From the Rio Grande River I went to hunt quail alo the Monon Route in Indiana. From Indiana I went Georgia, Mississippi and Louisana, fishing for anythi from "green trout" (our common large-mouth ba to sheepshead, Spanish mackerel, redfish, red and sn per, and even tackled tarpon in the "passes" of Lou iana. From Louisiana I sped back to Lake Marie, the line of the Wisconsin Central R. R., in north Illinois, where the large-mouth bass run riot in ea April, just after the ice breaks up. I captured twen six bass in Lake Marie one sunny afternoon, usin phantom minnow as a lure. I stood up in my bo drifted with the wind and cast from 20 to 50ft. av from the boat. From Lake Marie I went to Pra River, Wis., which is one of the most beautiful of tr streams. I have fished this stream year after year w several members of the Chicago Fly-Casting Club, as an "early" trout stream it is unsurpassed. I m relate in some future article the peculiarities, the cha ing (and other) traits of character of some of th men with whom I have fished. For it must be so occult thing that hovers over and about a tr stream which uncovers and lays bare the soul of m If you would know a man just spend a few days w him fishing on some trout stream, and I'll guaran that you will learn more about his innermost nat than years of ordinary intercourse would reveal. requires (to become a successful angler for trout) tience, humility and many fine qualities not posses by the ordinary man.

But to return to our trout fishing. Wisconsin, Mic gan and Minnesota afford good trout fishing, ye always miss the mountains. Prairie River in Wiscon is a thing of beauty, and its waters teem with the r spotted trout. The woods surrounding the Michigan Wisconsin trout streams are dense, dark with pine, he lock and spruce trees, while here and there the slend graceful birches are silhouetted against the darker ba ground of the pine forest; ever and anon a silver l gleams through the shadows of the forest; the air fragrant with the breath of trailing arbutus, early spr flowers, fresh ferns and the ozone from the pines. we wander slowly through these Michigan or Wiscon woods our lungs are filled with the bracing air, our m cles rebound with the elasticity of rubber, and our spi seem to be lifted up in grateful ecstasy—it seems go to be alive.

Yet with all their beauty and attractions, the wo of these States lack the charm and grandeur of mountains. I always arrange to spend my last trout days among the Rocky Mountains, in Colorado. Th mountains mother countless beautiful trout streams, Gunnison, the Juanita, the Saguache, the Platte, So Platte, Deer Creek and hundreds of others, yet the Grande River, which flows along the Creede branch the Denver & Rio Grande R. R., is my first and o love among trout streams. And so we (Mr. Edward Linnen, of Santa Fe, New Mexico, and myself) pitc our camp on the left bank of this lovely stream, wh leaps into life away up in the heart of the Rocky Mo tains, and away it dashes over titan rocks, around sh bends, through cañons, out again into broad reac of quieter water, ever rippling and singing; sometir after a violent storm its waters become suddenly mud but a few hours quickly clears it again, and its he waters are a paradise for the trout angler, more parti larly the fly-caster.

We waded the waters of the Rio Grande River s by side for miles, daily, casting our flies afar out over shining waters, now hooking a large trout, playing h a while, and losing more fish than we saved, beca of our using small flies—No. 10 being our cho Down the river we wandered, now reeling in a tro now laughing at one another, as a foot would slip a fall would result. Now our gaze would rivet our t ant eyes upon some extraordinary sight. Mounta all about us, range upon range, reaching away int dim and far-away eternity. Mists, like purple ro enfolding the distant peaks, and giant summits lean over toward the river, threatening to fall and engulf Gentle slopes, covered with wild flowers, frail and dai Over all a sky of deepest blue, with here and ther

fleecy cloud, hanging like a feather in midair. So we fished the Rio Grande. How fast time flies in this earthly paradise! Morning, noon and night seem to run together, and the heart offers up a continual prayer of gratitude for life amid such surroundings.

EDWARD G. TAYLOR.

Canadian Salmon Rivers.

IN his acknowledgment of Mr. Davison's letter of Aug. 30, Acting Assistant Commissioner Charles O. Lavoie writes that "As regards the rivers or parts of rivers flowing in the Mingan Seigniory, the Privy Council having decided that the power to legislate to regulate the fisheries remains with the Federal authorities, we will have to apply to Ottawa as to this matter."

NEW YORK, Sept. 7.—Hon. Commissioner of Land, Forests and Fisheries, Quebec, Canada.—Sir: I have to acknowledge your favors of the 29th of August (No. 10168-98) and of the 2d of September (No. 10435-98), which refer respectively to my letters of the 23d of August, concerning Nova Scotian and other schooners illegally setting trap nets inshore, and my letter of the 30th of August, concerning the details of the poaching in the Jupitagon during the present year.

It may make the matter of the setting of trap nets by schooners and the effectiveness of that class of poaching more evident if you consider the coast conditions at many places. For example, I enclose a little sketch (from one of your department's detailed surveys) of the mouth of the Jupitagon (Tchiptagon), which river was referred to in my last letter. It is at once apparent that a trap net set opposite either the passageway between the more easterly island and the shore, or the passageway between the two islands—even at some little distance from the shore—would take many salmon. So many small islands lie near the coast along the north shore, creating in each instance a somewhat well defined and narrowish channel through which the salmon must pass, that many similar opportunities occur. Also the larger bays or estuaries into which so many of the rivers of the north shore debouch afford opportunity at the times of the spring tides in the months of May and June—or if the spring tides come early in the months of June and July—for the setting of such nets. Indeed it may be predicated of the greater part of the "illegal" estuary netting that in places where shore nets are set and a license exists it is done by means of floating or anchored nets set for schooners, while at places where there is no estuary license the schooner might go in closer and perhaps set its nets from the shore itself. It is to a large extent for the purpose of stopping this class of poaching that the patrol steamers referred to in my original letter are so necessary, though I would not have you fail to bear in mind the absolute necessity of these steamers for the purpose of seeing that not more than the number of nets authorized by the license (where one exists) are set at an estuary, that the nets do not remain set at forbidden times, and whatever distance between the ends of nets set opposite each other is prescribed by law or regulation is actually maintained.

Let me add (if the Government hesitates in any wise to incur expense on account of these steamers) that I think beyond a peradventure they would be almost self-supporting in carrying the mail for anglers located at rivers along the north and south shores, as also in taking them to their respective rivers, bringing them back, and carrying their men, canoes and provisions. One great drawback to the north shore leases, and one reason why so many north shore rivers remain unlet, and why the revenue derived from most of those which are leased is so small, and why the rivers being comparatively infrequently visited are not properly guarded, is the great difficulty of access, and the uncertainty of communication. If your department should institute patrol steamers, give publicity to the fact that communication along the north shore from say the first of May to the end of July would be frequent, that mail for the different rivers would be carried by them if addressed to the care of your department, and that anglers might utilize the steamers—upon suitable payment—for the transportation to the rivers of themselves, their tents, provisions, canoes and men, I am inclined to believe that a remarkable change of condition would be produced as to the north shore. As the matter stands, the idea of hiring a north shore river presents to the mind many discouragements. Time, expense, difficulty of communication and impossibility of return, except at rare intervals, arise immediately before the mind and deter anglers from applying for leases.

In relation to the subject touched on in my letter concerning the Jupitagon; the beheading and cleaning of codfish at the mouths of the rivers, I have been furnished with the following information, which may be of interest to your department.

An angler who has visited a number of rivers on this coast writes me that it is the custom at the mouths of all the rivers of the coast off which codfish are taken to cast the heads and entrails of the cod direct into the stream, where they lie putrefying in the sun at low tide. He adds especially in relation to the St. John (the reference is to the St. Jean en bas), which has recently been leased by your department to Mr. Hill, at a very large rental, as follows:

"At the mouth of the St. John, all along the channel for more than a mile, I observed his summer (1898) that codfish heads were lying in masses. Their quantities could only be estimated by the ton, and they converted the mouth of this beautiful stream into a hideous and nauseous cesspool at low tide. I am told that the law provides that such offal must be buried. This provision is never observed, and I must believe deters salmon from entering in many instances. Some years ago I observed in the upper waters of the Moisie that the blood of a single salmon spilled in a rapid current close to the bank drove out from that shore more than 100 fish, which had been resting close to the bank on that side at points from 50 to 100ft. below. These fish did not return for several days, nor could I account for their departure and return in any other way."

The same angler adds:

"I am unable at the moment to speak from personal observation of the details of the poaching and abuses in other rivers of the north shore, but there is a good deal of testimony from others, which has come to my general knowledge, which may be of interest. It is well known and a matter of common report along the coast that the rivers east of the Natashquan are nearly all badly run down through excessive netting, and from the destruction effected by unlicensed and improperly placed trap nets along the shore and near the mouths of the rivers. It is well known that many schooners come from Newfoundland and Nova Scotia, and set trap nets to an anchor where they please and without paying license fees, and that many salmon are taken in these nets.

"I was told by Mr. Chevalier, who, with his father and brothers, nets the mouth of the Esquimaux, that that magnificent stream furnished now so few salmon that it is scarcely worth while to set out the nets; and similar stories come from many other rivers of this region which should furnish an abundance of fish." (I call to your attention that this, the Esquimaux, is the stream which all the guide books and all the puffs which are so liberally published in relation to salmon in Canada always take pleasure in mentioning "formerly furnished 52,500 salmon yearly.")

Allow me in closing to add that I am informed, and you can readily verify the information, that Mr. John Brown, of Quebec, the late lessee of the Becscie (this is not the Shelldrake, which is in the Mingan Seigniory, but the Shelldrake or Obetsie, which is more in the neighborhood of the Godbout), gave up that river because he found poachers on the stream with salmon in their possession whom he could not oust, though he was paying a guardian, one Michael Emond, of Mistassini, to guard the river (i. e., the Mistassini on the north shore, not the river of the same name in the Lake St. John district.)

I have now pursuant to my promise furnished your department with detailed information as to some six rivers, and have as well pretty thoroughly covered the general subject of the present condition of your salmon rivers, the poaching and the methods of stopping it. I have called to your attention the large loss of revenue which the Province suffers, and the large diminution in food supply by reason of the improvident taking, and no one has written or come forward questioning or denying any of the propositions which have been put forth, although the subject has been given pretty full publicity in the Montreal and Quebec newspapers, the New York Times, and also much of the correspondence has been published in full in the American Field and the FOREST AND STREAM. On the contrary, so far from questioning the correctness of the general position taken, on all hands it is admitted that the time has come for either definite improvement in methods of regulating the taking or else for the disappearance of salmon.

I have no desire to weary you with this matter, and yet the subject being of importance I am loath to abandon it without seeing a definite result. Information comes to me from those interested in the subject in Canada, including a member of the Upper House of the Dominion Parliament, that legislation is to be proposed at the coming sessions of both the Provincial and Dominion Legislatures, and I should be glad if in the event of your department's preparing any act for introduction in the Provincial Legislature, I might be notified of its proposed provisions and be given an opportunity to suggest in relation thereto.

As a further evidence to you of the universal existence and the persistent character of the improper taking of salmon, and of the effects thereof, let me add that I received yesterday from Mr. Frank Wilkeson, of Anacortes, Washington State, a letter in which, after referring to my original letter to your department, he adds:

"Here our salmon, five varieties, are threatened with extinction by the salmon canneries, which use traps to catch the fish. These fish are caught in enormous numbers while migrating to their spawning beds. I have seen 63,000 salmon taken in one day in one trap. Last year 2,000,000 sock-eye salmon were thrown away by the trap men operating at Point Roberts. If these traps are allowed to continue taking fish migrating to spawning grounds, the business of canning salmon will come to speedy end. I propose to attack trap fishing in the Legislature in this State. Any information you can give me will be most thankfully received, etc."

I remain, sir, your obedient servant,

CHAS. STEWART DAVISON.

Plankton.

IN this country the fisherman as a rule continues to fish in any one locality until fishing in that locality has become unprofitable. He then moves his operations to new waters till these in turn are exhausted. He is apt to look upon each body of water as inexhaustible, and rarely has occasion to ask himself whether it is possible to determine in advance the amount of fish that he may annually take from the waters without soon depleting it.

On the other hand, the fishculturist is apt to plant his fry in waters that are quite unsuited to them, or to plant them in numbers far in excess of what the water can support.

The fishermen proceed as farmers might who imagine that they could continually reap without either sowing or fertilizing; while the fishculturist proceeds often as if convinced that seed might grow on barren soil or that two seeds might be made to grow in place of one.

In some regions the public is beginning, through the machinery of the State, to insist that its interest in the fisheries be guarded, that neither fishing or planting of fish should be carried on in excess, and the time is fast approaching when the State will everywhere exert its authority to control the fisheries. It will then become necessary to determine, at least approximately, the productive capacity of any body of water.

It is known that the many species of plants and animals which inhabit a body of water are interdependent. In the final analysis all the fishes are dependent directly or indirectly on the minute floating plants and animals which, taken together, we call the plankton. The total mass of plankton is in most bodies of water so great that, in comparison with it, it is customary to neglect the field plants along the shores and the animals that they harbor. That the plankton lies at the base of all life in the water is then the first principle.

The second principle is that the plankton, considered as a whole, is uniformly distributed. There are no longer any doubts that some constituents of plankton, e. g., the crustacea, may not be distributed uniformly. Whenever measurements have been made of the total plankton, it has on the other hand been found that this is so distributed that nearly the same volume of it occurs under each square yard of the surface.

From these two principles Hensen concludes that a determination of the amount of plankton under a unit area of any part of the sea would afford a measure of the productive capacity of the part.

It remained to find some means of making such determinations. After much labor Hensen finally adopted the method of drawing a net vertically from the bottom to the surface. Such a net strains out the plankton contained in a vertical column of water, and catches the whole amount of plankton under an area of the surface equal to the net opening. From the plankton thus obtained the total plankton of the water under consideration may be calculated, and the results expressed in volumes or by weights, or by enumerating the contained individuals. The productive capacity of a body of water, as expressed in its plankton production, may thus be compared to that of other bodies of water, and so may be made of practical use.

The method which Hensen used in the sea was later extended by his pupil, Apstein, to fresh water. This method, with some slight modifications, has since been used in this country by Reighard, Ward and others.

The great advantage which this method enjoys over others is that the water from which the net strains the plankton is a vertical column of water extending from bottom to the surface. It thus contains water from all depths, and is a represented sample of all the water in the lake examined. This column of water bears the same relation to the whole body of water that a sample removed from a sheet of metal by a punch bears to the whole sheet. There is no other method applicable to all conditions which has been shown to have this advantage.

PROF. JAMES REIGARD.

A Strike-in of Bluefish.

BOSTON, Sept. 9.—Mr. C. A. Brown is spending his vacation in the early autumn, and he takes it at that season for the sake of the shooting and fishing it is then possible to combine. Monomoy is the place he has chosen, and it has brought him the bluefishing occasion of a lifetime. Up to Labor Day bluefishing had been poor, and even up to 2 o'clock on that day there had been but little fishing. Brown had been "heaving the drail" all the morning with but little success, when all at once tremendous schools of herring and other small fish were seen leaping and skurrying for the shore on the ocean side of Monomoy. The incoming surf seemed glistening with silver in the sunlight. The little fish were leaping for their lives. Bluefish drails were quickly brought into requisition; no bait, only a billet of lead armed with hooks. Every time the drail was whirled and cast out into the surf the indrawing brought a big bluefish. The casts were made in more and more rapid succession, and every cast quickly brought a bluefish. The excitement spread from the hotel down the beach for a long distance. Guests and fishermen were all soon "at it," till eight or ten men were fishing—heaving and hauling the drails, and catching great bluefish. The sight was one long to be remembered. About the first cast after the fishing begun our friend Brown broke his line on a big fish, and his drail was gone. He tried to buy another, but there were none for sale; every drail on the coast was in use. He approached a fisherman who was casting and drawing for all he was worth, and offered him a dollar for his drail—worth 30 cents. The fisherman did not even turn his head. Brown bid $1.50. The fisherman looked at him with something like contempt in his eye. The bid was raised to $2. The fisherman only turned his weather eye from his work and shook his head. Two dollars and a half was offered for that drail. The fisherman turned for only a moment and snapped out: "Young man, the fish are worth 50 cents apiece!"

Brown was in despair; the greatest bluefishing he had ever seen, and no rigging! Just then a friend up the beach called to him: "I'm getting tired of this! My hands are cut, and my arms ache; let us fish in a team!" Three of them took one drail. The first, with the line tied around his leg, would make the cast and draw the fish up to the beach. No. 2 would seize the line and run up to the beach with it, dropping the fish for No. 3 to unhook. During this time No. 1 would be untying the line from his leg and changing places with the man above him, while the drail and line would be ready for No. 3. In this way they fished while the fishing lasted, which was only for a few hours. But such excitement while the fishing did last! People without rigging even rushed into the surf and caught partly disabled fish by their tails as they were being helped to escape by the receding waves. One man actually rushed down the surf following the wave, and caught a couple of big squiteague by their tails. Several sand flounders were also caught in the surf. It was a great day for fish, but the fishing ceased almost as suddenly as it began. By 5 o'clock not a bluefish could be taken, and the same was true of the next day.

The tired captors took a horse and cart from the hotel and drove it along the beach, loading on the fish—one, two and three or more loads. Everybody had bluefish for breakfast and supper. There were sent up to the Boston market the next day 1,000lbs. of bluefish. The most remarkable feature of all was the size of the school; not a fish under 10lbs., and the largest weighed plump 20lbs.

BOSTON, Sept. 12.—Considerable interest is noted about here in the opening of the partridge season in Maine, Sept. 15. Several Boston gunners are already in that State on vacation trips, with shotguns ready, and others will go this week. H. S. Jones has gone to Buckfield, with the full determination of being on the ground

early, and getting his share of the partridges. With some Buckfield friends he will make a trip up into Byron and Roxbury, an excellent partridge section.

Shore bird shooting along the New England coast would be better in cooler weather, and the gunners all say that a storm will be sure to bring a big flight of birds. Harry Moore and C. H. Tarbox were down to Plum Island the other day, with result of very few birds, the weather being terribly hot. But they had lots of sport. Harry took his twin nephews, the Richards boys, with him; youngsters of fourteen, just beginning to "be crazy to shoot." They had little Flobert rifles with them, and with watching they were allowed to shoot sparrows off the telegraph wires. To the surprise of both the older men, the boys were able to pick off the sparrows, scarcely missing a shot. Next came the desire to try the shotguns of their seniors. They were warned beforehand that they might be kicked over by a 10-gauge gun, heavily loaded, but this did not dampen their ardor in the least. One of them—they look so much alike that Tarbox could not tell which it was—fired Tarbox's gun, made a good shot, killing three or four sparrows. Then came the turn of the other boy—bound to beat. With a good raking shot along the wire he pulled away with his Uncle Harry's gun. There was a big crack with the boy nearly kicked over, and eight sparrows came down. All hands wondered why the gun had kicked so badly, but this was explained when it was found that the youngster had pulled both barrels at once, in order to beat his brother. The same party will visit Plum Island again when there is a better prospect for birds.

SPECIAL.

CHICAGO AND THE WEST.

In Indiana.

CHICAGO, Ill., Sept. 3.—I am told that the private soldier of the U. S. Army in the West has a rather bitter feeling against some of the pictorial representations which pass current as his portrait in the illustrated papers. He protests that he is not a freak, but a man. I have heard also, and more than once, that the famous and kindly poet, Mr. Jas. Whitcomb Riley, of Indiana, has incurred the enmity of certain citizens of his native State, more especially the real estate men, who say that his dialect poems have done more to convey a wrong impression of Hoosierdom than the whole State can ever do to set right! The people of Indiana, or some of them, say that they do not all of them all the time talk in dialect, but that some of them, some of the time, speak with correct and collegiate accent, and that the State, as a State, has the best public school system in the world. To all of which I imagine the popular artists on Western topics, and the famous poet of Indiana, may answer with a smile.

I do not know why Indiana should be such an unknown land, or why all sorts of lawlessness and ignorance should be ascribed to it, but somehow it has always been the fashion to think that in Indiana the game and fish laws were dead letters. To a certain extent Indiana does now and then show a bad state of affairs. Thus Judge Elliot, of Marion county, says that in his belief the dynamiting along the Indiana streams will in a few years render it impossible to catch any game fish at all. Upon the other hand, and this is what I want to get at, there has really been progressing all the time, in spite of the popular apprehension on such topics, a very steady and useful work toward protection, under the care of the Indiana State Commission, sadly hampered as it is by a scanty appropriation. Deputy Commissioner Earl has been doing a great deal of good this very summer along the White River, one of the best bass streams of the State (and a very fair fly-fishing water at one time). He has begun now to close in with his cases, and has set things moving by fining Rufus Caldwell, of Brooklyn, for seining. He will next take up the cases of John Parker, of Centerton, and Jas. C. Greer, of Green township, and after them several other cases which he has been working up of late. The law is apt to gain in respect in that community. Over near Anderson, Ind., Deputy W. Moore has also been at work, and he has succeeded in creating a reign of terror among the illegal fishers. He arrested Perry Hull and Jack Foster on Fall Creek, and found a net in their possession, which he confiscated, and the news of this has sent all the nets and spears in the neighborhood into hiding, and there is a great stirring up of things. There is protection in Indiana, and there would be more protection if the intelligent citizens of the State would make a larger appropriation for its fish and game commission. This might be a good advertisement for the State, and it might in a measure offset the damage which is done it by Mr. Riley, who, as I understand it, is not guilty of any malice aforethought, and only writes poetry as a spring runs water, because it can't help it.

In Illinois.

Deputy Warden Ratto, of Chicago, has been doing a lot of work in fish cases in Illinois this summer, as many handlers of short fish in Chicago may testify. This week Mr. Ratto idly strolled down to Bloomington and got among the fish dealers there. He said he was hungry, but not so very awful hungry. What he really needed was a little fish, just a small fish, about so long on his hand. Several dealers were able to dig up such a small fish or so out of their barrels. Then the fun began, and each of the dealers was fined $20 and costs. Now comes the odd side of the story. The retailers came back on the wholesalers, the big market fishing firms along the Illinois River, who have been handled so gingerly by the State Commission. The latter dealers were asked to liquidate these fines inflicted on the men who had retailed their short fish. One Beardstown outfit refuses to do anything to help out the retailers who got fined. Let me see, it was said in favor of the Chicago retailers, who for a time were not pushed much for a "first offense," that they "could not help it if the wholesale firms sent them short fish," and that they ought not to be punished for the sins of the market netters. Now, it appears, the latter do not agree to be responsible for the sins of the retailers. All of which is just about as it might have been supposed to be. Leniency in protection has its drawbacks.

Tarpon Club's Building.

Rumor comes from Texas that the club house of the big and wealthy Tarpon Club is not yet forthcoming. The harbor company at Aransas Pass wants too much for the privilege of building on Mustang Island, near the channel. Live Oak Point is suggested as a good point, though a long way from the fishing. This latter is true, but I should think that so lovely a site as this bold headland would be better than the sands of any of the keys near the channel where the tarpon run. A sail of a score of miles is not much, and on those lovely landlocked waters would be a pleasure. There is no locality near the pass where so sightly a building spot can be had as at the Live Oak headland.

Biggest Nepigon Trout.

Report has it that the Lake Superior trout fishing has been exceptionally good this year, the south coast of Isle Royal having turned out exceedingly well. The Nepigon River record runs heavy, and this year brings out the heaviest trout ever taken there, with one exception. The heaviest Nepigon fish was taken three years ago, and weighed a trifle over 9lbs. The biggest trout of this year weighed even 7lbs., and was taken by a Peoria, Ill., angler, whose name I did not get. Another trout was taken to Duluth by the lucky captor, and was found to weigh 6½lbs.

Heavy Bass.

The angling country about Kabekona Camp, in Minnesota, continues to produce. Last week Mr. Wm. G. Newby, of Fort Worth, Texas, caught two grand bass at that point, one weighing 6¼lbs., and the other 6lbs. Harold du Charme, a twelve-year-old boy from Detroit, Mich., was the luckiest muscallunge angler. He caught two 'lunge, one weighing 20lbs. and the other 23½lbs., and was naturally a pretty proud boy. The biggest fish has been sent to Chicago for mounting.

Deep Fishing for Bass.

Dr. E. W. Moyer, of Waterbury, Conn., writes inquiring something about deep-water fishing for bass.

"I read your article," he says "('Ben Dick's Big Bass'), in current issue of FOREST AND STREAM, and was much interested. Kindly instruct me how the minnow is fastened, and if any species of bait is preferable, also best way of anchoring boat in waters of such depth.

"I visit a lake near here that is full of small-mouthed bass, but for some reason only a few of them are caught.

"I have just returned from a week's outing there, and in that time only succeeded in getting about a dozen, and they were all small. I used helgramites, crickets, crawfish and frogs for bait. I have always had an idea that they could be caught by fishing in deep water; however, I have never tried it."

I do not know much about the bass of the Eastern States, but their habits are apt to be much like those of our Western bass. In the lakes with which I am familiar, the best time to catch bass is in May and June, when they are running in the shallow water. They are then sometimes upon the spawning beds, but after they have spawned they very often come out into the shallow waters to feed in the early morning or in the evening. After the very warm weather begins, these fish drop back into deep water. In the Wisconsin lakes the frog is used a great deal for the shallow-water fishing, but the minnow is better for the deep-water work. We usually bait the minnow by passing the hook through the lips, as it will swim better so and live longer. Usually bass will bite best at the edge of a shoal coming up out of the deep water, but I have on rare occasions taken them very deep down, and on frog bait at that. I can not say whether Mr. Dicks was at anchor when he caught his big bass, as sometimes one may drift and fish deep successfully, not trolling. If one has to anchor in deep water it might take a lot of line, but sometimes this can be done by anchoring on a bar and fishing out on the deep side.

When the small-mouth bass wants to bite, it can be caught on any of the baits mentioned above, though the cricket, helgramite, or even the crawfish I should fancy more for rock bottom or rapid-water fishing than for deep still-fishing, where I think I would rather pin my faith to a good lively minnow, one rather longer than one's finger. I have fished all day on Lake Winnebago, a good bass water for small-mouths, and tried all sorts of baits, but when we finally got these finical fellows started it was just plain angle worms they wanted, and they would not touch anything else. Once I stood on a bridge at midday and saw fifty grand small-mouth in a hole in the Fox River, Wisconsin, and they would not touch minnow, frog, cricket, fly, or anything else, till we by chance tried the dragon fly, killing some of these big insects with our landing net. Then we caught seventeen fine bass in a little while. This was in shallow water. I can not do much more for Dr. Moyer than this, but suggest that he keep on trying till he finds the deep, rocky-bottomed spot where his epicurean small-mouths are very likely lying. If he can locate them, and will stay with them, after a while he will get them coming his way. They have to eat, and they do eat. They will be more apt to begin doing business with him after a frost or two in September.

Big Bass.

CHICAGO, Ill., Sept. 10.—At the store of A. G. Spalding & Bros., this week, Mr. A. Hirth, of the tackle department, showed me a splendid bass which had just come down to him from Eagle Lake, Wis., caught by the redoubtable angler, Billy Tuohy, who runs the hotel at that point. This bass was a big-mouth, and it weighed 6lbs. 5oz. It was a very thick, chunky, heavy-built fish, and was the biggest bass I have seen this year in this part of the country, though I believe Lake St. Clair is still ahead with the record. Lake St. Clair is a big water, but Eagle Lake, Wis., is a shallow, pretty pond of water, backed up into the tree-dotted meadows by means of a dam. It has floating bogs and strips of heavy weeds, and all in all is a good place for big mossbacks such as this old fellow. Oddly enough, there was at the same store at the same time a mounted bass which was caught at the same place, Eagle Lake, by John Fannin, of this city. It seems that Billy Tuohy's medal has called out some of the old-timers from under the bogs of those storied waters.

On the Mississippi.

I have more than once spoken of the grand fishing for small-mouth bass in the Mississippi River at points near La Crosse and above that point. It will please a great many anglers who are beginning to become acquainted with the sport of that locality to learn that the wardens are doing somewhat to keep it good. Last week they arrested a wholesale lot of market fishers at Prairie du Chien, and burned up 1,000ft. of seines, 300ft. of trammel netting, and three fishing boats which had been in the illegal trade. That much of an outfit would clean out a lot of bass in a year.

Trout and Bass.

Mr. Edwin G. Taylor, of this city, is just back from the Rocky Mountains, where he has had fine sport with the trout of the Pecos and the Rio Grande. He fished the latter stream near the Wagon Wheel Gap, and got 40lbs. of trout one day on the fly. It now appears to him that he requires a little big-mouth black bass fishing to make him happy, and this week he went to Lake Marie, in upper Illinois, after some of those fish. He should take all one would want, as the fall season is now well under way, and the fish are biting better than for some time.

Big Pike.

Eddie Bingham and a friend from the East were up at Lake Koshkonong, in Wisconsin, last week, and caught 54lbs. of pike ("pickerel," as they are commonly called in this country), one of which weighed over 13lbs.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

A Big One that Got Away.

ON Sept. 3, at Belmar, N. J., a fishing party started out on the ocean to fish for sea bass. The party consisted of Mr. Wm. M. Duff, Mr. Jno. L. Lequin, of the Hazard Powder Company; Masters Jno. L. Lequin, Jr., and E. Gerard Lequin, all of East Orange, N. J., and the 15ft. boat was in the hands of Messrs. G. H. Newman and son, boatmen. After fishing for an hour or so, and getting a nice lot of bass, Mr. Lequin, using a rod and reel, hooked on to something large, which, after a delightful play of some twenty minutes, turned out to be a blue-black man-eating shark. The monster exposed itself within 40ft. of our row boat by jumping at least 12 to 15ft. out of water, taking some 50ft. of line with him and thus escaping.

Our boatmen, one of whom has fished this surf for over thirty years, said that this was an occurrence he had never before witnessed, while his son turned paler than the masters in the stern, who were seasick.

Mr. Duff declared that he would not have missed the sight for a gold eagle, while Mr. Lequin considered it apropos, as it was his birthday.

The shark was considered by Mr. Newman to have been, conservatively speaking, at least 10ft. long, and would weigh 350 to 400lbs.

It was a sight that occurs only once in say thirty years, hence we jot it down and subscribe our names hereto in commemoration of the event.

EDWARD NEWMAN.

Maine Fishing.

BOSTON, Sept. 12.—Returning sportsmen from Maine continue to report good trout fishing in many parts of that remarkable State for sporting interests. Mr. S. H. Johnson has recently returned from a trip to the Seven Pond region. He was there during the very hot weather, Aug. 22, 23 and 24, and the fishing was very poor. But when the cooler weather of that week came the fishing was immediately better, and on Friday he made a fine catch of trout. Mr. A. T. Waite, of the Boston Herald staff, has just returned, with Mrs. Waite and Master Courtland Waite, from a most enjoyable trip to Billy Soule's Pleasant Island camps, in Cupsuptic Lake. They had good luck with trout, Mrs. Waite landing one of 2½lbs. on the fly, with numerous other fish.

Mr. Gardiner Chapin has just returned from his vacation trip to Aroostook county, Me., where, with his son, the fishing of Portage Lake was taken in. The water was warm in the lake, and the fishing was not very good. The water was low and warm in the streams that they tried, but they caught a good many trout, and greatly enjoyed the outing. The Ganong party, consisting of Mr. and Mrs. Frank N. Ganong, Mr. and Mrs. Mortimer Fawcett, and Mr. and Mrs. Geo. N. Richards, has returned from bass fishing and camping at Lake Cobbosseecontee, Me. The weather was terribly hot a part of the time, and the bass fishing not all that they expected. The fish ran rather small, the largest not being over two pounds. Pickerel fishing was poor and unsatisfactory.

SPECIAL.

A Vermont Black Bass.

Editor Forest and Stream:

Having just returned from a fishing trip in Vermont, I wish to report a good catch made by me two weeks ago, as follows:

In Burr Pond, near Sudbury, Vt., in about 8ft. of water, still-fishing early in the morning with worms for bait, I caught a 5½lb. small-mouth black bass on a 7½oz. pole.

The fish was weighed at Hyde Manor before a large number of people, and is being mounted by Conger, at Burlington. I also got the mate ten minutes later, but after a few runs he broke my hook while jumping.

HOWARD S. HADDEN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trout Streams Drying Up.

MILLBROOK, N. Y., Sept. 9.—Anglers who have followed the brooks of the Hudson and Harlem valleys unite in deploring the gradual drying up of the trout streams. Some of the older anglers say that some brooks have decreased in volume as much as one-half during the past forty years. In many cases this means the total drying up of the smaller brooks during the trout season. There is considerable difference of opinion as to the causes which are at work to diminish the volume of water in the territory. Some say it is due to the water system of the Croton Valley, owned by the city of New York, but brooks are affected which have no connection with the Croton system. Another theory is that the wholesale cutting off of the forest trees for firewood has exposed the surface to the evaporating effects of sun and wind, and caused a series of freshets and droughts. On the other hand some say that since the common use of coal less wood has been cut off, and instead of the forest growth decreasing it is actually increasing in the localities under consideration. There is a theory that the effects of the cutting of forests are felt for many years, possibly a century, and that the springs and brooks are feeling the effects of the clearings made by our forefathers, possibly when the country was first settled, and even if the forests were restored it would take many years to restore the springs and streams to their condition when the country was first settled.

G.

Newfound Lake.

LAND-LOCKED SALMON HOUSE, Bristol, N. H., Sept. 1.—The fishing season for trout in Newfound Lake has closed with a good record for trout taken. Through the summer months large trout were caught; one in July weighed 15lbs.; in August quite a number from 8 to 12½lbs. The last trout were taken Aug. 31 by N. M. Rugeri, of Stoneham, Mass., weight 10½lbs., and S. Hentall, of Bristol, weight 4½lbs.

The land-locked salmon fishing is good, and continues until Sept. 30.

Game is reported to be more plenty than last year, deer being seen in pastures quite frequently, so rifles will be in demand here by Sept. 15.

S. H.

Fish at Fairs.

SYRACUSE, N. Y., Sept. 6.—The exhibition of fish at county and State fairs is adding to the attractions of the shows, and at the same time increasing the interest in fishculture—especially among the farmers. At the recent State fair eleven tanks with varieties of propagated fishes were shown. A portion of the exhibit was forwarded at once to the Dutchess County Fair at the Poughkeepsie Driving Park. They were from the State hatchery at Caledonia. The tanks contained fingerlings six months old of brown, brook and rainbow trout, and in separate tanks brown, rainbow, red throat and brook trout.

G.

The Florida Kingfish Record.

OSHKOSH, Wis., July 28.—*Editor Forest and Stream:* While in Florida (at Clear Water) last March, Mr. Lawrence Jones, of Louisville, Ky., and myself made a catch of kingfish which we claim breaks the record on kingfish taken with the rod and reel. On the 16th day of March we took from the stern of a sailing vessel twenty-four kingfish and six black groupers which aggregated in weight 316½lbs. The three largest kingfish weighed 19lbs. each; average weight 12lbs. I am aware of larger catches of kingfish by larger parties with hand line, but not with the rod and reel..

ANDREW JACKSON.

Tarpon in North Carolina Waters.

ASHEVILLE, N. C., Aug. 31.—Two tarpons have been caught in the lower Neuse River, inside the beach, and in brackish water, which is far outside their known habitat. One was 5ft. long and the other 6. They were taken on Aug. 28.

Irish Setter Prizes.

THE Irish Setter Club of America offers two cash prizes of $40 and $20 to the first and second Irish setters winning an undivided first, second or third prize in the all-age stakes of the following trials, viz.: (1) Monongahela Valley Game and Fish Protective Association. (2) Indiana Field Trial Club. (3) Eastern Field Trial Club. (4) Missouri Field Trial Association. (5) Missouri Valley Field Trial Club. (6) Continental Field Trial Club, or in the Derby or all-age stakes of the United States and Alabama Field Trials.

In the event of the prizes not being awarded, the sum of $10 will be paid to each Irish setter run in Derby or all-age stakes of any public field trial in the United States, beginning with the Iowa Field Trials, Aug. 31, 1898, and ending with the Alabama Field trials of February, 1899, inclusive.

GEO. H. THOMSON, Sec'y.

Western Canada Kennel Club's Trials.

THE scene of the Western Canada Kennel Club's trials was at La Salle, Manitoba, the same place where the club's trials were held last year. Monday and Tuesday, Sept. 5 and 6, were the dates fixed for the running. This club is strictly an amateur organization both in theory and practice, and does not cater to the professional element in any particular, nor does it permit any professionalism in its trials. Thus the meetings are distinctly conspicuous for amicable competition for the honors, instead of competition for the stakes, which is the chief feature of the open trials.

La Salle is a small town, nineteen miles south of Winnipeg, reached easily by team or railroad from Winnipeg. But it is lacking in accommodations as regards hotel and livery, so much so as to cause positive inconvenience to those who arrived with the expectation that hotel accommodations and livery could be secured at the last moment.

Mr. Frank Richards officiated as judge. The weather was favorable for competition, though the cold, strong wind of the afternoon and morning of the first and second days was a test more severe than common.

The Derby.

Bang showed unquestionable superiority over his three competitors in the essential qualities of speed, range and judgment. He is a rapid mover, is under good control, and works industriously. First deservedly went to him.

Second went to the pointer Joe, also obedient and a good ranger, with a courageous bearing.

Spot W. won third, and Buttonhole fourth, the latter chiefly by virtue of being the only dog left for the place. There were but four starters, as follows:

Winnipeg Kennels' b. and w. setter dog Buttonhole (Val Lit—Cam Sing), E. Hamber, handler, with J. Lemon's liv. and w. pointer dog Joe (Plum—Venus).

A. Code's b. and w. pointer dog Bang (Rector—Dinah), E. Hamber, handler, and C. W. Wellband's b. setter dog Spot W. (Little Billee—Belle W), H. G. Spurgeon, handler.

First Round.

Buttonhole and Joe run about forty minutes. The judge gave them the word about 7:17. The work was all on one side. Joe was industrious and ranged well and was obedient. Mr. Hamber had never handled Buttonhole before, so that dog and handler were unacquainted, but this would not in any way explain the dog's poor showing. No work was done on birds, if the flushing of a bevy by Buttonhole is excepted.

Bang—Spot W.—This brace began at 8:24, and ran about forty-six minutes. No birds were found. Both were industrious, but Bang showed higher abilities in every way.

The judge, to give the puppies a rest, began the all-age stake, and after two heats were run the Derby competition was resumed.

Final.

Joe and Bang then ran forty-four minutes, beginning at 11:56. Some marked birds afforded the first opportunities for point work. Both pointed about the same time on the same bird, Joe's point being made more independently than Bang's, as he was not cautioned. Both behaved well to wing.

Bang was first; Joe was second; Spot W., third; Buttonhole, fourth.

All-Age Stake.

Fourteen starters made a very good all-age stake in point of numbers. They were run as follows:

E. R. Collier's b. and w. setter dog Gay Buster (Rod—Gay Lass), owner, handler, with Chimo Kennels' b. and w. setter dog Prince Rupert (Larry Noble—Atalanta), G. B. Borradaile, handler.

J. Lemon's liv. and w. pointer dog MacLemon (— — —), owner, handler, with F. J. Waghorn's b., w. and t. pointer dog Rector (Fritz—B. W.), H. C. Spurgeon, handler.

F. J. Waghorn's b. and w. pointer dog Go Bang (— — —), H. G. Spurgeon, handler, with E. J. Bennett's b. and w. pointer bitch Tannis (Rector—Miama), owner, handler.

H. L. Rolston's b. and w. setter dog Count Cambria (Gladiator II.—Miss Cambria), E. Hamber, handler, with B. Gordon's liv. and w. pointer dog Lord Buster (Lord Mount— ——), owner, handler.

H. Garwood's o. and w. setter dog Master Mark (Larry Noble—Angela), owner, handler, with H. A. Holman's b. and t. setter dog Blackie (— — —), A. Gale, handler.

W. J. Thompson's b. and w. setter dog Rod o' Light, Jr. (Rod o' Light— ——), owner, handler, with F. W. Scott's b. and w. setter bitch Angela (Gath's Mark—Lady Jean), G. B. Borradaile, handler.

E. Hamber's b. and w. pointer dog MacHamber (Ned Croxteth—Miama), owner, handler, with H. G. Spurgeon's o. and w. setter bitch Nellie (Ranger—Daisy), owner, handler.

First Round.

Gay Buster and Prince Rupert were the first to open the competition in the all-age stake at 9:19. On a single marked bird, Buster awkwardly roaded up wind to a flush. At 9:59 the heat ended. Prince was a good wide ranger, apparently out for business, but unfortunate in not finding birds. Buster showed no particular merit.

MacLemon and Rector were down forty-six minutes, starting at 10:02. Again there was a dearth of birds, which was not at all encouraging to the dogs. On the showing made, MacLemon had a better, quicker and more dashing way of going, while Rector was lacking in these qualities.

Go Bang and Tannis were next, starting at 1:54 and working thirty-six minutes. Go Bang pointed and there was no bird. Tannis pointed a running covey, which Bang also pointed, not seeing Tannis on point; they drew on rapidly, Tannis beating Bang to the birds. Both were steady. They were not entirely independent workers. Tannis was the better in style, on point and in motion, and both were usefully fast and covered a reasonable area of ground.

Count Cambria and Lord Buster were cast off at 2:35. The heat was rather disorganized, so far as steady work is considered. While Count had range and speed, and proved that he could find and locate, he was unsteady on his points, flushing and chasing so regularly that he ruined his chances. Buster ran somewhat lame from an injured foot, though he scored one point. Down thirty-seven minutes.

Master Mack and Blackie started at 3:12, and ran forty-six minutes. Mack was harmfully reckless, and his work abounded in errors. Blackie showed great judgment, industry and good finding powers, and pointed very reliably. Mack, riotous and mischievous, kept watch on Blackie, and flushed her bird promptly when she pointed.

Rod o' Light, Jr., and Angela were next. They ran about thirty minutes, commencing at 3:49. Their performance was very ordinary. Angela was not in working condition, being loaded with flesh, and she flushed three times, two singles and a bevy. Rod ranged the better of the two, but his locating and pointing were faulty.

MacHamber and Nellie were started at 4:24, and they ran thirty-seven minutes. Nellie seemed to have the best intentions, but her efforts relaxed soon after the beat began, and she seemingly lacked the ability to locate quickly and accurately. Mac ranged wide, though not with the best judgment. He made a point on a bevy and one on a single. Neither one took advantage of the opportunities offered.

Second Round.

Prince Rudolph and MacLemon were started at 5:06 and ran one hour and seventeen minutes, the longest heat of the day. Mac made two points and a flush, while Prince pointed a sparrow, and his competitor refused to back and tried to steal the point. Both were lacking in endurance, and had practically ceased work long before the heat ended. This heat ended the competition of the day.

TUESDAY.

The weather was far from favorable or agreeable. A cloudy sky and a high wind greeted the field trial party, yet the trials were so near concluded that the weather was not of great importance, if the impending storm held off.

Bang and Tannis were first off at 8:04. Down twenty-seven minutes. The work was a great improvement on that of the preceding day, and was of a quality to be worthy of competition. Each dog went wider, faster and with better judgment. Bang pointed; no bird found, but one was flushed near the place of point afterward. Tannis, quite a distance away, found a bevy nicely, but it flushed wild. She next made. Quite a number of single bird points were made by Tannis in a very skilful manner, showing herself to be perfectly reliable in her work to the gun.

Go Bang and Blackie were cast off at 8:34, and worked twenty-six minutes. Blackie completely outclassed her competitor in range, speed and judgment.

Nellie and Lord Buster ran fifteen minutes, beginning at 9:05. Buster was disinclined to work seriously, wasting time on false scents, while Nellie did some good work on birds, which brought the heat to a close quickly.

The judges then announced the winners: First, Tannis; second, Bang; third, Nellie and Blackie divided.

RAT PORTAGE.

Manitoba Field Trials Club's Trials.

THE Derby of the Manitoba Field Trials Club had thirteen starters. The trials began on Sept. 7. The weather conditions were most unpleasant and against any good performance in the competition. A dark, heavily-clouded sky threatened rain, and a high, raw wind added to the unpleasant and unfavorable weather. The competition, owing to the threatening storm, was postponed till afternoon.

Birds were very scarce, which made the trials very imperfect so far as bird work was concerned.

First prize was awarded to Bang, second to Warlock and third was divided between Silver Lace and Jubilee Flo.

The dogs were drawn to run as follows:

W. F. Ellis' b., w. and t. setter dog King (Duke of Manitoba—Maid of the Morn), owner, handler, with Thos. Johnson's liv. and w. pointer bitch Jubilee Queen (Alberta Joe—Diana II.), A. C. Reid, handler.

Charlottesville F. T. Kennels' liv. and w. pointer bitch Nana (Rip Rap—Toxie), C. E. Buckle, handler, with Thos. Johnson's b. and w. setter dog Jubilee Prince (Rector—Dinah), A. C. Reid, handler.

Charlottesville F. T. Kennels' b. and w. pointer bitch Ranee (Rip Rap—Toxie), C. E. Buckle, handler, with John Wootton's b. and w. setter dog Manitou Spot (Val Lit—Cam Sing), owner, handler.

Charlottesville F. T. Kennels' b. and w. pointer dog Warlock (Rip Rap—Edna), C. E. Buckle, handler, with W. F. Ellis' b. and w. setter Silver Lace (Val Lit—Cam Sing), owner, handler.

Thos. Johnson's b. and w. pointer bitch Jubilee Princess (Rector—Dinah), A. C. Reid, handler, with John Wootton's b. and w. English setter Rule Britannia (Val Lit—Cam Sing), owner, handler.

W. F. Ellis' b., w. and t. setter Exasperator (Duke of Manitoba—Maid of the Morn), owner, handler, with Thos. Johnson's b. setter bitch Jubilee Flo (Little Billee—Belle W.), A. C. Reid, handler.

A. Code's b. and w. pointer dog Bang (Rector—Dinah), a bye, E. Hamber, handler.

King and Maid of the Morn began the Derby competition at 1:46. They ran about thirty-four minutes. No birds were pointed by either, though King had one good opportunity. Their range was narrow and they showed but little industry.

Nana and Jubilee Prince began at 2:23; they ran forty-six minutes. Prince was trailing in the latter part of the heat, though cutting out the work at first. He ran too hard, and was forced to slow up toward the end. Nana was the better of the two.

Ranee and Manitoba Spot started at 3:24. Down

forty-four minutes. Spot showed very good possibilities which were badly schooled. He pointed a bevy, and when Ranee joined in the point he flushed and chased riotously, keeping up the performance while there were any birds left. Ranee had some good opportunities to point, but she flushed two single birds and a bevy, behaving well to wing. Spot flushed one to which he remained steady.

Warlock and Silver Lace were put down at 4:18 to 4:53. To a marked bevy some distance away, the dogs were worked in a circle, Warlock reaching and pointing the bevy first, Lace going up shortly afterward and joining in the point, but proved unsteady, for he broke in and flushed soon afterward, demoralizing Warlock, who chased. Next they made game and drew on a sod breaking, but failed to locate the birds, which flushed wild. It was excusable on the whole, as the cover was thin and not of the best. The brace made a very good performance. Both had speed and range, and hunted industriously, Warlock much the wider in his casts, and much the best of any of the dogs which had run.

Jubilee Princess and Rule Britannia began at 5:00 and ran one hour and eighteen minutes. The brace made a very poor showing in every particular.

King and Jubilee Queen were again given a trial, a short one, without in any way improving their chances.

THURSDAY.

The second day of the trials was much improved in weather conditions, a pleasant breeze and a cool temperature being favorable to good work. There were a few insignificant showers during the day. The running of the first round was continued.

Exasperator and Jubilee Flo made a poor showing in every way, excepting that they had speed and stayed out at their work fairly well. On birds they were inefficient.

Bang, the bye dog, was given a half-hour trial, beginning at 9:17. There is always much interest in the second competition of a dog which has made his first win, as there is a question whether the dog is a class performer and can repeat. Bang fully sustained his new reputation. He was fast, ranged well and worked pleasingly to the gun. He roaded a running chicken to a good point.

Second Round.

Four brace were kept in the second series.

Silver Lace and Ranee ran a moderately good heat, which was marred by a joint chase.

Jubilee Flo and Nana started at 9:55; down fifty minutes. After an excusable flush by Nana, Flo made a good point on a bevy. They were worked where the scattered birds were marked down, but no further pointing was done.

Bang and Warlock ran twenty-seven minutes. Each dog ranged wide and at good speed, showing quite good judgment. Warlock made an error on his first chicken. Bang roaded well to a point, and was stanch. Bang's work to the gun was best, and he showed a more workmanlike performance.

Jubilee Prince and Manitoba Spot ran twenty minutes. The heat was a poor one. Spot refused to go out from her handler, seeming to be timid, and Prince's range was erratic. This heat closed the Derby.

RAT PORTAGE.

Monongahela Valley Trials.

HOMESTEAD, Pa., Sept. 2.—*Editor Forest and Stream:* At a recent meeting of the board of directors of the association, S. B. Cummings resigned his office as secretary, and I was elected to fill his unexpired term. The field trials date was changed from starting Nov. 1 to Nov. 22. Entries will close Oct. 22 for both Derby and all-age, just one month before the starting. Trials will be run on the percentage plan as heretofore, with $5 to nominate and $5 to start; 20 per cent. of this money will be retained by the club, and the remainder will be divided into 50, 30 and 20 per cent. Our preserve grounds are excellent for holding field trials. They are almost level. Birds are reported very plentiful this year, and all that will be necessary to make these trials a great success is for owners to enter their dogs and come and see them run. Messrs. W. S. Bell and Simon C. Bradley are the judges, and this of itself will insure just treatment and just decisions. Entry blanks are now ready, and will be mailed to any one wishing, with any information desired regarding the trials.

A. C. PETERSON, Sec'y.

American Fox Terrier Club.

BOSTON, Mass., Sept. 8.—The following American Fox Terrier Club stakes will be judged at the open air show of N. E. K. C. 1898 Yankee stakes, home-bred puppy stakes, and second division of the twelfth grand produce stakes, and the following specials "open to members of the A. F. T. C. only":

$2.50 each for best American-bred field trial dog and bitch in free-for-all classes (smooth).

$2.50 each for best dog and bitch (wire).

$2.50 each for best dog and bitch (novice, smooth).

$2.50 each for best dog and bitch (wire).

$2.50 each for best puppy (smooth and wire respectively).

T.

Points and Flushes.

The second forfeit of the Continental Field Trial Club's Derby closes on Oct. 1. This club is making admirable efforts in behalf of field trials, and owners and field trial supporters should give it their material attention. Mr. W. B. Meares, secretary, Hillsboro, N. C.

Mr. James F. Kirk, of Toronto, Canada, died on Sept. 3. Some years ago he accepted invitations to judge at many shows in the United States, and was respected and admired for his skill and integrity as a judge, and his sterling qualities as a man. He had an excellent knowledge of all breeds of dogs, though he made a specialty of spaniels. Of late years he has judged mostly in Canada. At the time of his death he was manager of the London and Canadian Loan and Agency Company, with which institution he had been connected during many years past.

Volume IV. of the Greyhound Stud Book, 1898, is a most creditable addition to the interests of the greyhound, and a testimonial to the skill and industry of the compiler of the Stud Book, Mr. Louis F. Bartels, Denver, Colo. It contains the addresses of coursing secretaries, of gentlemen registering greyhounds, of judges, shippers, and the American Coursing Board constitution, by-laws, rules, officers and members; a historical sketch of coursing, reviews of coursing in different sections, winners of cups, etc. It is neat and substantial in its mechanical features.

Yachting.

The America Cup.

A MEETING of the committees of the Royal Ulster Y. C. and the New York Y. C. was held at the New York club house on the morning of Sept. 6, there being present Vice-Com. R. G. Sharman-Crawford, Hon. Sec'y-Treas. Hugh C. Kelly, and Messrs. Hugh M. McGildowny, Wm. Fife, Jr., and Charles Russell, representing the challenger; and Com. J. P. Morgan, Sec'y J. V. S. Oddie, Treas. F. W. Hurst and Messrs. H. B. Duryea, E. M. Brown and H. F. Lippitt, representing the defending club. Mr. Lippitt was appointed to fill the vacancy on the committee caused by the declination of Gen. Paine. The result of the meeting was the drawing up and signing of the following conditions to govern the match for the Cup:

New York Y. C., No. 67 Madison Avenue, New York, Sept. 6, 1898.—Conditions to govern the races for the America's Cup, under the challenge of the Royal Ulster Y. C. on behalf of Sir Thomas J. Lipton, dated Sept. 3, 1898, as agreed upon by the committee of the New York Y. C. and Royal Ulster Y. C., at a joint meeting held on this date:

Number of Races.—The match to be decided by the best three out of five races.

Courses.—Starting from Sandy Hook Lightship: First race, to windward or leeward and return; second race, equilateral triangle; third race, similar to first race; fourth race, similar to second race; fifth race, similar to first race.

The starting line and compass bearings to be announced as early as practicable, and the tug bearing the marks to be started ten minutes prior to the preparatory signal.

In every case the course from the starting line to be laid to windward, if possible, from Sandy Hook Lightship.

In case a course as required by the conditions cannot be laid out from Sandy Hook Lightship, the regatta committee may provide some other suitable starting point, and in this case the preparatory signal will be given about half an hour later than the time named for starting from the lightship.

Length of Courses.—The courses shall be as nearly as possible 30 nautical miles in length.

Start.—The starting signal shall be given as nearly as practicable at 11 A. M., and this time shall not be changed except as follows:

First—By the regatta committee, as described in the preceding paragraph, for changing the starting point.

Second—By the regatta committee, in case of fog.

Third—By the regatta committee, if in its opinion the space around the starting line is not sufficiently clear at the time appointed.

Fourth—In case both yachts consent to a postponement, in which case the regatta committee shall determine the time of the start.

Fifth—In case of serious accident to either vessel, as hereinafter provided.

Signals.—The preparatory signal shall be given 15 minutes before the starting signal, and in case of a change in time of start a preliminary signal shall be given 15 minutes before the preparatory.

At the starting signal a yacht may cross the line; the exact time at which a yacht crosses the line during the succeeding two minutes to be taken as her start, and the end of that period as the start of the one crossing after its expiration.

If a race is not started by 1:30 P. M. the regatta committee shall have the right to declare the race postponed for the day, and no race shall be started after 3 P. M.

Time Limit.—If in any race neither yacht goes over the course within 5½ hours, exclusive of time allowances, such race shall not count, and must be resailed.

Selecting the Defender of the Cup.—The challenger shall be informed at least one week before the first race what vessel is to defend the cup.

New York Y. C. Rules to Govern.—The system of measurement, time allowance and racing rules of the New York Y. C. to govern the races, except as herein modified.

The first race shall be sailed on Tuesday, Oct. 3, 1899, unless Shamrock should be detained by stress of weather or other cause, in which case three weeks shall be given her for fitting out after her arrival; but the first race shall not be started later than Oct. 10, 1899, and the races shall be sailed on Tuesdays, Thursdays, and Saturdays until completed.

Repeated Races.—An unfinished race of one kind shall be repeated until finished.

Accidents.—In case a serious accident occurs to either vessel prior to the preparatory signal she shall have sufficient time to effect repairs before being required to start, or if such accident occurs during a race, before being required to start in the next race.

Representatives.—Each vessel shall have on board during races a representative named by her competitor.

Manual Power.—Manual power only shall be used for working the competing vessels.

Measurement.—The competing yachts shall be measured with all the weights, dead and alive, on board which they intend to carry during a race, but shall not have on board more persons, all told, during any race than three for every 5ft. of racing length or fraction thereof. Waste or water tanks, if carried, must be filled with water at the time of measurement.

The restriction of the New York Y. C. rules as to floors, bulkheads, doors, water tanks, to be waived.

If either yacht, by alteration of trim or immersion by dead weight, increase her L.W.L. length, or in any way increase her spar measurements, as officially taken, she must obtain a remeasurement by special appointment before the next race, or failing this, must report the alteration to the measurer, at the club house, by 10 P. M. of the day before the race following such alteration, and must arrange with him for remeasurement, and if required be in the Erie Basin by 7 o'clock A. M. of the day of said race, and there remain until 8 o'clock A. M. if necessary for purposes of remeasurement.

If either yacht decrease her measurements for sailing length in any way, in order to profit thereby in time allowance, in any race, she must obtain a remeasurement by special appointment before such race, or notify the measurer and be at his disposition as above described.

A measurement taken as provided above shall be final and not subject to protest by either party.

In the event of the measurer being unable to obtain a measurement which he considers accurate before a race, a remeasurement shall be taken as soon as possible after the race.

Marking the Load Waterline.—Distinct marks shall be placed at the L.W.L. at the bow, and as far aft as possible on each vessel.

(Signed)

HUGH C. KELLY, Hon. Secretary and Treasurer.

The Seawanhaka Cup.

A SPECIAL meeting of the Royal St. Lawrence Y. C. was held at the club house, Dorval, on Sept. 2, to take action in the matter of the Seawanhaka international challenge cup. The following report of the meeting is from the Montreal Gazette:

Resolved, That this club approves of the resolution in relation to the international cup passed by the sailing committee of the Royal St. Lawrence Y. C. on Aug. 19 last, and approved by the executive committee of the club, and authorizes the sailing committee of this club to take such further action with respect to the matter as they may deem advisable.

The above resolution was practically the sum and total done at the meeting of the Royal St. Lawrence Y. C. last evening. In this connection it might be as well to state that an unfortunate typographical error, which substituted the word simplification for amplification, caused considerable misunderstanding in the American press.

After the usual dinner at the club, and a few minutes of smoking, Com. Riddell took the chair and explained the object of the meeting, which practically was being held for the benefit of those who had not been able to take any active interest in the sailing affairs of the club, which duties were consigned to the sailing committee, who were considered to have full power.

Newspaper reports, which were considered to be not official, but interesting, had a tendency to put the club in a false position, and the difficulties were only complicated by the challenges already received from the West. A great deal of comment which did not represent the feeling of the club had been read in the newspapers. This comment should be taken with a grain of salt, and if the sailing committee consider it advisable to send back the cup it should be done as courteously as possible. The question of the advisability of building new boats was next touched upon.

Mr. Kennedy asked who was the holder of the cup. A question which Mr. Duggan explained by telling that the cup had been donated by a club, had been challenged for by a club, and had been defended by a club.

Some desultory discussion followed, which had no particular bearing on the case. Mr. Buchen offered the resolution which appears at the head of this column, and in supporting it thought that in future rules should be so changed and amplified that no such unfortunate incident as marked the last contest could possibly happen. The suggestion was also made to the effect that a better understanding could be got at by a mutual arrangement between the Seawanhaka and the Royal St. Lawrence clubs. There were some little troubles which had been paid much attention to, but which after all were more of the individual sort than could be laid at the door of any club proper. The majority of the American papers had treated the matter in a calm, judicial way, and only congratulations could come to them for the fair and sportsmanlike spirit in which they had accepted the decision after the races were over.

Mr. Buchen's resolution, which was loudly applauded, was seconded by Mr. Lansing Lewis.

Several gentlemen commented on what they thought was the hasty action of the committee, and a suggestion was made that, the deed of gift being perfectly clear, the cup should stay here until challenged for and won in the ordinary course of events.

Mr. E. K. Greene pointed out the futility of placing any stress on private telegrams, being matters which no club could seriously consider. A suggestion had been made to hand the cup over to the Royal Canadian Y. C. to defend, irrespective of anything which might happen afterward.

Com. Riddell explained that the celebrated telegram was in no wise official, had nothing whatever to do with the decision of the sailing committee and should never have been published.

As the meeting was in the nature of a committee of the whole, the discussion was free and unlimited, but at the same time very interesting. Mr. Kennedy thought it would be advisable to adjourn for a month and moved a resolution to that effect. In this he was seconded by Mr. Fulton, and supported by the Messrs. Ross.

In discussing the motion to adjourn, Mr. Duggan pointed out that prompt measures were advisable, as a challenge from England might make considerable trouble.

After some more desultory talk, Mr. Buchen made the speech of the evening, in which he pointed out that a club of the standing of the Royal St. Lawrence should be above the cognizance of apparently insulting communications. There was no room for elasticity of rules or sharp practice. The R. S. L. Y. C. wanted to play fair, with no advantage; they preferred to give the challenge cup back again. He thought the resolution was courteous and dignified, and that it was the duty of the club to stand by the sailing committee's decision. In explanation of a remark, Mr. Duggan came down to very plain facts, and pointed out that there were few people on the lake who cared to take the trouble or spend the money which would be necessary to defend the cup, open as it is on its present conditions.

A little more discussion, and the matter was brought to a vote. The motion to adjourn for a month was lost, and Mr. Buchen's motion was carried on a unanimous vote.

This means that absolute power was placed in the hands of the sailing committee in future dealings concerning the cup.

In its issue of Aug. 25, the first after the termination of the Montreal races, The Yachtsman devotes its leading editorial to the subject of the Seawanhaka cup. In view of the feeling which our position has awakened in certain quarters, we venture to reproduce what is absolutely independent opinion, written before the FOREST AND STREAM of Aug. 27, as dated, had gone to press in New York. This opinion, which is presumably fair and impartial, is based on the main facts of the races as cabled to the other side:

The yachting atmosphere is at present so surcharged with the America Cup challengers, 90-footers, large schooners, etc., that we are afraid that the latest development of international racing may fail to attract the attention due to it. Yet the matches sailed for the Seawanhaka cup this year are pregnant with instruction to those who wish blindly to rush into a fresh contest for the America Cup. Mr. Duggan, who is the mainstay of the Royal St. Lawrence Y. C., this year designed four or five boats for the defense of the cup against the Seawanhaka C. Y. C., and one of these was a double-hulled craft.

This was the boat, Dominion, which was selected to sail against Mr. Crane's Challenger, with the result that she very easily defeated the American craft in every race, though four had to be sailed owing to her being disqualified on protest in the first. The result gave such umbrage to the visitors that, as a telegram from New York says, they returned home immediately after the matches, without waiting to be entertained as usual by the defending club. The reason for this ire seems to us to be very absurd, viz., that they objected to the cup being defended by a "freak" boat.

In this year of grace it is not a little amusing to read that our cousins have been so completely beaten at a game essentially their own, and the way in which they take their beating only serves to bring the absurdity of the affair into prominence. What constitutes a "freak" we are afraid to say, but probably it is something uncommon, useless for any purpose save that of racing, and built for that purpose only. If this be anything like an accurate definition, it applies to the challenger's boat as well as to Dominion, and indeed to all the boats that have raced for the cup.

The cup is a direct incentive to the production of "freaks," and the funny part of it is that the people who grumble now at being beaten by a more "freak-like" boat are the men who made the rules under which the cup is held. Defender was essentially a "freak" boat, for we cannot distinguish between a boat that gains an advantage by means of freak construction and one which obtains it through a "freak" shape. The latter indeed is the more worthy of praise, for the advantage is derived from the more fertile brain of the designer, while in the former it comes from mere mechanical skill.

It is interesting to note that double-hulled boats were tried under our S. A. rule, and were not successful. Mr. Herreshoff, however, thought that he could build one that would "whip creation" under that rule, as we have stated several times. What Dominion may be like we do not know, but probably she differs in some important respects from Black Deuce and other craft seen in our waters. Such boats, even had they been successful here, would certainly have been regarded as "freaks," but nobody would have denied their perfect legitimacy.

Now this little episode goes to emphasize the oft-repeated statement that international racing is more likely to lead to squabbles than to an increase of concord between the yachtsmen of two countries. This has emphatically been the case with the America Cup races, and therefore any attempt to challenge for it again should be most carefully conducted. If we may take the attitude of Mr. Crane as an example of what American feeling would be if the America Cup were won by a foreign challenger, it would be far more satisfactory to send out some craft that could have no earthly chance of winning it than one carefully designed and built for the purpose, or, best of all, to send no challenge at all. And we very much fear that the Crane spirit is not uncommon among the yachtsmen of America.

In its "Notes and Notions" The Yachtsman continues on the same subject:

It seems that there is a little sore feeling on the part of the Seawanhaka C. Y. C. because the Canadian boat is of what some members denominate the "freak" type, and they consider it unsportsmanlike to have defended the cup by a boat which they say was not contemplated and can scarcely be considered as a practicable vessel. There is a certain serious ground in this argument, but was there not "a hair of the same dog" in a bigger international contest a while since? We never heard it advanced, however, though surely it could not have been because it then would have cut the other way. Upon account of this feeling, and in view of changed conditions since the rules governing the events in which small yachts compete were formulated, it is stated that the R. St. L. Y. C. has decided to return the Seawanhaka challenge cup to the States. If this be so, what a chance for another "new deed!"

THE following is the letter presented by the race committee of the Seawanhaka Corinthian Y. C. at the special meeting of the club on Sept. 3, and then endorsed by the club:

To the Royal St. Lawrence Y. C., Dorval, Montreal, Canada.

Gentlemen: By resolution of the Seawanhaka Corinthian Y. C., adopted at a special meeting held at Oyster Bay on Sept. 3, we are instructed to send you this letter. Members of the race committee had fully intended to be present at the recent match, but, much to their disappointment, were prevented at the last moment by engagements of controlling importance. Mr. R. W. Gibson kindly consented to serve as our representative, and in consultation with Mr. Clinton H. Crane was fully authorized to act in our behalf. On Aug. 12 the Dominion was chosen to sail the match as your representative yacht. Mr. Gibson thereupon addressed to your sailing committee the following protest:

"MONTREAL, Aug. 12.—To the Sailing Committee of the Royal St. Lawrence Y. C., per A. F. Riddell, Esq., Chairman.—Gentlemen: The race committee of the Seawanhaka Corinthian Y. C. have instructed me to lay before you their opinion in regard to the eligibility of the yacht Dominion, which, I am just informed, has been selected by you to defend the Seawanhaka international challenge cup.

"We are of opinion that the universally observed custom of classifying vessels with two hulls in classes distinct from one-hulled boats as catamarans should be considered as applying to the yacht Dominion, inasmuch as she has two distinct immersed hull sections and two separate water lines, constituting two hulls, which are connected only above the waterline.

"It seems to us that the reason catamarans were not specifically barred in the agreement was because the custom of classifying them separately was so settled as to amount to an unwriten law requiring no mention.

"Under these circumstances we feel obliged to make a formal protest against the selection of the Dominion to defend the cup, and we appeal confidently to the sailing committee of the Royal St. Lawrence Y. C. as umpires to give this question a new and impartial consideration for the welfare of the sport in which we are all deeply interested.

"We cheerfully leave the decision in regard to these races in your hands, and will abide by your ruling.

"We remain, gentlemen, very respectfully yours,
"Race Committee of Seawanhaka Corinthian Y. C., per R. W. Gibson."

We beg to advise you that the action of our representatives in making this protest and in sailing the match against Dominion has our unqualified approval and that of our club. We should not deem it necessary to make this formal avowal except for certain incidents made public in the press, which may have conveyed a mistaken impression as to our attitude. We allude especially to a personal telegram, sent by two members of our club to Messrs. Gibson and Crane, which was intended to be a personal and confidential suggestion. Unfortunately it was transmitted over a private newspaper wire from Montreal to your club house at Dorval, and came into the hands of a reporter, who made it public without authority. The publicity given to this private telegram through comments of the press has no doubt led to a general impression that it was in a manner official and represented our wishes. We desire to assure you that it was sent without our knowledge, and that we regret the incident. The gentlemen who signed it have addressed us a letter, in which they assume the entire responsibility personally, and specially request us so to advise you.

Having through our duly authorized representative made a formal protest against the selection of Dominion, agreeing in advance to abide by the decision of your sailing committee, we unhesitatingly accept that decision as the expression of the conviction of your committee that the Dominion was eligible under the declaration of trust to defend the cup, and we therefore regard the match of 1898 as a closed incident, not open to further discussion. A profound difference of opinion, however, exists between us as to the propriety of accepting this decision as a precedent for the interpretation of the trust declaration and the government of future matches. It is our conviction, and that of our club, reached after full discussion and deliberation, that a vessel of the Dominion type is not within the contemplation of the declaration of trust, and that therefore, without the consent of our club, expressed by formal amendment as prescribed in the instrument itself, such a vessel should not participate in future matches for the cup. Some confusion may perhaps have arisen in discussing the question from the use of the word "catamaran." It may very well be that the Dominion technically is not a catamaran, and that she may be merely an extreme development of the principle adopted without objection in El Heirie, Glencairn, Speculator and Challenger. However this may be, our point is simply this, that, whatever she may be called, or however her conception may be accounted for, she is a vessel which in design passes the limit of fair competition with vessels not possessing her peculiar feature of double hulls or separated bilges. While not now attempting technical argument, we cannot admit that such a vessel, even though evolved through the application of principles heretofore accepted, remains justly in the class from which she may have been evolved. It can hardly be questioned that, had such a development been foreseen at the time when the cup was established, it would have been expressly barred by the declaration of trust. But, whether this be so or not, we are not willing ourselves to challenge for the cup with a vessel of this type, and we could not regard with indifference the admission of such vessels to contests between other clubs for the cup which our club has founded. It cannot be doubted also that if the recent match is to be accepted as a controlling precedent the result will be either that future contests will be limited to vessels embodying a progressive development of the peculiar features of Dominion or that competition for the cup will altogether cease. Either result, it seems to us, should be deplored. As founders of the cup, knowing that it has done much, if not for the art of designing, certainly what is far more important, for the development of Corinthian sailing, we feel a deep interest in its future, and we do not doubt that you, who won it under circumstances reflecting such high credit upon your enterprise and upon the skill and character of your representatives, and have since twice successfully defended it, are equally solicitous. While we are firmly of the opinion that no amendment is necessary to the declaration of trust, yet if after final consideration you find yourselves unable to concur in our views as to the proper interpretation of that instrument, we invite your attention to the fact that it was framed in a liberal spirit, having in view the possibility of developments which, in the interests of yachting, would make changes advisable or necessary, and expressly provides that it may at any time be amended in any respect whatever by the consent of the holder and of our club, subject only to the condition that in case a challenge is pending the consent of the challenging club must also be obtained. With great respect, we remain, gentlemen, yours very truly,

OLIVER E CROMWELL,
CHARLES W. WETMORE,
WALTER C. KERR,
CHARLES A. SHERMAN,
Race Committee, Seawanhaka Corinthian Y. C.

SEPT. 3.

The reports of Messrs. Crane and Gibson, and the letter from Messrs. Dresser and Kerr explaining and assuming all responsibility for their telegram, have not yet been made public, but the following letter sent by Messrs. Kerr, Dresser and Sherman, on behalf of the race committee, to Mr. Crane some days prior to the first race, was given out:

---

1. We hesitate to address the Royal St. Lawrence Y. C. committee on this subject so long as they have not yet chosen Duggan's "freak" as the cup defender.

2. We fear to bring up the matter after they have chosen it, for such choice will doubtless be advisedly taken and irrevocable.

3. This makes it a delicate matter to handle from a distance, and we think you should feel your way as to what is the best and most diplomatic method of expressing our views.

4. Specifically from your description we consider Dominion a catamaran and ineligible in spirit, under the rules, to race for the cup.

5. We would prefer to state our belief rather than argue or give reason purely to avoid altercation and possibly misunderstanding, leading to strained relations.

6. We therefore prefer to have them withdraw from consideration of this freak as a candidate for defender without our formal protest, and we authorize you to give to them, as delicately as possible, a hint on which they can act without it being known or said that we had to object to prevent her choice of entry.

7. We should consider the admission of such a type of craft detrimental to the sport of yachting.

8. We assume that their race committee would have jurisdiction in the event of a protest, and we should not wish to leave such a matter to any committee who are themselves choosing a defender, and therefore it seems to us at present our course would be to withdraw rather than protest in case this freak is selected. We should have to state very clearly our reason for withdrawing, which we have not time now to formulate, and we trust it may not prove necessary.

9. From such consideration as we have time to give we consider your demonstration of the reason why one hull is an outrigger is good, and can be used in defense of our decision, if it ever becomes necessary to argue the point technically. Kerr hopes that he will be able to reach Dorval on Friday, but if you want any further advice in the meantime wire or write and we shall do the best we can from this end.

I have asked Fred Tams to overhaul the archives of the New York Y. C., as we are under the impression that the definition of a catamaran was clearly made when the question of entering such a vessel came up in the New York Y. C. some years ago.

I shall be unable to reach Montreal in time for the first two races, but expect to see some of them, and in the meantime wish you the best of luck.

CHARLES A. SHERMAN.

The letter of the committee to the Royal St. Lawrence Y. C. covers two important points, it repudiates the Dresser and Kerr telegram and relieves the Seawanhaka Corinthian Y. C. from all responsibility for this act of its representatives, and it also places the club on record as accepting the result of the races after having once started, as promised in the final clause of Mr. Gibson's letter. When it comes to the real point of the dispute, the eligibility of Dominion, the letter fails to reach a final and satisfactory conclusion. On this subject the committee goes no further than to express its opinion that vessels of the Dominion type should be summarily barred in the future. In support of this opinion no arguments whatever are adduced, and the committee virtually abandons the original contention that Dominion is a catamaran, and also admits the claims that she is a direct development of the principle of design embodied in other boats of her class.

It seems to us that this position is by no means what is to be expected from such a body as the race committee of the Seawanhaka Corinthian Y. C.; and that it will not stisfy the great yachting public of this country and Europe, which to-day is keenly watching and studying every development of designing and racing with a view to the remedying of many recognized evils. The position of the Seawanhaka race committee is, briefly, that Dominion is a freak of such extreme and abnormal type as at once to place her far beyond the bounds of argument and calm scientific investigation. We doubt very much whether any number of disinterested yachtsmen will accept this view as opposed to the other side,

RECRUIT—DEFENDER OF QUINCY CHALLENGE CUP, 1898.
Designed by J. R. Purdon from photos by N. L. Stebbins.

that the hollow under Dominion's bottom is but one detail (and by no means the most important) of the entire subject of freak designing with which the Seawanhaka C. Y. C. in particular has for several years concerned itself closely. In view of the well-known efforts of the club and especially of its race committee in the direction of the study of existing conditions and proposals for the remedy of certain evils, the deliberate exclusion of a strictly technical matter such as this, as entirely beyond the pale of argument, is certainly not calculated to impress the average yachtsman as strong and conclusive reasoning. The case seems to be one which specially calls for that technical argument which the committee refuses to present, and which will probably be carried on by yachtsmen at large until some general conclusion is accepted.

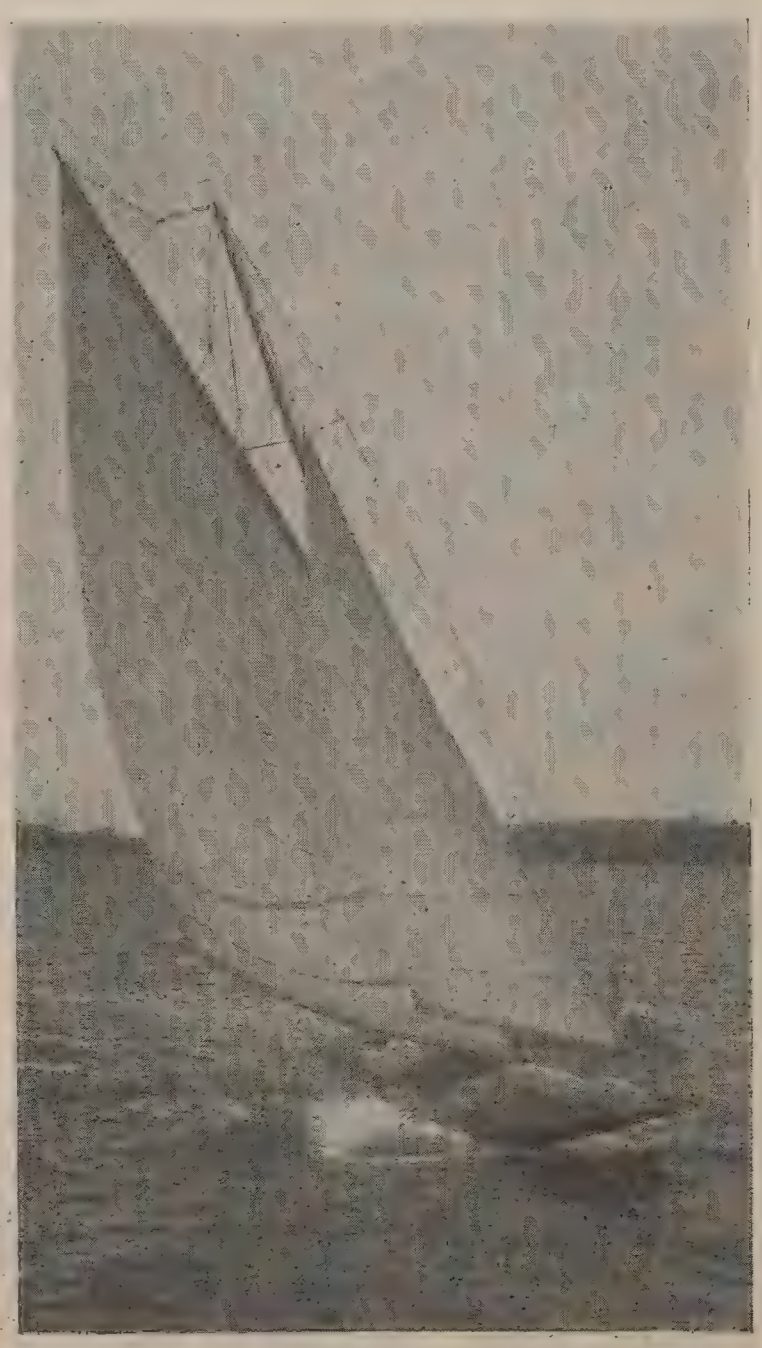
Without going far into this part of the subject, it is but proper to point out that the arguments advanced against Dominion during the races have all failed. It does not appear that the archives of the New York Y. C. have revealed any definition of a catamaran, or if so, that such definition will apply to Dominion; nor have they disclosed any precedent for barring her. The lack of strong technical argument against her is shown in the ninth clause of the letter to Mr. Crane, above quoted, referring to the attempt to exclude her under the clause of Article VIII. of the general regulations of the match, "No outrigger or other mechanical device for carrying live ballast outboard shall be allowed." It is a fact, strange as it may seem, that intelligent men actually thought that Dominion might be barred under this rule on the ground that the weather side of the deck became an outrigger.

So far as we can understand the position of the race committee, it has no better foundation than a vague and indefinite sentiment that a "single hull' boat is of necessity something admirable, while the "double hull" boat is precisely the reverse. The origin of this idea is plain enough if we go back twenty or thirty years to the time when the "single hull" type was represented by big, roomy old cruisers, and the "double hull" by the skeleton catamaran with its small car, carrying a few persons for an afternoon sail. This idea, however true in the past, cannot be considered for a moment in connection with Challenger and Dominion; but the comparison must and will be made solely on the merits of the two boats in the cup racing of to-day.

RECRUIT DISMASTED ON AUG. 26.

The "single hull" type, which the race committee accepts as perfectly satisfactory, is well represented by Seawanhaka and Challenger. Leaving apart their obvious close relationship to Dominion and material difference from all previously known yachts, it is sufficient to take them just as they are, racing machines of great cost and limited durability; unfit in general model for any purpose but racing, and in construction for more than a few races. This year has witnessed several new extremes of bad development, the cost has been increased, safety and durability have been absolutely disregarded, and as a special feature two boats have been built to do the work of one. It is probable that Seawanhaka would have stood the strain of the cup races, though she was badly out of shape at the end of the trial races; but, as a matter of fact, the challenger was represented in the cup races by a boat which never sailed in the trials, and the winner of the trial races, after being chosen by the committee, did not sail in the cup races. While this was all regular, it indicates a new refinement of freak racing, building two flimsy and very costly boats to do the work previously done by one.

The "double-hull" boat which is condemned by the committee is also a racing machine, and most decidedly faster than the "single hull" type; the real end of all parties in this competition. After making due allowance for the difference in cost of construction on the north and south shores of the St. Lawrence, Dominion, owing to simpler construction and the use of less expensive materials, cost probably 25 per cent. less than Challenger and Seawanhaka. She is very much stronger, being to all appearances still good for indefinite use in racing or general sailing after the last of the cup races. She is quite as safe, infinitely more comfortable as a racing machine, owing to the large flat deck and small angle of heel, and as far as she has been tried is an excellent boat in rough water. She belongs to a bad type of racing machine, and she is not a desirable type of yacht; but in her class, apart from her incontestible superiority in speed, she is a better boat in every way than Challenger, Seawanhaka, Skate or Al Anka; boats which have been recognized as perfectly legitimate and eligible.



For ourselves, we have nothing to say for this class. For the past two years it has produced nothing but freaks, and has done nothing but harm to yachting; and if any further good is to come from the Seawanhaka international challenge cup, some important changes must be made in the conditions. We would point out, however, that what the committee says about Dominion, as of a new and unusual type, not contemplated when the conditions were framed in 1895, and of the possible effects of such a vessel on future racing, applies just as fully to Challenger and Seawanhaka, except for the fanciful distinction of the "double hull." If Dominion had never been built, the extreme of cost, weakness and general uselessness reached in the two Seawanhaka representatives this year would still have stood as a bar to further good results in the cup racing.

So far as remedy goes, the committee has nothing further to recommend than the summary and arbitrary barring of the Dominion type, a proposition that entirely fails to meet the case. In the first place, it will be by no means an easy matter to attain even this end. We do not know what the ideas of the committee are, but two methods have been suggested in the course of the general discussion of the case. One of these is to prohibit any hollow whatever in the floor of a boat; the other is to allow a hollowing of the floor, provided it does not come quite to the water when in measuring trim. The first proposition is arbitrary in the extreme in the present stage of yachting legislation, a discrimination, supported by no scientific reason, against one of the innumerable details of designing. If it be allowable to replace the old conventional yacht form with a thing modeled after a coffin or a dry goods box, with a perfectly flat floor, merely to evade the rule and gain speed, why should not a designer be allowed to hollow the floor for the same end? If any hollowing of the floor be allowed, then it will only be necessary to design an improved Dominion to meet the rule, with the hollow below the L.W.L. when in measuring trim, but allowing one hull to lift out when at the proper sailing angle. This involves a bit of trick designing that may be difficult, but not necessarily impossible. It will be found a very difficult matter, in all probability, to frame a reasonable and practicable rule for excluding the Dominion type without affecting the Glencairn type; and the race committee offers no suggestions in the matter. Even if this much be successfully done, and the new type barred, there still remains the necessity of going to a more undesirable extreme, if such be possible, than in Challenger; enough to deter most yachtsmen from further competition for the cup.

Coming down to the actual conditions of the cup racing to-day, they are such as to demand a far more practical and searching investigation than the Seawanhaka committee has bestowed on them. It is very desirable that the racing for the cup should go on every year, and that under conditions which will produce such excellent results as in the first two years, when the 15-footers were in vogue. At that time there was a general interest in the racing, and a reasonably useful boat could be built and raced at a moderate cost, being fully capable of subsequent service. To-day no one cares for such a machine as is necessary, they are only built because the cup must be challenged for or defended, and then by syndicates. As the racing has been carried on for the past two years, it is hurting instead of helping both parties; and in default of very radical changes it must be worse instead of better each year. The principle of design which now governs the class is probably of no real value, it is simply a method of cheating the measurement of waterline; as it stands, with no supplementary restrictions, it is a positive premium upon freak designing, as shown each year in the trial races at Oyster Bay. Whether it stops short at the point of nominal "single hull" sailed with keel and one bilge out of water, or whether it goes a little further to the point of actual separation of the two bilges, is but a matter of immaterial detail. What is needed is a radical revision of the measurement rule, with restrictions on extreme light construction and other undesirable features, so as to produce a fairly durable and serviceable racing boat. How to accomplish this end is likely to prove a difficult question, but it is evident that nothing short of some such general remodeling of the conditions will give any life to the races or make the results of any value. The appreciation of the necessity for such work, and of its serious difficulty, is one reason why the present holder of the cup is desirous of returning it.

The following notice has been sent out:

"At the request of members, as provided in the by-laws, a special meeting of the club will be held at the Oyster Bay club house on Wednesday, Sept. 14, at 8:30 o'clock in the evening, for the purpose of considering the question of challenging the Royal St. Lawrence Y. C. to sail a match for the Seawanhaka international challenge cup during the season of 1899, and matters pertaining thereto."

RECRUIT.

Atlantic Y. C.

Sea Gate—New York Harbor.
Monday, Sept. 5.

THE only important yachting event of Labor Day about New York was that of the Atlantic Y. C., the entire day being devoted to races; the morning events for working boats, while the yachts had the afternoon to themselves. Good prizes were given in all classes. The working boat race was started at 11 A. M., in a very light S.W. wind, the course being a triangle between the club house, a mark off Fort Lafayette, and Red Buoy No. 12, three rounds, making fifteen miles. The times were:

	Length.	Elapsed.	Corrected.
Working Boats—Schooners—Start 11:05.			
A. M. Smith	47.00	4 21 11	4 13 20
John W. Stout	58.00	4 26 22	4 26 22
Working Boats—Sloops—Start 11:10.			
Sadee M., George H. Mott	36.00	. .. ..	. .. ..
Lauretta S., John Van Wart	31.60	4 28 53	4 20 38
Jennie, Robert Ewin, Jr.	37.00	5 13 20	5 03 42
Clara S., Lambert Snedeker	37.80	4 18 11	4 18 11
Franklin Brewer, John Brewer	32.00	4 06 16	3 58 38
Flyaway, George Syversen	34.50	4 11 40	4 07 34
G. W. Mojer, Albert Russell	32.00	4 39 56	4 32 18
Lena, Charles Johnson	33.40	4 21 08	4 15 32
Clara, F. Bradford	31.28	5 05 12	4 56 30
Charter Oak, Joseph Courtney	26.60	4 24 28	4 07 36
Tessie Carmen, N. Hanson	30.00	4 33 42	4 22 57

The yachts were started at 2:30 in a fresh S.W. wind, increasing for a time, and then coming light from the west. The fleet was started in divisions, as follows:

First Division, 2:35.—Impudent, Golightly, Tiger, Ella S., Seagull, Mauwee and Athene.

Second Division, 2:40.—Kit, Qui Vive, Dot, Rex, Oseonda, Vagabond and Dorothy.

Third Division, 2.45.—Baby, Martha M., Mary, Cleota and Sis.

Fourth Division, 2:50.—Vortex, Gunwar, Cyclone II., Gryphon, Madeline and Graff.

Fifth Division, 2:55.—Canoes No. 44, Aziz, No. 43, Zip and No. 45; dories Punkie, Dixie and Damfino.

Several of the small open yachts went up into the large class to race for the Adams cup, being placed at the middle of the class, 42.50ft. R.M., or at about double of their real measurement. The first round was quite exciting, owing to the lively breeze; the times were:

Seagull	3 19 57	Mary	3 40 21
Kit	3 20 59	Gunwar	3 43 20
Dot	3 22 05	Sis	3 43 28
Impudent	3 22 29	Vortex	3 44 30
Qui Vive	3 24 54	Madeline	3 44 58
Rex	3 26 48	Cyclone II.	3 44 58
Dorothy	3 27 46	Zip	3 45 31
Tiger	3 28 08	Gryphon	3 45 44
Mauwee	3 28 56	No. 43	3 48 28
Vagabond	3 29 43	Aziz	3 48 38
Golightly	3 30 00	Graff	3 48 39
Oseonda	3 30 53	Punkie	3 54 01
Athene	3 32 14	No. 44	3 55 33
Baby	3 35 26	Damfino	3 55 57
Martin M.	3 38 29	Dixie	3 58 06
Cleota	3 38 32		

As the wind was much lighter on the second round the race became less interesting. The final times were:

	Length.	Elapsed.	Corrected.
Sloops and Yawls, Group I.—Start 2:35.			
Seagull, J. Fred Ackerman	51.73	2 29 50	2 29 50
Tiger, A. J. Harrison	35.00	Did not finish.	
Athene, F. B. Mackey	....	3 03 58	. .. ..

Laurel, F. Burgess	14.00	2 07 00

Hull Y. C.

Hull—Boston Harbor.
Saturday, Sept. 10.

THE open race of the Hull Y. C. on Sept. 10 ended the season of the Y. R. A. of Massachusetts. Owing to lack of wind the start was postponed to 3:15. Though there was little wind then, a few minutes later a fresh N.W. breeze sprung up, making a good race. The times were:

	Elapsed.
25ft. Class.	
Hermes, A. W. Chesterton	1 27 20
Little Peter, H. Moebs	1 27 29
Eleanor, D. B. Clapp	1 29 55
Beatrice, John Cavanagh	1 34 25
Nettie, Walter Burgess	1 35 40
Open 21ft. Class.	
Recruit, F. B. Rice	1 30 25
Cleopatra, H. M. Faxon	1 33 58
Tacoma, C. Prior	1 36 10
Cabin 21ft. Class.	
Arab IV., W. P. Scott	1 33 50
Harriet, L. T. Harrington	1 35 00
Idler, S. Noyes	Withdrew.
Knockabout Class.	
Chinook, Adams Bros.	1 32 50
Hazard, H. M. Sears	1 32 51
Darthea, E. C. Lambert	1 33 30
18ft. Class.	
Duchess, C. Hayden	1 26 38
Vamoose, R. M. Brewer	1 28 31
Alpine, C. J. Blethen	1 30 47
Hesper, E. P. Johnson	Withdrew.
15ft. Class.	
Vitesse, E. H. Clapp	1 27 05
Katydid, J. F. Small	1 28 30
Firefly, Howard	1 43 00
Isidore, H. F. Cleverly	Withdrew.

This race gives Hermes the championship in her class.

The judges were T. E. Jacobs, James Bertram and E. C. Backus.

Annisquam Y. C.

THE Annisquan Y. C. sailed two races on Sept. 10 for the 15ft. trophy. The morning race was sailed in a light breeze, the times being:

	Elapsed.
Imp, Oscar Perkins	2 42 08
Gaboo, Walter Adams	2 42 42
Lynx, Fred L. Cunningham	2 42 50
Scooter, D. H. Woodbury	2 45 08
Tabasco, H. H. Wiggin	2 46 10
Gertrude, Harry E. Damon	2 46 28

In the afternoon there was a fresh south wind, shifting to N.W. and increasing. The times were:

	Elapsed.
Scooter, D. H. Woodbury	2 02 15
Gaboo, Walter Adams	2 02 50
Tabasco, H. H. Wiggin	2 06 00
Gertrude, H. E. Damon	2 06 41
Imp, Oscar Perkins	2 06 42
Lynx, F. L. Cunningham	Disabled.

Riverside Y. C.

Riverside—Lond Island Sound.
Saturday, Sept. 10.

THE Riverside Y. C. sailed a race on Sept. 10 in a fresh N.E. wind, the times being:

	Finish.	Elapsed.	Corrected.
15ft. Class—Start 3:20.			
Edwina II., J. N. Gould	4 26 27	1 06 27	1 06 27
Mermaid, G. M. Stanton	4 33 47	1 13 47	1 13 47
Fiddler, M. P. Vulte	4 13 15	1 12 15	1 09 44
24ft. Catboats—Start 3:25.			
Minnetonka, A. B. Alley	4 33 03	1 08 03	1 08 03
Lobster, T. J. S. Flint	4 35 12	1 10 12	1 04 04
Dories—Start 3:30.			
Bass, W. Fischer	4 48 15	1 18 15	. .. ..
Black Cat, C. H. Dayton	4 50 20	1 20 20	. .. ..

The winners were Edwina II., Lobster and Bass.

Eastern Y. C. Fall Regatta.

Marblehead—Massachusetts Bay.
Saturday, Sept. 10.

THE fall regatta of the Eastern Y. C. was sailed on Sept. 10 in a very variable and fluky wind, the times being:

	Start:	Finish.	Elapsed.	Corrected.
Second Class—Schooners.				
Loyal	11 15 49	5 28 32	6 12 43	6 10 03
Adrienne	11 16 13	5 30 55	6 14 42	6 14 42
Fifth Class—Sloops.				
Milicete	11 30 00	5 27 41	5 57 41	5 57 41
Choctaw	11 30 00	6 21 26	6 51 26	. .. ..
Third Class—Schooners.				
Barbara	11 25 32	2 58 14	3 32 42	. .. ..
Rusalka	11 25 35	3 42 36	4 17 01	. .. ..
Seventh Class—Sloops.				
Meemer	11 35 00	3 20 10	3 45 10	3 43 39
Onward	11 35 00	4 19 52	4 44 52	4 33 46
Cartoon	11 35 00	4 28 35	4 53 35	4 42 05
Ashumet	11 35 00	4 20 38	4 45 38	4 45 38
Saunterer	11 35 00	4 27 49	4 52 49	4 50 12
Handicap—Sloops.				
Shona	11 40 00	4 36 27	4 56 27	4 49 27
Camilla	11 40 00	4 41 59	5 01 59	4 58 59
Saladin	11 40 00	4 39 59	4 59 59	4 59 59
Mildred	11 40 00	4 42 45	5 02 45	5 02 45

Loyal, Milicete, Barbara, Meemer and Shona win first prizes, and Onward and Camilla win second.

Messrs. H. H. Buck, Eben B. Clarke and Odin B. Roberts had charge of the race.

Savin Hill Y. C. Annual Regatta.

Savin Hill—Boston Harbor.
Saturday, Sept. 3.

THE Savin Hill Y. C. sailed its annual open regatta on Sept. 3, with a very good fleet of yachts at the line, and some close racing in all the classes, in spite of the light wind, variable from the west. The times were:

	Elapsed.
30ft. Class.	
Meemer, R. C. Nickerson	1 45 45
Ashumet, C. F. Bache	1 47 28
Elfreda, Hall & Johnson	1 58 11
Emma C., P. A. Coupal	2 19 57
Harbinger, W. F. Bache	3 19 18
Heroine, C. A. J. Smith	Withdrew.
Open 25ft. Class.	
Romance, Loring Sears	3 16 37
Raccoon, H. Chivars	Withdrew.
Cabin 25ft. Class.	
Beatrice, J. Cavanagh	2 35 47
Eleanor, D. B. Clapp	2 37 40
Hermes, A. W. Chesterton	2 51 10
Little Peter, H. Moebs	2 52 47
Open 21ft. Class.	
Bud, S. N. Small	1 08 31
Cleopatra, H. M. Faxon	1 15 30
Tacoma, Elmer Prior	1 16 30
Cabin 21ft. Class.	
Arab IV., W. F. Scott	1 10 37
Privateer, A. E. Schaaf	1 11 00
Harriet, L. T. Harrington	1 15 00
18ft. Class.	
Vamoose, R. M. Benner	1 14 41
Circe, F. L. Pigeon	1 16 37
Fantasy, W. Allerton	1 17 38

Seawanhaka C. Y. C.

THE knockabouts of the Seawanhaka C. Y. C. sailed a special race on Sept. 5, starting at 11:30. The wind was light and variable, with calm spots at times. The times were:

	Elapsed.
Stella, Sherman Hoyt	5 18 05
Heron, J. A. Weeks	5 25 02
Senta, Daniel Bacon	5 29 00
Keewaydin, C. W. Wetmore	5 30 50
Dacoit, H. L. Maxwell	5 32 41
Gloria, J. R. Maxwell, Jr.	5 33 30
Nakodo, Mr. Sherman	5 33 45
Midge, F. W. Boyer	5 37 20

The Ethics of Up-to-Date Yachting.

NEW YORK, Sept. 8.—*Editor Forest and Stream:* The recent deplorable exhibition in Canada of how far honesty and fair dealing can be stretched before they become actual cheating, must be nauseating to all true yachtsmen.

It is surely disastrous to the interests of the sport when one of our representative clubs sanctions the use of a craft so lightly built that she cannot stand the strain of sailing on real water.

To build a structure that will not perform the work for which it was designed is simply bad engineering of the worst kind, and nothing more. Herreshoff's Defender was built to the extreme of lightness, but could have sailed races for months after she fulfilled her special mission without strain or alteration of form. This is good engineering.

What is gained by perfection of shape if the construction is so light that the lines cannot be preserved when the boat is sailed, the crew step through the deck, the boat is badly strained with less than one hundred miles of sailing, and changes shape from day to day?

Does it not also strike you that such risky attempts to gain a doubtful advantage are unfair to the club and the sport, as well as to the other contestant, although in this case they accrued to his advantage? Let us hope that the last days of the lath and piano wire trussed eggshell are near at hand.

In the craft opposed to the above engineering failure we find a deliberate evasion of the spirit of fair play in the shape of a floating "thing" called by courtesy a boat.

This obvious cheat was also endorsed by a club of gentlemen who doubtless hold larceny from the person to be a crime, but whose sense of fairness seems to be slightly fogged when a cup is to be won in a yacht race.

If we are to have a contest of freaks and a policy of "win; honestly if you can, but win," then let it be so announced and not disguised by taking the term "yacht" in vain.

In my humble opinion neither of the Crane boats nor the Duggan craft has any right to the name of yacht. The Crane boats by their construction are only fitted to sail on paper muslin seas under a glass case, and the Dominion—well, she certainly overhangs the catamaran-proa territory, even if, technically, she does not drop into it.

ENGINEER.

Yacht Racing.

Editor Forest and Stream:

To one who knows nothing of the merits of the question of propriety and fair play in the sailing of yachts in friendly competition it appears strange that no plan can be adopted that will insure sport and fairness.

This communication is no proof of a Daniel come to judgment, but only of an ignoramus with an idea.

Adopt just one single rule—length over all, not of the hull, but of the whole craft; that is, that the 21ft. of a certain class shall include every bowsprit, yard, spar, boom, sail, flag, streamer, rope or string, within that limit.

Inside this measurement give freedom to build anything from a dry goods box to a balloon; and then have it understood in advance that if we beat the other fellow he is a sportsman, and if he beats us he is not one.

ORIN BELKNAP.

Rifle Range and Gallery.

Zettler's Annual.

THE twenty-fourth annual shooting festival of the Zettler Rifle Club will be held at Armbruster's Greenville Schuetzen Park, Jersey City, on Tuesday and Wednesday, Sept. 27 and 28. All riflemen and lovers of this sport are cordially invited to participate. To reach the park from New York city take Cortlandt or Desbrosses street ferries; from Brooklyn take Pennsylvania R. R. Annex to P. R. R. Depot, Jersey City; from there Greenville or Bayonne trolley cars to Neptune avenue, Jersey City, two blocks from the park.

SHOOTING PROGRAMME.

Ring Target.—Distance 200yds., ¾in. (25) German ring target, any rifle. Open to all comers. Tickets $1. Two best tickets to count for the first ten prizes. The best single ticket to count for the following. Tickets unlimited. Only one prize obtainable by one shooter.

Bullseye Target.—Open to all comers. Ten shots for $1. The best bullseye to count by measurement.

Target of Honor.—Three shots. Open to members only, for the prizes presented by judges and members, and $150 donated by the club.

Special 25-ring Target.—Open to everybody. Three shots free. Only one ticket allowed to each shooter. A fine trophy presented by Zettler Bros.

Judges' Target.—Three shots. Open to judges only. Prizes: Two fine gold lockets will be presented by the club.

Ladies' Target of Honor.—Open only to the ladies of the club members, for prizes presented by the club.

Shell Mound Range.

SAN FRANCISCO, Cal., Aug. 29.—The shooting conditions at Shell Mound yesterday were good, and some fine scoring was done at the Columbia Club butts, notably a 10-shot score of 38 rings, Columbia target, by D. W. McLaughlin. He was closely followed by F. E. Mason, with 43 rings. This shooting was done at 200yds., off-hand.

Scores of the day, Columbia Club, were:

Columbia target, 10-shot scores, members' rifle medal: J. E. Gorman 55, A. B. Dorrell 69, 70.

Bushnell military medal, Creedmoor count: E. Jacobson 47, 46, 46; C. F. Waltham 43, 42.

Allcomers' rifle medal, Columbia count: D. W. McLaughlin 38, 44, 50; F. E. Mason 43, 48, 54; A. H. Pape 50, 52.

Pistol, Siebe medal, open to all comers: J. E. Gorman 42; J. P. Cosgrave 60; G. M. Barley 62, 62.

Twenty-five and .22cal. rifle, 50yds., and Roos trophy for ladies: A. B. Dorrell 19, 21; Mrs. C. F. Waltham 30, 35, 37, 40; Mrs. G. Mannell 33, 38, 39; Mrs. M. J. White 32, 38, 46; A. Johnson 60.

ROEEL.

Cincinnati Rifle Association.

THE following scores were made by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road. Conditions: 200yds., off-hand, at the German ring target. Gindele was declared king with a score of 202; Strickmier was high on the honor target with a score of 61. Strickmier was high man for the Uckotter trophy. G. A. R. festivities made the attendance rather light to-day, Sept. 4. Weather warm and some wind:

King target:										
Gindele	22	23	16	15	22	21	25	19	20	19—202
Payne	16	16	25	24	19	24	19	22	16	18—198
Hasenzahl	20	13	19	19	24	24	14	21	21	18—193
Strickmier	22	18	22	20	22	25	15	14	19	18—194

	Honor target.			Special scores.		
Gindele	21	0	22—43	212	205	203
Payne	23	18	18—59	208	205	199
Hasenzahl	10	20	18—48	208	207	206
Strickmier	21	19	21—61	214	202	198

Zettler Rifle Club.

THE Zettler Rifle Club had its regular outdoor shoot at Henry J. Bookman's Cypress Hills Park, Sept. 3. Only five members put in an appearance and the contest as usual was at the ring target, 200yds. range, best three scores to count. Henry Holges made high score. Summary:

				Total.
H Holges	224	223	219	666
F C Ross	219	218	218	655
C G Zettler	222	222	204	648
A Kronsberg	207	201	194	602
H Muenz	197	189	168	554

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Sept. 17.—New Brunswick, N. J.—Shoot of the Central New Jersey League.

Sept. 20-23.—Detroit, Mich.—Tournament of Michigan Trap-Shooters' League. W. H. Brwady, Sec'y.

Sept. 21-22.—Cleveland, O.—Cleveland Gun Club's eighteenth annual tournament. J. R. Donnelly, Sec'y.

Sept. 21-23.—Omaha, Neb.—Fourth annual shoot of the Du Pont Gun Club.

Sept. 22.—Natick, Mass.—All-day tournament on grounds of Natick Gun Club; open to all. Samuel Bowker, Manager.

Sept. 24.—Rutherford, N. J.—Handicap, 100 targets at 1½ cents; entrance $5; Rose system; commences at 1 o'clock.

Sept. 24.—Conshohocken, Pa.—Philadelphia Trap-Shooters' League, on grounds of Worthington Gun Club.

Sept. 28-29.—Bloomfield, Ind.—Bloomfield Gun Club's target tournament.

Oct. 4-6.—Des Moines, Ia.—Iowa State Sportsmen's Association; open to all.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 7-8.—Altoona, Pa.—Tournament by members of the Altoona Rod and Gun Club; targets and live birds. U. S. Houck, W. S. Bookwalter, G. G. Zeth, Committee

Oct. 11-12.—Mt. Sterling, Ill.—Mt. Sterling Gun Club's two days' tournament. J. Breldenbend, Sec'y.

Oct. 12-14.—Dayton, O.—Rolla Heikes' tournament; one day live birds; $200 added to target events.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Oct. 18-21.—Belle Meade Stock Farm, near Nashville, Tenn.—Two days at target; two days at live birds; $500 added. W. R. Elliston, Manager.

Oct. 18-21.—Baltimore, Md.—Fourth annual fall tournament of the Baltimore Shooting Association; two days at targets, two at live birds. $100 added each day. Geo. S. Harrison, Sec'y.

1899.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to hav printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the eighteenth annual tournament of the Cleveland Gun Club Company, Cleveland, O., Sept. 21 and 22, provides eleven events, which are alike for each day. There are three 10-target events, $1 entrance; five 15-target events, $1.50 entrance, excepting one at $1 entrance; three at 20 targets, $2 entrance. There is a fine list of average prizes, and $200 in cash added. Of this $10 is added to each event, excepting No. 6 of each day, which are merchandise events. Only those who shoot through the twenty-two programme events will be eligible to compete for the average prizes, of which, the programme sets forth, the first prize is a solid gold diamond watch charm, second a pair of fine shoes, third a box of cigars, fourth a $3 hat. Sept. 22 is set for the special handicap event, eligibility requiring that a competitor shoots through the regular programme events. This is at 25 targets, 50 cents entrance, targets included. No contestant, with the use of his handicap, shall be scored more than 24 broken targets. Straight scores cannot be tied with the use of handicap birds. Class shooting will govern, and if those who tie cannot agree on a division of the prize the tie will be shot off under the same conditions which govern the event. The shooting park will be open for practice on Sept. 20. Manufacturers' agents are barred from all except merchandise events. Shooting begins at 9 o'clock. To reach the shooting park take Wilson Avenue Crosstown Line to Kershaw street. All necessary further information will be furnished on application to the secretary, Mr. J. R. Donelly, 516 St. Clair street, Cleveland, O.

The sportsmen of South Framingham and vicinity have organized the South Framingham Gun Club, with twenty-five members. The following officers have been elected: S. F. Blodgett, President; L. E. Isham, Vice-President; D. C. Raymond, Secretary; E. E. Oliver, Treasurer; L. A. Isham, Captain. Directors: E. A. Staples and E. W. Fuller, in addition to the above named officers. A club house has been erected on excellent grounds, situated on line of electric cars. Club shoots will be held regularly, and it is the intention of the club to hold a number of tournaments the coming season.

The tournament of the Altoona Rod and Gun Club has been postponed to Oct. 7 and 8. Mr. Zeth writes: "We have several reasons for making the change, one of which is that we are getting a magautrap, and will place it on the pinnacle of Lookout Point and throw targets into space, with only the blue heavens as a background. It requires a lot of extra work and preparation, but the result will be most novel."

Under date of Sept. 10 that young and rising shooter who is constantly improving by practice, Mr. Rolla O. Heikes, writes us as follows: "I will give a shoot at Dayton, O., Oct. 12, 13 and 14, adding $200 to the target events. One day will be at live birds. I will give you particulars soon. I might say that targets will be thrown at 2 cents, and money divided so that all will be pleased, and all will be welcome."

From Haverhill, Mass., Mr. Jack Fanning goes to Batavia, N. Y., thence he may go westward. His win at Haverhill was the latest of a season of consistent high-class shooting. At the Rochester Labor Day shoot he broke 133 out of 140 shot at, an average of .95 per cent. All told, he has shot at 4,500 targets this season, on many different grounds and at all styles of shooting he has averaged .938 per cent., a most excellent showing.

Phil Bekeart, of San Francisco, Cal., has arrived in New York, and intends to put in a few days admiring some of Broadway's sky-scrapers. Mr. Bekeart, however, is usually to be seen in company with Harvey McMurchy, who also is in town; and it may therefore be well imagined that his stay in this city will not only be pleasant, but will also result in his returning to San Francisco with new ideas as to life in the East.

In two team races between Messrs. Bingham, Steck, Leffingwell and Levi on the one side, and Messrs. Paterson, Yonson, Marks and Smith on the other, at Watson's Park, Chicago, Sept. 9, at 5 live birds each man, losing team to pay for the birds, the scores were: Bingham's team 18, Paterson's 22. Second race: Bingham's team 24, Paterson's team 18. The final will be shot off at some future date.

At the New Utrecht Gun Club's shoot last Saturday at Woodlawn Mr. P. E. George won the club shoot by a score of 21 out of 25, and also the Troisdorf cup by a score of 20 out of 25. Mr. George and Mr. W. H. Thompson have now three wins each on the Troisdorf cup, and one more win by either makes it his personal property.

The Ideal Manufacturing Co., New Haven, Conn., are now ready to receive orders for their improved Shot Shell Loading Machine. Full information relating to it and all other implements of the company will be found in the Ideal Handbook and Catalogue, sent free on application to the Ideal Manufacturing Co.

Mr. E. M. Steck won the Montgomery Ward & Co. Diamond Badge in shooting off the tie on Sept. 9. On Sept. 2 Miss Edith Porter and Messrs. Barto, Foss and Steck were tied, as recounted in FOREST AND STREAM of last week, the shoot-off resulting as above mentioned.

The Baltimore Shooting Association desires the shooters to know that $100 added money will be given each day at its forthcoming tournament.

The Mt. Penn trophy was won by the Keystone Shooting League, of Philadelphia, with a score of 104 out of 125, in the five-men team shoot at Reading, Pa., Sept. 5.

The Ohio Trap-Shooters' League tournament, June 7-9, 1899, at Columbus, O., under the auspices of the Sherman Rod and Gun Club, is a fixture for next year.

In the contest for the Chicago challenge trophy, Sept. 9, Mr. J. B. Barto defeated Mr. Thos. P. Hicks by a score of 24 to 20, Barto at 29yds., Hicks at 30, Barto having one bird handicap.

In the Brooklyn Gun Club's cup shoot last Saturday Dudley, Billings, Amend and Asmus tied on 50. Harold Money was close up with a score of 49. Remsen 48 and Gil Hatfield 47.

Keep in Mind the Mt. Kisco Handicap, two events, 7 birds, $5; 10 birds, $10, Sept. 22. Address Mr. G. E. Sutton, Mt. Kisco, N. Y. Entries close Sept. 20 at 8 P. M.

BERNARD WATERS.

Buffalo Audubon Gun Club.

BUFFALO, Sept. 3.—The following scores are from the Audubon Gun Club's shoot of to-day. Mr. C. S. Burkhardt's shooting was the feature, breaking 69 out of the first 70 shot at, and winning Class A badge. Jacobs won Class B, and J. A. Kennedy won Class C:

C. J. MAYER.

IN NEW JERSEY.

FORESTER GUN CLUB.

Newark, N. J., Sept. 5.—The Forester Gun Club held their annual amateur shoot to-day. The shoot was a success, only the captain would rather have had a larger number of shooters to handle. The extreme heat was a drawback to our many friends. Special note should be made of J. Fleming's good score, as he was kept busy all the day squad hustling. The scores:

W. E. WIMANS, Sec'y.

Sidell Gun Club.

SIDELL, Ill., Sept. 10.—Inclosed find trap scores made at the tournament of the Sidell Gun Club, Sept. 7 and 8. Wednesday opened with a chilly wind, which continued all day, and the scores will show how strong the wind was. We had a fair crowd, but only about 50 per cent. of the men entered in the 100-bird race showed up. We had fifteen in this race, and J. W. Hoosier, of Evansville, won with 92. He shot Smokeless shells. John Dietrich, of Waveland, Ind., came next with 90, and used hand-loaded shells. J. McQuaid, of Canton, Ill., next with 88 and used Smokeless shells. H. J. Sconce fourth with 87 and used Peters' New Victors, and King's Smokeless.

In this event $75 was added, and first money was no small sum, as Hoosier went away with a well-filled pocket. Miss King, of St. Louis, was with us and showed what she could do in the way of smashing bluerocks, and made some good scores. Our visiting brethren were: J. W. Hoosier, Evansville; John Dietrich, Waveland; J. E. Nicholas, Bloomfield, Ind.; A. J. McQuaid, Canton, Ill.; Cadwalader, of Dansville, and Davis, of Paris, Ill.; De Witt and Cooper, of Hoopston, Ill.; G. Gilbert, Philadelphia, Ill.; Clare Carson and A. J. Carson, of Mortimer, Ill.

The second day was a better day, only a little cold, and better scores were made. The interesting event was the Vermilion county championship, for $30 gold medal, and had six entries. The medal is subject to challenge, and can be contested for every thirty days. H. J. Sconce won it first with 45 out of his 50. H. W. Cadwalader, of Dansville, second with 43. W. A. Gray and F. Jackson third with 40. J. A. Linder 38, and Max Holton 33. Max is only fourteen years old, and shot two days, and averaged .530 the first day and .667 the second day, which is better than some of the older heads could do. He figured in the money several times.

The averages for the shoot are as follows:

	First day.			Second day.		
	Shot at.	Broke.	Av.	Shot at.	Broke.	Av.
Dietrich	280	243	.867	105	97	.933
Sconce	280	235	.839	210	186	.885
Smith	140	119	.850	...	...	....
McQuade	280	222	.790	145	118	.813

The next shoot of the Brockton Gun Club, Brockton, Mass., will be held on Sept. 17.

Confabulations of the Cadi.—IV.

THE Cadi and his family were early risers. Hopie Jane must eds rise early to prepare the humble meal and attend to the utine labors of the day, and the good Cadi rose early, both cause that the mornings were too insufferably hot to lie ed, and that he was too amiable as a gentleman and a husband interfere with his wife's industrious habits, so necessary to livelihood. Nevertheless, when the family and guests met in e morning, "after the events narrated in the last chapter," as e five-cent novelist is wont to say, there was a certain con-aint exhibited by all, and the conversation was fragmentary and ble. Yet Hopie Jane had settled down into her steady round daily drudgery, patient, taciturn and amply solaced with snuff, e storm of the night before having for her cleared up the mestic atmosphere for many weeks to come.

Breakfast, though simple and frugal, was rather solemn on at particular morning, and even the children showed moments hen they were apprehensive and quiet for a whole minute at a ne, notwithstanding that Hopie Jane attempted a few carols a voice consisting of three or four harsh notes all out of tune, r benevolent purpose being to establish that cheerfulness which is so distressingly absent.

The good Cadi sat at the head of the table as became him as rd of the castle. At his right, looking demure and sweet—r all women look either sweet, sweeter or sweetest—sat his be-ved wife, while Moke and Ephraim sat on his left on chairs. ong benches reached down each side of the board table from e dignataries enumerated, for the use of the children, who se-red the desirable seats by clawing, elbowing, pushing and snarl-g in their general scramble to be nearest the food supply, much er the manner of the doings of the old-time Scotch border arauders, who acted as they listed,

"Because the good old rule
Sufficeth them—the simple plan,
That they should take who have the power,
And they should keep who can."

The four dignitaries had cheap coffee, fried rabbit and corn ne for breakfast, while the children had corn pone and butter-lk straight, which they had also for dinner and supper, and re blooming and strong, notwithstanding their simple diet.

PATCHING UP EXPENSES.

The Cadi's court sought the shady side of the house after eakfast. Hopie Jane and the eleven children soon trooped by the cornfield, and there was a visible lessening of the constraint rthwith.

'Gadzooks," said Moke, "what a raft of children you have when ey are all together."

"Yes," replied the Cadi, reverently, "the storks have been untifully kind to me. Most poor people consider a big family hardship, but it is a blessing to me in my invalid state to ve them to assist in making a living for me."

Pipes were now lighted, and a drink of cider brought around em that mellow atmosphere in which all shone socially at their st.

After considering the weather prospects for the day, Moke id: "Cadi, I allow as how I will take more interest in trap ooting, now that you are barred from the shoots; for there is no ne in the club who can shoot very well, and I allow as how I n win some money, or at least win enough to pay my shooting penses."

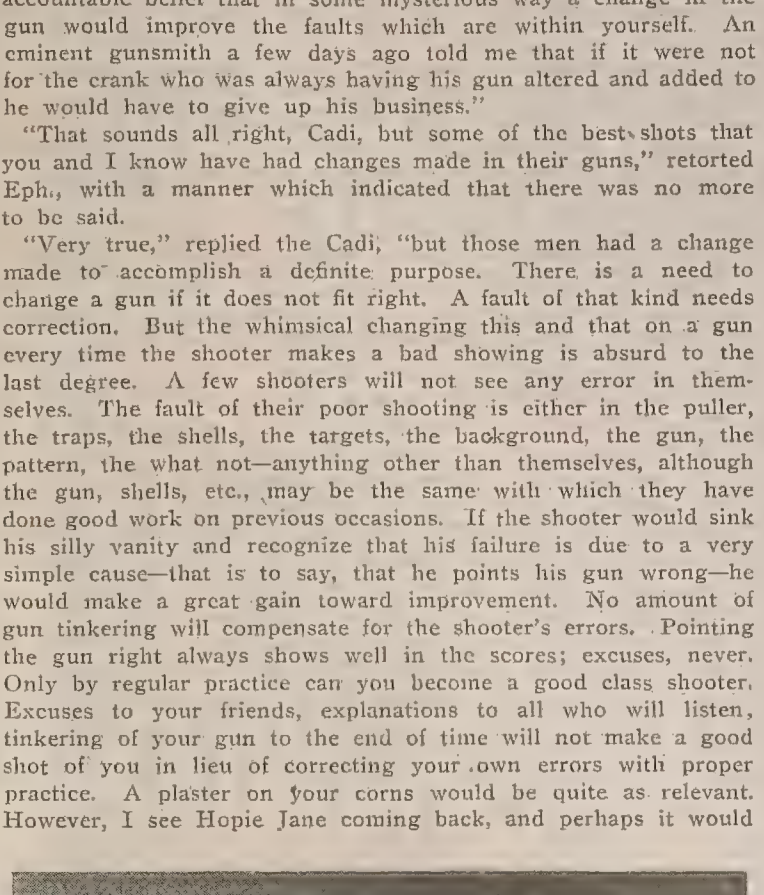
"Why do you consider it necessary to win your expenses?" nerjed the Cadi. "There is quite as much of a wolfish purpose winning your expenses at a shoot as there is in my purpose win enough to pay for my tobacco somewhere else."

"I don't see it that way," said Moke. "I only shoot for ort, and if I only make my expenses, I win nothing and have ly sport."

"You deceive yourself, good Moke," retorted the Cadi, in his ost suave tones. "If you cannot afford to pay for your sport, u cannot afford to participate in it. To shoot for sport costs oney, and if you get your shooting for nothing, some other llow or fellows are paying for it. You are patching up your ort at some one's else expense. You say you cannot afford it herwise? Then you cannot afford it at all, any more than you n afford to keep a yacht, or a game preserve, or any other atter of sport which is beyond your means. If you go to theater, or a baseball game, or the circus, you pay for your cket and feel when you come away that the entertainment has mpensated you for the outlay. You go a-fishing, and at the end the day you feel that the time has been pleasantly spent hether you caught anything or not; that is to say, if you are e right sort of angler. And yet, when it comes to shooting, u seem to feel that by some hocus pocus you should make me one else pay for your shooting. Now, when you shoot for ort, you should pay for your sport; but when you put your oney against some one's else money, you are a wolf then in your tle way quite as much as others may be in a big way; and when u lose you should not howl at your losses, and should not cupy the ears of the world with the disappointing results of ur own doings. When you lose, some other fellow is making s expenses as you would be if you won and he lost. Admit at you are a little wolf, and ask for a handicap to put you an equality with the big wolves. So long as you shoot for oney, without a handicap, just so long will you be skinned; for, you bar the experts, the next best class, which is one still far ead of you in skill, will then be the experts, and so far as u are concerned you will be no better off than you are now, as assured you when I told you 'it's a matter of teeth' some weeks go. If we try to establish a handicap, the objections would come om the experts, which would be a most conclusive vindication a handicap being the right thing."

"It is impossible to handicap the shooters of targets, owing their numbers, irregular shooting, etc.," replied Moke.

"It is quite time enough to say that it cannot be done after e attempt has been made," replied the Cadi. "There never yet as any sweeping reform but what the impossibility of it was ost earnestly pointed out beforehand. All progress means ange, and change means wreckage of some things, which we lieve in, are habituated to, and which perchance are to our n financial advantage. What established sport is there which s not a handicap? Yet the desired reforms cannot be made so adily as if we had a national association."



THE GUNSMITH'S DELIGHT.

Ephraim had been listening with a great deal of attention, and broke in with the remark: "I believe that I will again join the shoots for sport, and if I can raise money enough I will ve a new drop put in my gun stock, and I believe that it will prove my shooting."

"More fallacy. As near as I can recollect," said the Cadi, ou have had something done to your gun after every shoot, ith a whimsical belief that the change would improve your ooting. You have had the stock made shorter and made longer a number of times; you have had a Monte Carlo hump put on and taken off; you have had the trigger pull made easier and made harder; you have tried different guns and different chokes, and different this, that and the other thing, every time that you have fallen below your average for awhile, with the most unaccountable belief that in some mysterious way a change in the gun would improve the faults which are within yourself. An eminent gunsmith a few days ago told me that if it were not for the crank who was always having his gun altered and added to he would have to give up his business."

"That sounds all right, Cadi, but some of the best shots that you and I know have had changes made in their guns," retorted Eph., with a manner which indicated that there was no more to be said.

"Very true," replied the Cadi, "but those men had a change made to accomplish a definite purpose. There is a need to change a gun if it does not fit right. A fault of that kind needs correction. But the whimsical changing this and that on a gun every time the shooter makes a bad showing is absurd to the last degree. A few shooters will not see any error in themselves. The fault of their poor shooting is either in the puller, the traps, the shells, the targets, the background, the gun, the pattern, the what not—anything other than themselves, although the gun, shells, etc., may be the same with which they have done good work on previous occasions. If the shooter would sink his silly vanity and recognize that his failure is due to a very simple cause—that is to say, that he points his gun wrong—he would make a great gain toward improvement. No amount of gun tinkering will compensate for the shooter's errors. Pointing the gun right always shows well in the scores; excuses, never. Only by regular practice can you become a good class shooter. Excuses to your friends, explanations to all who will listen, tinkering of your gun to the end of time will not make a good shot of you in lieu of correcting your own errors with proper practice. A plaster on your corns would be quite as relevant. However, I see Hopie Jane coming back, and perhaps it would

MAYNARD P. ROACH.
President Worcester Sportsmen's Association.

be better to move over to the lodge out of her sight till later in the day," said the good Cadi.

The lodge, which was set on sections of log at each corner, was a plain board cabin, in size about 12 by 20, which the Cadi reserved as a sleeping room for his guests, and incidentally as a store room for old harnesses, saddles, jars of preserved tomatoes, etc. Cracks of varying width yawned between the boards of the floor and walls; therefore, so far as the exclusion of noises was concerned, it was the same as if the frail structure did not exist. A cheap corn-cob bed was the only furniture. It pleased the fancy of the good Cadi to dignify this primitive cabin with a good title.

THE ROOSTER HANDICAP.

An oak tree, spreading its rugged limbs protectingly over the roof of the lodge, was a living testimonial to the truth of the old adage that every rose has its thorn, for Hopie Jane's large flock of hens and chickens used it for a roost at night. The pride of the flock was a large, awkward, fool Cochin China rooster, which the Cadi had named De Reszke, and which had a full coarse voice, very rasping to the ear of visitors, and rather given to flying off into weird discords when he tried to crow too loudly and ecstatically, as was his wont every half-hour of the day and night, either on his own motion or in answer to the clarion challenge of the neighboring roosters for a mile around, receiving therefor the twittering plaudits of all the home hens, just as if he were a real Paderewski of a rooster.

They were hardly seated on the shady side of the lodge when the giant rooster, with his admiring train, strutted up close to Moke and saucily turning his head askew, scanned him impertinently with one eye. Moke remembered the exasperating crowings of the night before, supplemented with the uneasy gruntings of the hogs, which slept under the floor, and the irritating disturbance when one would scratch his back with great power against the sill, making the frail lodge quiver and heave from ridge pole to floor; for the hogs, too, rested badly, the night being hot and the fleas viciously active. Moke looked at the rooster with no kindly feeling, but he modulated his voice and said mildly: "Cadi, what would you take for that rooster?"

"None of your business. Do you see that road? That leads to your home!" and the Cadi pointed his finger accordingly.

"No offense in asking the price of a rooster, I hope?" ventured Moke in a humble tone.

"That depends," said the Cadi, with something of his usual affability. "I am rather touchy on that subject sometimes. I had a dude from St. Paul, who was staying with me last fall, shooting and fishing, and as he expressed it 'living close to nature,' although one day, when the meal and bacon gave out, and we had no supper, he said very saucily to me that it was getting a little closer to nature than he expected. The dude and I were smoking much as you and I are now, when the father of De Reszke walked up much as De Reszke did just now, and the dude said, in a dreamy sort of way: 'Cadi, that's a lovely bird,' and his face seemed to shine with admiration as he noted the beautiful mottlings and pencilings and polished surface, to say nothing of the full majestic curves of the whole body.

" 'There's not another like him in a day's journey,' I replied, for I was truly proud of that aristocratic fowl. 'I don't think I'd care to sell him to anyone except you.'

" 'What will you take for him?' he said sweetly.

"I thought that he was talking just to be a-talking, and that it was all talk anyway, much the same as shooters frequently challenge each other, so I said: 'O, I don't know, about 50 cents would be a fair price, I reckon.' I expected to hear him laugh at the good joke of such a fine bird selling for 50 cents, but he handed me that amount, which I took without a thought that he was serious.

" 'That rooster is mine now, noble Cadi, isn't it?' he quietly asked.

"I was game myself, although I wouldn't have taken the best $25 you ever saw for that bird, so I said, 'Of course it's yours, but I'll give you a dollar for it if you will sell it back.'

" 'I bought that hullabaloo bird because I have a particular use for him, Cadi. Pretty thing, isn't it?' Then he turned to my oldest boy and said: 'Ike, catch my rooster and I'll give you 50 cents.' When the rooster was caught, he gathered its feet and wing tips all in one hand, while with the other he choked it till its eyes turned red, then walking to the chopping block he cut off its head with one blow of the axe, and threw its body to the hogs. He then sat down as calm as you please and said to me: 'Cadi, do you believe that rooster will crow any more of nights now?' "

"Not in a thousand years," commented Moke.

"Not a solitary hoot," said Ephraim. "No more than you can shoot, since we have decapitated you with that manufacturers' agent's handicap."

BERNARD WATERS.

Worcester Sportsmen's Club.

WORCESTER, Mass., Sept. 5.—The Worcester Sportsmen's Club tournament to-day was well attended, and among the crack shots were: Leroy, Eager, Wheeler, Dickey, Allison, Puck, Griffith, Root, Bowker, Davis, Snell, Coffin, Burbank.

Leroy broke 147 out of the 150 of the programme and won the Forehand Gun. Leroy shot a Remington gun and U. M. C. ammunition. Everything in connection with the shooting went smoothly. E. Garland was in charge of the cashier's office. Mr. P. Roach, president of the club, who is very popular among the shooters, kept everybody in good humor and made himself useful in many ways. The scores:

A. W. WALLS, Sec'y.

Brockton Gun Club.

BROCKTON, Mass., Sept. 5.—The weather here to-day was very hot, yet a goodly number of the amateur trap-shooters took a lively interest in the sweeps, merchandise and charm shooting, while their friends turned out in good numbers, fully three-score and ten. Grant shot a professional gait, .944 per cent.; Allen, .875 per cent.; Worthing, .821 per cent.; Barrett, .813 per cent. The next shoot will be on Sept. 17.

Merchandise event, 25 targets, unknown angles: Allen 25, Grant 25, Barrett 25, W. Woodard 23, Stanley 25, Stork 21, Worthing 23, Donaghue 25, Scott 25, Leonard 17, W. Murdock 22, Taylor 25, Turner 23, Carr 25, Thayer 22.

Watch charm event, 25 targets, unknown angles: Scott 23, Allen 25, Donaghue 21, Worthing 25, Murdock 25, Turner 18, Leonard 25, Grant 24, Barrett 23, Carr 24, W. Woodard 25.

Match between Smith and Arnold, $1 a side and price of birds: Smith 21, Arnold 19.

Match between Wallburg, Smith and Arnold, 5 pairs, $1 a side, winner take all, low man to pay for birds: Wallburg 7, Smith 9, Arnold 5.

Schmelzer Tournament.

MR. PAUL LITZKE writes us that the beginning of the Schmelzer tournament was postponed from Tuesday to Wednesday on account of rain, as alleged, but chiefly from lack of proper preparation.

WEDNESDAY, FIRST DAY, SEPT. 7.

There was a fair attendance on the first day of the shoot, though nothing like what had been expected. Only six shot through the entire programme for the day, and of these Hickman is high man, and Funk comes next. The fact that so few shot through is principally because the second event for this day was not finished until late Friday afternoon, and many of those present on Wednesday had gone home by that time.

The prize winners in to-day's events are as follows:

Event No. 1: First prize, corduroy shooting coat, was won by Scott; second, silver tea set, went to Hickman; third, a clock, went to Gottlieb; fourth, a spoon holder, was won by Hodges.

Event No. 2: Stockwell first, a silver water pitcher; Cockrell second, also a water pitcher; Hodges third, a clock; W. S. Allen fourth, 5lbs. of Gold Dust powder.

Event No. 3: Stockwell first, a silver tea set; Sykes second, gold enamel inkwell; Bramhall third, split-bamboo fishing rod; Eldridge also got a clock in this event as fourth.

Event No. 4: Funk won first, a Winchester take-down gun, while Hickman, who won second, got one of those numerous clocks; White got third, a pair of skates; Curtiss fourth, a pitcher.

There was nothing but cash added in No. 5, and this was easily divided.

Event No. 6: Simms won first, an Ithaca hammerless gun; Cockrell second, silver tea set—four pieces; Sykes third, silver syrup pitcher; Gottlieb fourth, a hammock.

Event No. 7: Hill got first prize, a hunting suit complete; Cockrell second, a hammock; Scott third, a canvas hunting coat; Hickman fourth, one more clock.

In event No. 8 there was $10 in each added, which was divided into five moneys.

The weather was perfect for shooting, being clear and bright.

There were three live-bird events on the card. The chief one among these was a 20-bird event, known as the Schmelzer Arms Co. Interstate championship. This was a handicap affair, and had the goodly entry of forty-four, of which number six, namely, Dave Elliott, Cockrell, Hickman, Richards, Nuot and Hairgroves, killed straight. These attempted to decide who should have the silverware that was first prize. However, after the first 10 birds it resolved itself into a race between Dave Elliott, Hickman and Cockrell, for not only did each of these kill his 10 tie birds straight, but in addition 20 more, which made 50 straight kills for each in this event, and yet no decision was reached. At this juncture they concluded to defer the shoot until Saturday, as they were in too good a form then. The ties on 19 and 18 also remain undecided:

D Elliott	21121112122211222222—20
Hickman	11111212111111222122—20
Cockrell	22222222222222222222—20
Richards, 28	22111212121112222121—20
Nuot	11112111111111112211—20
Hairgroves	11111111121221121111—20

SECOND DAY, THURSDAY, SEPT. 8.

Of those who shot through the programme to-day, Hallowell is high, though of course he shot only for birds, except in events 5 and 8, which were added money events and open to all. Of the amateurs, Hayden, Hickman, Gottlieb, Hodges and Funk showed the best form and rank in the order named. The winners of prizes are as follows:

Event No. 1: Clapp first, a clock; Hodges second, silver tea set; Cockrill third, a powder and shot measure; Hayden fourth, a star crimper.

Event No. 2: Cockrell first, a tent; Hodges second, a camera; Hill third, a clock; Scott fourth, a Thurman shooting blouse.

Event No. 3: Funk first, Forehand single-barrel ejector gun; Scott second, silver syrup pitcher; Hungate third, a shell case; Erhardt fourth, a folding cot.

Event No. 4: Hairgroves won the Smith hammerless gun, which was first; Holmes second, also a clock; Gottlieb third, silver water pitcher; Funk fourth, carving knife and fork.

Event No. 5 was an added money event.

Event No. 6: Hayden won first, some more silverware; Thomas second, got a clock; Hickman third, nutcracker and pick; Rickmers fourth, silverware.

Event No. 7: Gottlieb first, a silver water pitcher; Hodges second, another clock; Hickman third, silverware; Simms fourth, 500 targets.

In event No. 8 nothing but cash was added.

The weather throughout the whole day was ideal for trap-shooting.

THIRD DAY, FRIDAY, SEPT. 9.

The attendance to-day has dwindled down to almost nothing. Only five shooters participated in all events of the day, while the last event had but seven entries. Of those who shot through Hickman is high man, Funk second and Holmes third.

In the first event Holmes won the silver-plated tea set, which was first prize; Sykes won second, a clock; Hodges third, a pair of skates; Taylor fourth, a shooting blouse.

Event No. 2: Hickman made the only straight, and won a clock without a tie; W. S. Allen won second, a silver water pitcher; Funk won third, a quarter-keg of Hazard Blue Ribbon powder; fourth prize, also a clock, was won by Smith.

In event No. 3 Funk won first, a Marlin rifle; Linderman second, a clock; Stockwell third, a sole leather gun case, while fourth, another clock, was won by Wright.

Event No. 4: The Lefever gun, first prize, was won by Scott; Holmes got second, a shaving cup and brush. Hodges won a quarter-keg of Hazard powder, third; fourth, a silver spoon, went to Snyder.

Event. No. 5 had $10 in cash added, and this was divided.

Event No. 6: A Spencer repeating gun was won by Woodson; Funk got second, some more silverware; third, 5lbs. of Gold Dust powder, went to Clapp; fourth, another timepiece, was won by Kelly.

There was nothing but silverware in event No. 7. Of this Clapp got first; Hodges second, Scott third, and Wright fourth.

In the eighth event Wright won first, a single-barrel gun; second and third, two clocks, went to Hickman and Woodson respectively.

There were only seven entries in this event, and all of these either tied for first, second or third, so no one got fourth.

The weather was chilly, the sky being overcast, with a haze, and there was a strong wind blowing.

SCHMELZER TROPHY.

This trophy, representing the championship at reversed angles at targets, was also contested for to-day, and resulted in the holder, Mr. Charles Budd, retaining possession of it. There were but thirteen entries, and of these none could approach the form that Budd displayed. It was early apparent that he would prove the winner. Considering the bad background and the dark weather, his score of 87 is a most creditable one, and while not of so high a class as his previous score of 96, it is still a first-class performance.

The shooting was done on the live-bird grounds, down in the hollow, and there the background was very bad for target shooting, especially on a dark day like to-day.

The conditions of this race were 100 targets, reverse angles, entrance $7, of which amount $4 went to the present holder of the cup, and the balance was put with the $25 which was added to the purse by the management. This amount was divided into three moneys and went to second, third and fourth places. The cup went to first. Hallowell won second money, Cornett third and Funk fourth.

Lill Scott acted as referee. Tom Morton was scorer and Lou Erhardt was trap puller. There was not a single protest made during the entire match. The scores follow:

Cornett	11111110011111111101100001—18
	10101111010010111001111100—15

FOURTH DAY, SATURDAY, SEPT. 10.

The attendance to-day is somewhat larger than that of yesterday, though most of the participants were local shooters. Hill, it will be seen, is high man, closely followed by Hallowell. In addition to making high average, Hill made the only straight score of 25 credited to any one during the tournament. The shooting as a whole was not near so good as on the previous days. There was a good stiff wind blowing all day, which added to the difficulty of the shooting.

In event No. 1 first prize, a mirror, was won by Hill; second, also a mirror, went to Rickmers; third, a flower vase, was won by Norton; fourth, a silver tray, went to Erhardt.

Event No. 2: First prize, a Colts rifle, was won by Norton; Sweet won second, a silver pitcher; third, an eight-day clock, went to Cornett; fourth, a gilt picture frame, was won by Bryant.

Event No. 3: The first prize in this event was silverware, and was won by Funk; Hill got second, a kodak; Essig won third, a pair of boxing gloves; fourth, a striking bag, won by Wright.

The fourth event was an added money event.

In event No. 5 the first prize was a bicycle, and Erhardt captured this; Fairman got a silver water pitcher as second prize; Hill got another clock as third prize in this event, while Wright got a silver spoon as fourth.

Event No. 6: First, a Bristol steel fishing rod, was won by Scott; Fairman had to content himself with a silver pitcher for second; Hill got more clock for third prize; Hickman got a silver tray for fourth.

Event No. 7: It was in this event that Hill ran his 25 straight and was handsomely rewarded by winning a fine Parker hammerless gun; second was another clock, and Cornett got this; third, a sole leather gun case, went to Fairman; Plank won 100 loaded shells as fourth prize.

PAUL R. LITZKE.

Chambersburg Gun Club.

CHAMBERSBURG, Pa., Sept. 6.—The Chambersburg Gun Club held its monthly shoot for the club live-bird trophy yesterday. Five members of the regular team participated in it and made the following excellent scores:

Trophy shoot, 10 live birds:

Runk	1121111111—10	Kennedy	1222111111—10
Vandereau	1120211212— 9	Rhodes	0122112111— 9
Rinehart	111201*111— 8		

Runk and Kennedy shot off the tie at a miss-and-out:

Runk ..... 212111111211—12 Kennedy ..... 121221222220—11

The club has been in existence only six months, but in that time, under the intelligent coaching of Capt. J. M. Runk, has acquired remarkable proficiency. Many of the members had never shot over traps before they joined the club, and few had shot at live birds.

At targets J. C. Elder, Esq., holds the club record, 95 out of 100. Capt. Runk is second with a record of 94. Some other very creditable scores are the following, at targets:

Runk 25, Elder 24, Rinehart 23, Rhodes 23, Vandereau 21, Henson 21, Disney 21, Buchannon 20, Blocher 20, Minnich 23, Hobbs 24, Humer 24, O'Leary 23, Ross 20, Kennedy 21.

The club has a well-arranged ground, with commodious club house, and holds weekly shoots. It is now considering the issuing of a challenge to any club in the State to shoot a match with teams of two to five men in Chambersburg, the local club to furnish the birds.

Mr. Samuel Bowker, under date of Sept. 12, informs us that there will be an all-day tournament on the grounds of the Natick Gun Club, Natick, Mass., Sept. 22, and that the tournament will be open to all.

The Interstate at Haverhill.

THE concluding tournament of the Interstate Association's trap-shooting season was given for the Haverhill Gun Club, Haverhill, Mass., Sept. 7 and 8. There was a reasonable support of shooters in point of numbers, but short of what might be anticipated, considering the proximity of shooting clubs in neighboring towns and cities. This was largely compensated for by the steadiness with which most of the contestants shot through the entire programme, as will be noted on reference to the scores subjoined.

On the first day 5,375 targets were trapped; second day 6,440; a total of 11,815 targets for the two days.

On Wednesday, the first day, there were two rainstorms in the afternoon, the first one occurring soon after lunch, as event 6 was begun, interrupting the shooting for about a half-hour. The second storm set in at the finish of event 10, yet notwithstanding the delay the programme was finished early, and a number of extra events were shot besides. Several extra events were also shot on the second day. Besides the skillful management, this in a measure was due to the excellent service of the trappers, and to the equally excellent working of the traps. There was a very small percentage of targets broken by the traps throughout the tournament, a percentage so small as to be insignificant. At the beginning 330 targets were shot at before one was thrown broken.

The grounds are pleasantly situated in a picturesque setting of hills, vales, woods and green fields far and near, at Hoyt's Grove, about one mile north of the City Hall, and reached by the electric cars every fifteen minutes. The traps face a bit east of south, and the level piece of ground, amply large for the shooting grounds, has a moderately steep wooded ridge for its eastern boundary, while west and south there was a picturesque view of beautiful New England scenery. An isolated clump of fine trees, however, at the limits of the grounds, caused many a miss at right-quartering targets, the colors of the targets blending with the lights and shadows of the trees so completely that a target's distinctness was much dimmed, and there was an uncertainty of aim in consequence.

Two tents, one at each end of the club house, supplemented the room of the latter. With their sides looped up or removed, they afforded a most comfortable, shaded resting place for the onlookers. The large one was also used for a dining tent. Within it at the lunch hour two long dining tables were set with scrupulous care as to neatness, variety and plenty, thereby pleasing the eye as well as satisfying the appetite.

The club's secretary, Mr. Geo. F. Stevens, assisted by Mr. Rockwood, looked after the cashier's department most efficiently; Messrs. Steven Tenny and John Ingham gave satisfaction as referee and blackboard scorer respectively, while Mr. L. C. Day won the particular good will of newspaper men by his efficiency in manifolding copies of the scores. Mr. F. Mighill acted as trap puller.

The diamond stud, presented by the home club to the shooter making the highest average for the two days, was keenly contested for by the experts present. At times the winner of it was in doubt, but that quiet shooter, Jack Fanning, who "saws wood" with admirable consistency, was always looming up as a candidate for it, won it by the good average of .932 per cent.

At the conclusion of the regular events Mr. H. P. Collins, of the Du Pont Powder Co., before the assemblage, made a presentation speech in behalf of the Haverhill Gun Club, most happily setting forth the achievements of the winner, and handed over to him the diamond stud. Then in a lighter vein he produced a life-size earthenware dog of saucy pose and aspect, explaining that it was donated by the Parker Gun Co. and Du Pont Powder Co. to the winner, and that it would be a guard to the valuable trophy just won.

Mr. Fanning briefly expressed his thanks and appreciation of all the honors bestowed on him, and modestly referred to his own performance, but coming to the dog and in respect to guarding the diamond he said that he felt able to guard the latter himself, as he had done all other trophies, and would turn over the earthenware dog to the club as a mascot. The hearty cheers he received were the best testimonial to the unreserved popularity of the winner and the win.

Mr. Elmer E. Shaner then stepped forth and explained that the gun case, presented by the club to the amateur making the highest average on the second day, was won by Miss Kirkwood (Miskay) on an average of 90 per cent., which was very close to the best averages of the most successful shooters present. The club, however, could not find a gun case of sufficient high quality in Haverhill to present to the charming shooter, so that the actual presentation would be deferred for a day or two, till one such as the club desired to present could be obtained, whereupon the assemblage cheered heartily.

The surprise of the occasion, however, was still in store. Mr. Edward Banks then walked forth from the array of shooters, and requested Mr. Shaner to remain where he was a few moments, as he had something in behalf of the shooters present to say to him and concerning him. Mr. Shaner looked apprehensive, as a more active body of practical jokers than the trap-shooters do not exist; but he stood his ground well. Then Mr. Banks in substance called attention to the fact that the tournament just closed was the fiftieth Interstate tournament which Mr. Shaner had managed, of which six were Grand American Handicaps, and that, as commemorating the event, and as a token of the affection and esteem which the shooters all bore him for his ability, impartiality and amiability, etc., he, as one of the shooters, and in behalf of the shooters present, desired to present him with a testimonial, and here he handed Mr. Shaner a neatly wrapped package. "It's a bar of soap," said one of the irrepressibles present, who could not restrain his humor. Mr. Shaner opened it, revealing a set of solid gold shirt studs and sleeve buttons, each piece bearing a small diamond, all designed in quiet elegance.

Mr. Shaner then expressed his surprise and therefore his inability to set forth his due appreciation, but nevertheless his few words and manner were more eloquent than many words in a set speech, and the rousing three cheers and tiger which he received could only come from the throats of men who were unreservedly sincere.

In respect to Mr. Shaner's management of the tournament, it may be stated briefly that every detail ran with the sequence, promptness and smoothness which distinguish this artistic organizer and manager's efforts, which is only a way of saying that it was done perfectly.

The real feature of the shooting, however, was that of Miss Kirkwood, who is a shooter by virtue of sterling skill and performance, and not by virtue of courtesy. At the risk of being ungallant, I will say that, saving one or two lady shooters, most of them shoot a gun with the same elegance and precision that they throw rocks at pears or apples in the tree. Miss Kirkwood shoots in quick time, handles her gun with grace, promptness and ease, stands erect and entirely free from the cramp attitudes so common at the score; and, while being an earnest shooter, she is as modest about her skill as it is possible to be, a trait to which some members of the sterner sex might profitably give thought.

Among the amateurs present were: Messrs. Charles McL. Clark, (Chase), St. Louis; Dudley, New York; Thos. Howe, Hingham, Mass.; C. M. Staniels, Providence; J. R. Griffith, Pascoag, R. I.; Miss M. Kirkwood and Horace Kirkwood, Capt. E. B. Wadsworth (Puck), Capt. Sawyer (Snow) and J. Corning (Gordon), Boston; Gil Wheeler, Marlborough; Dr. Gerrish, Exeter, N. H.; W. N. Taylor, Portland, Me.; R. Valentine, Monroeville, O.; J. L. Bowen, Manchester, N. H.; Sam Bowker and W. F. Brown, Natick, Mass.

Among the local shooters were: Messrs. Chas. Lambert (Bryan), S. G. Miller, Geo. Leighton, E. and G. Reed, J. Brown, F. Webster, and Messrs. Tozier, Griggs, George, Marble, Orne, Fernald, Busfield, Holden, Braford, Haskell and Morse. There was a large number of visitors who watched the shooting with keen enjoyment. Quite a number of them were ladies, among whom were Mesdames C. F. Lambert, G. W. Eaton, C. A. Griggs, C. H. Leighton, G. Meseroe, H. Mitchell, E. Brooks, G. Dodge, G. Fogarty, S. G. Miller and Mrs. Gore and Mrs. Harriman, and the Misses Brooks, Griggs and Kelley.

The trade representatives present were U. M. C. Thomas, Jack Fanning, of Gold Dust fame; B. H. Norton, of the Hazard Powder Co.; Ed Taylor, of Laflin & Rand; Edward Banks, of The American E. C. & Schultze Powder Co.; B. Leroy Woodard, of the Remington Arms Co.; J. R. Hull and O. R. Dickey, of the Parker Gun Co.; Thomas H. Keller, of the King Powder Co. and Peters Cartridge Co., and Mr. A. W. Higgins, secretary of the Laflin & Rand Powder Co.

Fanning's average for the two days was .932, Leroy .915, Banks .909.

There were ten programme events each day, known and unknown angles alternating. Six of each day's programme were at 15 targets, $1.50 entrance; four at 20 targets, $2. All purses were divided according to the Rose system, in the ratio of 5, 4, 3, 2. Targets were 2 cents.

As to Haverhill, it is thirty-two miles from Boston, on the B. & M. R. R. It was founded in 1640, and contains about 40,000 inhabitants. It is situated on the banks of the beautiful Merrimack, which is thence navigable to the ocean. Its chief industry is the manufacture of boots and shoes. Although one of the oldest cities, it is modern in its equipments, and has an abundance of trees and vegetation, adornments which cannot be compensated for by any of the architect's embellishments in the works of bricks and mortar.

The local sportsmen were courteous and attentive in every way, and the closing Interstate tournament of this season was one of rare wholesome enjoyment.

WEDNESDAY, SEPT. 7, FIRST DAY.

Pawling Rod and Gun Club.

PAWLING, N. Y., Sept. 5.—The Labor Day tournament of the Pawling Rod and Gun Club had a total attendance of twenty-three shooters, and 3,760 targets were trapped. The first event was started at 9:30, and the last event, No. 23, at 10 pairs, was finished at 5:15. Mr. T. E. Roberts, of White Plains, was the referee. Messrs. Geo. S. Williams, Geo. A. Daniels, Otis Arnold and M. Haynes, the other members present, were kept very busy owing to the unusually large attendance. Present: Capt. A. Money, J. Gerow Dutcher, Dudley, and George Schneider, New York; Dr. W. L. Gardiner, San Antonio, Texas; L. H. Schortemier, Jersey City; Isaac Tallman and E. J. Foster, Milbrook, N. Y.; H. Nelson, Frank Fry, Dover Plains, N. Y.; Harold Money, Oakland, N. J.; Geo. S. Holmes, F. C. Tabor and Chas. Schieman, Pawling, N. Y.; Messrs. Betty, Gorham, Brian and Sutton, Mt. Kisco, N. Y.; H. P. Lefurgy, Hastings-on-Hudson; Edward Ward and Chas. Sutton, White Plains, N. Y.; Messrs. Blanchford and Hall, Sing Sing.

Eleven extra events were shot, six at 10 targets, two at 20, two at 15, and one at 10 pairs. The weather was bright and hot, with a moderate breeze:

Labor Day at Meriden, Conn.

MERIDEN, Conn., Sept. 5.—The extreme heat of the summer lasted just long enough to knock the Parker Gun Club out of a portion of the usually large attendance that always graces its Labor Day shoots. Still there were enough shooters on hand to-day to make things decidedly pleasant and interesting, despite the sultriness of the atmosphere, which was not relieved by even a breath of wind.

The programme was a varied one at popular prices, the Rose system of dividing purses being used on this occasion. The cashier's department and the scoring and pulling were all that could be desired, not a hitch being noticed in either department during the entire day. L. J. Gaines was of course the moving spirit in everything, and by reason of his hard work in behalf of the pleasure of others placed himself at a great disadvantage when it came to shooting. It is impossible to work and shoot, and to do both well.

Among those present were: C. McL. Clark, of St. Louis, Mo.; Mills, Bristol, Conn.; H. L. Edgarton, Willimantic; C. B. Bristol, W. H. Longden, B. W. Claridge, H. Whitney, H. M. Clark, J. Savage, etc., New Haven; Edward Banks, New York city, winner of high average for the day; E. L. Post, New York; and representatives from several other clubs. The home club was well represented, chief among its representatives being J. R. Hull, winner of second high average; Wilbur F. Parker, of the Parker Gun Company, etc. Scores follow:

Events:	1	2	3	4	5	6	7	8	9	10

No. 1 squad's score in event 10 missing. E.

At Dickey's Shoot.

DICKEY'S shoot, on the grounds of the Boston Shooting Association, Wellington, Mass., Sept. 9, was a pronounced success. His friends turned out in gratifying numbers, as will be noted in the subjoined scores, and participated in a most enjoyable competition. When the train pulled into Wellington, a formidable number of the shooters were of those who had participated in the Interstate tournament at Haverhill, as will be seen on reference to that event. There also was a good local support, bringing the attendance up to an unexpected number. The programme was also shot through well by most of the shooters.

There were seven events on the programme, four at 15 targets, $1.30 entrance, excepting the first, which was 80 cents; two at 20 targets, $1.40 entrance, and one, the fifth, at 100 targets, $5 entrance. The latter event was subdivided into four 25-target events, with extra sweeps at $1.50 each. There was $25 for the four highest guns shooting through the programme, divided 40, 30, 20 and 10 per cent. The competition was open to all. Targets 2 cents each.

The Wellington Shooting Association's shooting grounds are most perfectly equipped in all the needed appointments. There are two sets of traps side by side in the same line, with corresponding scores. A ditch extending the whole length of the two sets of traps is floored and walled with boards and planks, and a plank benching, running the whole length, serves for a base on which to fasten the traps. The whole is deep enough, so that the trappers can stand upright, facing the benches and loading their traps as freely as if they stood at benches in the open air. However, the traps could have performed better, as quite a number of the birds were broken by them. The screens are as low as possible, and thus enable the shooter to catch sight of the target almost at the start. The club house is two stories in height, and is most lavishly provided with gun racks, lockers, loading implements, etc.

Mr. Dickey managed the shoot and hustled the squads.

Mr. Ed Crowly acted as referee and scorer, a difficult double position to fill, and one which never should be filled by any one man at a tournament, as the exacting duties of scorer and referee are such that two men are necessary to fill the positions. Mr. Elmer E. Shaner acted as cashier, assisted by Mr. Chas. E. Emerson.

The targets were thrown toward a broad expanse of marsh, free from any obstruction nearer than the middle distance, so that it was practically a sky background, which gave great satisfaction.

The lunch was something of a wonder, and was made up of oysters, lobster and chicken salads, ham, bread, cake, frozen pudding, ice cream, tea and coffee, and the busy way in which the shooters chewed and praised it was sufficient testimonial.

Among the visitors were: Mr. J. A. H. Dressel, of the Union Metallic Cartridge Co., and Mr. C. W. Dimmick, of the U. S. Cartridge Co.

The five high guns and the division of the $25 was as follows: Leroy $10, Fanning $7.50, Banks, Snell and Floyd $2.50.

Events:	1	2	3	4	5	6	7	8	9	10	11

The Rainmakers' Gun Club.

CORNING, N. Y., Sept. 7.—The Rainmakers' Gun Club held their first tournament at East Side Park, Corning, Sept. 5 (Labor Day). Twenty-five shooters were represented in the different events, and a day of rare sport was enjoyed.

Considering that the Rainmakers have only been organized about two months, their showing is good.

The new magautrap threw nearly 2,500 targets, with only 7 broken birds. The score is herewith appended:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	
Targets:	10	10	10	10	10	15	20	10	15	10	15	10	Av.

WESTERN TRAPS.

MONTGOMERY WARD & CO. DIAMOND BADGE.

CHICAGO, Ill., Sept. 10.—Yesterday afternoon the tie was shot off in the Montgomery Ward & Co. diamond badge contest, which could not be completed last Friday on account of darkness. There were in this tie four contestants, each of whom scored 20 in the contest and remained in at the close of the former tie shooting. These were J. B. Barto, H. B. Foss, E. M. Steck and Miss Edith Porter. The latter, with her handicap of 3 birds, was thought likely to be in at the close of the 10 birds string, but events proved against her, she missing 5 birds in the 10, though then killing 5 straight in slashing style. Foss killed his first, but lost his next two birds, and stepped to the bench, with his handicap of 1 bird exhausted. Barto was in good trim, and was a favorite with many on account of his excellent earlier showing. He missed his 4th bird, a fast blue, which was not hurt very much. His 5th was a good stop, the bird lagging on and finally dropping near the wire. His 6th was another fast blue bird, not troubled very much, and Mr. Barto retired. Meantime Eddie Steck was sawing wood right along, shooting in excellent time and with care which denoted his intention to take home the badge. In this desire he succeeded, killing his 10 straight and adding to that his handicap bird, or 11 straight in all, which brought him out winner. Score:

THE CHICAGO CHALLENGE TROPHY.

During the same afternoon there was shot the race between Mr. Thos. P. Hicks, holder of the Chicago challenge trophy, and Mr. J. B. Barto, challenger for same. Mr. Hicks was placed at scratch, Mr. Barto being given one bird and one yard. The latter had little trouble to take Mr. Hicks' measure to-day, the holder of the trophy having gone out of form a trifle to all appearances, though I am disposed to think that in the draw of the birds Mr. Hicks had really a bit the harder lot. Ordinarily the luck evens up in even so short a race as this, but at one stage Mr. Hicks drew four of those fast, low, stinging birds, which so sorely try the best skill, while Mr. Barto was fortunate enough to get birds which could be stopped near the traps. This is not in the least to the discredit of Mr. Barto's shooting, for he certainly cut out a slashing gait, and would have been hard company for any shooter. He used good care in placing his first, but was up to the mark with a fast second when needful. Both men made some fast and long kills, and justly shared applause. Both were prompt and did not dawdle in finding their birds, using only the first barrel in numbers of instances. The weather was coldish and the sky overcast, with a good wind, and the birds were fast, many of them very fast.

Mr. Hicks ran along to his 7th bird, which started out a curving quarterer to the right. It then turned and came in and was fired at inside the traps, but missed. At this stage both men were doing good, clean work, and interest was rising. On his 11th bird Mr. Hicks got a duplicate of his 7th, but stopped this one with a good second. His 13th was an unlucky one for him, a streak of blue lightning, which was the more disappointing after Mr. Barto's easy bird just preceding. His 15th was not hit much, a very fast and low bird, and his 17th going out and then curving back in like the 7th bird, again proved a hoodoo for Mr. Hicks, and he failed to score it. His 18th was a white bird and a strong one, and was only stopped far out by a good second. His 19th was not hit with the first, but was cut down well with the second. His 20th showed neat work on a low driver, which was caught by the second just in time. His 22d was flagged and sprang high and to the left, stopped well with first. His 24th wobbled over the wire, hit very hard, and was dead out. Mr. Hicks used the same 10-gauge gun with which he defeated Mr. Paterson and Mr. Cunnyngham.

Mr. Barto got a bad bird in his 2d, which lugged away a lot of shot close up to the wire, but fell inside. His 7th was a strong bird, stopped far out, and on his 8th he made a phenomenal stop on a fast blue, killing it at 50yds. at least. His 9th bird was thought sure to go over, as it turned in and kept on wobbling toward the dead line, but it dropped at last just inside. He ran along nicely to his 17th bird, which was the first he missed, a black bluebird, very fast, hit lightly with the first and not hurt with the second. His 19th was high and hot, and was greeted with applause as it fell like a duck shot on a pass. His 20th seemed not troubled much, and got over. His 21st was smothered with the first, which was well, as it sprang very fast. His 23d was high, and was stopped with a long second. His 24th was caught with a careful and well-timed second, and he killed the remaining two birds easily, going out with 24 after a fine display of shooting on good, strong birds. This retires Mr. Hicks from the present competition for the trophy, and leaves the trustees with three members qualified to act. At this writing it is not determined who will be the next man to give this emblem the next jolt down the grooves of time, but if Mr. Barto keeps his good form he is apt to trot him a hot race. Score:

LABOR DAY.

Labor Day, Sept. 5, was signalized by numerous trap shoots of greater or less size and interest all over the country, the Western States having full representation in that line.

In the two days' amateur shoot at Rock Island, Ill., Monday and Tuesday last, there was a nice little attendance. Honors were carried off by C. L. Holden, of Marengo, Ia.; Al Henry and A. D. Bestor dividing second money for high average. Wm. Porter, of Rock Island, made the best score of the second day, singles and doubles, 20 straight. One live-bird event was shot the first day and two the second.

The King Smokeless Powder Co. trophy was won at Detroit in the Rusch House Labor Day shoot by J. Cady (Blue Rock), who defeated Mr. Woods, the former holder, with a score of 77 to 76 targets. Mr. Cady was challenged by Mr. Marks, a former holder, and they two will shoot at a later date, not yet announced. In the sweeps of the day steady work was done, Jack Parker winning first average, with Mr. Oren Scotten, the wealthy tobacco manufacturer, second; P. C. Woods third, and Cady fourth.

Winchester Gun Club, of Detroit, had a pleasant Labor Day shoot, running off a grand target handicap, 25 targets. Cox and Turnbull tied on 24.

At Dayton, O., there was an all-day shoot on Labor Day, at the grounds of the Buckeye Gun Club. This is an annual fixture with that club, and on this occasion the fun was close and spirited. The scores show Rolla Heikes, Charlie Young, Scott McDonald and Andy Mumma pretty steadily in the front. It need not be said that a fine time was enjoyed at these well-known grounds.

The Kentucky Gun Club, of Louisville, Ky., held their fifth annual Labor Day tournament last Monday. The weather seemed threatening, so that not so large a crowd turned out as is usually the case at this standard event, though a fair gathering from the home city and adjacent ones appeared. Among others from out of town were Capt. A. W. du Bray, of Dayton, Ky., representing the Parker gun, and Mr. Lou Parker, of Parker Bros., Meriden, Conn.; W. T. Alsop, of Owensboro, Ky.; W. M. Falley, of Henderson, Ky.; R. J. Powell, of Evansville, Ind.; W. A. Fawcett, of Bardstown, Ky.; W. E. Bradshaw, of Nashville, Tenn.

There were fourteen target events, and the shooting proved excellent. In the third event Dr. R. G. Fallis ran straight, 20, and in other events straights were made by Wilmerding, Alsop and Du Bray.

At Kalamazoo, Mich., on Labor Day, a number of shooters assembled at the Long Lake grounds and passed the time very pleasantly. Vosburg, Spicer and Ames were among the higher guns. Ames made the longest run, Vosburg next.

At Fort Worth, Texas, a good representation of the club membership of the Fort Worth Gun Club turned out on Labor Day and had a little fun at live birds and targets. In live birds, 9 birds, Arford was high with 7. At 20 targets Bicknell was high with 18. The club is preparing a handsome live-bird medal, which will get into commission about Nov. 1.

At Findlay, O., last Monday, the seventeenth annual merchandise shoot was held by the local club men, and some 3,500 targets were thrown in seven warmly contested events. Ritter, Lang, Evans, Drake and Jenkins showed very often in the first hole.

Highland Gun Club, of Des Moines, Ia., Charlie Budd's town, turned out on Labor Day and had fun at both targets and live birds, six events being run off after lunch hour.

Piasa Gun Club, of Alton, Ill., held a Labor Day shooting celebration on Monday, at the Douglas Park range.

BELLE MEADE TOURNAMENT OF NASHVILLE, TENN.

Mention has already been often made of the coming October tournament on the pleasant Belle Meade shooting grounds, owned by Gen. Jackson, of Nashville, Tenn., which promises to be a very happy affair, and the programmes for which should now soon be out. Mr. Irby Bennett, of Memphis, writes very enthusiastically regarding this splendid shooting park, to which a number of the cracks from his city will certainly turn their steps next October.

PEORIA MEDAL SHOOT.

In the contest for the Herald live-bird trophy, formerly open to shooters of Peoria county, Ill., conditions have now been revised to cover three open shoots per year, September, December and April, and the competition will be extended also to adjoining counties. In the race for this trophy last week Gus Portman made a good run, but the affair simmered down at the finals to Jas. Morton and E. K. Whiting, the latter the man who has lately been shaking things up so in the club's shooting records. These two each killed their 15 straight and went in to shoot the tie off at 5-bird strings. They tied on 4 at the first string, and went on, tieing again on 3. They shot a third string and tied on 4. Seeing that this might be long, they agreed to shoot miss-and-out, and Morton killed his first bird, Whiting missing.

Mr. W. A. Heilman, of Pekin, Ill., a member of Peoria Gun Club, has challenged Mr. Morton, who is of Kingston, for the next individual race for the Herald trophy.

STOCK YARDS, OF K. C.

At the last monthly medal shoot of the Stock Yards Gun Club, of Kansas City, Mr. K. G. Hendley won the Class A medal, 14 out of 15; Isaacson, Class B, with 12. Col. A. G. Courtney, of the Remington gun, was a guest.

METROPOLITAN, OF K. C.

In the medal race last week of the Metropolitan Target Club, of Kansas City, Hearn, with his handicap, tied Hickman, 49 out of 50, and won the shoot-off. Gottlieb and Ostertag scored 48, Dave Elliott and Howe 45, Bramhall and Wright 44, McCurdy 42, Fairman 41, Beach 40. They can shoot a little down at the side-hill town.

HIGH GUNS.

Congressman Chas. K. Wheeler, of Kentucky, and Mayor James M. Lang, of Paducah, same State, competed in a little five-bird event at the above-named town last week, and Mayor Lang was first, Mr. Wheeler second. They shot again, and the Congressman defeated the Mayor.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

EUREKA GUN CLUB.

The Eureka Gun Club's weekly target contest, Sept. 10, had a fair attendance. The sky was quite clouded. A strong wind blew from the left quarter.

Trophy event. F. P. Stannard won Class A, H. Vetter Class B and H. B. Morgan Class C;

Class A—A. Paterson 21, F. P. Stannard 24, E. M. Steck 18, W. D. Stannard 23, A. W. Adams 20.

Class B—Walters 17, Cunnyngham 20, H. Vetter 20, Lockie (visitor) 23, O. J. Buck 13.

Class C—H. B. Morgan 23, Weart 8, Arnold 14, Buroff 22.

GARFIELD GUN CLUB.

The Garfield Gun Club's shoot, Sept. 10, had a good attendance. T. E. Graham proved himself to be the hero of the day when he won the Class A medal on a score of 24 out of 25.

Trophy event, 25 targets, known traps, unknown angles, Class A was won by T. E. Graham, Class B by H. Wiley, and Class C by De Maris:

De Maris 20, Shaw 19, Pollard 17, Workman 17, Gardner 11, Kuss 21, Russell 15, Von Lengerke 23, T. E. Graham 24, Nusley 22, Meek 21, Richards 21, Eaton 15, Stiger 20, Young 15, E. S. Graham 22, Hicks 21, Butelmo 11.

A. C. PATERSON.

Trap around Reading.

READING, Pa., Sept. 5.—With just enough breeze to make shooting pleasant, and a fine deep blue sky as a background, the first annual tournament of the Mount Penn Gun Club was inaugurated to-day at their fine shooting grounds on Mount Penn. The tournament was commenced promptly at 9 A. M., as had been scheduled, and a number of local and out-of-town marksmen of more or less fame were on hand to take part in the various events of the day. The wind was favorable to good shooting, and many excellent scores were made.

The management of the tournament was intrusted to Arthur A. Fink, of Reading, who had everything working like clockwork, there not being one single delay during the entire tournament. Mr. W. W. Brown had charge of the blackboard upon which the official score was kept. George Runyeon was in charge of the cashier's desk, assisted by Mr. Cyrus Shultz. The magautrap was used, and gave entire satisfaction. The prizes for which the shooters contested in the different events were merchandise prizes, and also money sweeps besides. Among the shooters from a distance were: Mr. Sullivan, of Harrisburg Shooting Association; Messrs. Harry Thurman, W. N. Stevenson, J. Anderson Ross, Henry Febiger, Henry and Harry David, Landis, of the Keystone Shooting League, of Philadelphia; Messrs. Wickersham, Benner, Shealer, Saylor, Grubb, Trumbauer, of the Shuler Shooting Club, of Pottstown; Messrs. Johnson and Frank Nettles, of Royersford; Mr. Bull, of Blue Rock, P. Q.; Messrs. Spatz, Hainley and Bossler, of the Independent Gun Club, of Sinking Springs, Pa.; John Shaaber, Francis Yost, Heber Yost (Jones), William essick (Bogardus), Frank Gerhart, Eshelman, Gicker, Brooke Harrison, Miles, Butler, of the South End Gun Club, of Reading; George Ritter, Michael Eeast, Edward Yerger, of the Independent Gun Club, represented the Reading Club, while Allen, Yeager, Brown, Schwartz, Ball, Knerston, Rhoads, Dippery, L. Gerhard, Laird, Hill represented the Mt. Penn. Club at the traps.

The principal event of the tournament was the five-men team shoot for the Mt. Penn trophy and the intercounty championship of eastern Pennsylvania, in which four teams entered. The Keystone Shooting League, of Philadelphia, carried off the prize with 104 out of 125. Shuler, of Pottstown, was second, with 90, while the South End, of Reading, whose shooting is of the gilt-edge order, was away off, as they finished with but 88. The Mt. Penn finished with 85.

The shoot will net the club not less than $150, which is in a great measure due to the prompt work of manager Arthur A. Fink. The money realized will be used to enlarge the club house and also fix the grounds, which are somewhat hilly at some points. It is the intention of the Mt. Penn Club to roll their grounds and have one of the finest shooting grounds in the country if possible.

The scores of to-day's events follow, there being nineteen merchandise and six extra sweeps run during the day:

The regular programme events resulted as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
Targets:	10	10	10	10	10	10	20	15	20	10	10	25	10	15	10	20	10	15

Event No. 9, team shoot, teams of five men each, shooters to be bona fide members of said club they shoot with, 25 targets per man:

Mt. Penn Gun Club team—Yerger, captain, 21, Rhoads 17, Knersten 19, Ball 16, Schwartz 12—85.

Shuler Shooting Club, of Pottstown—Trumbauer 19, Benner 16, Wickersham, captain, 19, Sheeler 18, Grubb 18—90.

Keystone Shooting League, of Philadelphia—Landis, captain, 24, Stevenson 22, Thurman 20, Ross 19, Henry 19—104.

South End Gun Club, of Reading—Yost, captain, 18, Eshelman 19, Shaaber 15, Jones 16, Harrison 20—88.

SECOND DAY.

Sept. 6.—It was after 9:30 A. M. to-day before the second and last day's events commenced. There was a conspicuous absence of out-of-town shooters, as the majority had left for home on Monday evening, as it was a holiday, and they could only be absent one day. To-day's shooting was confined chiefly to local shots. Three extra sweeps were shot besides the balance of the programme events to the number of eleven, which called for merchandise prizes. The scores of the regular programme events follow:

Events:	20	21	22	23	24	25	26	27	28	29	30
Targets:	10	10	10	10	10	10	10	15	10	15	10

Reading, Pa., Sept. 9.—Members of the Highland Gun Club held a shoot at the Neversink Flats. The principal event was the club shoot at 10 targets each. James Hasson, referee, gave entire satisfaction. The scores were as follows in the club event: Merkle 10, Heguman 8, Grund 7, Lindemuth 7.

The Shuler Gun Club held a club tournament here to-day, and in spite of a brisk wind good scores were made. The scores follow:

First event, teams of four men each, 10 targets per man:

Grubb's team—Smith 10, Grubb9, Shaner 6, De Witt 8—33.

Saylor's team—Davis 6, Slonaker 9, Hawkins 6, Saylor 6—27.

Second event, teams of four men, 10 targets per man:

Regulars—Slonaker 6, Grubb 9, Shaner 7, Davis 7—29.

Ponies—Smith 10, Saylor 9, De Witt 6, Johnson 4—29.

Other events were as follows:

Events:	3	4	5	6	7
Targets:	25	10	10	10	25
Smith	18	8	..	10	22
Grubb	17	7	10	6	22
Davis	16	..	7	6	..

DUSTER.

Answers to Correspondents.

No notice taken of anonymous communications.

G. C., Fort Washington, Pa.—Can you tell me whether Chas. H. Mason has published a book for 1898 called "Our Prize Dogs"? If any such book is published, please let me know the price. Ans. None published in 1898. "Our Prize Dogs" was published in 1888 at $6. Price now $3.

PUBLISHERS' DEPARTMENT.

Where to Go for Game.

THE FOREST AND STREAM is constantly being applied to by readers who are anxious to find good localities for shooting. Some want elk and some squirrels; some turkeys and others shore birds. We wish to send each one of these men to some place where he can have good sport, and to do that we require the help of people all over the country who know of such localities. Guides, farmers who are willing to take in a sportsman for a few nights, and hotel keepers situated in good game territories are requested to send us information about the advantages of the sections in which they live.

PHILADELPHIA, Aug. 5,—Pleasant Valley Wine Co.: Gentlemen—I have had marked curative results in the use of "Great Western Champagne" made by your company, following the most severe attacks of cholera morbus. Toning up the stomach, bringing back its vigor and promoting appetite. One of the worst cases of this disease I have ever seen was under my care a few weeks ago. Though all the symptoms had been subdued by proper treatment, yet the patient, who had not partaken of food for two days, was fully restored as to appetite and strength in a most surprising manner by sipping small glasses of the "Great Western," made very cold by placing on ice.—C. CARLETON SMITH, M.D.—*Adv.*

MESSRS. HARTLEY & GRAHAM have secured a limited quantity of genuine Spanish Mauser repeating rifles, 7mm. caliber, with knife bayonets and leather scabbards; also cavalry carbines, same as used by the Spanish army, and largely by the Cubans, during the recent war. Within a very short time Hartley & Graham expect to be able to supply samples of these, together with Spanish Mauser smokeless powder cartridges.

Samples of the U. S. Springfield rifle, .45cal., with angular bayonet, and cavalry carbines of same description can be had of the same firm.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 24, 1898.

VOL. LI.—No. 13. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Nay, let me tell you there be many that have forty times our estates, that would give the greatest part of it to be healthful and cheerful like us; who, with the expense of a little money, have eat and drank, and laught, and angled, and sung, and slept securely; and rose next day, and cast away care, and sung, and laught, and angled again; which are blessings rich men cannot purchase with all their money. Walton.

THE NEW YORK ZOO.

THE Zoological Society is now busily engaged in working out on the ground its plans for the improvement of the Zoological Park. The work of constructing buildings and other accommodations for animals began in July, immediately following which the Board of Estimate and Apportionment of the City of New York appropriated $62,000 for the use of the Park Department during the present year in carrying out the Society's plans for the preparation of the ground.

The accommodations for animals now under construction are the following: Winter house for birds, reptile house, bear dens, wolf dens, fox dens, elk house, burrowing rodents' quarters, prairie dogs' enclosure and pheasants' aviaries. The erection of the monkey house has been ordered and will be proceeded with forthwith. The eagles and vultures' aviary, the beaver pond and the shelter house for the large ruminants and ducks' aviary will follow as rapidly as possible. It is the intention of the Society to complete all these by next May, when the Park will be formally opened to the public.

The Park Department is now excavating the pond for aquatic rodents, and will proceed forthwith to construct about 125,000 square feet of gravel walk, and provide a water supply for the collections that will be installed next spring.

All the officers of the city government, from the Mayor down, whose official positions render it possible for them to aid the undertaking, are co-operating with the Society in a very satisfactory manner.

The Commissioner of Parks for the Borough of the Bronx has entered most heartily into the work of carrying out the Society's plans for the improvement of the grounds, and his subordinates are making every effort to husband the fund appropriated by the city, and make it go as far as possible.

As the buildings, dens and aviaries above enumerated will, when completed, nearly exhaust the $105,000 now in the treasury for building purposes, the need for additional funds with which to erect the large antelope house and the lion house is now very urgent, and it is the intention of the Executive Committee to make immediately a call for $145,000 to erect these two buildings, and to complete the fund of $250,000 which the Society has pledged itself to raise.

In December the Society will begin to make contracts for animals with which to stock the Park, to be delivered in February and thereafter. It is now certain that the Park will be opened to the public with an excellent showing of improvements and collections some time next spring, probably in May, and there is every reason to believe that the city will immediately furnish the maintenance as required by law.

All this work has been done during the heats of summer, and the Society is to be congratulated on the energy of its officers, and especially of Secretary Grant, who, in the absence of the Chairman of the Executive Committee, has been acting chairman of that body. As the work progresses, and evidence accumulates to show to the public what the Park will be when it is completed, it should not be difficult to secure from well-to-do people interested in the subject the further sum, which is needed to complete the fund of $250,000 which the Society has agreed to furnish.

THE SIDE-HUNT.

SOME of the FOREST AND STREAM's exchanges in the religious press have been commenting upon a lottery lately held in Mexico for the release of souls from purgatory; and a newspaper champion of the priest who got up the scheme adduces in his defense that as concededly it would be permissible for two persons to chip in fifty cents each and then draw straws to determine for which one of them the priest should read prayers for the day, so the system may legitimately be extended to embrace the soul lottery system. The lottery story has been scouted as a newspaper fake; but the editor who so loyally put forth this defense of the scheme probably has implicit confidence in the validity of his argument.

Adopting the same line of reasoning with respect to side-hunts, it may be said that if two gunners are justified in a competitive scoring of game, two hundred gunners may claim the same privilege in a game killing contest for a dinner. That is a proposition difficult to controvert; yet all of us who have had any experience of the devastating effects of side-hunts know that they do an immense amount of harm, more than can be compensated by whatever fun the participants may find in the competition.

Writing from northern New York, Mr. Burnham reports that the reason the woods are barren of game is because of the ravages of a side-hunt which swept over the country, annihilating the birds and animals, and leaving no stock to breed from. This is a story which may be repeated in numerous localities; it is the natural result of side-hunting. The spirit of the competition, where each species of game or vermin or harmless creatures has its value in the scale of points, encourages the killing of every animate thing that may come within range. This promiscuous destruction is likely to be wanton, and in many instances it degenerates into the unlawful and forbidden. In the excitement of the competition little heed is paid to the obligations of good sportsmanship and good citizenship. Protected species fall with the rest. For instance, at the 1897 side-hunt of the Oskaloosa, Iowa, Gun Club, game of all indigenous species was slaughtered to make the grand totals swell to impressive figures; doves protected by the statute were openly scored under the name of ground pigeon, and pheasants, for which in 1897 there was no lawful open season, were included in the game brought in. Indeed one natural and well defined tendency of such hunts is to provoke and promote game law violation. Side-hunters are not by any means all sportsmen; the event calls out every Tom, Dick and Harry in town who can muster a gun; it is only the sportsman element which, we may assume, cares anything about the sportsmanlike character of the sport. The rest know little and care less about what is and what is not game, and game in season. The side-hunt means a horde of gunners intent on getting everything that walks, crawls, hops or flies. And if the land is not so cleared of animal life that another year will come complaints of game dearth, this is only because the majority of side-hunt participants cannot kill their game when they see it.

We are convinced that if the sportsmen of a community understood clearly the effects of the side-hunt they would as a unit oppose these competitions, save the game for their own pursuit, and insure immunity to those species which do not come within the sportsman's classification as fit objects of sport. The only legitimate game for a side-hunt is the inanimate target sprung from a trap.

SNAP SHOTS.

With the growth in this country of the game preserve idea, it was inevitable that those owning preserves should cast about for a variety of large wild game with which to stock them. We have a number of species in America that do well anywhere, but those indigenous to the Atlantic seaboard are not numerous. Only Virginia deer and elk thrive anywhere, and are easily obtained. Buffalo are so costly as to be out of the reach of many people. It is not strange therefore that in a number of cases owners of preserves have imported large game from Europe. This has been chiefly the wild hog, though we have known of one or two cases where the red deer of Europe and roe deer have been brought over for the purpose. The wild hogs seem to do well everywhere, but like the English sparrow they have hardly become firmly established anywhere before they grow troublesome. We understand that the late Mr. Corbin regretted his importation of these animals, and made an effort to have them killed off. Boars were turned out some time ago in the Shawangunks, but as soon as they had become firmly established, they ravaged the country far and wide, and it was necessary to exterminate them. For all our preserves located well to the north, this continent can furnish enough different sorts of large game to satisfy the most exacting, and the practice of importing and turning out exotic species of big game about which we know comparatively little is certainly one to be avoided.

A belief was held by eighteenth century physicians that the atmosphere of one's birthplace possessed peculiar virtue; and a not uncommon recourse, when a patient was in desperate straits, was to send him back for this benefit of the natal air. However fanciful may have been the notion, there are thousands who can testify to the magic influences of the old home and its surroundings when a visit is made to them after the lapse of years. For many a man a fishing excursion in spring or summer, or a hunting trip in the crisp days of autumn, means going back to the familiar scenes of youth; and it would not be far from the fact to say that no other outing one may make can compare with this home returning. The streams may have dwindled and the old-time store of fish be wanting; but scant score of trout or bass is more than made up by the flood of pleasant recollections which overwhelm the spirit at sight of familiar scenes. The covers once unfailing for quail or partridge may prove now barren and desolate of game, but one would not exchange for a bag of gold the pictures memory paints of the old days, with the dear faces and the voices heard no more.

If it be our good fortune to find the old woodland haunts unmarred by the axe or by fire, the maples and oaks and birches and pines and hemlocks may afford some compensation for the disappointment and disillusioning which inevitably have part in every delayed homecoming. The proportions are all so changed and so unfamiliar. The village street has narrowed and shortened; the houses have shrunk in size and drawn closer together; and the people who stare out at you are strangers. You realize with a shock that you know nobody, but it is a greater shock to find that nobody knows you; and that here in your own home you too are a stranger without claim to the friendly salutation which everywhere greeted you in the old days.

A short time ago the chief game warden of Ontario sent out a series of questions on the subject of hounding deer and killing them in the water. The questions were sent to all deer hunters who had taken out licenses last year. Toronto papers report that the great majority or nearly all of the hunters have responded, and that those of eastern Ontario are almost unanimous in favor of killing in the water, while those of northern and western Ontario are practically solid against it. How many are opposed to hounding has not been reported, but probably the majority are in favor of it. However this may be, it is improbable that the law will be changed.

A silver half-dollar is the key to many a good game cover. The insistent gunner who sets in to browbeat his way may stand long like a horse in paddock gazing longingly over the fence it cannot jump into the clover field. He is wiser, happier, luckier and more heavily laden at the close of the day who negotiates his privileges in a businesslike way.

The exhibition given by the New England Sportsmen's Association in Boston, last March, was of such a character that there was a popular demand for its repetition in 1899; but our Boston correspondent reports that the enterprise will not be repeated.

Maj.-Gen. Sir Montague Gerard, a British officer in India, has killed first and last 229 tigers. That is a game score that amounts to something.

The Sportsman Tourist.

Highways and Byways.—IV.

Two o'clock, a clear morning, the end of August! The alarm goes off as I put on my togs. Over the eastern mountains the spangled belt of Orion rests upon the pines and in the far north the Great Bear treads lightly upon the misty horizon. My footfall re-echoes from brick walls, and the feverish breath of a summer midnight lingers sullenly about dim-lighted corners. Even the lone policeman has crawled from his beat into the coolness of some unfrequented alley. Sidewalks give place to dusty roads, where giant poplars stand like specters waiting for the dawn. From farmhouses, hidden in the gloom, comes the barking of dogs that my whistle has aroused from slumber.

Three o'clock! The highway crosses the river. It is a low song that the river sings as it ripples over the stones. Then comes a hill that leads up to the bench, where the wheat stubble looks a ghostly white beneath the stars, where the fragrance of ripened apples and peaches fills the air, and the breezes that come from the mouth of the cañon give promise of cooler weather than we have known for many a week. This traveling at such an unearthly hour, after having been up for two consecutive nights with the sick, is something of a hardship, but what boy does not work harder in the field, what man does not put in lighter-hearted hours at the desk when he thinks of a glorious day's fishing just ahead?

Four o'clock! A faint flush of false dawn, the crowing of a distant cock, and then, most welcome sound, the challenge of Reid's faithful Ginger, who would first tear me to pieces and then satiate me with canine caresses. My tackle and a change of raiment had been sent out the night before, and Reid and I put in the horse and load with hay, while Mrs. R. fixes our lunch. Down the lane and out on the pike! Now there are lights in the farmhouses, and the sparks begin to fly from the smokestacks of engines that are getting ready for the day's threshing. Anon comes the twitter of birds, and daylight steals into the valley.

Five o'clock! It is chilly. We draw our coats about us, cross the river bridge and enter the cañon. Far behind us the first rays of the sun sparkle upon the Oquirrh Range. It will be three or four hours before they touch the pools and reaches where we expect our day's sport. On we hasten. There are seared leaves where two months agone the wild roses sported and the dust, like a fog, hides the hubs from view. The campers along Provo River are kindling their morning fires. They should have been casting a full hour ago. Then we turn into the yard of the Telluride Power Co., where the waste water from the giant flume makes a cataract 90ft. in height, where a net-work of copper wire carries the subtle force to the mining depths of Tintic and of Mercur—full fifty miles away. We unhitch and feed our steed, fix our casts and start through the underbrush for a long reach of inviting water just above the plant.

Six o'clock! We step into the icy stream. Before us a solitary peak, like Curicanti needle, cuts the wondrous azure of the morning, and beyond that the massive Wasatch rises tier upon tier, but of that we must not think. The river is full of loose boulders and deep holes; a mis-step means complete immersion, and we shall fish all day in waist-deep water. Hip boots are only an aggravation, as a sudden plunge must be expected. I make mine very early, in fact before I am ready for it. Thereafter the stream has no terrors for me. Of course it was done by too great eagerness to reach a promising pool. Meanwhile Reid, casting from waist-deep water toward the further bank, scores one. I follow, and the sport, albeit the trout are small, grows fast and furious. Reid lands three to my one. I have rises enough, and apparently make honest strikes, but to no purpose. Alas, for the fisher who brings no fine file! My hooks are dull, and it is necessary to change the cast. Queen-of-the-waters is the favorite. I have only a No. 4, which is a little too large, so I use professor, with but moderate success. At length, after fishing up for a couple of hours, we decide to fish back. The sunlight comes down upon the crystal water. Rises are few. Then there step into the water a couple of grangers, out for a day's sport. The chivalry of fishing is unknown to them. One is an old man with long gray beard. He is new to the business. With a worm-baited hook he angles in the shallow waters. His son, of robust cast, hurls a minnow and a heavy sinker into each pool, rushing along at a four-knot rate. This is no place for us, so we go back to the buggy and to breakfast.

It was no use to try to disguise the fact that, until the shadows grew longer, few trout would reward our efforts. After loafing an hour, we went back and Reid scored a couple of beauties. Then our friend with the minnow came up stream. How many miles he had been down the river we could not tell. The father tried to cross the stream where we had been. It tossed him like a cork, and it seemed for a while as though he would not make it. Reid and I stopped, ready to go to his relief, but at length he felt the shallows. He fell exhausted on the bank, and we decided to drive down to Carter's ranch for the afternoon fishing.

Long stretches of water, with deep pools below, the river running 5ft. deep beneath willow-hung banks, a few fish and then the shadows fell across us. A slaty point appeared a hundred yards down stream. A small boy saw us heading toward it, and tried to get there first. He succeeded, drew out a trout and was gone. Under water the slate was in terraces, making a succession of pools. Reid waded into the upper pool. I took the lower. There, standing knee-deep and on a very slippery footing, we cast across and slowly drew our flies athwart the current. For each of us at the same instant the water broke. The twist of the wrist, the bending rod, the music of the reel, betokens that the evening sport had begun in good earnest. Six beauties where the lad had secured one, and then, casting here and there as we go, we hasten back to the buggy, for we have yet two good pools to fish. They are a full mile below, and the day is far spent.

Seven o'clock! We tie up for the last time at the mouth of the cañon. On either side rise the perpendicular portals 600ft. in height; below them 150ft. of slaty talus slope, a willow-dotted valley, and the river itself, not rushing and boiling with the fury we have seen since dawn, but widening, meandering peacefully out of its rocky confines toward the lucerne fields and orchards, and the setting sun. Here are taken out the six mighty irrigating canals that make possible the cultivation of seventy square miles of the most fertile land in the great West. The dams that jut out into the stream make miniature lakes, and in their depths lurk the largest trout that apparently cannot be enticed save at the twilight hour. Reid has fished these waters several times during the season, and with rare courtesy gives me the better place. He uses the cast with which he has fished all day, but I change mine for white and light gray. Below us and just where we expect the best results are eight fishermen. One uses flies, the rest have bait and sinkers. They are fishing for a livelihood, but they have not learned that success is certain after sundown, so as we approach they one by one disappear, and we are left sole masters of the field.

My first cast brought to creel the largest fish of the day, and after that each cast brought rises. It grew too dark to see the flies, but the welcome splash and the arm-thrill assured us that good work was going on.

As we were about to give up, I had a strike of more than usual force. My rod bent almost double. I was hampered by being in breast-deep water, and at first the trout had everything his own way. If he sulked at the bottom I could scarcely budge him. If he fought I was afraid he would tear himself loose. For full ten minutes we pitted ourselves against each other. Then his struggles grew more feeble, and I slowly backed toward the shore. How I needed a landing net! At length I was on terra firma, reeling in my captive, now only 40ft. away. A last break, and as the giant leaped high in air he showed that above him was also hooked a trout about a foot in length. Slowly I drew them toward my feet, swinging them a little up stream. The smaller one measured his length on the sand, the larger grated on the pebbles. He felt them, shook himself convulsively. The hook tore out, and he was gone. I was defeated, but happy.

Ten minutes later we were changing clothes at the buggy, and in another hour a good curry supper at Reid's ranch warmed the inner man. After supper we both fell asleep over a game of cribbage, which sufficiently indicates the condition of mind and body.

Three evenings later I rode to the same spot, and about 8 o'clock, just as the full moon came over the crest of the Wasatch, the pool was musical with silvery splashes and brilliant with opalescent circles. In an hour I landed a dozen good fish. One of these I caught in a singular manner. My dropper was a No. 10 Queen-of-the-waters, and I felt that I had securely hooked a fingerling. As I hurriedly drew him in, I felt a sharp strike without a rise, and when I reeled up discovered that a large trout had seized the smaller and had drawn him so far into his gullet that disgorgement was impossible.

There has been during the season an unusually large catch of good-sized trout below the dam of the power plant, but very few have been caught above. The ladder put in by the company is so steep that the fish were unable to ascend and spawn. This may have a very serious effect on next year's sport. In conversation with President Kingsbury, of the University of Utah, and an ardent fisherman, I learn that last week he fished the waters of the Upper Provo, some forty miles above my favorite ground. He found the river dynamited to death. There were no large fish, and around each pool hundreds of small trout in all stages of putrefaction testified of the illegal practices that had been resorted to. Well, there is no use of complaining. Such is bound to be the case until forests and fisheries are taken off from the list of political spoils, and men who understand that they owe a duty to the people of the State for the salaries which they draw are given an opportunity to enforce the laws that are now a dead letter on the statute books.

SHOSHONE.

A Mountain Thunderstorm.

It is a hot day in the mountains. Were it as hot in the city the weary people would be dragging themselves painfully through the oven-like streets between the monster office structures in a pitiful state of lassitude and suffering. But here in the mountains things are different. There is not that humidity, that heated breath from the ground, which causes people to flee to the mountains, shore or woods for relief. Instead there is still the clear, bracing air for which the mountains are noted, and one can move about with comfort.

It is late in the afternoon, and the sun is shining brightly, but away off to the west ominous black clouds climb over the mountain tops. Soon the sun is lost to us behind these clouds. The mountains in the next ridge to the east are still streaked with the sun's rays, making a beautiful picture in light and shadow. Faintly at first, then more distinct, sounds the deep rumble of the thunder, rolling and reverberating from mountain to mountain. Grayer and grayer, dimmer and dimmer grow the mountains in the direction from which the storm approaches. The lightning is yet mild, coming now and then in zigzag flashes that light up the distant mountains in a weird, white light. The wind has ceased. The mountains appear to have assumed a melancholy, gloomy air that seems contagious to man and beast alike. It is the calm before the storm.

"Clear for action! Batten down the hatches! Shorten sail on yonder hammock!" B.'s voice bellows out orders and I hasten to obey. Windows and doors are soon fastened; fragile articles are safely stowed away, the ladies retreat indoors, and we men install ourselves comfortably on the porch to watch the progress of a mountain thunderstorm. A more beautiful and impressive spectacle I have rarely witnessed.

The wind begins to blow, first in sudden, fitful gusts, then increasing in its fury till the young pine trees before the cabin are bent almost to the ground; loude rolls the thunder, a sudden clap, a blinding streak, an the storm is upon us. Everything looks big and gra and spectral in its mistiness. The rain pours down i torrents, and bounds off the gables of the house in lit tle rivulets. The lightning plays among the trees i fantastic streaks of fire and light, now in a quick, straigh line that buries itself in the ground or in some tree, the in a series of broken, blinding flashes. The mountain as revealed momentarily by the lightning, look grande and more majestic than ever.

Contentedly we sit under shelter of the porch an watch the passing of the storm. The thunder grow more distant, the lightning fainter, the rain cease the storm is over. The leaden-hued clouds break int waves of blue and white, and the sun peeps timidly ou from behind a thin cloud, then at last bursts fort in a glory of light.

Heavy white clouds, resembling so many big so blankets, rest lazily on the tops of the mountains, an lap down over the sides as if threatening to slide dow and engulf in their misty haze the valley beneath, the slowly they dissolve into the bright, fresh atmosphere.

Down beneath the rustic bridge, where, before th storm, a little brooklet had playfully rippled over th rocks, is now a roaring, rushing, irresistible flood. O the mountain across the road small streams fall dow over the ledges and rocks, making one of the charmin sights of this beautiful country.

Here and there are trees cut down or shorn of the branches by the lightning. Everything is fresh and co and bright. In the city the streets would be muddy an slimy, the air sultry and heavy, and the people uncon fortable and unhappy. But here in the mountains thing are different. In its approach and passing a thunde storm is only another of the many wonderful and i teresting incidents and views which go to make an ou ing in the mountains an enjoyable and pleasant exper ence.

G. F. DIEHL.

The Ascent of the Grand Teton

THE question as to whether the summit of the Gran Teton had ever actually been attained previous to M W. O. Owen's recent success is one of much interest mountaineers. We printed last week a note directi attention to Mr. Langford's account of his expedition 1872. In the Sunday Herald of Sept. 18 Mr. Ow writes on this subject as follows:

As far as records go, seven previous attempts h been made to scale the Teton, and all had ended failure. Of the various parties which have tried the pe there is but one which claims to have reached the to and as the question of first ascent must be settled now, am constrained to mention this particular expedition greater length than would otherwise be warranted.

The party referred to is that of Stevenson and Lan ford, of the United States Geological Survey, the a tempt having been made in July, 1872.

They came in from the west, crossed the glacier at t southwest base of the peak, climbed to the Saddle a turned north up the granite hallway which leads to t enclosure on a pinnacle 800ft. west of the Grand Tet and fully 500ft. below it. Their path from the Saddle the enclosure was practically identical with that of m own party.

After examining the enclosure they descended eas ward, as any one must do who desires to climb t peak, and, as near as can be judged from their accoun of the alleged ascent, struck the icy niche through whi the writer made his attempt last year. The base of th crevice is about 650ft. below the summit and 150ft. low than the enclosure. Passage through it, however, impossible. And right here, beyond question, Mess Stevenson and Langford abandoned the climb.

Notwithstanding the failure, it was given out that t top had been reached and was so published in the offic reports of the Geological Survey. Mr. Langford al published an account of his alleged ascent in Scribne Magazine of June, 1873.

Much as I dislike to provoke a controversy on th point, I am compelled by a sense of duty and obligati to myself and companions to make the clean cut stat ment that our party was the first to reach the sumn of the peak.

I have in my possession unimpeachable evidence th Langford and Stevenson did not reach the summit the Grand Teton. This testimony consists of the af davit of Thomas Cooper, of this city, who was Hayde chief packer for years, and who is personally acquaint with Mr. Langford, and knew Mr. Stevenson during l lifetime; a personal letter from Mr. Henry Ganne chief geographer, United States Geological Survey; sworn statement of the Governor of Wyoming, and M Langford's own written statement in his magazi article.

Thomas Cooper swears that Stevenson admitted him that he and Langford failed to reach the summ but "got so near they called it the top."

Mr. Henry Gannett (I quote from his signed letter me) says: "The Grand Teton has, to my knowled been climbed twice, although in neither case did t parties reach the exact summit.

"The first is probably the one to which you refer, co posed of Messrs. Langford and Stevenson, in 18 The second was composed of Mr. A. D. Wilson a assistant, in 1878. Both these parties went up this c vice and turned to the left, and so reached a po which is only about 200ft. distant from the main su mit, and about 50ft. below it."

Here is the whole proposition in a nutshell, the o discrepancy being the distance below the summit. was 500 instead of 50ft.

Mr. Gannett says they did not reach the exact su mit, and this tallies beautifully with Stevenson's adm sion to Cooper. And this is amply sufficient for purposes.

In the Scribner article Mr. Langford describes alleged route up the peak, and, having reached a po 125ft. below the summit, says: "Above the ice belt o which we had made such a perilous ascent we saw, in debris, the fresh track of the American ibex, the mo tain sheep," etc.

If there were no other evidence in the world on this question that one statement would convict. If Captain Langford had actually made that "perilous ascent," his wildest dream or freak of imagination could not have drawn that statement from him. It is too absurd to discuss. A cat might crawl up that slope, but the mountain sheep would stop 600 or 700ft. below.

The last and very convincing proof that these gentlemen did not reach the summit lies in the fact that we found not a shadow of a mound or other evidence of man's having been there before.

Every mountaineer will appreciate the value of this fact, and for Mr. Langford to say that he and his party devoted several days to preparing for this trip, passed through all the perils of life and limb described in his article, reached the summit of America's grandest peak, and then ran away without leaving some little evidence of his visit, is altogether too ridiculous to dwell upon: I will leave it for the world to judge.

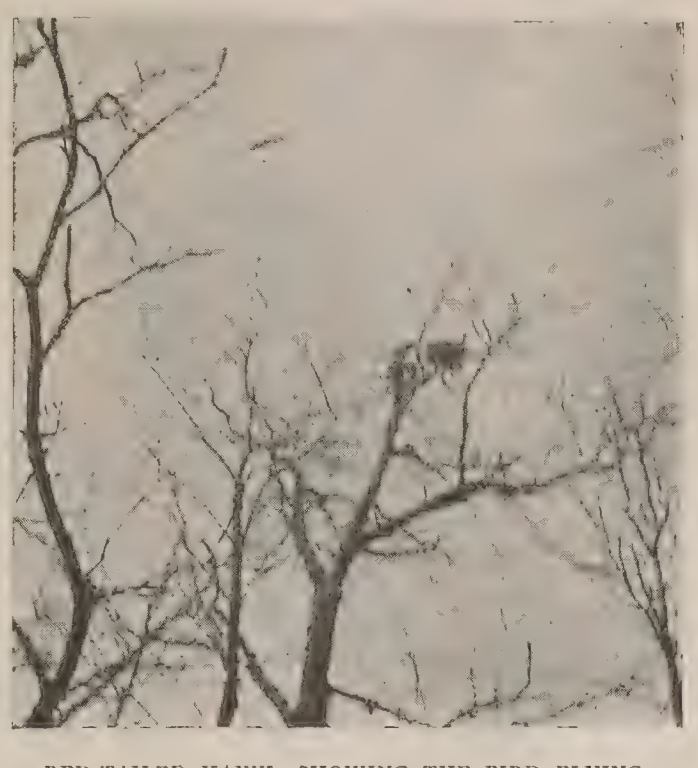
Natural History.

Nesting Notes on the Raptores of Wisconsin.

II.—Hawks.

THE red-tailed hawk (*Buteo borealis*) is the most common species in this locality. It is commonly called chicken hawk, which name in fact is applied to almost every species by the farmers. In talking with the farmers in regard to hawks and owls, I find that most of them believe all are more or less an injury to the farmer, and that the only way to rid themselves of the nuisance is to keep up a war of extermination. In fact, it is but a few years since the farmer lads, led by some of the older ones, organized a hawk, owl, crow and gopher hunt, by choosing sides, the side obtaining the most heads to be treated to a picnic dinner by the losing side. Every nest they found was spotted, then the eggs were allowed to hatch, and at the proper time the homes were ruthlessly destroyed, and the parents shot. Each side closed the season with some hundred heads to its credit, and the destruction could not help but react to the direct injury of every farmer for miles around. A little more Government literature on this subject would be a good thing to distribute among our farmers, instead of so much political trash, most of which is never read. The efforts made along this line by the eminent ornithologists of the Biological Survey are highly commendable and cannot fail to bring about good results. The same may be said of the various societies for the protection of birds.

But to the notes. A pair of red-tails were seen sailing about over a piece of timber on March 17, 1896, and a short search disclosed the nest in a large black oak tree. It had evidently been lately repaired, as the lining was freshly arranged, made up of leaves and bark, some of which showed fresh blood stains, but no eggs had been laid. The nest was 60ft. up, and was 2ft. across the top. When examined again on the 31st the nest contained two well marked eggs, with incubation started. One was heavily blotched with reddish brown at the largest end, and the other was finely speckled all over with lighter brown. The bird had left the nest on our approach.



I found another nest on April 5, while walking through a piece of oak timber. It was placed in a small black oak, 40ft. from the ground, but was a much smaller nest than the preceding. It was lined with bark, leaves and feathers. There were many green poplar twigs with the large, downy buds on them in the make-up of the nest. The bird left the nest as soon as she espied me, and soared above during the time I was at the nest. Both eggs have faint under splashings all over, one of slightly deeper color than the other. The nest was within forty rods of a farmhouse.

I next visited a small piece of heavy timber close to a farmhouse on April 6, just at the close of day; and was not long in locating a red-tail's nest on the edge of the timber, overlooking a broad expanse of marsh. A few sticks dislodged the bird, and she continued to soar and scream during our visit. After a hard climb, the nest was reached far out on a treacherous limb, 66ft. from the ground. The lining consisted of a few leaves, and on the whole it was a slovenly nest. But what the bird lacked in the way of nest building was made up in the coloration of her eggs. The markings on one egg seem to be entirely under the surface, and show almost a lavender shade in heavy blotches; the other has surface markings of a deep brown, the blotches on both being scattered over the entire egg.

On the 9th I went to a large piece of timber bordering on another marsh, which is a great hunting ground for hawks. A nest was seen along the edge of an opening; the bird left it quickly, but soon returned, followed by the male. The nest was placed in an immense crooked white oak, impossible to climb. A small sapling grew close by, which met the oak about 30ft. up. My companion climbed briskly up the sapling, but when the main trunk was reached the struggle began, the lowest branch being still about 20ft. above. At last the nest was reached, and a fine set of three eggs was found. The entire set is almost uniform in style and color of the markings, which are large blotches of an amber color. The nest was 80ft. from the ground, and was built close to the trunk on a large limb. It was a well made nest, but formed to fit the crotch it filled.

On the afternoon of the same day we took a long drive to some heavy timber. A large, dark object was seen long before we reached the woods, and the nearer we approached the more it looked like a hawk's nest, and such it proved to be. It was placed in a gnarled and knotty white oak 3ft. in diameter. I was half-way up to the nest before I knew what the prospect was; but the bird then left the nest, which gave me a little more inspiration to climb. The nest was placed about 15ft. out on a limb, which was perfectly safe; it was lined with leaves, and was 40ft. up. I found a beautiful set of two eggs, lightly washed with chocolate, mostly about the smaller end. The bird kept sailing about overhead, and the next morning, as we passed the place at 10 o'clock, she flew from the nest again.

After crossing a road and striking into the timber this second day, we caught sight of an immense nest in a very tall poplar. The bird was soon induced to leave, to soar above while we investigated. After a long, slippery climb (for it had rained the night before and had so dampened the moss on the tree trunk that it reminded one of the greasy poles so often used on Fourth of July by the small boys), the nest was reached. It was in a fork formed by several branches. It had little lining besides the downy buds of the poplar, and was the best built nest I have seen, being compact and

RED-TAILED HAWK, SHOWING THE BIRD FLYING.

solid, with well formed brim. There was but one egg, and this was perfectly fresh. It was heavily marked with dark reddish brown spots all over. I resolved to visit the nest again to see if the bird would finish her complement; so on the 27th, seventeen days later, I went back and found one more egg. This was about half-incubated, which showed that the bird had laid it soon after my former visit. The size and amount of markings are about the same as in the first egg, but they are under the surface, which is in strong contrast to the other.

The next nest was found in a large black oak, on

RED-TAILED HAWK'S NEST IN BLACK OAK 80FT. HIGH.

the edge of a large woods, with no marsh near. The eggs, two in number, were entirely free from markings of any kind, just a plain bluish white ground color, which is in great contrast to the richly marked set preceding. After leaving the nest the bird soared about overhead, coming down quite close at times. This was observed on April 12. The nest was loosely built, with a few leaves for lining, placed 40ft. up.

On the 19th I again visited the island where I had seen a set of red-tails on March 31, and found a small nest within a few rods of the great horned owl's nest. The bird did not leave the nest until I was part way up the tree, after which she hovered near without any screaming. The nest was out some distance on rather a small branch, and it was some time before I ventured to take the climb; the nest proved to be 70ft. from the ground, and it was with feelings of thankfulness I reached the main trunk again safely. This is the smallest nest I have seen; it was loosely built, and lined with leaves. The eggs were two, and perfectly fresh. One was marked heavily with brown and red at the larger end, and the other was lightly painted in small chocolate patches all over.

Driving along the road April 27, as we were returning home, we noticed a large nest in a small piece of timber about eighty rods from the road. Quickly turning the horse, we entered an opening in the fence and drove down across the field. When within a short distance we saw the bird standing on the edge of the nest, and there she remained till I began to climb. The nest was 40ft. up, and was lined with leaves. It contained two fresh eggs and a gopher which had recently been killed. One egg was heavily marked at the small end, and finely speckled elsewhere with reddish brown, and its mate was marked exactly as one egg in the set preceding, being lightly painted in small patches of chocolate. GEO. A. MORRISON.

FOX LAKE, Wisconsin.

Animal Intelligence.

CHARLESTOWN, N. H., Sept. 16.—*Editor Forest and Stream:* I cannot refrain from expressing my delight at the admirable answer of your correspondent Hermit to the metaphysical meanderings of Mr. Alexander, in your issue of 10th inst. I had thought of taking up the question myself, but decided that "chopping logic" was not in my line of business, and that I could find enough to do in examining mechanical and economical questions and fallacies, without fooling with "egos" and "sub-egos." I long since expressed my belief in the columns of FOREST AND STREAM, that what is called "instinct" was simply "inherited experience," and though, like Haeckel, I decline to attempt to inquire into the original mystery of life, I think that both his writings and those of Darwin prove very clearly its progressive development, and its upward progress from the simple "cell" to the complicated structure of vertebrate life.

It certainly is beyond question that the animals of newly-explored countries do not show the fear of man which follows on their experience of his destructive nature, and continually increases with that experience. That the wisdom acquired by experience is transmitted to the offspring from generation to generation needs no argument is shown by the knowledge of every sportsman who ever owned a well-bred setter, or pointer, or a full-blooded horse, and I will not try the patience of your readers by entering into one, but will simply endorse Hermit fully.

Let me repeat, what I believe I have already said, how much I enjoy the reminiscences of Shadow, which recall many old friends, and scenes with which I was familiar forty years ago, though I never shot over that country as much as I have fished in it. I want also to commend Fred Mather's admirable series of practical articles to the attention of the younger generation of your readers (and some of the older ones too), and see if he can cure them of calling the genuine pike either a pickerel or a muscalunge, and the pike perch a pike, or the black bass a trout. By the way, quite a number of bass have been reported lately as caught here in the Connecticut, though I have heard of no more pike perch. Ruffed grouse are reported as plenty. I do not know about gray squirrels, but the sound of guns was heard yesterday (opening day) on the hills back of the village. VON W.

An American Blue Grotto.

IN a recent number of Science, Mr. H. Carrington Bolton writes from Lake Minnewaska, N. Y., of his discovery there of a blue grotto, which must certainly be well worth seeing. Mr. Bolton is anxious to learn whether similar blue grottoes are common at other American lakes. His description of this one is as follows:

Many of the beautiful phenomena seen at the celebrated Blue Grotto of the Island of Capri are reproduced on a small scale in a cavern at Lake Minnewaska, N. Y. This lake is situated on the Shawangunk range of mountains, at an elevation of about 1,700ft.; it lies in a basin, excavated in glacial times, about half a mile long and less than a quarter in width, and of a depth reaching 70ft. The rock on all sides is a white quartzite known as Shawangunk grit, which rests upon shale, but no outcrop of the latter is visible at the lake. The quartzite is compact to granular and contains in places pebbles of white quartz; it is very free from feldspathic admixture, so that it yields to the water very little soluble matter. Bare cliffs rising to the height of 150ft. bound the east side of the lake, while the western banks are well wooded. The cliffs are vertical and fringed at their base by the usual talus, which, however, is made up of blocks of unusual size. The cavern is formed by several huge rocks overhanging the water, so as to form a comparatively dark hole, and the space between the under side of the sloping rocks and the water varies from about 2ft. to not more than 2in. The cavern faces the southwest; it is very irregular in shape, and at one point the roof and walls reverberate in response to a deep bass note. The water just at the entrance to the cavern is 33ft. deep, and 2 or 3ft. away 40ft.; it is very transparent at considerable depths. As the rocks overhang so close to the water the optical effects can only be seen by a swimmer, and it was while swimming along the shore that I discovered the American Blue Grotto three years ago. As one approaches the mouth of the cavern the bluish color of the water is noticeable, but the beautiful effects are best seen by entering the opening and looking outward toward the light. The water varies in color from Nile green through turquoise blue and sky blue to deep indigo blue, and in all these shades exhibits the silvery appearance, when agitated, characteristic of the grotto at Capri. A body immersed in the water has a beautiful silvery sheen, similar to the reflection of moonlight. The water has these colors at all hours, but they are strongest when the sun is in the zenith; late in the afternoon the slanting rays of the sun enter the opening and light up the cavern, greatly diminishing the optical effects.

The water retains the characteristic color (but without the silvery sheen) on cloudy days, and even during rain, being especially strong when fleecy white clouds bar direct sunlight. The relation between the different hues, green and blue, to the aspects of the sky, whether clear or overcast, is not evident.

Another pleasing phenomenon must be mentioned. Just below the water line, where the rocky sides are lapped by waves, the white quartzite exhibits a brilliant

siskin-green hue; this bright color is limited to a space about 3 or 4in. below the level of the lake and to certain walls of the cavern. The bare arm immersed in the water partakes of the green color when the light is reflected at one angle, and of the silvery blue color at another angle. The interior size of the cavern is not easily given, but the face of the overhanging rocks measures about 40ft., and they project about 15 to 20ft., and it is surprising that so small a cavern can produce such a variety of fine effects.

Orioles in Confinement.

STEVENSVILLE, Pa.—Noting F. M. B.'s remarks in FOREST AND STREAM of Sept. 3, I was surprised to read that the Baltimore oriole "cannot be caged, as it will kill itself when confined," and that "even the young will pine away and die." Nine years ago a pair of orioles built their nest in a lofty elm in the rear of our house, and when the young were full feathered and grown a heavy storm beat one of them down, and my wife caged it. It continually called for company, and we placed it outside, where the mother bird seemed very solicitous of its welfare, alighting on the cage and in every way showing great anxiety, and at the end of the second day we found it dead. The neighbors said it had been killed by its mother. But a few days after one from the same nest became entangled in some trailers, and I caught it, and after one day's confinement indoors gave it to a lady who had another pair. For aught I know the birds are alive now, as after she had had them nearly two years she called me in to see them breakfast, and it was both amusing and instructive. She was feeding them on pieces of crackers, which they relished; but before eating they would grasp each piece firmly with one foot and with the other perch on the edge of the water dish, and soften the cracker by soaking it in the water.

I complimented her on her tact in educating birds, but she explained that they belonged to the "soft-billed species," and unless furnished with soft food would perish from starvation. In this connection I would like to know whether others have noted not only the difference in the summer and autumn dress of the oriole, but the great variation of markings and colorings of different individuals. W. W. McC.

A Black Woodchuck.

ESSEX, N. Y., Sept. 10.—*Editor Forest and Stream:* Yesterday, while returning from a squirrel hunt, I ran across and shot a black woodchuck. I have preserved the skin, which is quite handsome. It is about the color of the average bear skin, except for the nose, which is white. Examples of melanism in woodchucks seem fairly common here, as I have heard of several specimens being killed. Black squirrels are also fairly plentiful.

It is a poor year for squirrels, however. Last year Essex and Whallonsburgh engaged in a side hunt, and as a result about all the breeding stock was killed off. The side hunt should be legislated against; the game law people busy themselves with much less important matters.

I have killed five gray squirrels with a .22cal. Marlin repeater, out of six seen. Squirrel hunting with a rifle is the best of practice for deer hunting, as it gives one a confidence in his aim, which it is necessary to renew and cultivate after a year's inaction. J. B. B.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Game Bag and Gun.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

In Virginia Game Fields.

Editor Forest and Stream:

I am located in Sussex county, Virginia, near an embryo town called Lumberton. I am here for the hunting season, as usual, which opens for deer Sept. 1; for quail, Oct. 15, and might be said to stand open the year round for fox hunting, the favorite sport of the descendants of the old English gentry, who brought their love of the chase from "Merrie England," along with their thoroughbred foxhounds, more than a century ago.

I chanced the other day upon a tin poster which exhorted me in big white letters to "Report your luck to FOREST AND STREAM," hence this communication. Moreover, I have seen no report from this favored section in your columns since the seventies, when Chasseur contributed a number of interesting articles describing this "happy hunting ground" of the aborigines, and later of the flower of Virginia sportsmen from the cavaliers of King Charles' time to the sport-loving youth of to-day.

The love of sport is as much a heritage with them as the thoroughbred deer, fox and bird dogs, whose pedigrees have passed down from sire to son for generations, and may well be called "F. F. Vs."

I am training two brace of pups from this stock, and at four months old they follow to the fields, starting covey after covey of young birds. They stand as staunch and point as handsomely as old dogs.

It is a pretty picture—the little dogs pointing in every direction at the fledgelings hidden in the stubble. When they find a covey old enough to rise, it is amusing to see them circle, heads up and nostrils wide; amazed at the sudden flight of their game.

Such dogs hunt as instinctively as they swim, and need no breaking in, but must learn the words of command and instant obedience. I never knew one of this breed to be gunshy, or to fail to retrieve on land or water.

Quail are reported more than usually abundant this season, owing to the protection they have enjoyed for the past two years, and doubtless numbers have migrated from North Carolina (close by), whither our sportsmen resorted in great numbers when they were no longer permitted to shoot quail in their own State. Three years ago this sunny land was visited by the most unheard-of freeze, which locked the land in ice and snow from the last of December to the last of February. Birds froze and starved under the snow-crust by thousands in the fields, and those seeking the shelter of barns or stacks were trapped or shot by farmers' boys, and caught by hawks and foxes, until the snow was dappled with feathers everywhere.

So great was the destruction that the State Legislature took prompt measures to protect the birds, and prohibited quail shooting for two years. The law was very generally observed, and the result is a superabundance of birds—partly owing, however, to the two mild winters and unusually fine breeding seasons following the freeze, and the supposed migration from North Carolina, where the hunting was excessive, and gave the birds no rest.

I have no "luck" to report with deer. Of the four killed here in the past week I had no share in the slaying—only hearing the music of the chase from afar, for it never came near me. The style of hunting here is peculiar. The men are placed on "stands" which the deer are supposed to pass en route for the river, which they invariably seek to baffle the dogs. The mounted "driver" follows the trail and encourages the dogs with short yells till the deer is "jumped" from his bed. He usually has the first shot, but must often shoot from his horse, so his chance is not first rate. As the deer takes his accustomed way to the river, the standers have a show. But alas! if he takes another route, they are not in it. L. P. BLOW.

Indian Modes of Hunting.

Otters.

WITH steel or wooden traps is the only systematical way of hunting these animals. They are, of course, hunted for their pelts in the north country of Canada, and not for sport, as in Scotland. A few are shot, but these are met with by chance.

November is when the Indian sets his traps for otters. They have then their full winter coats on; and it is just before the small lakes and rivers set fast.

Their resort is generally in some chain of small lakes with creeks connecting the chain, and their home, if they can find one, is an empty beaver lodge. They prefer such a place, as after the ice is taken in fishing along shore, they carry the fish into one of the "washes," where they can breathe and eat with safety and comfort.

The otter is a great enemy of the beaver, but never willingly courts an encounter; yet, every time they meet, there is a terrible battle. I remember years ago coming out on a small lake about sundown, and seeing a great commotion on the surface of the water a few hundred yards out, jumped into my canoe and quietly paddled out. As I drew near, I noticed two black objects engaged in a deadly conflict. Although they must have observed the canoe, they paid no attention, but continued the fight, sometimes disappearing beneath the surface, fast to each other, for a full minute.

When within gunshot, I made out the combatants to be an otter and a beaver, and could have despatched the two with one shot, only I could plainly see they were both very much exhausted, and I wished to see which would gain the day.

The end was nearer than I expected. Once more they disappeared beneath the waters, each maintaining the same deadly grip of the other's neck; a few moments later the beaver floated to the surface on its back, dead. I looked about for the otter, and saw him swimming toward the shore, bleeding profusely from many wounds and evidently hurt to the death. I followed, however, with my gun full cocked, ready if need be to shoot him; but the beaver's long, sharp, spade-like teeth had done their work well, for the otter all at once rose half out of the water, pawed about for a minute in a blind way, turned over on his side, gave one convulsive quiver, and he also was dead.

A No. 3 Newhouse trap is generally used. In fact, this number is called throughout the country "otter trap." These traps are set at the overflow of beaver dams and otter slideways during the open water, and at little portages used by water rats crossing from one bend of a small river to another. No bait is used; the trap is set in about 4in. of water, with a picket out in deep water to tie the chain to, and a small piece of castorum on a forked stick.

The odor of the beaver castor has a very alluring effect on most all animals, and is greatly used by the hunter.

Traps for otters are set in the following way, under the ice: A place is selected in some small creek, connecting two lakes, where signs of otters are found. These signs are noticeable at the discharge of the lake, where the lake ice thins off into open water, for the ice is so thin that the otter readily breaks a hole to come out on the ice to eat his fish. The otter is a fish-eating animal, and is very expert in catching them.

Their slideways are generally made on some moss-covered, rocky promontory, jutting out into a lake. Here they will climb up one side and slide down the other for hours at a time.

Otters, when taken young, are readily tamed and become great pets.

Another way of setting traps in winter is under the ice in some creek where otters are known to resort. The ice is cut away from the bank, outward, for about 3ft. long by 1ft. or so wide. Each side of this cut is staked with dry sticks, driven into the mud or sandy bottom. The trap is set between the stakes at the outer end, in about 4in. of water at least; that is, the water may be deeper than that, but two cross sticks are so placed that the otter in entering must go under the sticks and thus gets caught. The picket to secure the trap chain to is out from the trap, as in open-water time.

To induce him to enter, a small whitefish or trout is placed on a forked stick near the shore, and is so fixed that it appears to be alive and swimming. As soon as the trap is struck, the otter jumps backward into deep water, and for want of air is soon dead.

MARTIN HUNTER.

Trapping the Coon.

Editor Forest and Stream:

The raccoons your correspondent writes of which cannot be taken except in the water must differ widely in their habits from Maine raccoons. While I have never set any except log traps on purpose for raccoons, I have caught many of them on the land in traps set for other game, and have always considered them one of the easiest kinds of animals to trap. In fact they are always bothering one by getting into traps set for other animals. I have caught them in traps set on the land for bears and otters, and I can remember taking fourteen in traps set for mink.

To show how little fear they have of a trap, I once hooked a line of eighteen traps set for mink around two lakes. About half of these were log traps; every one of the eighteen traps had either been robbed of what game had been taken, or had been sprung by raccoons. The log traps not having been heavily enough weighted to hold a raccoon, were all torn down just as a fisher destroys a sable trap. In the steel traps I had part of a nice mink (mink were worth some seven dollars then) and the remains of a weasel both eaten out by the coons. A coon's foot and one small coon. Both forelegs of this one were badly bruised where he had been in log traps. As the traps being set for mink were too small for the raccoons to enter, they had reached their paws in and pulled out the bait, and the bruised forelegs of this one proved that he had been caught more than once. On the second look after this I caught the same one whose foot I had taken two weeks before. He was a very large coon, and the wound had not fully healed. My other steel traps were sprung by the coons pulling the bait sticks into them, as the houses were made for mink, and were not deep enough for a large animal like a raccoon. I once set a log trap on purpose for a coon, and caught him. Then caught lots of them in traps set partly in water for muskrats. I have always found them as easy to trap as a skunk or lynx, which are two of the easiest animals to trap. I have bought hundreds of their skins, which were taken in traps set on the land. A great many are caught every year by our farmers, who know very little about trapping, but who catch them when they are destroying their corn. I knew one farmer to trap five in his corn in two nights.

While I am willing to credit a coon with a great deal of "head stuffing," I have never seen one use his cunning in trying to avoid traps, but I only know about the raccoons we have in Maine. They may be deficient in their education about traps, but when it comes to devices for getting away when trapped, or when cut out of a log or hollow tree, I will back them against any coons in the United States, including all the recent additions to our territory. M. HARDY.

Editor Forest and Stream:

My experience in trapping coons extends over half a century, with a record in the hundreds, fully ninety per cent. of which were taken in traps set in the ground. The writer who stated that coons cannot be thus trapped evidently belongs to the class who "know a great lot that isn't so." WARFIELD.

CHICAGO AND THE WEST.

Illinois Season Opens.

Chicago, Ill., Sept. 15.—To-day is the opening of the last of the Western chicken seasons. Some of the Western States begin shooting the big field grouse Aug. 20, others hold off till Sept. 1, but Illinois shuts the bars till Sept. 15. This is putting the grouse of the fields only about two weeks ahead of the grouse of the woods, the ruffed grouse and the quail. I have earlier stated that this has always seemed the best thing to do, in the opinion of the Illinois men who had most to do with the framing of our law, but in the progress of events it might very well happen that the same men to-day would think it better to open the season Sept. 1, for this State and all adjoining States. As it is, our opening day to-day is a very barren affair, for it is an open secret that our birds have been shot into and pretty much all killed off in a very large majority of the best regions of the State. In some few better protected localities there will be shooting to-day and for the coming week or so, and to all such localities our shooters are now hurrying out, each following such tips as his judgment may approve, or accepting such invitations as he may have from shooters living in sections where there are still some birds. This has been a hard year for protection of prairie chickens in Illinois, and if the average of the individual "opening days" were struck I am afraid it would set the consensus a good many days ahead of Sept. 15.

If the reader happens to have a map of the big State of Illinois, he may readily be able to discover why it is that it has been so difficult to protect the prairie chickens of Illinois. It is an enormously large country, this State of Illinois. It runs far, far down to the south, so far that the lower end of the State is quite out of touch with the upper, and is regarded as almost a foreign region, with ways of thought quite as much Southern as Northern; for the State bases on the Ohio River, and that stream does not divide sharply the characteristics of two sections. To patrol all this immense territory is an absolute impossibility. It is too big, even covered with railroads as it is and easily accessible and free from wild lands. The active warden, Harry Loveday, has done good work and has tried faithfully to get good deputies all over the State. Without thought, we ask that he do all this all at once, and do it so that no illegal birds shall be killed. Look at the map, and it may teach us something of the reasons why this has not all been done all at once. The warden appoints deputies which are recommended to him by lists of residents. In very many cases the local deputy warden is inefficient, if not corrupt, and it is hard to get a better man to replace him, since, of course, the State warden is not personally acquainted in each and every community of the State. The result is that in many of the far-off counties the game gets little actual protection while the hunt for a decent deputy goes on. On the whole the work has been done as well as we could hope, though it would be mere folly to claim that no game is killed in this State out of season, or that none is shipped into this market out of season. Warden Loveday admits this very freely and knows some of the main drawbacks of his work and wishes he could overcome them.

A very simple little question in traffic matters means a great deal to the game of Illinois, more especially the quail, snipe and wildfowl, and to less extent the chickens. This is the fact that the express companies will not permit their cars to be searched at this end of the St. Louis bridge. All this through stuff goes bang through the edge of Illinois, and over the bridge and out of Illinois jurisdiction, and when you figure that this is an airtight outlet, and that it is working and has been working for a long time, for over two months on chickens alone, and that it is going to keep on working for all the rest of the year, and all the rest of the other years, so far as can be foreseen, it may well be supposed that the total of game thus smuggled away from this State is something enormous.

The Chicago market is the greatest of the Western markets, and St. Louis next. Of course, the stuff landed here by the express companies can more or less thoroughly be spotted out and seized, and a great deal of such contraband game is confiscated, as see these columns from time to time. This game is game that has been killed somewhere out in the State, by market hunters, farmers' boys and "sportsmen," and which has been marketed perhaps at some little out-of-the-way country village, where perhaps there is no warden, or where perhaps there is one who does not know or does not care what is going on about him. It is too late to prevent the killing of this game, but though the man who killed it is not available, the men who handle it and who have money in it can be reached and punished and made very careful, and perhaps very reluctant ever to handle any more such game. This is one way of getting at the corrective principle of the protection of our game. We can't save it in the field, so we punish the men who carry it out of the field, and so teach them to do better the next time.

Obviously the little local market men who find their shipments to Chicago interfered with look about them for another market. They see that the city of St. Louis bids for game as well as Chicago, and learn that their shipments, once on the train, are safe, for they cannot be stopped this side the market, and the market is outside the State. No one knows just how much this great leak means to the game of Illinois, but it is without doubt a very big one. Warden Loveday has not yet secured any permission to go into the express companies' cars, and until he does he cannot do much toward stopping the outgo of this game. Co-operation with St. Louis protectors seems not to have been found feasible to any practical extent.

A look at the map again will show that the State of Illinois runs down below the latitude of St. Louis, and that vast territory of this State may be called tributary to that city. It is sure that all the game killed for market in Illinois within 100 miles or 150 miles of St. Louis is now shipped to St. Louis and not to Chicago. That means that just so much game is out of all possible reach of our wardens. Look at the map again. You see hundreds and thousands of little towns and villages dotted all over it. Would you like the job of sitting down and getting for each and every one of these towns a warden who should prove honest, capable and efficient to stop all the illegal shooting within six miles of his home? Can you cover six miles of country yourself and know what is going on all over it? **That is the small** end of the protection, and the city market inspection is the large end of it. Both are necessary, and both ought to be possible in this State, so far as covering the main country towns and the two big city markets is concerned. It is a long, slow, hard, in some ways a thankless job, that of protecting game in a country which does not want it protected. If all our citizens were as ready to steal personal property as they are to steal that of the State, we would need vigilantes here in twenty minutes, and our civilization would be anarchy. It is a matter of popular education, and it is slow. There is no population on earth more reluctant to take up with the idea of protecting game and fish than many of the inhabitants of the more remote country districts of southern Illinois, and especially along some of the larger streams, where fish and fowl have so long been part of the hereditary right of all men at all seasons. It will be many years before these men will change their ways. One of the quickest ways to help them change would be to get a chance to see what is going into St. Louis.

Chicken Belts and Game Circles.

If we may take another look at the map we may perhaps get a bit of information on a more cheerful side of the question, for it remains true that, in spite of all the inroads made by all sorts of agencies, there still are chickens in Illinois. Strike a line from east to west across Illinois, at a point say at Springfield or neighboring locality, twenty-five to fifty miles north or south. North of this line will be the chicken belt of Illinois and south of it the chickens will not be found in any considerable numbers. There are no chickens worth going after in lower Illinois, though upon the other hand that is the best part of the State for quail. The quail line and the chicken line do not sharply define, but overlap roughly, though the division I here mention may be accepted as practically correct. Thus, so far south as Springfield one may find good chicken shooting, and Sangamon county was once and may said to be still a very fine game country. A little above there, at Bloomington, you come to what was once one of the greatest chicken sections of the State, and it is still about as good as any, all this of course dependent upon local protection here or there. Still east and northwest of that country you will be on ancient chicken grounds, and you still will find birds. Turn to the south and you run out of the good chicken country when you get very much below Springfield. You strike a plenty of localities which you will do well to remember when you want quail, but you are below the chicken belt. Suppose you get so far south as Kankakee, Ill., you will then be in good chicken country, though only about fifty-five miles south of Chicago. You may go on south of that place for sixty, eighty or one hundred miles and still get birds, and at say fifty or sixty miles south of Kankakee you should again be in one of the best of the Illinois chicken regions of to-day. This country has been fairly well protected. Suppose you keep on east, on this line of latitude, until you reach the eastern line of Illinois, then run on up till you hit the big Indiana marshes along the Yellow River, the Iroquois, the Kankakee and other marsh-lined streams. All this that you have caught in your net is good chicken country—good for to-day. I know it is good, not because I have been over it lately, for I will not have time to get out for any chicken shooting this fall, or for several falls, but I know it because I know they have been shipping illegal game from that country, and getting caught at it. There are a great many towns where they do not ship chickens ahead of the law, and some of these have chickens and some do not; but if you find a town where they have been shipping some chickens, and not too many chickens, it is safe to suppose that the chicken supply is not yet quite all gone in that neighborhood.

Now suppose we go to the extreme northwest corner of the State of Illinois, and take a string sixty to one hundred miles long and make a circle, sweeping to within thirty miles or so of Chicago. You will have inside that circle what is to-day probably the very best of the chicken shooting left in the State of Illinois. This was in early days the best chicken country that ever lay out of doors, and it so happens that over a part of this region at least the birds have been much better protected than they have lower in the State. In that circle rudely drawn there will be included a number of such marshes as the once famous Winnebago Marsh, the marshes near Mineral, Sheffield, Annawan, etc. It will include the marshy ground of Lee county, and a number of the great swamps which are now coming to be drained, but which still have grass lands along their borders. If one could see the whole State at a bird's-eye view, it would be very safe, if one were hunting for chicken country, and did not know the localities, to pick out the long river bottoms, the big marshes which cover large tracks of land, and all the open and unbroken grass lands, the larger the acreage the better. The chicken loves the wild prairie grass, and next to that the marshes appeal to it. Driven to nest in the low grounds where it finds the only hiding for its nest, it is often drowned out. That means a bad chicken year. Given a drier spring, and we have a good chicken year. Always we have the most chickens on wheat country which is also grass country, where there are large bodies of marsh grass or long tongues of unbroken land running into farming regions. Given such conditions, such weather, in the above described zone of this big State, and you will have this week, with the assistance of the saints, and such assistance as the wardens may this season have given, some very fair sport at the biggest and best of our Illinois game birds. It will be largely cornfield shooting, and the birds will be big and strong. That is one virtue about Sept. 15 as on opening date. You get shooting when you shoot.

Warden Loveday and his old friend, Bill Werner, of Kinsley's, have gone out to Sheffield to take a whirl at the chickens. They go as guests of a large land holder there, Mr. Humphreys, and shoot over some 200 acres of country which has been absolutely protected. They should meet good sport, and I do not know of two men who better deserve it, for the one has done all he could to protect the birds, and the other has spent years as a chef, and can cook game birds better than anyone in the world. Methinks they may discourse on protection as they travel over the fields together, over cookery as they gather about the board at night.

More Hunting.

There is a decidedly better feeling among men in all sorts of business in the West, and with improving conditions we always have more hunting and fishing. For the past few years of hard times it has been difficult for newspaper men and others to make a comfortable living, with cucumbers up to three and five cents each, but now the money market is easier and there is every reason to believe that we shall see a time of prosperity, so that it is sure we shall have times of greater activity in field sports. I think that there is very much more sporting travel this fall than last, or the fall preceding that. Last spring there was less shooting than for many years, the excitement over the war cutting off much shooting. In some ways this has been a good thing. Thus I note in Wisconsin the number of local-bred ducks is better than was expected, simply from the fact that the birds were less disturbed than usual in the springtime. Out of this we may perhaps not deduce a moral in favor of war, but certainly one in favor of stopping spring shooting.

Returns from the Minnesota fields still point out that the estimate of the chicken crop in general was correct, and that it is above the average. From the country around Hallock, in the upper tier of counties in that State, I have word that bags of ten and fifteen are not infrequent, and that the number of birds is now thought to be a good one, not only in that once teeming region, but all over the West to-day.

Pheasants for Missouri.

The State of Missouri is the next to take up the question if importing the Mongolian pheasants. The Big Lake Hunting Club, of Pulaski county, will put out twenty-six birds, and the Wattensas Club will soon follow this example with a liberal stocking of its preserves. Two pairs of these birds were put down by the Big Lake Club last year, and a fine covey has been seen this year. The club hopes for success in this work.

Cook's Inlet.

The Cook's Inlet country, of Alaska, may not be panning out very big in the way of gold, but it is surely making history as the best big game country within reach on this continent, though about the hardest to hunt in. The heads and horns of big moose and the skins of big bears come down from that point almost in ship loads. If one has lost a moose, I presume that is the place to go for him. This is the region from which the giant heads shown by Periolat, of this city, came last winter. They were wonders to the sporting world.

Ducks.

Members of the Duck Island Club, whose splendid preserves are located along the Illinois River, this State, are this week to have the first try of the season on the bountiful crop of birds which they have on their marsh. This is a fine shooting place naturally, and of course the closing of the marshes to open shooting increased the supply of birds fourfold. I should expect to hear very good reports from that club. It is still too early for the fall flight of northern ducks, and our men are still less concerned about ducks than about chickens, but at such grounds as those of the Duck Island Club, or the old Spring Lake country, the early shooting at teal and wood ducks is sometimes very fine indeed.

They hunt ducks out in Montana too, and do not devote all their time to shooting grizzly bears and such like. And they have sooners out in Montana too; men who go out ahead of the opening day and swat the ducks all the same as they do back in this part of the country. The valley of the Big Blackfoot is described as the natural duck hunting grounds of the Missoula shooters, but there comes a story to the effect that the latter found the birds pretty well cleaned up at the time the season opened.

They have duck preserves out in Washington, just as they have in the East, and they have some very good preserves too, I should fancy, from the story about the Peyton-Corbin preserve, near Lamona, on the Great Northern road. This club was established by Col. E. I. Peyton, of Spokane, Wash., and Austin Corbin 2d, who bought a large strip of marsh and erected a good club house. Last week the two gentlemen above named, with Lord Orford, son-in-law of D. C. Corbin, and Mr. T. B. Ware, made a trip to the club marsh and bagged 375 ducks in two days. I note one very sensible plan adopted by this select body of shooters: they have certain portions of their marsh which are called "safe harbors," where no shooting is ever allowed at any time whatever. No boat is allowed to go into these parts of the marsh, and the ducks are left entirely to themselves, with the result that they breed there and hang about the marsh all the time.

Waponoca, of Tennessee.

The annual meeting of the famous Waponoca Club, of Tennessee, whose grounds are on the Arkansas side, opposite Memphis, will be held this week. Mr. Bun. F. Price, the secretary, is so good as to send me the yearly report, which will be submitted, and it is easily to be seen what a lucky and well-to do body this club is. The property is a large one and is owned in fee, the assets of the club being worth some $14,000. The secretary makes a most satisfactory showing of the club finances, and recommends that the club fence in every foot of land which it owns, so that it may still more perfectly protect its privileges. The fence would cost about $2,000, but is thought to be desirable. The secretary also recommends a good cook and a good warden on salary, the latter to give his whole time to supervising the property and keeping out poachers. It is thought that the value of club shares, if the fence should be completed, as suggested, would range from $2,000 to $5,000 each. The shooting on this great preserve has

often been described in the columns of the FOREST AND STREAM, and is admittedly among the finest to be found in the South. I note a very good feature in the management of this club. In large, black-faced type, there is printed on the face of the report above mentioned the following suggestive sentence, which ought in these days to be on the house rules of every duck shooting club: "The limit is still fifty ducks per day to the man."

Trapping Coons.

I observe some statements in FOREST AND STREAM regarding the trapping of coons. I do not remember whether or not I mentioned it at the time, but it is the fact that, when some friends from the South and myself were once in camp on the sea marsh near the mouth of the Mississippi River, we found that country very much infested with coons. One of our pushers set a trap in a path just back of the tent, and one morning I saw him take a coon out of it. It was just a plain steel trap, and was put flat on the ground with a few straws over it. I set a steel trap myself, and caught a long-tailed mouse in it. This I know, because I found the tail. A coon had come along in the night and eaten the rest of the mouse. I don't doubt I would have caught him if I had not caught the mouse first. It didn't seem to be much of a trick to catch a coon down there.

Michigan Record.

The record of the Michigan State Fish and Game Commission for August, as shown by Warden Osborn's report, is forty-one complaints, twenty-one arrests, six convictions, one dismissal, and fourteen cases not yet trial. Of this grist all but two were fish cases.

A Little Soon.

Deputy Humphreys, of Sheffield, Ill., this past week caught four parties at illegal shooting, two near Tampico and two from Mineral. The first two were fined $40 and costs, but the latter two could not be landed. They could not quite wait till Sept. 15.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

In the Aroostook Country.

Editor Forest and Stream:

It has been my custom to spend a few weeks of the heated term in the mountains, and for many seasons I have gone to the Adirondacks, but of late years the lands in that region best suited for hunting and fishing have been taken up for private use by many large owners, who own in some cases over 150,000 acres, and many large tracts are taken up by clubs, and being convenient to the metropolis and the many cities of the State, the other parts of the mountains have become dotted with large fashionable hotels; and the hunting and fishing have been very much curtailed.

I decided to make a trip this year to the interior of the wilderness of Maine, and left New York at 3 P. M., and at noon the following day reached Masardis, on the Bangor & Aroostook Railroad, where I arranged to have a buckboard to carry my wife and nine-year-old boy, who have accompanied me on these outings since the boy was eighteen months old, when he was carried in a pack basket over the old Sweeney Carry and up the lakes to Little Tupper.

After a comfortable ride of twelve miles from Masardis to Ox-bow, we embarked in three canoes, and made our trip up the Aroostook River, arriving at William Atkins' Salmon Pool Camp at 6 P. M., and while the fire was progressing, the cook of the party was getting ready for supper. I put a Leonard 4½oz. rod together, and with three favorite flies on a salmon leader, a scarlet hackle on the tip with a Montreal next, and a brown hackle last, I fished until dark, and the result was eleven square-tailed trout and one ouananiche. The trout ran from ½lb. to 3lbs., sufficient for a party of six persons for supper and breakfast, with five fish to take along for our mid-day meal on our trip up the river.

After breakfast we were in our canoes and under way by 7 A. M. on our trip of twenty-two miles up the Aroostook River. We had no time for fishing, as the current of the river is swift, and it was hard work for the men at the paddles. On arriving at Millnocket Lake at sundown, we were very much pleased to find nice, clean, comfortable camps, with spring beds and easy chairs, and a general air of comfort, and a hearty welcome from Mr. and Mrs. Atkins and all at the camp. It is easy to find good fly-fishing in May or June, but not so in the month of August or first week of September. I had some misgivings about having as much success during our stay as I had the first evening, but after a good night's rest and a hearty breakfast we paddled up the Chandler Brook and fished there with the same flies, and got twenty-one nice, square-tailed trout, the largest one weighing a trifle over 3lbs. The guides arranged them on a strip, and I made a photograph of them, which I think was a good catch for the season of the year, and as this has been a very dry, exceptionally warm season, the water is warm even in Maine, and the fish naturally are in deep water.

Mr. Atkins has a line of camps through this territory which makes it very convenient and comfortable for parties going in that country. The trails are well cut out, and wet and bad places have received careful attention, so that a person can go to a new place every day for two weeks, and find a clean, comfortable, dry log camp every night, all under the same management, and all well stocked with good provisions. I was impressed with the number of deer and moose that I saw in traveling through the woods, and particularly in the water. They are tame, and allowed our canoes to get within 15ft. of them on several occasions.

I had a camera, and made five photographs of deer and two of moose. Once we got within 30ft. of a spike bull moose in the river, but the sun and the reflection in the water prevented us from getting what would otherwise have been a close, desirable picture. The deer and moose are in fine condition. There is a pond about four miles from Munsungan Lake, called Reed Pond. It contains very cold water, and the trout run large, and George Cole, my guide, said "it was a good moose country."

On our trip from Munsungan, from the home camp, we saw a lot of deer and two moose, one, a large bull, was swimming across the lake. He was about a mile from the shore, and when he saw us he seemed to climb right out of the water, and his great horns looked like a bush. But as we had left our camera at the home camp we could not get a picture of him. Munsungan Lake is very deep, and there are a great many trout in its waters. But although we fished it for four hours, we only got one trout, about 2lbs. The water was quite warm, and our trip to it had less success than any of the others. In fishing one day in Brown Pond, we got a few large trout and a chub that weighed over a pound, which is the largest one I ever saw; but I learned afterward that they had been caught even larger in the same pond.

One day, while fishing near the home camp, I saw a few trout jumping, and cast where we had seen them rise. The result was a small trout on the brown hackle, and the vigorous little fellow made such a splutter when near the canoe that I gave him a long line to see how far he would go, and after letting him swim around a little we had two other trout on the remaining hooks, which we succeeded in landing safely in the canoe. I fortunately used salmon leaders, and had No. 4 flies tied on extra strong gut, intended more for saving large fish than for getting three at a time. Once, two years ago, at Tim Pond, I had Mrs. S. and the boy in the boat with me, and had the pleasure of seeing them take two fish on each line at once, but the trout in Tim Pond (in the Dead River region) are small, and rarely exceed 1lb.

The country near the head waters of the Aroostook River is a great place for deer and moose, as well as for large trout; and Mr. Atkins, who is a good taxidermist, finished seventy heads of deer, moose, caribou and bears

DEER SHOWING THE WHITE FLAG.
Photo by William Simpson.

last season, some of which were shown at the Sportsmen's Show, and all were killed near his camps. I saw twenty-one deer in one day, and one of the gentlemen I met at the camp counted thirty-nine in one day. The caribou are very seldom seen this year; and some of the old guides I talked with said they thought that they had moved off toward the Fish River country. But anyone who goes to the head waters of the Aroostook River, from the time the ice goes out until the middle of July, can get plenty of large trout anywhere when there is over 2ft. of water, and by looking around a little can get all a large party can eat in August; and in the hunting season any person who can shoot fairly well can get all the heads the law allows, both deer and moose. I am sure if the law was observed in this State as it is in Maine, the deer would increase rapidly as moose has in Maine. If our State Legislature would pass a law to prohibit the killing of does, and make the violation punishable by imprisonment, there would speedily be a large increase in the number of deer in the Adirondacks. Few persons dread the fine, but the prison has its terrors, and no doubt would be effective. And, at the same time, would make novices more careful what they were shooting at, and would prevent the killing of persons by mistake, as has too often been the case.

WILLIAM SIMPSON.

NEW YORK, Sept. 12.

Boston Gunners.

BOSTON, Sept. 19.—Shore bird shooting is improving, and the gunners say that a storm and cool weather is sure to bring some excellent flights. Theoretically they fly far out to sea in warm, calm weather, and this seems reasonable, since the best shooting early in the season and during warm, bright weather is always to be had off Chatham and Monomoy; places well out to sea. Good reports of the shooting at that location are coming in. Dudley Hall brought up 129 big birds the other day, the returns of one gunning trip. In the lot were beetleheads, green plover, etc.; a beautiful bag. Sully Corcoran also got twenty-nine birds out of the same flight. Louis B. Wellington had to leave for Boston just before the best part of the flight, and got but few birds. C. A. Brown has had good shooting, and always gets his full quota of birds. He has succeeded in calling down a jack curlew, but for another gunner to shoot. One day, in one of the boxes off Monomoy, he was calling and looking at a flock of birds circling in front of him, when, hearing a very near reply to his call, he turned his head and right on a little hummock, not 12ft. away, were a couple of yellowlegs; so near that the twinkle of their bright eyes could be seen. He watched them for a minute or two, hating to bag the little fellows till they flew.

Quite a company of Boston gunners have gone down to Plum Island for a shoot. Some of them will spend a vacation of two weeks, and hope to get some cool, stormy weather in that time. Leonard Chapman, a young gunner living with E. M. Gillam, in Reading, and under Mr. Gillam's training, went out yesterday with Gillam's dogs and flushed and bagged two partridges. He is only seventeen, and very proud of his success. He did it with a gun the stock of which is broken and mended, with only the left barrel being useful. He bought the gun last winter of a departing Klondiker for $5. No returns have yet come in from the Maine partridge gunners, and it is evident that they have found birds terribly scarce. Reports say that duck shooting on the Androscoggin River, from Merrymeeting Bay way up to Berlin Falls, is remarkably good this fall. Lisbon and Lewiston gunners have bagged a good many.

It is reported, on excellent authority, that the very successful Sportsmen's Show of last March is not to be repeated the coming spring. As a show venture it did not pay sufficiently for the promoters to be willing to risk weather and other features again, besides they believe that it would not be easy to secure new and striking attractions sufficient to warrant its success again next year.

SPECIAL.

Adirondack Deer Hunting Conditions

Editor Forest and Stream:

There is no question that the non-hounding law is contrary to the sentiment of the great majority of men living in the Adirondacks who hunt. The natives have never had a law to suit them, for hounding, when permitted, opened too soon and closed too soon. The native hunts for meat, and wanted the hounding season at a time when the weather was cold enough to keep his meat from spoiling. The hotel influence, however, was too strong, and the law was framed for the city guests—business and professional men, college students and the like, who found it more convenient to hunt in August and September than later. The men who were born and bred in the same counties with the deer had to defer to their wishes.

Now another distinctive influence has appeared in the Legislative field, and succeeded in stopping hounding altogether, against the wishes of hotel men and natives alike. The law is a good one, though no doubt there is a selfish interest at the bottom, and men who have studied the game problem in other States know it is in the interest of the deer supply.

Its chief defect seems to be that it makes the season too long, a sop apparently having been thrown to the hotel interest in permitting hunting to begin in August, earlier than any other State in the Union, if memory serves me, and at a time when there can be no profit in killing deer.

The effect of the law is very apparent in the Adirondacks. Both hound dogs and rifles have depreciated in value. I bought a .38cal. Winchester rifle, model of 1892—a favorite deer gun here—for $8 a few days ago, and loading tools were thrown in as well as gun case and cleaning rod. Under the old conditions the late summer brought a sharp demand from farmers and native sportsmen for rifles. Deer were likely to be driven almost anywhere during the hounding season, perhaps through the village streets, and a man who could shoot often got meat even though he was no hunter. Moreover, nearly everybody living within driving distance of the deer country went hunting at least two or three days during the season, and to go hunting it was necessary to own some kind of a gun.

Similarly, and to a greater extent, hounds have depreciated in value. Reub Heath, who has sold hounds for as much as $50, offered me a promising looking foxhound pup, two years old, for $4. Ordinarily this dog, coming from good stock as he did, would have brought $15 or $20. Reub has to keep him tied up. Not long ago the dog ran something—it may have been a fox—and was caught off by a man living in a town ten miles away. When Reub asked for his dog he was told he could have him on payment of a pretty stiff fee for lodging and care, and Reub only got the dog back through the aid of a lawyer, who threatened to bring suit for theft against the enterprising harborer of lost dogs. One pities the poor hounds who seem bound to spend the rest of their days in chains, because man first cultivated an instinct in them and then forbade its use.

J. B. BURNHAM.

Maine Hunting.

JOCK DARLING'S camps on the Sebois chain of lakes in northern Maine will be open this fall under the management of the old hunter's grandson, Natey Fogg. Most of Jock's old friends know the new manager as an obliging guide and a keen and successful hunter. I have had several letters from him during the summer, in which he mentions having seen considerable moose sign, and predicts an abundance of other game. The Sebois country is an excellent game region, there being a considerable mileage of dead-water streams emptying into the different lakes, on all of which are good caribou bogs and also extensive hardwood ridges where deer are very abundant. Any one contemplating a trip to this country would do well to address N. C. Fogg, Patten, Me.

J. B. BURNHAM.

A Veteran Fisherman.

A RUTLAND, Vt., communication to the New York Times records that Le Grand Eastman, of that city, ninety years and thirty days old, brought in twenty trout one night, after a day's fishing. Some of them weighed nearly a pound. He walked four miles to the stream, caught his fish in a few hours, and walked home. Aug. 31 was the last day of the open season for trout fishing. Since May 1, when the open season began, he has been on a fishing trip every week, and sometimes twice. He knows every mountain stream and river where fish are found in this section.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Where to go.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

In the Louisiana Lowlands.

BY FRED MATHER.

A TRIP by boat down the Red River from Shreveport to Alexandria in the fall of the year is a most pleasant one. The air-line distance is about 100 miles, but the river is very crooked, and the bends make at least half as many miles more. There was a sameness to the wooded banks and a lack of hills or bluffs to vary the scenery, but there was life and incident on the trip which made it a memorable one. Over twenty-five years have passed into history since that journey, but the stern-wheel steamer "Natchitoches," her crew of roustabouts and her passengers are as fresh in memory as if the trip were only a week old. A blessed thing is a good memory; it retains only the best part of our lives, or so tints and gilds the other portions, seen through the haze of distance, that they seem to belong with out most enjoyable experiences. A note book is like a photograph, it records disagreeable things as well as pleasant ones; things which memory does not retain. As an instance of this my note book says: "The mosquitoes were of large size, great subcutaneous penetration, and in vast numbers. I was nearly wild from their persecutions." Memory has no such record, but thinks there might have been a mosquito or two, but they were not the most important things on the trip.

A Bear.

We left Shreveport early in the afternoon, or "evening," as it is called in the South. There was no brain-racking "time table"; the steamer arrived at her convenience, discharged freight and passengers, took on more, and left when ready. There was no rush of passengers when the gang-plank was hauled in, for they had been at the landing hours before, looking up river for the smoke of the steamer. In going down stream all these craft "round to" and head to the current, a curious move to a "Yank," who had seen the big side-wheelers of the Hudson come to dock headed the way they were going, but here were no docks and no side-wheelers. A sloping levee paved with stones like a street to accommodate freshets and flat-bottomed boats was a necessity, and the result of the conditions of navigation on those streams.

A seat on the upper deck, forward, was cool; there were no mosquitoes, and I remarked to an elderly gentleman on my left that the evening was a most delightful one. His curt response sufficed and I remembered that I belonged to a class not popular in the South at that time, and that my speech betrayed me. Silence followed. The silence was large and expansive, and spread out over the landscape, broken only by the puff of the steamer and the plash of her wheel. Then the pilot tooted the whistle, and instead of a steamer we could barely see something moving in the water half a mile away. It might be a man, a doe or a bear. The steamer slowed down, and rifles were brought out. Soon it was decided that it was a bear, and the shooting began. It was wild; a moving target from a moving boat is a combination calculated to disconcert the aim of any marksman, and we came near the bear before it was fatally struck. I had gone to the lower deck, and, before a boat was lowered, saw a gird of perhaps ten years lose her balance and fall overboard. Throwing off coat and vest I dove in and held her up until the boat picked us both up before the bear was taken in, for it was fat and still struggling, but was killed at once.

While shaking off the water and starting for my room my hand was grasped by the old gentleman whom I had tried to engage in conversation on the upper deck. Said he: "I will ask you to come to my room and partake of that truly Southern drink, peach and honey." A long talk with the old gentleman and a story or two ended in a promise to visit him at his plantation near Alexandria after I had spent a week fishing on Catahoula Lake, by which time his family would be home and we would have some shooting together. The promise was renewed when we left the steamer.

Night on a Red River Steamer.

I was familiar with night scenes on the big Mississippi steamers, the rounding to at a wood pile, the flaming cressets that lighted the gang-plank and the men, and threw weird shadows into the forest; the bullying of the profane mates and the rushing of the men with many sticks of cordwood on one shoulder, and all that; the professional gamblers in the cabins, which were abolished later, but now I struck a new game—new to me then, but now common enough among the gamins of New York, and it was interesting. It was called "craps," and they "shoot," not "play," the game. Two dice are used, and they are "shot" from the hand. The points of interest to me were the terms used; and a quarter to a darky who was longing to get in, but had no stake, was invested in extending my vocabulary. As it was an original Southern darky game, I mastered the lingo, but doubt if I could do as much with the "guff of gawf," as the jargon of the new Scotch game is called, for before one attempts to play golf he, or she, must learn to call it "gawf."

I saw excited darkies calling out: "Come seben—'leben"; "Fade you"; "Big Dick is mine"; "Come, little Joe"; "Cut his throat, seben," and other things which I did not understand. My mentor informed me that any number of players can shoot craps. Before the first player shoots the dice he calls out his bet, say a nickel.

"He throws for a nickel, what does the other fellow mean by 'I fade you?'"

"He means dat he takes de bet, an' den de oders dey bets awn de side. If he frows seben o' 'leben fust, he wins, but he craps out if he frows 2, 3 or 12 on de fust, 'an de nex' man frows. But if he frows 4, 5, 6, 8, 9 or 10, he makes his p'int an' can frow ag'in an' make hees p'int once mo' o' make seben, den he wins, but if seben come fust, befo' he makes hees p'int, he loses, den de oder man frows."

"Why does the new shooter blow on the dice before he throws?"

"Dattah's to blow any hoodoo dat de yallah fellaw put awn de dice, fo' dem cream-cullahed nigs is up to dat, an' so's dat tall man who's de cullah o' gingah cakes. Yo' see de boys is 'spicious o' some w'ats got too light complected faces."

"What did that black fellow mean by calling, 'Come, little Jo'?"

"'Little Jo' is fou', maybe two 2s, o' a 3 an' 1; dey nebbah call de numbahs, 'cept seben an' 'leben, deys got names fo' 'em; five is 'fever,' six is 'Jimmy Hicks,' nine is 'Liz,' an' ten is 'big Dick.'"

As my quarter passed into the hand of my preceptor he pushed into the ring and slapped it down, crying "I fade you." Then I watched the game with interest, knowing its points and its "language." A new shooter calling: "Come seben—'leben," snapping his fingers as he throws the dice, is answered by a man who has "faded" him by: "Cut his throat, seben," and so the games goes on. It's a queer game and has invaded the North. I do not gamble in any way, and firmly decline to bet on any event, but there is something in this semi-barbaric game that temps me to stop on Spruce street and watch it in progress on the pavement, especially as there are pickets out at Nassau street, and below, who signal the coming of the "cop," for the police have orders to arrest crap-shooters, but never attempt a foot race with the fleet-footed street Arab, who, by the way, is usually white, but may be Hibernian, Teutonic, or of that numerous Latin race which is generically classed as "Dago" in New York.

In the Louisiana Lowlands.

The moon was about full and some two hours high after I had become a past master in the mystery of crap-shooting, and was longing for a new sensation, not that the Southern negro is not now a field for character study, but he was more so then. It is a fact that few Southern men really see the peculiar features of the darky; they were brought up with them, and naturally accept their idiosyncrasies as a matter of course, but the "foreigner" from the "Nawth" catches the salient points at a glance. To him it is the revelation of new life, of a people hitherto unknown to him. Hence the popularity of "negro minstrels" from 1845 until after the Civil War. Tastes change, and the "minstrels" changed, until their songs no longer bore the slightest relation to the blackened faces.

As I went up into the saloon I heard a banjo, and before the last step was reached I knew that no Southern darky was manipulating it. I claim to be an authority on the history of the banjo, and will here assert that the Southern darky, in 1860, hardly knew the instrument; his favorite was a fiddle, and he inherited his like for it from his ancestors.

I was not surprised when I saw a young white man at the end of the saloon just winding up an obligato and retiring for a rest. But he was vociferously recalled and "The Lowlands" was demanded. The air was a singular one, with a refrain that began slowly and ended fast; it was:

> "In the Louisiana lowlands, lowlands, lowlands,
> In the Louisiana lowlands, low."

And from this song the title of this sketch was chosen. It was a trifling darky song, not worth recording, but being well sung made an impression.

A Big Catfish.

The morning was well advanced when we tied up to the levee at Alexandria. Col. B., the old gentleman referred to, directed me to the best house in the little place, and reminding me of my promise, departed in his carriage. After dinner I strolled down to the deserted levee and found an aged colored man sitting idly on the stones gazing at the water. "Uncle," said I, for that is a common Southern salutation to men of his age and complexion, "are there many fish in the river?" I knew that many kinds of fish literally swarmed there, but it was an introduction.

"Yas sah, dey's a plenty o' fish, big an' little; sometimes I likes de little ones an' sometimes de big ones. I'se tryin' to cotch a big one this ebenin', but I dunno if he come. I'se been fishin' all de mawnin', but don' got no bite to-day."

There was no rod nor line in sight, and I wondered how he could be fishing, but asked no question. The only thing in sight was the "heaving line" of a steamer which was fast to a snubbing post, with the other end in the water, a hempen line of half-inch diameter, used to heave ashore to draw out a cable. The old man yawned and lay back on the stones, as much as to say, "the interview has ended"; and I walked off to where some boys were catching perch, crappies and other small fish, which were biting lively. I asked the boys what the old man was fishing with, and one said: "He's a-fishing fo' big cats wid a pound o' po'k, but he's mean an' hunts us off de levee w'en he's fishin', but we don' 'sturb him. I 'spec' he didn' talk to yo', but if yo' want him to talk jes give him a fip fo' some gin an' he talk yo' ears off."

On this hint I returned to the lone fisherman and said: "Uncle, it's dry work waiting all day for a bite, here's a dime, go up to the grocery and treat yourself. I'll look after the fishing if you'll show me where your line is."

"Thank you, sah," touching what had once been a hat, "I knowed you was a ge'man w'en I see yo' comin' along de levee. Yes, sah, I'll drink yo' health, dattah's my fishline," pointing to the heaving line, "but I 'spec's I'll be back befo' a big catty comes along." And he limped off to the grocery. Then I began to fear that I had been too liberal, and that a dime, which he called a "levvy," might purchase more juniper juice than he could assimilate without producing vertigo, and rejoiced that my first impulse to give him a quarter, or "two bits," as he would call it, was restrained. A half-hour passed and "Time, which strengthens friendship, but weakens love," began to be a burden. I was about to desert my post when my new friend appeared above the levee none the worse for his indulgence, but rather better so far as the limp was concerned. He hurried down, exclaiming: "I dun 'spect I got one," and made for the line. I had not noticed the strain on it and the weaving motion until he spoke, for I had been watching a little dab-chick dive, and then guessing where it would come up.

The old man tugged on the line with all his might, and I sprang to help him, for I was stronger than he, and that we had a big fish was certain, the vibrations could only be caused by a living animal, and the resistance was assurance of its size. We piled up yard after yard of line, and at last had the fish on the slope of the levee with its head out of water. The old man produced a hatchet from somewhere and killed it with a single stroke.

I had read of the great catfishes of the southern Mississippi that weighed 150lbs., and believed that we had a record one. I had not counted, however, on a great stone sinker that must have weighed 40lbs., which was necessary to keep the hook and bait out in the channel, that was credited to the fish while hauling it in, by me at least.

I ran up, got a wagon and help and we brought out our fish. It was 3ft. 4in. long, and weighed 63½lbs. It was a record catfish for me, for a 10-pounder, taken near Potosi, Wis., in 1855, was my largest. No one seemed enthusiastic about the fish; it was a big one, but they had seen as big. Uncle Sam, as they called my lone fisherman, sold the fish for $2.50, about 4 cents per pound, and with so much wealth in his possession I expected that he would blow it all in on booze, an opinion based upon what the darky boys had told me, but he was as clear headed as ever when he called on me after supper. Said I: "Yo' said yo' wanted go fish in Catahoula Lake, an' wanted a man an' a boat to go 'long; is yo' got de same min' yet?"

"Yes, I want to go to the lake and camp there. I understand that the lake is about twenty miles away, but that we can strike a small stream that runs into it by a ten-mile tramp. I will furnish provisions, but I want a boat and a shanty to sleep in, if there is a shanty on the lake. I want to stay a week and then return."

Lazy Lou.

A bargain was made, and next morning we left Alexandria on a wagon drawn by one mule, and driven by young Sam; there was a boat, a lot of tinned goods and a sack of potatoes as well as other things that come good in camp, when you can get them. The boat was a clumsy, flat-bottomed sort of a bread-tray, absolutely non-capsizable, non-dryable and almost non-rowable. I piled a lot of brush in forward and put my bag of bedding and such things as should be kept dry on top, then seating myself in the stern with a tin dish for a bailer we started off. The stream was narrow and crooked for a few miles, and kept one busy dodging the low growing branches. All went well until we came to a tree that had fallen across the stream. It was about 2ft. in diameter, and its lower side was below the surface of the water in places, and some inches above it in others. The limbs, roots and bark all said that it had been there for several years, yet no man had cut it to make a passage for his boat, as any Northern woodsman would have done.

I looked at the log and at the shore; then at the heavy old ark we were in, and I mentally vowed that I'd be ding-swizzled if I would help to lift such a water-logged old tub over that log, or to make a portage with it around either end. I was paying for my passage and would assert my rights, if we never reached the lake. After I had worked up my feelings to the exploding point, Sam laid the boat alongside the log and began piling our freight on it. I sat still while he did it, the mercury in my madometer climbing higher every minute. Just let him propose that I dislocate my spine in lifting that thing he called a boat over that log. Yes, there was water enough there to drown him—but I must not think of that; a tongue-lashing would be all the punishment necessary, and I had the opening sentence formulated just as he put the last of my plunder on the log and said: "Ef yo'll jess step on dattah lawg I'll dun get de boat a-pas'."

The mercury in the madometer ceased to climb as I stepped on the "lawg" and wondered how that old man could get the boat beyond it. He removed his shoes, turned the boat head to the log and pulled a plug in the bottom. He had chosen a place where the log was some 4in. above the water, and as the boat sank he stood in the bow, worked it under the log and walked back until all was clear. Then replacing the plug he bailed out the boat. The mercury had dropped out of sight. We loaded up and a gum coat on my seat was all that was needed to restore the *status quo*. I thought I knew a trick or two in running streams with a boat, but now I had learned another from a poor old darky, and might truthfully say that I knew a trick or three.

I just hugged myself when I reflected that old Sam never suspected that I had hated him for half an hour. I wanted to apologize to him, but that would never do. so I said: "Sam, you went under that tree in good shape; never took off any paint from the—. What's the name of this boat, anyway?"

"Well, sah, she don' got no name painted awn her, but we calls her Lazy Lou, dat's fo' one o' my gals, she was married las' week, an' was too lazy to comb her haih, so she jes' cuts it froo wiv a scissor. We allus call her Lazy Lou, 'cause w'en she wasn' mo'n ten yahs ole she was so lazy she let de skeeters bite fo' she bresh 'em off."

At the Lake.

Catahoula Lake is about twenty miles long by from three to five miles wide; there is a good current at the lower end, where Little River and several other streams come in, and it has a big outlet off to the southeast, which flows into Red River something like a hundred miles before it joins the father of waters. Sam rowed up to what he called a cabin, but which was only a 10 by 12 open camp—better than a closed house—and we unpacked an hour or two before sundown. I sent Sam to gather firewood for cooking and for the night, while I prepared a supper of fried perch, taken on the way up; bacon, boiled corn and potatoes, canned baked beans, bread, butter, tea and coffee. The coffee was for Sam, for I don't drink it, and as he had no use for it when good tea was at hand, there was no more made on the trip.

There were two sleeping places, each made of two boards cleated together, the head ends were raised higher than the others, so that they sagged in the middle slightly, but not as much as a hammock does. I noted a hole in the bark roof, and called Sam's attention to it, as it was over my bed.

"I sees de light froo de bahk; fo' shu', an' I mend dattah hole in de mawnin'. I don' 'spec' 'twill rain to-night, an' dat's a leetle hole at best'; no, de rain won' come to-night." This last remark as he looked at the sky and the declining sun.

I insisted on having the roof repaired at once, but the old man said: "Dey's no good bahk nigh de cabin an' dey's bahs out in de woods." He was afraid of the woods at sundown, so I picked up my gun and told him to come along with his axe. Thus assured he soon found a suitable piece of bark from a dead tree, and the roof was patched before daylight left us, and about midnight a hard rain came down that lasted until daylight, but Sam did not want to talk about the rain.

A Turtle Talk.

In the morning, after breakfast, I said to Sam: "I came to this lake to get a live alligator snapper to send north. Men tell me that they are common here, and I have hooks and lines especially for them. You know the turtle I mean, don't you?"

"Yas, sah, I knows 'em, dey's two kin's o' snappahs; some's jess snappahs and de odah kin's de 'gatah snappahs. O yes, I knows de snappahs, an' I cotch 'em plenty, an' I t'ink de snappahs is sweetes' meat dan de 'gatah kin'."

I brought out three cotton lines of ¼in. diameter and 100ft. long; 300 great needle-eyed O'Shaughnessy hooks of Harrison's "Dublin Limerick" pattern, size 10-0, all attached to strong 2ft. snoods of cotton, with a 6in. piece of copper wire in the eye of the hook that was twisted into a lump so that the hook would revolve on it, as on a swivel. Sam had never seen such a lay-out, and remarked: "Golly, I'd like to get some o' dem hooks fo' big catfish, dey's de bes' I ever see."

"Sam, if you can put me where I can get an alligator snapper of 60lbs. or more, you shall have all these hooks and lines. Now get ready and we will go and catch bait"; and I produced a bait-holder made for the occasion. It was of ½in. mesh netting made like a box without a lid; loops for poles floated it, and a few light leads kept the bottom down. When extended it was 6ft. by 4, and 2ft. deep. This was to keep bait-fish alive until night. Sam looked at it, then at my rods and reels, before he found breath to say: "I 'clar' to goodness, you is de 'pletes' man fo' fishin' dat I eber see." I was some time in figuring his "'pletes'" into "completest," but that was what he meant.

We fished, top and bottom, and caught crappies, black bass, perch and all the common fishes of that region; went to camp for dinner, and fished again until the sun told us when it was time to quit. Then we put out the lines from shore to an anchor stone, with a baited hook every 3ft., and lying on the bottom. The sun was well up next morning when breakfast was over, and Sam was anxious to go to the lines, but I said: "No, Sam, we will go and fish for bait all day again, and at night will run the lines over and see what we have, and re-bait our hooks; any turtles that are there will stay there."

We did this, and our catch was several soft-shelled turtles, *A. ferox*, which Sam declared were "snappers," because of their ferocity, from which they get their specific name, and then I knew that his classification of turtles differed from mine. We also took several "yellow-bellied terrapins" and some catfish of 5 or 6lbs. Sam wanted the catfish for camp, and I let him have one, and let the rest go free, for I don't care for a catfish that weighs over ½lb.; the big ones are oily and gross. The best panfish for me in that lake was the crappie, but fish were too plenty for us to dispute over. Sam could stuff himself with catties without protest from me. The big one he caught at the levee was so rank with fish oil that I wanted none of it, yet I am told that steaks from such a fish, parboiled before frying, are freed from their grossness; I don't doubt it, for the same is true of sturgeon, which, treated in that way, makes a better veal cutlet than ever came out of a calf.

Sam and I discussed the snapper question for a while with no prospect of an agreement, and then he said: "Yo' ain' gwine let all dese snappahs go 'cause dey ain' de kin' yo' want, an' I want de big one to cook fo' yo', an' yo'll say he's de bes'es' tuttle yo' eveh stuck a toof in."

"All right, Sam, what we catch is for our own use, if we want it, but I don't want to kill any animal, fish, bird or turtle unless it is needed for food or it is my enemy, as a rattlesnake is. You have misunderstood me; take what turtles you want and let the rest go; do the same with the catfish, but never waste animal life by killing more than you or your friends can get."

Just how far this new religion penetrated Sam's brain is impossible to say, but the lesson may not have been entirely lost, for a few days later he carefully unhooked a big sunfish and let it go, when on previous trips he might have dropped it in the boat to die, and then have thrown it away.

The turtle question and the hunt for an "alligator snapper" has been spun out so long that it must be postponed for another time.

[TO BE CONTINUED.]

ANGLING NOTES.

Record Trout.

THE FOREST AND STREAM "big fish record" will have to be amended so far as it relates to the largest brook trout caught in the State of New York.

Superintendent Robert Bibby, of the North Woods Club, formerly the Adirondack Preserve Association, tells me that the club waters, which have never been stocked with fish, so only the native brook trout are found therein, have this year furnished better fishing than for a number of seasons. From one of the ponds on the preserve, Frank Pond, a speckled trout of 8½lbs. was taken, and this I am satisfied is the largest brook trout, *S. fontinalis*, ever taken from the waters of the State of which there is any reliable record. I know of one or two trout of greater weight taken from New York waters, but their species are open to question. One that was first claimed to be a native brook trout proved to be a brown trout.

The Frank Pond trout was caught by trolling, and not with a fly, and what a troll would produce in some of the Adirondack lakes which contain nothing but native brook trout, if it were leaded and drawn at the bottom, experience only will prove conclusively. One small lake had the reputation of containing brook trout, but as no one caught them, it was rarely fished. Upon the representations of an old guide, that he had actually caught brook trout from the lake through the ice, fishing in deep water, a friend was induced to make the trip to the lake in summer. He fished at or near the surface with fly and bait, and caught nothing, and finally trolled a lure at the bottom, and caught four large trout. In this connection I may say that I have heard of several very large trout being taken in Canadian lakes, and in every instance they were taken through the ice in winter, by fishing with bait, which is, of course, during the close season. If one is really desirous of finding what our wilderness lakes do contain in the way of exceptionally large trout, they may be fished for by trolling in deep water during the open season; but 8½lbs. will, I imagine, head the list for some time to come.

Pickerel and other Fish.

In some waters the pike, generally called pickerel, is considered a very desirable fish, and in others it is considered a nuisance or worse. It is a good fish in its place, but it has got out of its place in many instances, and excites the wrath of anglers. As a rule, the fish itself is not to blame for being found where nature never intended it should be found, but the biped man is responsible for interference with nature's plan in the distribution of fishes. Spite is sometimes the motive, but generally it is pure ignorance that causes man to plant pike in trout waters, and this habit in mankind generally seems to be growing. With the advent of rational fishculture and fish planting there sprung up a host of 'prentice hands who planted any and every thing in the way of fishes that could be carried from one body of water to another. Those whose business it was to plant fish made mistakes when the work was in its infancy, but they were not a circumstance to the mistakes of the men and boys who tried to follow in their footsteps with no knowledge whatever of cause and effect in fish planting. It is such a simple matter to plant certain of our common fishes in waters never intended for them, and such a stupendous task to undo the error when it is found to be an error, even if it is possible to undo it at all, that one should think well before experimenting in fish planting if the experiment calls for the planting of some species of fish in waters which never before contained them. The chief offenses in this line are the planting of black bass and the so-called pickerel in waters wholly unfitted for them, and where other kinds of fish would do far better and furnish better food and more sport. Another error, not so common, however, is over-planting water with fish which are suited to the waters—in other words, planting more fish than the water will furnish food for to keep them in condition. While fish must have an abundance of food to be at their best for the table or sport, there is one solitary instance in this State of over-planting fish food, but this was done through a misapprehension of existing conditions, and the plants were not really made as fish food.

The Great Lakes whitefish were planted in a large lake in which only a small species of whitefish were native, and they have multiplied until they swarm in the water. Netting is forbidden by law, and thus far the only mission of the whitefish is to furnish food for the adult lake trout, and to eat food that the little trout would consume if the whitefish were not so abundant.

This condition of things results in indifferent trout fishing at a time when the lake has vast quantities of trout in it, because the food is so superabundant that the fish sought by the angler have only to eat what is placed before them to become gorged, and the lures of the angler are lost in the multitude of similar bait fish which have no fish hook trimming.

An artist who has a summer house on the shore of the lake told me that he baited a trout buoy in deep water, and while fishing at it he foul-hooked more whitefish than he caught of trout.

However, it was not of overstocking with fish food that I began to write, although the instance is so extremely rare that it is worthy of mention, but it was of misdirected fish planting—black bass and pike.

As soon as pike are found, for any reason, undesirable in a water, there is often a desire to plant black bass to get rid of the pike, and this is simply jumping from the frying pan to the fire, for while it may be possible to reduce the pike below the point of danger, it is a most difficult thing to similarly reduce the black bass. I have been interrupted in writing this note, and during the interruption I have received three letters asking how to get rid of pike and black bass. Two referred to pike alone, and one to both pike and black bass in the same waters. There is no way of getting rid of the fish except by draining the water off or by netting it, and to do this consent must be obtained of the Fisheries, Game and Forest Commission.

In previous notes I have referred to Loch Leven, in Scotland, said to furnish the best trout fishing in the world. This lake contains Loch Leven trout and pike, but by judiciously netting the lake the trout have for years been on the increase, and the pike are kept down below the danger point. Now another case comes to my notice, also in Great Britain, where by netting the pike the water has become good trout water. It required four years of netting to practically exterminate the pike and make room for trout where they were never known before. During the four years 1,410 pike were netted, the largest fish weighing 23¾lbs. This means of getting rid of pickerel has been tried in this country, but generally the people who engaged in it have pronounced it a failure, because they have not succeeded in netting out all the pike in one morning before breakfast, so as to have trout fishing in the afternoon.

This is a matter that cannot be done in a hurry, for the netting must continue every season, taking the fish when they run into the streams and back waters to spawn, and keeping at it until the big fish are practically exterminated, even if it takes several years to accomplish it. In the end it will be far more satisfactory than to introduce black bass to kill the pike, and if the netting is persisted in, trout waters infested with pike may again become trout waters. It has been and is done on the other side, where they apparently have more time to do the work thoroughly than we have, but there is no good reason why, when a water is invaded by undesirable fish, other undesirable fish should be planted as a remedy. Recently I went to examine a beautiful trout lake, that is, it was once a trout lake, that has had planted in it pike and black bass. The fish were dwarfed and of no account as food and furnished no sport, and the owner wished something done to make his water of value. I urged him to take out the fish now in it by persistent netting, and to introduce yearling or older brown trout, and this he will do. There are two other private ponds where a somewhat similar condition exists, and the owners will try the taking out of fish rather than the putting in to improve the fishing.

A. N. CHENEY.

CHICAGO AND THE WEST.

Plenty Pickerel.

CHICAGO, Ill., Sept. 17.—Fox Lake, Wisconsin, seems to be about the pickereliest of all pickerely places, to say nothing of its black bass. I have heard a good deal from this fishing water this season, and if this sort of thing keeps up it will need looking into. On Wednesday of this week Mr. Frank Brice, of Milwaukee, Wis. caught fifty-five pickerel, fishing about half the day, casting with spoon bait. His average was around 3lbs. to the fish, and 7lbs. was the biggest taken. Incidentally he took five black bass.

The editor of the Fox Lake Representative, Mr. Hotchkiss, sends me the above information, and prints also other spoon hook performances on this fortunate water. It seems that Ed. Corcoran once took ninety-six pickerel there by trolling in one forenoon, and Chas. Adams is credited with 126 pickerel in one day. This would appear to be doing a great deal toward the laudable act of cleaning out these smiling savages, though personally I should hate to have to eat 126 pickerel in 126 days.

It was at this place, Fox Lake, that an incident is recorded as odd in piscatorial matters. Going down a little creek, two gentlemen of that neighborhood, Dr. Hitchcock and Wm. Mahoney, were much surprised to see a small pickerel jump into the boat, scaring their dog pale in the face as it struck him. This sort of thing is not at all without precedent, and I have had it happen twice in the same day in a narrow ditch on the marsh of the old Cumberland Club, in Indiana. When a pickerel gets scared he is the biggest fool fish ever was, though not any worse than the black bass, which will also jump in the same way when frightened, and has very often been known to spring into a boat. I narrated, some years ago, how this habit of the bass is sometimes utilized by fishermen, who stir up the fish along shore at night with poles, causing them to jump into the boat in their confusion. I have seen over half a wash tub of bass which were taken in this way on the Fox River in one night. This I state, not with the wish to make Dr. Hitchcock and Mr. Mahoney ashamed of their one little lonesome pickerel, but to show them that they may be able to take advantage of the jumping habits of that fish at a later time, and perhaps catch themselves a wash tub quite full. It ain't much use coming into this office with a story about one little pickerel though, unless it had wings, or something of that sort.

Taking out the Carp.

Some years ago the park commissioners of Jackson Park, this city, planted a number of nice, fat carp with great care and firmness in the lagoon of that beautiful park, where it was hoped they would prove a means of beautifying the landscape and educating the masses, who might at later days stand on the bridges and watch their rooting mud. The carp have more than done their part of the contract, and now the ungrateful commissioners have given a contract to Fish Warden Deputy Goetter to get the carp out of there at any cost, before they eat up the marble statues and the lake front. All the other fishes are reported to have gone to a better land since the simple and energetic carp came in.

Tarpon Club, of Texas.

The latest advice from Rockport, in regard to the location of the palatial club house of the Tarpon Club, of Texas, is that the building will go up on St. Joseph Island, right at hand to the pass where the fishing is to be had. This is a rather sandy site, but it is cool, and well above the water, and is a spot with all the charm of the sea about it, for the rollers of the Gulf will come in at the foot of the beach. This is a sporting project which will make a lot of history in the near future. I presume the members of this club are to be near the finest tarpon fishing of the world.

The "Fluttering Fly."

Here is an interesting letter of inquiry from Mr. L. Fisher, of Allentown, Pa., about the "new method" of fly-casting, of which I wrote last May. Mr. Fisher says:

"With the exception of few years I have been a reader of the FOREST AND STREAM, beginning when it was a small paper started with the Parker Bros., and drifting into the FOREST AND STREAM, if I remember correctly, I saw your article in FOREST AND STREAM, and I must say I was completely dumbfounded, because I was a crank on small flies and long and light casting, but you put the idea so strong I did not know where I was at, and I must confess I am somewhat converted, if I am able to put it into practice.

"The place I fish is two streams, one is a hard, stony bottom, with rapids, with large rocks, a good many exposed ones, with but few logs in the water, 2 to 6ft. deep. The other one is still water from 3 to 10ft. deep, and must be fished from boat, and has some large trout in (if you can catch them), and I should think the rapid one would be more suitable for your style of fishing than the still waters.

"I wish you would give me the names of the best flies and the size of hooks to use. One fly would be best I think. I use one and never more than two flies on a cast on a 6ft. leader, and 3ft. with bait. Are winged flies better than hackles? You must understand by not fishing in ten years I must learn it over again, and in that time many changes are made. Where do you get your flies from?

"In another article I notice you have found a perfect fly dope for mosquitoes. I am perfectly eaten up with them and have used every lotion and ointment on the market, but received very little good from any. Would you give me the recipe for the one you use? If you will be kind enough to answer the above, you will greatly oblige a brother fisherman."

Mr. Fisher has by this time, no doubt, read the article of Mr. Edward Taylor in the FOREST AND STREAM of Sept. 3, in which the latter describes his experience in the Rocky Mountains, using just the system of which Mr. Fisher wishes to learn more. As it was Mr. Taylor who was the discoverer of this way of fly-casting, and as he is the only man I ever saw use it except myself, after he had showed me how, I will let him speak for the method himself, which he does explicitly enough. As to the leader, I would say, make it short, 5ft. or even 4ft. will kill trout and big ones. The winged flies are best for a steady thing, I should think, though a hackle sometimes raises a good fish. One thing should be observed, and that is that nearly all trout flies are tied with about as much wing on them as they ought to have. The feather wets down some, but even so, the big stiff feathers do not look like the wings of a drowned or drowning fly. Trim off the wings so they are thin and neat. In size it all depends on how big a big trout is where you are fishing. I should think No. 8 about right at a guess, though No. 10 is usually nearer the thing on most streams.

As to the fly dope, it is all right, but I cannot give the formula, as it is not mine. Col. E. Crofton Fox, the inventor of this fly dope, is not making it for money, but will, I think, send the address of the druggist who puts it up for him. His address is Grand Rapids, Mich., and he is a nice man.

As to the sort of flies to use in trout fishing, I really can't afford to write all that could be said on that subject, not for the salary I get. It would fill a book. In a general way, a fly with a brown wing, a fly with a black wing, and a fly with a white wing may be said to be good enough to take fish if they want to be taken. The coachman is my favorite for all-round fishing. The black gnat is good sometimes. The brown hackle is another safe one to tie to. On some Wisconsin streams the Reub. Wood is a hot favorite, but in Michigan south peninsula it isn't worth a cent. In the latter country the Montreal is sometimes the only thing, and in Wisconsin the Montreal isn't worth a cent. So it goes. Get a coachman, get a professor, get a brown hackle, get any brown-winged fly with a peacock hurl or a dirty yellow body—say the cowdung fly—and I should say you would not need feel badly equipped, even if the trout didn't rise.

Bullheads at Beaver Dam.

A few years ago, about three years I think it was, I remember seeing the statement that the ice had frozen to the ground in Beaver Dam Lake, Wisconsin, and that though it was against the law, the residents of that community wanted to go to work at once and cut, hack, slash, net, spear and otherwise get rid of all the bullheads in that water right away, because if they didn't there would be a pestilence next spring when the ice went away and the dead fish were left along the shore. At the time I mildly suggested that the bullheads ought to be consulted about that a little, and that it might be well to risk them in the lakes as well as in the wagons. I don't know what effect my valuable advice had on the community, but last winter there were forty-three tons of dressed bullheads shipped by express out of Beaver Dam alone, so I think some of them must have survived the freeze. But now comes the fish warden, and points out that it is unlawful to ship these fish, and says it must be stopped. Again arises the cry—which I would not for the world suggest comes from the men who have made a business of shipping these fish—that the bullheads, if not at once caught, skinned and shipped in marketable form, will breed a pestilence, etc. Yet I do not hear any news to lead to the belief that Beaver Dam is unhealthy, for to the contrary some very fine looking people live there. As to the quality of the Beaver Dam bullhead, it is above reproach.

Nature Got There First.

At the fish hatchery at Ukiah, Cal., an odd thing came out this summer in the trout hatching, which has puzzled some of the experts. A lot of trout eggs came in from Lake Tahoe, and in the course of hatching out there appeared among the products of these eggs some eighty-odd strange fish, a pale lemon colored fish fringed with black, with a pink line alongside, and a bright metallic luster in general coloration. The authorities were unable to name these fish, and are holding them in a separate apartment, hoping that they will either turn into regulation trout or get themselves classified as they belong. It would appear that nature has gotten in another of her mystifying ways, and has not consulted the authorities about it at all. Is it possible that we are to have a few specialties to add to the fantail deer and the horn snake? The fantail deer I take to be now scientifically admitted, not only as a possibility, but as a fact, and I lay much unction to my own soul that I was ahead of the scientist on that, and guessed correctly that the old hunters were correct in claiming that there was such an animal. As to these trout, it is as well to be meek, for not even an old hunter has as yet appeared who ever saw anything like them. I allow that science is a plenty good thing to have, but I recollect that they used to think it was wrong to play an organ in our church, and now they play a horn.

Return of the Elevator Boy.

CHICAGO, Ill., Sept. 10.—I have earlier mentioned the elevator boy of this building, who sometimes used to come to ask where he should go fishing or shooting, and whom I always liked, because of his frank manliness. Perhaps I have said that he was a member of the First Regiment, Illinois Infantry, and that he went to the front with his regiment. First I heard that he was a corporal, and then I heard of him at Santiago. This morning my elevator boy, a bit thin and very brown, stepped off the long train which brought back the First Regiment, or what is left of it, to Chicago. He is a boy no longer, but almost a man in years, and more than that a man in experience. When he takes his place again at the throttle of our elevator, I shall surely take off my hat when I take my first ride with him. He was a sportsman to the best of his ability, and he is a soldier to the best of his ability, and I do not think that folks like us, who stayed at home, are quite as good as the boys who dropped their elevators and just went. To be sure, a good many of us felt that if we let go of the lever the world would not run just right. We had reasons, pretty good reasons sometimes, or pretty good excuses, for not going to the front. We had families, or

LEAPING LANDLOCKED SALMON.

Photo by Walter H. Blethen.

corns, or something valid. But my elevator boy, who didn't get away from his lever more than two weeks in the year, and who couldn't have nearly all the fun there was in the world, and not quite all the money, why, he just passed by the excuses, or reasons, and went! I still think I could lick this boy, or perhaps outrun him if chased, but now I think he is a more useful sort of citizen than, for instance, I am myself, and I shall lend him anything he wants the next time he wants to go shooting, and shall give him his title when I meet him in the morning.

Biting.

This week the bass are biting in great shape, but no one seems to care much for fishing during the shooting season, which is now under full swing all over the West. The weather has been glorious for some days. The fall season of the 'lunge and pike is on, and it will pay a man who had poor fun in July to try the same waters now.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Leaping Landlocked Salmon.

Editor Forest and Stream:

I inclose a photograph of a leaping salmon, thinking that you will like to reproduce it for the FOREST AND STREAM. It is a genuine instantaneous picture of a landlocked salmon ascending Cowyard Falls, Lake Onawa Stream. The fish is about a 4-pounder, taken last July at about medium low water. The water makes a fall of about 12ft. at that point. The falls are a short distance above Sebec Lake. This lake system is a natural one for landlocked salmon, the fish having been found there from time immemorial. There are two lakes or more below the falls of the picture, and nine or ten lakes and ponds above; all naturally stocked with landlocked salmon. The salmon formerly ran small, the same as at the Skoodic waters, but restocking has been done with fry from Sebago Lake, and since much larger salmon are taken every season. The salmon begin leaping at the falls early in July.

The picture is by the courtesy of Walter H. Blethen, of the Blethen House, Dover, Me. My friend, R. P. Woodman, heard of the picture when on his spring fishing trip to Sebec Lake, and told me about it. I asked him to get it, for I thought that you would like to reproduce it.

SPECIAL.

Boston Fishermen.

BOSTON, Sept. 16.—The rod and reel sportsmen are returning, and the season of 1898 is about over. Mr. J. H. Jones is back from his fishing trip. Making Buckfield, Me., his starting point, he fished the streams in that town, Sumner and Woodstock. He caught lots of rather small trout. The brooks in that section are excessively fished. He looked carefully for partridges, and in a good partridge section, where only a few years ago it was easy to shoot half a dozen from a wagon driven over a lonely road from Sumner to Woodstock, he did not see a single bird. He also carefully questioned the boys at the village, and became satisfied that they did not know of any partridges. But deer are positively plenty in that section. He saw deer paths in almost every direction, and actually stumbled on to a moose up between the Woodstock Mountains. A. M. Benson, of Dorchester, has returned from a successful fishing trip to the Rangeley waters. L. O. Crane, of Boston, could not get in at the Upper Dam camps after all; found too many sportsmen there waiting for the big trout to rise for any more to be accommodated. He pushed on through the Seven Pond region to Round Mountain. Henry Russell and Mrs. Russell, of Cambridge, have returned from the Rangeleys, where they had their usual good success. Harry Dutton has returned from his camps at Pleasant Island. Mr. Mark Hollingsworth is reported to have landed a trout of 4½lbs. at the Upper Dam. Mr. Geo. L. Osgood and E. D. Cummings, of Brookline, have returned from a Rangeley fishing trip.

Mr. C. A. Brown brings up another good fishing story from Monomoy or Chatham, though not equal to the bluefishing episode published in the FOREST AND STREAM last week. A party were fishing off the Chatham Bars the other day, when Brown caught an enormous goosefish, which greatly interested everybody. It was a monster, with a mouth nearly as big as a man's hat, and this raised the suggestion as to what the fish could swallow. Capt. Harrington, in charge of the boat, volunteered a goosefish story. When he was a boy he was scouring the beach in that section with his father. They came across an enormous stranded goosefish, and inside of it a handsome pair of black ducks, that the fish had evidently swallowed that morning. The Captain's theory was that the fish in swallowing the ducks had taken in so much air as to cause him to float belly up, and be stranded by the receding tide. All hands laughed at this story, of course, but Capt. Harrington persisted, and in proof declared: "To tell the honest truth, we had those black ducks for dinner." Later some one caught a toadfish, and the little fellow, when turned over, showed an immensely warty belly. When gently tickled with a straw, it would swell almost to bursting and then belch the air with a grunt. This greatly amused pork packer Plankinton, of Chicago, who was on board. Ten or twelve squeteague were also taken on the trip, with several plaice. Agent W. A. Wilcox, of the U. S. Fisheries Commission, tells me that he remembers when Prof. Baird first brought these plaice over from Europe, and liberated them on our coast. Now they are very frequently taken at Chatham and Monomoy.

The Massachusetts State police patrol boat Lexington is finished, and went into commission to-day. She was designed by Wm. E. Waterhouse; is 122ft. long, and mounts a 1lb. rapid fire gun on her upper deck. Commanded by Capt. Proctor, a lover of gun and line sport, she is designed to be a terror to fish and game poachers all along the shore. She will spend a good deal of time in and about Buzzard's Bay. She made a trip on Thursday as far as Cape Ann, with Contractor Storey and others interested in her construction, and Mr. John Fottler, and a number of ladies on board. She is pronounced a swift, beautiful boat for the purpose intended.

SPECIAL.

A New Hampshire Outing.

BOSTON, Sept. 8.—*Editor Forest and Stream:* I have added to the list of "Men I Have Fished With." It came about this way: The 12th of August found me at the hospitable home of the Hon. N. R. Perkins, at Jefferson, N. H., where I was, as usual, cordially welcomed. His son Manasseh, with whom I had passed many happy days on the streams and in the woods of Coos county, informed me that there was a gentleman stopping at the Waumbek who was desirous of getting into the woods for a few days, and incidentally getting some trout fishing, and if I would take him up to John Chandler's in Dummer, it might prove agreeable for both of us. Of course, I fell in with the suggestion, and the next day I was introduced to Mr. H. Bramhall Gilbert, a well-known business man of New York. We seemed to get together at once, and the arrangements were soon made for the trip, and three days later we were off for the north country behind a spanking pair of cobs, hitched to a light top buggy, into which our duffle was snugly stowed. The day was a delightful one for driving, cool and comfortable, and a three hours' drive brought us to the bustling little city of Berlin, where we stopped for a good dinner at the Berlin House, kept by my old friend Marston, who, by the way, is mayor of the city. After dinner the cobs were on their mettle and we bowled along the excellent road at a good gait, and in a couple of hours pulled up in Chandler's door yard. John soon came up from the river, where he had been tinkering one of his boats, and gave us a cordial welcome, as did all connected with the establishment. I had told Mr. Gilbert some of John's peculiarities, and prepared him for the usual chaffing which John and I generally indulged in. I said to John that I had understood there were some good stopping places a few miles further on where sportsmen were well treated, etc., and he said there were such places, and that the roads were good and lay straight ahead. But he knew as well as we that our stopping place was there, and we were soon unloaded and provided for. Now as to the fishing, and it was soon decided that Hillsfield Pond was our best chance. I had been there before, and was satisfied that if we couldn't get trout there we couldn't get them anywhere. But we were sorry to learn that a business en-

gagement for the next day would prevent John going in with us, for I had learned by experience that he was an excellent man to have around a camp in the woods. I also learned that a new trail had been made to the pond since I was last there, which lessened the walk by a mile and a half.

After breakfast the next morning John drove us five miles on the road to Errol Dam, from which the new trail to the pond started. John provided two men, Jim Griffin and Bob Hilliard, to carry the duffle, and with a parting salute from John we started on the four-mile tramp. The walking for the most part was good, and in less than two hours we were at the new log camp, which we found spacious and comfortable. We did not lose much time in putting up our rods and taking to the boats, as the trout were breaking the surface in all directions. Bob guided the boat for Mr. Gilbert, while I pulled out alone, and let the craft drift at her own sweet will. But we soon discovered that the trout were doing anything but feeding; they were simply playing, as it were. Occasionally one would take the fly, but the occasions were rare. But I soon found that it was not all of fishing to fish, so after a while I sat in my boat and watched Mr. Gilbert cast. I had an idea that I could cast fairly well, but that day I learned more about fly-casting than I ever knew before. Mr. Gilbert's work with his extremely light rod was something wonderful, and I watched it with some little envy and a great deal of delight. Meanwhile Griffin was preparing dinner of good things, which Mrs. Chandler had put into the pack, and when we were called in we had only half a dozen trout. But Mr. Gilbert declared he had had lots of fun, and I was not far behind. In the afternoon and the next morning they were jumping as before, but our flies were not what they were looking for. In all we got about twenty, and we took them with us in good shape. The fourth day saw us in Jefferson, and although I was greatly disappointed in the fishing I recognized the correctness of Mr. Gilbert's remark, that it wasn't the first time he had been served so. To conclude, we had a very delightful trip, pleasant weather, and I count myself fortunate in making the acquaintance and enjoying the companionship of so thorough a gentleman and sportsman as H. Bramhall Gilbert. WILLIAM B. SMART.

No More Trout.

MIDDLETOWN, N. Y., Sept. 16.—Mr. B. S. Smith is one of the oldest fishermen and gunners in this part of the State, and is entirely familiar with the conditions. He says the cutting off of timber is ruining all sorts of sport. The old trout brooks in the Walkill Valley have either dried up or become the home of carp, and trout have almost entirely disappeared. Mr. Smith has traded his trouting outfit for ammunition, but the cutting off of the timber is now driving game away. In one spot famous for woodcock a portable sawmill has driven all the game away. The only hope for sportsmen is the abandonment of the farms, which is rapidly taking place, owing to the low price of milk and other farm produce. There are thousands of acres in Orange county which have been cleared and cultivated, but now growing up with brush, which must eventually become forests. In time these trees may restore the water to the brooks, but it will probably take a century to do it. In the meantime sportsmen must go into remote sections far from the ordinary haunts of men if they would catch trout or shoot game. G.

Bluefish and Birds at Chatham.

CHATHAM, Mass., Sept. 14.—This season has been a record-breaker here, both in regard to a remarkable run of bluefish on the 4th inst. and a flight of beetlehead (black-breasted plover) on the 12th.

The bluefishing was described in FOREST AND STREAM of this week. The 12th was the largest plover day ever known here. Forty-four were killed, and thirty other large birds, making the total score for the day seventy-four, of which fifty-three were brought in by four gunners, there being eleven out. Sully Cochrane, of Boston, killed twenty-nine large birds, as follows: Nine beetleheads, six winters, two godwits, four red breasts, five chickens, one summer and two grass birds, besides a large string of sanderlings. Other large strings were those of John and Hoods Plankinton, of Milwaukee—thirteen—and R. P. Barry, Jr., of Melrose, and F. W. Ramseyer, of Hyde Park—fifteen—the larger part of these strings being beetleheads. This score would have been doubled had the flight arrived on a high course of tides; as it was, the tide did not come within 100yds of any box. BUMBLE-BEE.

Plankton.

Editor Forest and Stream:

The Standard Dictionary has this word and defines it as follows: "Plankton, *n. Zool.* Pelagic animals collectively: distinguished from coast or bottom forms. Gr. *planktos*, wandering [*plazo*, wander]." Prof. Reigard's use of the word in the reports of the Michigan Fish Commission and the American Fisheries Society, for the past few years, includes minute vegetation as well as animal life, and all small life on which young fishes may feed in the first few days of their existence.

KEGO-E-KAY.

The Irish Setter Club Prizes.

PHILADELPHIA, Pa., Sept. 15.—In order to avoid any misunderstanding, the total amount of prize money offered by the Irish Setter Club of America is $60. Any surplus remaining, should the whole $60 not be awarded, is to be devoted to paying $10 for each Irish setter running until such surplus is exhausted.

GEO. H. THOMSON, Sec'y.

Mr. T. Morgan, of St. Louis, has sold to President Dias, of Mexico, the pointer dog McKinley, out of Lass of Hessen, by Keswick's Tip. This would naturally lead one to infer that Mexico's chief executive is somewhat of a sportsman himself. PAUL R. LITZKE.

His First and Last Coon Hunt.

"HELLO, Tom! Don't you want to go out with the Ketch'em Koon Klub to-night? We've got a new dog down from Maine, and want to try him."

The red-faced, portly man, seated at a roll-top desk, to whom the question was addressed, wheeled around quickly in his revolving chair and glared at his questioner, who had dropped familiarly into a chair. There was silence for a moment, and then the portly man broke out:

"Naw, I don't want to go out with the Ketch'em Koon Klub to-night."

Then he wheeled back to the desk, picked up a pen and began to write savagely. Evidently the portly man thought the interview was at an end, but the young fellow in the chair only looked amused. Presently the pen was thrown into the back of the desk with a rattle and the portly man's chair squeaked as he wheeled about again.

"I went on one coon hunt," he blurted out. "I know what they're like. I'm one of those fellows that believe if a man's bamboozled once he's unfortunate, but if he's caught the second time on the same thing he's a blamed fool. That's my style. Hold on there! You needn't tell me any of those stories about the beauties of the trackless forest at night, with its strange sounds and mysterious shadows; or the silvery moonlight hiding imperfections on hill and vale, and dancing on the lake; or the excitement of the chase; or the noble hound whose voice is music to your ears. I've heard it all, and for just once I yielded to the tempter, but only once—thank the Lord!

"But I was younger then, and I dunno but that had something to do with it. At any rate, I hope I didn't make such a blamed fool of myself with full possession of my faculties. It was soon after I was married, perhaps that's the reason; but no matter about that. I was up in Vermont with my wife one fall, enjoying the mountain air and good, plain living at a comfortable farmhouse. Stopping at the same place was a party of hunters from Boston, and would you believe it, there was a girl in the crowd that put on a short skirt, toted a gun and hunted with her dad and her feller, who made up the party. Well, those people didn't do anything but hunt. It was foxes in the morning and birds in the afternoon; or squirrels in the morning and rabbits in the afternoon. There wa'n't no such thing as rest, and when night came it was coons. There were guns in the corners, shells on the sideboard and hunting coats in the chairs. And it was talk on hunt, hunt, hunt, until you couldn't hear anything else.

"Well, I confess that the stories that they told about coon hunting rather appealed to me. They told all about its beauties and so forth. How easy it was just to go out and stand around till a coon was treed, and then to go over and cut the tree down and see the dogs tackle him, until I thought it'd be fun.

"Those Boston people used to hire a man to come over regularly every good night with his dog, but that fall the man had been entertaining a city friend, and it had been too much for him, so he didn't show up for several days. But one fine night he came with his friend and his dog just as we were getting ready to play whist. There was a scramble, and before I thought much about it my wife and I were getting ready too. They insisted on her going because the Boston girl and the farmer's daughter wanted to go, and they said my wife could be chaperon. Well, pretty soon we started. There was Hake Smith, he owned the dog, and his city friend. Hake, at the head of the line, carried a lantern, and his friend lugged a jag with considerable difficulty. Then there was the man from Boston, my wife and the farmer's son, who carried an axe; the farmer's daughter and I, then the Boston girl and her feller, and down at the end of the line the farmer, carrying another lantern. And then there was the dog, an uneasy little cuss that swished up and down the line looking us all over. It was a beautiful night, one of those gems that you find late in October. The great full moon shed its mysterious light generously, the air, though cool, was free from dampness and invigorating. Just for a few moments I almost enjoyed myself, everybody else seemed to; but just ahead of me was the farmer's son hanging on to my wife's arm like a barnacle to a ship. I didn't like it. To be sure I had the farmer's daughter, a plump, buxom lassie, and she held on to me in a clinging way that would have been very pleasant if my wife'd been home and abed. But it couldn't be helped, and I plugged along and pretended to be as happy as everybody else.

"We trudged up a hill, turned into a mowing and made our way across it to a cornfield, where we gathered beside a shock and waited while Hake put in the dog. The minutes dragged on, but no sound broke the stillness. After a time that pesky dog came up waggin' his tail just as if he'd treed a whole family of coons.

"'Funny,' muttered Hake, 'this is ther fust time t'I ever put in hyar 'thout startin' 'un.'

"Then we formed in line again and started down the hill, I with the farmer's daughter and my wife with the farmer's son. Before we'd gone many steps, Hake missed his friend and asked us to wait while he went back to hunt him up. He found him asleep on a corn shock, and tried to get him up, but the tramp had been too much for him. So he covered him up as best he could, came down to us, and we started again.

"Then, I suppose, was the real beginning of the hunt. First we had to crawl over a rail fence that was grown up with thistles on one side and blackberry bushes on the other. The farmer's son cut a path very carefully for my wife. Then for half a mile we slipped on rocks and tripped over vines as we made our way down hill through a pasture. Then we crossed another stone wall fortified with birches, and a few minutes later were in a swamp. It was blacker than a raven's wing, for no moonlight found its way through the pine boughs overhead. As we pushed along leafless twigs slapped us in the face, and pine hemlock boughs jabbed at our eyes, or brushed our hats off. Every third step we slipped from a bog into the muck, anywhere from ankle to knee deep. The lanterns at either end of the line were of little use. Everybody laughed and thought it awfully funny. Hugh! The farmer's daughter clung to my arm more affectionately. I knew my wife was doing the same thing with the farmer's son. I began to get fierce, but I managed to keep quiet. Just back of me the Boston girl and her feller were cooing away like doves, and talking about love and war. The further we went the worse the traveling got. Then muck became water, which splashed when we stepped in it. After a time Hake called out:

"'I say, Aub (that was the farmer), guess we're lost, ain't we? Tho't thar wuz an old loggin' rud hyar, but don't seem ter find it.'

"Then the farmer came panting and puffing up from the rear, exclaiming:

"'You danged idiot! You bin huntin' all this time fur thet rud? It's off tew ther right half a mile or mo'.'

"'G'ess not, Aub,' was the slow reply, 'must be pretty close to hyar. Bin thro' this swamp number times and kinder kalculate I know't a trifle.'

"And then Ross (that was the farmer's son) broke out:

"'Did you say north, dad? Wall, 'tain't. It's 'bout ten rods to ther south, or I'll chop ther winter's wood fur ther fun on't.'

"Then the young feller from Boston managed to leave his girl long enough to express his opinions, but as long as he'd never been in the woods before they didn't count for much. There was a gradual gathering together, and after a little council of war Hake and Aub and Ross decided to circle in different directions until they found the road. The rest of us camped down on stumps, rocks and other dry places, while they went crashing off, hallooing every little while to get their bearings.

"Pleasant, wa'n't it? Coon huntin' you call it, do you? Yes, and mind you, all this while not so much as even a whine from that lazy pup.

"Well, they found the old road after a while, and the rest of the way was easy. A little while later we got into a little clearing on a hillside. In the meantime the sky had clouded. Aub started to build a fire so we might dry and warm ourselves a bit, but the young feller from Boston thought it'd frighten the coons, and so he gave it up.

"Hake couldn't stand that, and he remarked dryly, as he stamped his feet:

"'Don't 'spose they c'u'd take thar tracks with 'em if it did, der you, Aub?'

"Then that pup, dirty and wet, came trotting up, waggin' his tail in the same old way. I tell you it was disgustin'.

"Pretty soon Hake said he knew of a swamp where he always 'got 'em goin'.' I told him he meant 'another' swamp, but he didn't mind, and on we started again. When we arrived at the place we decided to let Hake go in with the dog, saying we'd wait until he got 'em treed before we went in. Then all of a sudden it suggested itself to Hake that he could send the dog in and we could follow around the edge. I wondered why he hadn't thought of that before. We waited from time to time, as we proceeded, while the dog skirmished about, but it was the same old story. A regular coon hunt!

"Pretty soon we came to some scrawny apple trees, tried to eat the apples we found on the ground, and felt sorry afterward. Hake picked up one and showed us where a deer had bitten into it—that very night, he thought. Then the dog came trotting up with the same disgustin' wag of his tail. Then it began to sprinkle, and for a wonder somebody had sense enough to know that it was proper to go in when it rained. As we started up the hill, the drops became bigger, and before we'd gone 50yds. it was pouring. That was something we hadn't figured on. It wasn't long before it began to come through to the skin, and all the while Aub and Hake were trying to decide whether we were six or eight miles from home. We plugged along in silence. No one seemed to be particularly happy, and that fact consoled me a little. In the course of half an hour we struck a road, and the remaining distance was finally covered. There was a bright light in the window of the farmhouse, shining out into the mist. As we stepped inside, logs were crackling in the fireplace and an odor of coffee floated to our nostrils. The high clock in the hall was about to strike one.

"Everybody hurried to get on dry clothes, for the farmer's wife said a lunch was waiting. I grumbled away at my wife and tried to make her think she'd die of pneumonia if she didn't take a dose of hot whisky and go to bed, but she only laughed at me and said she felt like a lark.

"Not daring to do anything else, I went downstairs with the rest. The fireplace did look rather cozy, and the coffee and lunch tasted mighty good, but, will you believe it, that whole crowd of galoots sat about till nearly 3 o'clock chatting like magpies, going over the whole trip again and again, stopping every now and then to jump up and down and exclaim:

"'Wasn't it too jolly for anything?'"

The red-faced, portly man wheeled back to his desk and exclaimed, as he picked up his pen:

"Get out of here, Sam, and don't ever say coon hunt to me again."

A moment later the door closed softly, and there was a queer smile on the face of the chap who made his way downstairs to the street. HERBERT L. JILLSON.

The Manitoba Field Trials.

The All-Age Stake.

THERE were nine starters in this stake, and they were run as follows:

W. F. Ellis' b. b. English setter bitch Maid of the Morn (Vallette—Cam Sing), owner, handler, with W. C. Lee's liv. and w. English setter dog Duke's Rush (Duke of Manitoba—Cam Sing), owner, handler.

Chimo Kennels' b., w. and t. English setter bitch Ortolan (Orlando—Atalanta), C. Archibald, handler, with W. F. Ellis' b., w. and t. English setter dog Columbus (Duke of Manitoba—Hickory Link), owner, handler.

John Wootton's b. and w. English setter dog Ben Bondhu (Dick Bondhu—Maud á Rose), owner, handler, with E. Hamber's b. and w. pointer dog Mac Hamber (Croxteth's Ned—Miama), owner, handler.

Thos. Johnson's b. and w. setter bitch Nellie (Ponto—Bess), A. C. Reid, handler, with E. J. Bennet's b. and w. pointer bitch Tannis (Rector—Miama), owner, handler.

R. McLennan's b. setter bitch Sut (Manitoba Toss—Pitti Sing), a bye, Thomas Johnson, handler.

First Round.

The Derby, a report of which was published in our last issue, was finished on Thursday forenoon; in the afternoon the all-age stake was begun.

Maid of the Morn and Duke's Rush began the competition at 2:09. Maid ranged over a deal of ground without much success. She flushed and chased a chicken. Her range, though wide, was irregular. She worked out large areas and left large areas untouched. Rush was a steady worker. He covered a good scope of ground and beat it out with better judgment than did his competitor. They were down fifty-five minutes.

Ortolan and Columbus began at 3:08. The former had made a very strong race for the championship honors on chickens last year, and much was therefore expected of her this year. On a bevy Ortolan made a very imperfect piece of work, she seemingly being too impatient to work out the details. She pointed and moved off instantly after her handler failed to find. Columbus backed well, and moving on when Ortolan gave up her point, he flushed a point on singles, Columbus marring his by a flush. Ortolan was fast and wide in her range, but left vast stretches entirely untouched. Columbus has a middling range, and keeps going at a good rate of speed, although he is not notably fast. He showed good skill in locating and pointing. Up at 3:54.

Ben Bondhu and Mac Hamber were started at 4:00, and ran forty-six minutes. Mac ranged in an intelligent, useful manner, and showed a most commendable knowledge of field work and work to the gun, and in pleasing obedience to his handler. He made one good point and two excusable flushes, but he showed very high class capabilities in every way. Ben made a very inferior competition in every way; indeed, it would be only by courtesy that it could be considered competition, for he was at heel most of the time, and when he was not at heel he was very incompetent.

Nellie and Tannis began at 4:47, and ran thirty-nine minutes. Tannis added to her good reputation by her good showing. Nellie is a diligent worker and steady and reliable to the gun in her work on birds, though in this respect both worked well.

Sut ran a bye with the celebrated pointer Alberta Joe. She did some work which was rather faulty, though plainly she intended to work without error, one of her faults being an inclination to draw too closely on her birds. The heat lasted about thirty-eight minutes, and was the last work of the day.

Friday, Last Day, Sept. 9.

A gentle breeze blew all day. The morning air was a bit sharp from the frost of the night, and the conditions seemed to be the best that could be desired for good work.

Second Round.

Ortolan and Duke's Rush began at 8:08 and ran till 8:44. Ortolan was working in much better form, steadying down to more systematic work and making a fine exhibition of good chicken hunting. She took her casts with rare judgment, and her locating and pointing were of a high degree of merit. Duke made a fairly good showing, but was entirely outclassed by Ortolan.

Maid of the Morn and Nellie started at 8:48, and ran twenty minutes. Maid was fast and ranged wide, but she seemed to be impatient in her locating, leaving the scent before she had determined properly the whereabouts of the birds, as she did on the bevy found. On some remaining birds both failed to find.

Mac Hamber and Tannis started at 9:09, and they ran fifty-four minutes. Some of the keen edge was gone from both dogs, neither working up to his and her prior performances. Mac made a flush on a bevy and afterward made a good point on a single.

Columbus and Duke's Rush started at 10:12 and ran twenty-six minutes. Columbus flushed a bevy. Both failed to find any of the marked birds, though they worked in places where the birds were afterward flushed by wagons.

Third Round.

Mac Hamber and Ortolan were started at 10:43, and ran thirty-seven minutes. Ortolan went out of bounds at times. She flushed a bevy, and next she made a point on a bevy a long distance away from the wagons, on a back field.

This heat ended the stake. Ortolan won first, second went to Mac Hamber, third was divided between Tannis and Nellie.

The Amateur Stake.

Most of the dogs in this stake had already run in the other events, so that there was very little of novelty in this competition, save that the handling was to be different. There were seven starters drawn as follows:

E. J. Bennet's b. and w. pointer bitch Tannis (Hector—Miami) with W. F. Ellis' b., w. and t. English setter dog Columbus (Duke of Manitoba—Hickory Link).

W. F. Ellis' b. b. English setter bitch Maid of the Morn (Val Lit—Cam Sing) with Prince Rupert (Larry Noble—Atalanta).

John Wootton's b. and w. English setter bitch Bonnie Lit (Orlando—Lady Lit), with Winnipeg Kennels' liv. and w. dog Duke's Rush (Duke of Manitoba—Cam Sing).

W. F. Ellis' b. and w. English setter bitch Silver Lace (Val Lit—Cam Sing), a bye.

First Round.

Tannis and Columbus opened the competition in this stake. Soon after starting Columbus flushed a bevy in a very awkward manner. Silver Lace, the bye dog, was substituted for Columbus, at the request of Mr. Ellis, as time would be saved by this course, in view of the fact that Columbus had little chance to win. Lace also seemed to feel lawless, for she flushed and chased grievously, and also was taken up on request of Mr. Ellis. Tannis was keeping diligently at work, though she found no birds.

Maid of the Morn and Prince Rupert started at 3:01 and ran forty-five minutes. Maid's unsteadiness was a grave fault against her. She spoiled what was really good work by flushing and chasing and disobedience. Prince made a common kind of a point on one bird.

Bonnie Lit and Duke's Rush started at 3:45; down forty-five minutes. Lit made a good point on a bevy, Duke at the same time working on the foot scent a few yards away.

Second Round.

Prince Rupert and Tannis were started at 4:35, and ran thirty minutes. The latter made a good piece of work in drawing to a bevy and pointing it, and her seeking also was of a good kind. Prince flushed a single bird.

Third Round.

Bonnie Lit and Tannis were started off after an intermission of twenty minutes, and after a short run of twelve minutes the trials ended, Tannis winning first, Bonnie Lit second, Duke's Rush third.

The well-known handler, Mr. Frank Richards, judged the trials, and gave excellent satisfaction. Birds were too scarce to give the dogs as thorough a trial as they needed for a thorough test. The grounds now are much less in area than they were, and the country about Morris so excellent at one time for field trial purposes is much less desirable, as the ground is more and more taken up for agriculture each year.

The weather was very unfavorable for the trials, and very uncomfortable for the visitors, owners and handlers. There is so much enthusiasm and energy of the right sort that there is but little doubt but what the club will keep up its field trial interests and secure grounds of the right sort.

RAT PORTAGE.

The Northwestern Club's Champion Stake.

WINNIPEG, Sept. 13.—Birds were scarce, and consequently impaired the fall success of the champion stake of the Northwestern Field Trials Club, inasmuch as there was a great deal of searching done which was without the results due to diligence, and there also was not the thorough definition on the competition that there is when birds are in sufficient numbers.

The trials were run yesterday near this city, in the vicinity of Silver Heights and Little Stony Mountain. There are large sections of prairie about Winnipeg which admit of riding across country in carriages, and this permitted making the trials a spectacular event. A great number of carriages followed the work, many of them the most fashionable turnouts of the city. Among the spectators were three ladies on bicycles, and Mr. R. Ross Sutherland and party; Mr. Joseph Lemon and party; Mr. and Mrs. Dr. M. C. Clarke, Mr. and Mrs. H. S. Rolston, Mr. and Mrs. Chas. Wellband, Mr. Tom Montgomery and party, and Messrs. Major J. M. Taylor, W. C. Lee, Rod. McLennan, G. Soames, F. W. Sprado, Hinman, J. Baird Thomas, G. Fowler, Johnson, Harry Woods, E. Target, E. R. Collier, H. G. Spurgeon, E. Hamber, Sandy Reed, B. Gordon, F. W. Scott, Messrs. Bulman, H. A. Holman, Jas. Watts, G. B. Borradaile, Charlie Archibald, J. Gower, R. Penwarden, A. Bennett (San Francisco), H. McKittrick, H. Rashburn, and others.

The judging was done by Messrs. C. E. Buckle and Frank Richards, both well-known handlers and experienced men in the office of judge. Mr. Thomas Johnson's famous pointer Alberta Joe proved to be the winner. The trophy, commemorating the win, was a cup of rare value and workmanship, presented by the patron of the club, Mr. Edward Dexter, of Boston.

The weather was pleasant and very favorable for good work. The quality of the work, however, was of a low grade for championship performance. Following is a list of the competitors:

Mira-Mote Kennels' b. b. setter dog Lock (Locksley—Liddesdale), A. Bennett, handler, with Thos. Johnson's l. and w. pointer dog Alberta Joe (Ightfield Upton—Ightfield Blythe), owner, handler.

E. J. Bennett's b. and w. pointer bitch Tannis (Rector—Miama), owner, handler, with E. Hamber's b. and w. pointer dog Mac Hamber (Croxteth's Ned—Miama), owner, handler.

Chimo Kennels' b. and w. setter bitch Ortolan (Orlando—Atalanta), Charles Archibald, handler, with Jubilee Kennels' b., w. and t. setter bitch Dodo III. (Orlando—Atalanta), Geo. Borrowdale, handler.

A. C. Reid's b. and t. setter bitch Schwab (Manitoba Toss—Pitti Sing), owner, handler, with Mira-Monte Kennels' b., w. and t. setter dog Dash Antonio (Antonio—Lady Lucifer), A. Bennett, handler.

Lock and Alberta Joe ran about forty-two minutes, beginning at 7:36. They displayed moderate range. Joe found and pointed a bevy nicely. Lock behaved badly to the flush as he chased. Neither covered the ground with the thoroughness which was desirable.

Tannis and Mac Hamber were started at 8:23 and ran till 8:58. The work opened with a point on bevy for Tannis, to which her competitor made a prompt back. On marked birds Mac made some very slobbery work.

Ortolan and Dodo III. started at 8:59. Dodo seemed to be unfortunate, for she made game where some birds were, but failed to secure a point, and again she was about to locate when the birds flushed ahead. Ortolan secured two good points on scattered birds. They ran forty-one minutes. Dodo's range was moderate as compared to that of Ortolan.

Schwab and Dash Antonio began at 9:41, and ran till 10:26. No birds were found during the heat.

Second Round.

Schwab and Dash Antonio were started after lunch at 3:53 and ran thirty-two minutes. This was a test of ranging only, as but little work was done on birds. Dash had much the best of the heat on what qualities were tested. Dash made a point on a single bird, which was all the bird work done in the heat; Schwab backed.

Alberta Joe and Ortolan ran about forty-three minutes. Ortolan pointed a bevy and both afterward pointed at the same time; Joe on a bevy. Ortolan had much the better speed and range. Joe worked very honestly to the gun, but was lacking in uniform range and speed.

The final heat was between Dash Antonio and Alberta Joe; lasted about twenty minutes. Both dogs were running on narrower ranges. Both made a point; nothing found.

When the heat ended, the judges announced that Alberta Joe was the winner.

RAT PORTAGE.

Death of Angus Cameron.

HEMPSTEAD, N. Y., Sept. 12.—*Editor Forest and Stream:* I have just received a letter from Mrs. Cameron, Sparta, Hancock county, Georgia, informing me that her husband, Angus Cameron, who came to this country with Brailsford and Mr. Heywood-Lonsdale's dogs, and was afterward employed by the Hempstead Farm, died in that city on Sept. 4. She further says that as her husband had been in no steady employment since April, 1897, what little money they had saved was gone, and she and her two children are left entirely destitute.

It has occurred to me that probably the sportsmen of this country would be inclined to assist her in returning to England, and I should feel very much obliged if you would kindly make the announcement of Cameron's death in your paper, and receive subscriptions in her behalf.

Mrs. Cameron is herself a very delicate woman, and totally unfitted for her hard work. This is a very sad case, and I am sure FOREST AND STREAM will render all the assistance it can.

JAS. MORTIMER.

Connecticut Field Trial Club.

NEW HAVEN, Conn., Sept. 19.—There has been formed in this city an organization to advance the interests of the setter and pointer as field dogs and to show them as valuable help in securing game and as far as possible to offset or balance the injury done by the Southern trials. The following gentlemen have been made officers: E. Knight Sperry, President; John E. Bassett, Secretary, and J. B. Robertson, Treasurer. They are now arranging to run a few field trials in the first week in November. The trials will probably be held in Hampton or East Hampton, Conn. The classes will consist of the Derby and all-age stakes. Five dollars to enter and $5 to start in each class. Mr. Wallace will judge. Prizes are 50 per cent. of entrance money to first, 30 to second and 20 to third.

E. K. SPERRY.

Dogs Baying the Moon.

WHAT may be considered indirect allusions to this are not unfrequent in the classics. The howling of dogs at moonlight was referred to a visitation of Hecate or Artemis (Diana), both of whom are often identified with Selene (or Luna), the moon. We have incantations by night described; they take place by the light of a full moon, and the howling of dogs is a sign that they are successful. The second Idyl of Theocritus (about 270 B. C.) contains more than one allusion to this, and is perhaps the oldest reference extant, but is said to have been copied from a Sicilian poet, Sophron, who lived 200 years earlier. It contains such passages as: "Shine brightly, moon, for thee I will invoke, and Hecate, at whom the dogs are terrified, when she comes." And further on, having called upon Artemis by name, the lady exclaims: "There! the dogs are howling all over the town! the goddess is at the cross roads." Dogs agitated by moonlight, or howling after nightly incantations, are also mentioned in Horace and Virgil.—London Field.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Sept. 20-23.—Detroit, Mich.—Tournament of Michigan Trap-Shooters' League. W. H. Brwady, Sec'y.

Sept. 21-22.—Cleveland, O.—Cleveland Gun Club's eighteenth annual tournament. J. R. Donnelly, Sec'y.

Sept. 21-23.—Omaha, Neb.—Fourth annual shoot of the Du Pont Gun Club.

Sept. 22.—Natick, Mass.—All-day tournament on grounds of Natick Gun Club; open to all. Samuel Bowker, Manager.

Sept. 24.—Rutherford, N. J.—Handicap, 100 targets at 1½ cents; entrance $5; Rose system; commences at 1 o'clock.

Sept. 24.—Conshohocken, Pa.—Philadelphia Trap-Shooters' League, on grounds of Worthington Gun Club.

Sept. 24.—Centerdale, R. I.—Target shoot under the auspices of the Centerdale Gun Club. N. F. Reiner, Sec'y.

Sept. 28.—Singac, N. J.—Twenty-five-bird handicap, and sweepstake shooting. Arthur Bunn, Manager.

Sept. 28-29.—Bloomfield, Ind.—Bloomfield Gun Club's target tournament.

Sept. 28-29.—Harrisburg, Pa.—Annual fall tournament of the Harrisburg Shooting Association.

Sept. 29.—West Chester, Pa.—All-day shoot of the West Chester Gun Club.

Oct. 1.—Holmesburg Junction, Philadelphia.—Live-bird open and challenge cup shoot of the Keystone Shooting League.

Oct. 1.—New Brunswick, N. J.—Central New Jersey League shoot.

Oct. 4-6.—Des Moines, Ia.—Iowa State Sportsmen's Association; open to all.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's tournament, open to all; one day live birds. W. A. Kidd, Sec'y.

Oct. 5-6.—Fort Wayne, Ind.—Tournament under the management of C. H. Miller and Lewis Melsheimer.

Oct. 7-8.—Altoona, Pa.—Tournament by members of the Altoona Rod and Gun Club; targets and live birds. U. S. Houck, W. S. Bookwalter, G. G. Zeth, Committee

Oct. 11-12.—Mt. Sterling, Ill.—Mt. Sterling Gun Club's two days' tournament. J. Breldenbend, Sec'y.

Oct. 11-14.—Baltimore, Md.—Fourth annual fall tournament of the Baltimore Shooting Association; two days at targets, two at live birds. $100 added each day. Geo. S. Harrison, Sec'y.

Oct. 12-14.—Dayton, O.—Rolla Heikes' tournament; one day live birds; $200 added to target events.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Oct. 18-21.—Belle Meade Stock Farm, near Nashville, Tenn.—Two days at target; two days at live birds; $500 added. W. R. Elliston, Manager.

1899.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Thursday of this week is the day fixed for a grand tournament on the grounds of the Natick Gun Club. It is open to all. This shoot combines all the ordinary features of trap shooting competition with certain philanthropical lines of research added, and should contribute a vast fund of useful information to shooters, and preserve trap shooting from decay and death. The programme sets forth that "Our tournament held here Sept. 3 was reserved to amateurs only, solely for the purpose of ascertaining the intrinsic cause of the marked decline in the attendance of trap-shooting tournaments, and the result was looked upon by those in attendance as a successful occasion, each event having an average entry of twenty contestants. Some said it was due to the exclusion of the experts and manufacturers' agents, while others maintain the contrary. The public is anxious to know the solution of this problem. This tournament will be held for this purpose, therefore we shall leave it entirely with you to determine the true cause. The result means much for or against the furtherance of trap-shooting, as detailed reports will appear in all the leading sporting periodicals."

The annual fall tournament of the Harrisburg Shooting Association, Harrisburg, Pa., will be held on the club grounds Sept. 28 and 29. All sweeps will be divided under the old percentage plan, 50, 30 and 20 per cent., under twelve entries; 40, 30, 20 and 10 if twelve or more. Shooting commences at 9 o'clock. Ammunition sent care of J. R. Conway, 7 North Fourth street, will receive prompt attention. Take street car marked W for grounds. There are ten events for the first day, 10, 15 and 20 targets, with a total entrance of $9.30. A deciding team race between the Keystone Gun Club, of Labanon, Pa., and the Chambersburg Gun Club, of Chambersburg, Pa., 10 men per team, 25 targets per man; also, 10 men per team, 10 live birds per man, will be shot. There are nine events for the second day, one at seven live birds, $5; one at ten live birds, $10, the remainder are 10, 15, and 20-target events, and one miss-and-out.

New York city has lately had the honor of entertaining a number of the Rough Riders. Among them was Mr. F. G. Wheeler, well known to those who have attended New York State tournaments in the past, as a member of the Bison Gun Club, of Buffalo. Mr. Wheeler has been in evidence for a few days, and has been greeted pleasantly at various stores on "Sporting Goods Row" during his stay here. His sunburned face, his uniform and his hat have never failed to cause passers-by to turn and look at him. That hat is something Mr. Wheeler will long cherish as a souvenir of what he went through in front of Santiago. Not that it has any bullet holes through it, but on account of the skill with which various incidents and scenes of the Rough Riders' career are burned into its surface with a sun glass by a young Louisiana Rough Rider, the artist having done his work while in the trenches before Santiago.

A grand Live-Bird Opening and Challenge Cup shoot will be held under the auspices of the Keystone Shooting League, on their grounds at Holmesburg Junction, Philadelphia, Oct. 1. Shooting begins at 2:30; no entries received after 3 o'clock. The first event is a 15-bird handicap, $5 entrance, high guns; also in addition $5 entrance, to be divided, class shooting; birds extra. The second event is the Keystone Shooting League Challenge Cup, open to members only. It is a 15-bird handicap, $2.50 optional sweep, this event to be shot in connection with the first event, the score to count on the cup event. The winner is subject to challenge every two weeks, and must defend or forfeit the cup. The cup season closes May 1, 1899, and the member winning the cup the greatest number of times will be the owner.

The programme of the Altoona Rod and Gun Club, of Altoona, Pa., at Wopsononock Park, Oct. 7 and 8, has ten events at targets each day, with a 15 live-bird event, $8 entrance, on the first day. Of the total twenty events of the two days, thirteen are 10-target events, $1 entrance. There are three 15-target events, $1.50 entrance; a medal event at 25 targets, $2; one at 20 targets, $1; a championship event at 50 singles, $3.50, the latter open to residents of certain counties. All events at unknown angles. Targets 1½ cents Guns and shells shipped to Mr. U. S. Houck will be delivered on the grounds free. Altoona headquarters will be at the Brant House, one-half square east of P. R. R. depot.

A target shoot under the auspices of the Centerdale Gun Club, Centerdale, R. I., will be given on Sept. 24. There will be $15 added money. Shooting commences at 1 o'clock. There are eight events, four at 15 targets, two at 20 and two at 25, with a total entrance of $9.10. Purses divided 40, 30, 20 and 10 per cent. Open to all. Take Centerdale cars from Market Square, Providence. Mr. N. F. Reiner, the secretary, writes: "I hope that the shooters of New England in our near vicinity will all be present and participate with us, and I guarantee them all a pleasant time. Centerdale is situated on the outskirts of Providence, and can be easily reached by two lines of electrics."

The late Sam Turrill, of whom mention is made by Mr. Hough, in Western traps this week, was a rare type of sportsman. He was a large man of magnificent proportions and faultless symmetry, and in the field he was quite as skillful as at the traps. He used heavy guns, bored to shoot heavy loads, and the disasters which visited the ducks and chickens when he was out with his gun were consecutive. He was a wonderfully accurate steady shot, whether at the traps or in the field, and he had a sterling integrity in all his dealings in sport and business. He died of pneumonia in the early eighties, after refereeing a match in St. Louis, in very stormy, cold weather.

The Catchpole Gun Club, of Wolcott, N. Y., will give an invitation shoot on Friday of this week. Shooting commences at 10 o'clock. There are twelve events, 10, 15 and 20 targets, 50 and 75 cents entrance, money divided 40, 30, 20 and 10. Targets 1½ cents. Event No. 6, at 20 targets, is a Gold Dust Smokeless Powder event.

At Singac, N. J., commencing at 12 o'clock, Sept. 28, there will be a 25-live-bird handicap, 26 to 32yds., $10 entrance, birds extra. Sweeps also. Trains leave Chambers street at 10:30 and 12 o'clock for Little Falls. Take electric cars from Erie depot, at Paterson, for Singac. For further information address Mr. Arthur Bunn, Singac.

The West Chester Gun Club will hold its sixth annual all-day target shoot Sept. 29, at West Chester, Pa. Shooting commences at 9 o'clock. There will be $50 in prizes and money. There are thirteen events, at 10 and 15 targets, excepting one, a merchandise event, at 25. F. H. Eachus, Sec'y.

The Peekskill Gun Club won The E. C. & Schultze Powder Co. cup, in the Hudson River Trap-Shooters' League series of tournaments. The ties on the King Smokeless Powder Co. medal will be shot off in the near future.

The programme of the West Newburgh Gun and Rifle Association's tournament, Newburgh, N. Y., Oct. 4-6, provides ten events alike on the first two days, three at 15 and seven at 20 targets, $1.50 and $2 entrance respectively. Total entrance per day, $18.50. There are three live-bird events on the last day, at 5, 7 and 10 birds, $5, $7.50 and $10 respectively. To the highest averages of both days on targets $50 will be divided as follows: $13, $11, $8, $7, $6, and $5. Target events under twelve entries, moneys divided 50, 30 and 20 per cent. Over twelve, 40, 30, 20 and 20 per cent. Shooting begins at 9 o'clock. W. A. Kid, secretary.

We made an error in our report of the Interstate Association's tournament at Haverhill, Mass., Sept. 7-8. Second general average was won by Mr. Edward Banks with a total of 309 breaks, Mr. Leroy taking third place with 306. On the second day, too, Miss Margaret Kirkwood (Miskay), won third average with just 90 per cent., Banks and Fanning being the only ones to beat her total of breaks for the 170 targets, the former by four targets, the latter by the narrow margin of one.

Mr. Paul North, of the Chamberlin Cartridge and Target Co., was in New York on Tuesday of this week en route to Boston, taking a few days for recreation. Mr. North was bronzed and alert, his manner indicating that placing an astonishing number of magautraps and booming bluerocks were by no means the limits of his business capacity.

Mr. David Brown, president of the West Newburgh Gun and Rifle Association, writes us as follows under date of Sept. 13: "We hope to have an old-fashioned shoot on Oct. 4, 5, and 6, first two days targets and the third day pigeons. We will not deduct 10 per cent. on live birds. We will send out postals instead of programmes. Please let the world know that we are alive."

On Sept. 24 the two renowned trap shots, Messrs. Jim Elliott and Fred Gilbert, will shoot for the Dupont cup at Watson's Park, Chicago. It should be a battle of the giants indeed.

There will be a 25-target handicap cup shoot, entrance $1, Sept. 24, on the grounds of the Bergen County Gun Club, Hackensack, N. J. Shooting commences at 2 o'clock.

The next shoot of the Central New Jersey League will be held at New Brunswick, Oct. 1.

Bernard Waters.

Mount Shasta Gun Club.

Shasta, Cal., Sept. 9.—The second annual tournament of the Mount Shasta Gun Club was held at Redding, Cal., on Sept. 9. There were representatives of five clubs present. The first event of the day was a 5 live-bird shoot, entrance $2.50, with thirty-one entries. Purse $50; divided into two moneys—$30 to first, $20 to second. Owing to lack of time, the ties were not shot off. The birds were very slow, many refusing to fly at all. The second event was Bluerock shoot, free for all, entrance $1. Purse $100; divided into four moneys—$50, $25, $15 and $10. There were also four merchandise prizes.

The ties for merchandise prizes were shot off, and prizes awarded as follows: Sole-leather gun case, with compliments of Clabrough & Golcher, San Francisco, M. L. Dunning, Baird. Second, hunting coat, with compliments of Kimball & Upson, San Francisco, W. H. Buscomb, Mt. Shasta Club. Third, set of cleaning implements, with compliments of E. T. Allen Co., San Francisco, J. F. Vickers, Redding. Fourth, 5lb. can U. S. Smokeless powder, with compliments of U. S. Powder Co., G. H. Lambson, Baird.

Ties for cash prizes were all divided, as there was not time to shoot them off. The third event was the team shoot—three clus participating. Purses as follows: Best team $30, second team entrance money, and to each shooter in each team making the highest score $5.

After the shooting a banquet was given at the Golden Eagle Hotel by the Mount Shasta Gun Club to the visiting clubs. The day's sport ended with a grand ball, given at Armory Hall, which was tastefully decorated with flags and empty shells strung and stretched over the hall. There was a good attendance and a most enjoyable time was had by all. Not an accident occurred during the day to mar the sport.

No. 1, 5 live birds, $2.50: G. P. Grams 2, A. B. Fuller 2, J. B. Freeman 4, H. Nottleman 4, W. A. Schroter 5, John Hutchinson 2, T. D. Goodman 2, C. W. Gilmore 4, A. J. Wilson 2, Paul Benthe 2, W. L. Rase 2, Boon Epperson 2, G. H. Lambson 3, C. Wallick 3, Geo. Schiller 4, A. F. Dobrowsky 2, L. Ledgerwood 2, C. O. White 2, M. L. Dunning 3, H. Frickinger 2, J. F. Vickers 2, W. F. Lunning 2, Ed de Freese 3, W. Debois 4, F. Dobrowsky 0, Tom Martin 5, Jas. Leary 2, M. E. Dittmar 2, H. Shannon 1, W. H. Buscomb 3.

Twenty targets, $1, four moneys: John Hutchinson 9, T. D. Goodman 8, Paul Benthe 10, Willie Martin 7, J. M. Bryan 16, G. H. Lambson 10, Elbert Bass 15, A. O. White 12, A. Fuller 8, C. A. Gilson 4, Bob Freeman 15, W. F. Lunning 13, A. Wilson 13, L. Ledgerwood 11, C. Wallick 13, M. Frank 16, C. W. Gilmore 16, H. Archibault 12, W. H. Buscomb 12, W. A. Schroter 16, Geo. Dean 15, J. L. Bass 14, M. L. Dunning 13, D. Dobrowsky 15, A. F. Dobrowsky 16, H. Frickenger 13, Tom Martin 13, W. L. Rose 9, Jas. Leary 10, W. Dubois 16, H. L. Shannon 19, Boon Epperson 15, D. G. Brake 9, Geo. Gratifend 15, Ed de Freese 15, M. E. Dittmar 11, Bud Wilson 7, F. Vickers 11, G. P. Grams 14, Jas. Ellery 5, H. Nottleman 11.

Team shoot, $10, two moneys:

John Hutchinson 4, D. Goodman 3, W. L. Rose 4, J. L. Bass 5, M. L. Dunning 6, G. H. Lambson 7, C. Wallick 5, Elbert Bass 5, Tom Martin 6, H. Frickenger 5; total 50.

W. Shannon 6, A. F. Dobrowsky 4, W. A. Schroter 7, Jas. Bryan 5, Jas. Leary 6, Ed de Freese 8, M. E. Dittmar 7, Geo. Dean 7, Geo. Gratifend 4, W. A. Duois 6; total 60.

Paul Benthe 6, A. Wilson 3, Chas. Gilmore 5, Boon Epperson 7, Bob Freeman 7, A. Fuller 4, M. Frank 7, H. Nottleman 6, W. Lunning 2, H. Archambault 2; total 49.

Red Cross Handicap.

Pittsburg, Sept. 14.—The Red Cross handicap shoot under the auspices of the Greenfield Gun Club, at the grounds of the latter, up to the evening of the 13th inst. had about sixty names, and others were expected to enter to-day. Fifty per cent. of the net entrance money is to be turned over to the Red Cross auxiliary relief fund. The following are the entries up until last evening:

J. S. McIntosh, Samuel McClarren, Neville Bayley, Samuel Pickering, J. A. Davidson, C. M. Hostetter, Bernard Rafferty, W. D. Corcoran, J. W. Melhuish, B. S. Law, S. H. Vandergrift, L. A. Schmidt, J. W. Dickson, M.D., Samuel Shaner, Elmer E. Shaner, E. Reed Shaner, W. S. Randall, Bernard Waters, Edward Banks, U. M. C. Thomas, J. A. H. Dressel, W. L. Kinser, John Gelm, H. C. McCurdy, Will H. Park, H. B. Pierce, C. C. Beveridge, John B. Garden, M. M. Garland, T. McLenhan, George Cochran, J. O'H. Denny, W. A. Magee, E. O. Schuster, George E. Painter, L. B. Fleming, John C. Knode, Henry L. Born, M. S. McKennan, T. C. Evans, Thomas H. Evans, M. McNally, F. C. Percival, F. M. Kiser, James H. McQuade, Louis Lautenslager, W. S. King, John M. Walsh, Charles Peddler, Barton Grubbs, Chas. J. Clark, W. B. Taylor, J. C. Snook and C. S. Guthrie.

One dollar entrance money was paid by or for each of the above, and of this number the following sixteen shooters put in an appearance and shot; $59.97 was taken in for the Red Cross auxiliary relief fund. There was a large crowd of spectators present to witness the shooting, and all of the contestants were perfectly satisfied with the arrangements. Bill McCrickart acted as referee, and Louis Lautenslager as manager and cashier. The results follow:

	Handicap.	1st 25.	2d 25.	3d 25.	4th 25.	Out of Allowance.	T'l.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Hudson River Trap Shooters' League.

Warwick, N. Y., Sept. 11.—The Kingston shoot was the last shoot of the League. The scores are given in regard to the different prizes. The weather was fine, not a cloud in the sky, and not a breath of air stirring. The grounds are delightfully situated, having a northeast background, with the Catskill Mountains in the distance. The Kingston boys are certainly leaders in entertaining visitors. There was nothing they left undone. The shoot went off without a single hitch, and everybody was well pleased. Fulford was on hand, and made more friends as usual. There were some extra events shot before and after the programme events. Ogden wins the Hull cup, having shot in at least two full trophy shoot programmes. Following are the records of all who shot and qualified:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Ogden	300	265	.883	Halstead	705	571	.809
Myer	300	263	.876	Stanbrough	540	433	.801
Dain	490	425	.867	Condit	300	233	.776
Mason	705	590	.836	J Rhodes	500	380	.760
Tallman	600	501	.835	E Hill	555	393	.654
Van der Borst	450	371	.824	Lewis	300	173	.576

Peekskill won the team race, also the E. C. & Schultze cup. Following are the scores of the team shoots: Peekskill .788 per cent.; shot a full team in all shoots. Marlboro .731 per cent., with only four men at Kingston. Glenwood .425 per cent.; shot in only three matches. Kingston .153 per cent; shot in only one match.

The Keller trophy tie was not shot off, as both Henderson and Stanbrough fortified their claim by not showing up at Kingston. As it was getting late, it was decided that the other three winners shoot off the tie in the near future at Peekskill, as all of them were Peekskill men. Following are the winners: Stanbrough at West Newburgh, Halstead at Peekskill, Henderson at Poughkeepsie, Van der Bosch at Marlboro, Mason at Kingston.

Confabulations of the Cadi.—V.

THE local gun club, of which the Cadi was president, was called the Egyptian Gun Club, although its real title should have been The Egyptian Company, Retail Target Dealers. Its constitution was that of a joint stock company, and the profits derived from the sale of targets to members and non-members—sales made under the cloak of merchandise shoots, etc.—were divided among the stockholders, so that the latter secured their own shooting for nothing, and made a profit from their thrifty sportsmanship besides.

The club had decided to give a tournament, and the members who did all the work convened by appointment at the home of the Cadi, who, though barred from all else in club matters excepting that rare and disinterested privilege of shooting "for targets only," bore no resentment whatever. He accepted the situation with the philosophical resignation that it was "all for the best," and that as between drinking hard cider on the shady side of the house and shooting in the sun hour after hour there were certain comforting advantages in favor of the cider—such are the blessings of a phlegmatic temperament, combined with contentment for what is, instead of grieving for the things which might be.

Five of the working members were present; for it is a peculiar feature of club sportsmanship that the drudgery always falls to a few members who have to do the thinking and the management. As a consequence they become quite expert in thinking, as do the others in shooting. In a way, it is quite as difficult to become a 95 per cent. thinker as it is to become the same per cent. shooter. The thinker sometimes gets the money.

The committee of arrangements convened beside the lodge, under the comforting shadow of the great oak tree, each member seated on such object as best suited his comparative anatomy, or which in a manner designated his own greater or lesser importance in the gathering; for in every assemblage, be the same great or humble, there are those who lead and those who are led.

The size of the company required that true hospitality should not be circumscribed by a pitcher, and this the sympathetic host promptly recognized by providing a bucket of cider instead. Each one gracefully balanced the bucket on his right hand and drank out of it with admirable ease, grace and endurance. Andy Coxey was last to tilt it, and after sundry stranglings and long breaths before he could resolve to let go, he placed the bucket close by him, within reach, wiped his mouth carefully on his coat sleeve and opened the meeting. "Gentleman and friends, about this here tournament. Perhaps I may be wrong, but then ag'in perhaps I hain't. I'm here to say that we want class shootin'. That gives us amatoors a chance in the money. We are agreed on everything but the system, and I want you to know that if you don't have class shootin' you can count me out; and if I don't shoot there are lots of others that won't shoot," and Coxey glared around the circle to see if there was one who dared to incur his displeasure by opposing him.

There was an uneasy silence. Each looked at the other, and each sat with his elbows and knees pointing at uncanny angles in the embarrassment which came with the honors of formal statesmanship and the need of taking a definite stand on the subject.

At last a thought seemed to dawn on Moke, who said: "I make a motion that the Cadi be made chairman of this meeting."

"Second it," said Ephraim.

"Carried," said the Cadi, "and now the meeting will please come to order. You, as secretary, will keep the minutes, Moke."

"I rise to a point of order," said Remus le Loup, of Coon Hollow, who was distinguished by a much-worn and soiled calico shirt.

"I second the point," said Sandy Montague, of Razor Back Hill.

"It seems to me that your action is overhurried and irregular, Mr. Chairman," continued Le Loup. "Don't we vote on the motion first to determine whether or not you are elected? Or do we vote on it next week?"

"I have already ruled on the matter," said the Cadi.

"But according to Cushing and other parliamentary authorities there must be a vote on the motion," persisted Le Loup.

"Not on your life," said the Cadi, with emphasis. "You forget that this is a gun club meeting, and Cushing therefore is not knee-high here."

"I appeal from the chair to the meeting," said Le Loup, excitedly.

"Before you appeal," said the Cadi, gravely, "answer these questions. Did Cushing ever win a pigeon match? Did he ever make a great score on 100 targets? Did he," and here the Cadi shook his finger straight at Le Loup, "did he ever belong to a gun club?"

"But all that is—"

"Answer the question, yes or no," commanded the Cadi.

"No," said Le Loup.

"Brothers," said the Cadi, in mellifluous tones, "the gentleman from Coon Hollow admits that Cushing didn't know how to shoot, and knew nothing of the affairs of gun clubs, therefore I would ask the gentleman from the Hollow what Cushing has to do with the business of this meeting. Perhaps the gentleman has an eye on a seat in this chair for the Coon Hollow delegate. If so I'll retire in his favor, if any member will rise and make an objection to me." Here all the members looked hard at Le Loup as if he had been caught stealing sheep. "The gentleman from Coon Hollow may appeal to the meeting now if he wishes," concluded the chairman.

"I have changed my mind," said Le Loup, scornfully.

"Mr. Secretary, you will inscribe on the minutes that the gentleman from Coon Hollow has changed his mind, and by way of emendation, and as expressing the sense of this meeing, you may add that it would be his gain and our pleasure if he would also change his shirt before Christmas time," added the chairman.

"Ha, ha, haw, haw—"

"Order, order! Gentlemen, order!" said the Cadi, as he kicked the side of the lodge with his boot in lieu of a desk and gavel. "I intend to run this meeting in an up-to-date manner. I have noticed that it is good modern usage at gun club meetings for the chairman to do nearly all of the talking himself, and to decide votes and things as best suits his own notions, besides selecting entertaining reminiscent and gossipy matters for subjects, so that all the important business of the meeting must needs be postponed and transacted at an adjourned meeting. Any objections, gentlemen?" and he placed his ponderous feet on the back of a chair reposefully.

Not a member dared to raise an objection, as is the common manner at such meetings.

"You, Coxey, will take off your hat and stand up when you address the chair, if you wish to say formally what you just now said informally."

"Not by a long shot," retorted Coxey. "This is a free country. In regards to and concerning this here shoot, I say that we ought to have class shootin', and don't you forget it. You don't ketch me in this here tournament if you have any other system, and my friends won't shoot if I don't."

"What friends?" queried Moke.

"Never you mind what friends. I'll attend to that part myself," said Coxey, angrily.

"Order, order, gentlemen! This is not an old lady's tea party where everybody can carry on a conversation with everyone else simultaneously. You will please address the chair."

"Mr. Chairman," said Moke, rising, with an I-ate-the-canary expression on his face, "I heard you once tell some things about your ideas of class shooting, and perhaps for the benefit of the assembled officers of our noble organization you would give us some information on the subject. I feel that in making this request I am voicing the sentiments of the members present."

"Yes, yes," exclaimed all together, glad to be relieved of the trouble of thinking.

CLASS SHOOTING.

"This is an unexpected honor, gentlemen all," said the Cadi, "so to begin the matter mildly I will say that class shooting is the rottenest system that ever was devised to govern a competition. It is utterly against the principles of equity and of sportsmanship. It recognizes and fosters a gambling spirit by its peculiar workings, and instead of being specially favorable to the amateur, as our learned brother so spiritedly remarked just now, it is against him, as it is against all others, as any system devoid of equity must needs be.

"Let me illustrate the point with an example. Suppose that there are thirty contestants in an event at 15 targets, $1.50 entrance, money divided 50, 30 and 20 per cent., targets deducted at 2 cents each, and that four tie on 15, two tie on 14 and one is third alone on 12. Keep this in mind, gentlemen, for I have further figuring."

"I declare to goodness, Cadi," exclaimed Ephraim, "I'm all mixed up in my mind already. Can't you go a little slower."

"The good Lord is bountiful to all his children, gentle Ephraim," said the Cadi, with slow enunciation. "To some he gives great beauty; to others great wealth; to others again voluptuous ears. Even to you, Ephraim, humble as you are, he has given a lavish smearing of calf's foot jelly instead of gray matter in your sensorium. Remove the jelly, and you would no longer be the sprightly, intellectual companion whom we all know and love so well. Now I will try again, and if you fail to understand this time, I quit."

The good Cadi then took a pencil and illustrated his subject as follows:

Thirty contestants at $1.50	$45.00
Targets, 450, at 2 cents	9.00
	$36.00

"This amount, divided 50, 30 and 20 per cent., gives $18, $10.80 and $7.20.

"To make it clear to your eye, gentle Ephraim, I will arrange the winners and their winnings thus:

First money.	A.	B.	C.	D.	Broke.
$18.00	$4.50	$4.50	$4.50	$4.50	15 targets.
Second money.	E.		F.		Broke.
$10.80	$5.40		$5.40		14 targets.
Third money.		G.			Broke.
$7.20		$7.20			12 targets.

"Now, good folks, will you please to explain to me on what principles of equity, or sportsmanship or anything that is founded on fairness and good sense, G gets more for breaking 12 targets than A, B, C and D do, who broke them all, or more than E and F, who were next to first?

"The incentive in a competition is to excel one's fellows. All principles of sportsmanship recognize that the victor should have the greatest honors and the greatest rewards.

"Class shooting is not a sportsmanlike competition, for the incentive is not for each to excel his fellow, but to win money and to drop alone in a place if possible to thereby secure the most money. Dropping into the most paying hole is largely a matter of chance instead of skill; therefore there is mixed into the system chance and skill; and a matter which involves the putting up money on a chance more or less is accordingly a gambling institution. It is absurd to attempt to defend a system which eliminates largely all considerations of skill, and leaves the rewards of the shooter to a matter of chance, with the absurd result that the man who performed the worst may be rewarded the best.

"Now, if the Rose system had governed in the above example, and the ratios had been 5, 3 and 2, the results would have been a perfectly equitable division on those ratios, with the gambling chance of dropping into hole alone entirely eliminated. It is true that there would not be any very big winners under this system as compared with the gambling chance of the straight class system, but on the other hand there would not be such a melancholy group of losers; for where one man wins a lot there must be a number who lose correspondingly. The Rose system is absolutely the only system applied to class shooting which adjusts itself to any and all classes of ties, and still preserves invariably the equity of the division of the money. In the above example, under the Rose system, the results would have been as follows:

"Four men, 5 points each, 20 points; two men, 3 points each, 6 points; one man, 2 points; a total of 28 points. Thirty-six dollars divided by 28 gives $1.28 for each point; therefore each first would receive $6.40; second would receive $3.84; third would receive $1.28, as equitable division as one could imagine."

"But breaking 12 was a matter of skill," interposed Moke.

"Quite true, Moke; but we are considering the 12 as it relates to other scores and the rewards, and not by itself. Breaking 14 and 15 are matters of greater skill, and yet they are rewarded the poorest in this instance."

"But it doesn't always happen so," protested Moke.

"The chances, as happens actually in tournaments, may combine in an infinite number of ways, as you can readily note by changing the number of men in the ties, and you can develop all kinds of absurd results. In practice, the workings of the system, so called—although it is no competitive system at all, inasmuch as no competitive results are attempted or obtained aside from money considerations—are absurdly ridiculous."

"If it is all you say," queried Coxey, "how is it that it has been so long in use, and so many times adopted by eminent clubs?"

"As to the first part of your query, I may answer," replied the Cadi, "that the chances of dropping into a place alone are quite as seductive as the temptation to bet on a horse when the odds are 20 to 1 or 10 to 1. The odds are all against the win, but men have won and men may win again, as the deluded ones reason, though the men who take the long chances are the delight of the book-makers. It is the element of chance which makes it so tempting, and yet it works disaster to the sport, since first there are no honors in winnings where so many are tied, and last many shooters are led on to shoot beyond their means on the chance of a lucky landing into a hole alone. As to your second question, clubs adopt such systems as they consider most successful to their shoots, and therefore they adopt ones which they consider most pleasing to the majority of the shooters. A genuine competition contemplates that there will be honors as well as rewards. In the old days, when the ties were shot out to a finish, there were some honors as well as rewards, but the shooters were too impatient to wait till ties could be shot off, and dropping for place added to the dissatisfaction, so the present so-called system came into vogue. Furthermore, it is not popular, as you imply."

"How could there be dropping for place when the ties were shot off?" queried Ephraim.

"Easily," replied the Cadi. "Suppose that, in the above example, A, B and C are steady professional shots, and being nearly alike in skill and out strictly for the money, they dislike to compete against each other. If they do compete against each other they are continually shooting each other out of the money. Therefore they conspire together to win all the money and divide. So, in the above example, B would miss one bird and drop into the ties with E and F; C would miss two birds and drop into a tie with G. In the shoot-off, the three steady shots, A, B and C, would shoot all the others out and divide all the money. The remedy was easy, if there had been any clubs with backbone enough to bar such dishonest shooters. Had there been a national organization, no doubt many beneficent reforms would have been established years since."

DROPPING FOR PLACE.

"Well," said Coxey, "we have stopped that dishonest practice of dropping for place now."

"Bah! you haven't stopped the practice of dropping for place, and it is not dishonest," retorted the Cadi, promptly.

"I was speaking of the old system. Dropping for place under the present system of class shooting is honest and allowable. Class shooting contemplates only the money phase of the matter, and as you are a shooter you know that it is devoid of all principles of equity both in theory and in practice. Referring again to the above example, what peculiar claim has G to the $7.20 that makes it unsportsmanlike for any one to drop a target and tie with him? Answer that. Supposing now that there were four who tied on 14, would it not be far more equitable for one to drop in with G, and thereby make a much fairer division of the money. You say that that would be contrary to the principles of a competition. So it would if this were a genuine competition; but dropping for place is complementary to this rotten system, and you must not mistake the incidental feature for the thing itself."

"I think that it is very wrong to drop for place," said Ephraim, pursing up his lips in a virtuous manner.

"Why do you think so?" the Cadi asked in gentle tones.

"Well, there are a lot of people who think so, and that's good enough for me," was the retort.

"I don't care a hang how many people think so," said the Cadi, "if they can give no substantial reason for their think, and if it is wrong on the face of it. There are no end of people in the world who think differently and who think alike; and most of them, you will find, try to think on the popular side, regardless of the merits of any given case. But before I attach any weight to any man's think, I want him to produce some substantial reasons for believing his think, or considering his think seriously. Mere assertion proves nothing, even if repeated to tiresomeness. I have many times heard it asserted that dropping for place was wrong—yes, outrageously wrong—yet I never have known of one good reason advanced for the assertion."

"But nearly all the clubs say that 'dropping for place will not be tolerated,'" objected Coxey.

"That is a fictitious parade of an honesty which does not exist. First of all, neither you nor any one else can tell whether a man misses a target to drop for place, or whether he misses it because he cannot help missing. His last target might be missed at a juncture which would drop him into a good place; but what man can take upon himself to say that the target was missed purposely. It is against all principles of justice that any man should be required to shoot under a system which puts him in a position where his honesty of purpose comes in question repeatedly by the circumstances incident to a falsity of competition, and wherein the offense itself is a matter of mere assertion, without a logical leg to stand upon.

"In law, the party who induces another to commit an illegal act is considered an accessory, and equally guilty with the chief offender. What shall we say of a management adopting a system which tempts a contestant or contestants to commit an offense—which, by the way, is an offense only by virtue of emotional assertion—and then when a contestant succumbs to the temptation offered, the accessory—that is to say, the management—punishes its partner in crime. I accept only for the moment your view that it is wrong, merely to show you where it lands you, for if it is wrong for a contestant to commit the offense, it is equally wrong for the management to offer the opportunity and the temptation. Both are parties to the same artificial offense as principal and accessory."

"You are likely to get into trouble if you go on talking this way, my good friend," said Moke.

"Bah!" said the Cadi. "If any one wishes to argue this subject, I will be delighted to entertain him. All I ask is that he produce something more substantial than a 'think.' If the Rose system were used in this headless juggle called class shooting, there then would always be an equitable adjustment of the moneys; but so long as managements pander to the passion for taking chances at long odds, just so long will there be wonderment as to why many of the shooters who once shot so regularly shoot now no longer."

"We haven't got very far along in our tournament matters," said Coxey.

"Committees never do at the first sitting," replied the Cadi, calmly. "Pass around the bucket, Moke, and this meeting stands adjourned to two weeks from to-day."

BERNARD WATERS.

A Three-Cornered Match.

CENTERDALE, R. I., Sept. 13.—A pleasant three-cornered target match was shot to-day between Hugh Bain, R. C. Root and N. F. Reiner, on the Providence Gun Club grounds. Mr. Bain won with 84. The score was:

R. C. Root 78, H. Bain 84, N. F. Reiner 76.

This match was for $2.50 a corner.

N. F. REINER.

At the County Fair shoot at Fulton, N. Y., recently, Charley Wagner, the Hunter Arms Co.'s gun tester, and Jack Fanning shot at 100 targets, Wagner breaking 90 per cent., Fanning 87 per cent.

Monumental Shooting Park.

Baltimore, Md.—The Monumental Shooting Park was opened to the public on Wednesday, Aug. 24. There is neither membership fee nor dues. Any one who is fond of shooting a gun can at any time have free access to these grounds, and has carte blanche to shoot to his heart's content; in other words, to the limit of his shell case, paying one cent each for targets. The aim of the promoter of the grounds seems to be to encourage trap shooting among the amateurs.

The park is very pleasantly and conveniently located on the water front, about ten minutes' ride from the center of the city, and embraces about two acres of ground, enclosed by a neat picket fence. The grounds are perfectly level, the grass is cut smooth, and the background is clear sky, unobstructed by either trees or buildings. The park presents the appearance of a well-kept lawn, there being neither screens nor board protections to mar its symmetry. The traps and trappers are entirely out of sight, and when the target takes its flight it seems to rise from the grass. Five traps are used, three throwing outgoers and two incomers. The score is arranged in an arc of a circle, located respectively at 12, 14 and 16yds. from the traps. Separate boxes are provided for each shooter at each distance. A modification of the Sergeant system has been adopted in shooting. The traps throwing outgoers are located in a trench 8ft. deep by about 12ft. in length, completely housed in, and with a storage capacity for eight or ten thousand targets. The traps throwing incomers are located 60yds. from the score, one on the right and the other on the left quarter. Events are shot unknown traps, unknown angles. Just in the rear of the score is the puller's box, fenced in. To the left are the cashier's and scorer's office, surrounded by a picket fence. In the rear of the score have been erected two large tents, with benches, tables, gunracks, ice water, etc., for the convenience of the participants.

To the right of the score is a tall post, vividly striped in black and white, and crowned with a huge sign, "Kicking Post." This is for the benefit and consolation of the oft-dissatisfied man who always has a "kick" coming to him. As soon as he opens, he is tenderly taken by the arm, or any other convenient portion of his anatomy, and gently guided to the post, where he can have it out all by himself. On the opposite side of the score is another post, adorned by a bell, and over it a sign reading "Chestnut Bell." The ringing of this bell is generally followed by a trip to the kicking post, as the shooter "who got a piece which the referee did not see" (the old chestnut) generally winds up with a good strong kick, and to the post he goes, like a lamb to the slaughter. (If you have ever attempted to slaughter a lamb, you will appreciate the analogy.)

On the occasion of opening these grounds, a hundred-bird handicap race was inaugurated. A championship gold medal was the first prize, and $25 divided, 50, 30 and 20 per cent., served as a sort of balm to the wounded feelings of those who landed near the top, but failed to make the exact connection with the highest score. This medal is to be won three times to become the personal property of the holder. The winner of same subject to challenge from any shooter living in Maryland or the District of Columbia, the handicaps first given to hold throughout the entire race for the medal. Handicaps were in distance and also in added birds.

The opening day was a sizzler, the thermometer registering 98 in the shade, but in spite of the intense heat, at 3 o'clock, when the main event was called, there were thirty-eight shooters entered to face the traps. Prior to the main event several sweepstake events were shot off, and at 3 o'clock the first squad in the big race faced the starter.

The first three squads of five men each had shot through the last round of twenty-five targets when time was called.

As the two final squads had been so severely handicapped by the darkness, the score was called back to the first squad in the final round of twenty-five targets, and Wednesday of the week following, the 31st, was set as the day on which the race would be finished. On Wednesday afternoon, the 31st, a goodly crowd gathered to finish up the scores begun on the previous Wednesday. Unfortunately a number of the out-of-town shooters from Washington, Frederick and other points, who participated in the first day's shoot, did not make scores high enough to afford them any chance for first places, and so did not return to shoot off their final round. The 31st was another very hot day, very hard on the shooters, though a number finished with very creditable scores. E. D. Hobbs, of Liberty, Md., won the medal and first money with a score of 98 broken. He stood at 16yds. and had a handicap of four birds extra.

The shoot was a gigantic success from beginning to end, and as a purely local shoot has never been equaled in this section of the country.

The shoot worked like clockwork, without a hitch. Once in a while a drop or two of lubricant was needed, but as between four and five thousand targets were thrown from three traps, only the outgoers being used, between the hours of half-past one and half-past seven, it will be seen that no time was lost on account of breakdowns.

Stanley.

Schmelzer Tournament.

Kansas City, Mo., Sept. 10.—The fifth annual tournament of the Schmelzer Arms Company was not near so successful as the previous ones given by this firm. It is more than likely that merchandise shoots have grown into disfavor and that in the future a tournament conducted on that line will never be a very pretentious affair. Heretofore the tournaments given by the promoters of this shoot never failed to draw less than a hundred participants; on this occasion scarcely half that number put in an appearance, and the majority of these were present only on the first day. It is quite probable that the postponement of the tournament affected the attendance somewhat. It was announced to begin Tuesday, but none of the programme events were shot until Wednesday. True, it rained quite hard Tuesday morning, but by 11 o'clock it was all over, and most of the events scheduled for that day could have been run off by night. The postponement caused some disappointment and dissatisfaction, because Tuesday's events were carried over to Saturday, and this interfered with the arrangements of a number of out-of-town shooters who expected to shoot through the programme and be back home Saturday morning. Then, too, the shoot dragged considerable, something that was unnecessary and should have been corrected, because the promoters have had four years of previous experience, and should have readily handled the crowd that was in attendance without any delay or interruption. It was the intention of the management to throw all the targets at this shoot (with the exception of those it would take to decide the Schmelzer trophy event) from the new magazine trap, and the tournament was begun over this, though only the first and part of the second event was shot when the trap broke down, and it was not until the third day, Friday, that it was again in working order. After that time the events were all shot over this trap, which worked fairly well. In the meantime, however, some expert traps had to be substituted, and this delayed the shoot some time while they were being set up. These were arranged on the Sergeant system.

No. 2, the unfinished event of Wednesday, was not finished until Friday afternoon. What the tournament seemed to lack was an efficient squad hustler or some person whose duty it was to see that the shooters were in their proper place and that the shoot kept moving.

SHOOTING GROUNDS.

The tournament was held at Washington Park, where all of the previous State tournaments have been held of late. Everything considered, they are very good grounds, being easy of access and having a fair background for target shooting; especially when the targets are thrown off the ridge where the target traps are usually located.

However, the Schmelzer trophy event was shot on the live-bird ground, and here the background is very trying, especially on dark days such as the one proved to be when this event was run off. The grounds are always kept in readiness for all kinds of shooting, but the magautraps which are used here had been taken out to make room for the new magazine trap, and it appears that the time necessary to make the change had been underestimated. For this reason the arrangements were not as complete as they should have been.

CONDITIONS.

The majority events were targets, and the winners of prizes in the respective events have been enumerated in the report of each day's results. But two shooters shot through the entire programme, Ed. Hickman, of Kansas City, and C. L. Funk, of Pueblo, Colo.

The former scored 483 out of 570, which gave him an average of .847, while the latter scored 473 out of a like number, and finished with an average of .829. The Kansas City, Pittsburg & Gulf R. R. donated three round-trip tickets to Port Arthur, Texas. Two of them to go to the amateurs who make the first and second best averages, and who participate in no less than two-thirds of the target events. These were won by the above pair. The other ticket was to go to the amateur who made the lowest average and participated in no less than two-thirds of the events. At present I am unable to state who won this. The above applies only to the target events. The programme called for three live-bird events. The most important of these was a 20-bird handicap, for amateurs only. Dave Elliott carried off the high honors and the silverware that went with them, though in order to accomplish this he had to kill sixty straight.

This achievement is robbed of some of its merits because the event was decided on the installment plan. The event proper was shot on Wednesday, and an effort was made to decide the tie on the following day, but after Elliott, Hickman and Cockrell had each killed thirty straight, those still in the tie came to the conclusion that they were in too good a form, and the tie was carried over until Saturday, when it was shot off in the ten-bird sweep of that date, which resulted in Elliott again going straight, which made his total run from start to finish sixty straight.

W. S. Allen won second prize in this event, and Curtice third. The two other events were ten birds, $5 entrance, and the money in these events was pretty much cut up. In addition to the above styles of shooting three glass-ball events were also on the programme. It was freely predicted that this antediluvian method of shooting would result in an endless amount of ties on straight scores, and it would be difficult to reach a decision in these events.

The results, however, were entirely different, for not only were there no straight scores in these events, but taken collectively the scores were far inferior to those made in the target events. The best anyone could do was to break 14 out of 15, and this was only accomplished after the trap broke down so that it would not rotate, and the balls were thrown at fixed angles. In the first event 12 was high, and Essig shot out those who were in the tie with him. First prize was some live goldfish. Hickman and Erhardt shot out the seconds, and then decided their little dispute by giving the second prize to Tom Hearn. Hodges won third, a minnow trap. In the second event Gottlieb scored 13 and won first without a tie. Linderman disposed of the twelves and Hickman of the elevens. Three cameras were the prizes on this occasion. The final event resulted in Sweet shooting out the fourteens, and the prize for this was a rifle. Howe did likewise with the thirteens and won a revolver.

Fairman won a game carrier on 12 without a tie.

Rifle shooting was another one of the attractions at this tournament. The shooting was done at 25yds. with a .22cal. rifle. J. W. Ackard, of Fairplay, Mo., won first prize on both the first and second days, on each occasion scoring 97 out of a possible 100. The first day he won a Stevens and a second day a Colts rifle. C. D. Snyder won second, a revolver, on the second day on a score of 94. On the third day Dr. J. B. Hungate won out on a score of 93, the prize was a rifle. On the last day, Jno. J. Hallowell, of the U. M. C. Co., carried off the Winchester rifle on a score of 93.

NON-RESIDENT SHOOTERS.

The following out-of-town shooters were present at some time during the shoot. Dr. S. Redman, A. D. Park, J. W. Carson and F. N. Cockrell, Platt City, Mo.; George Essig, Plattsburg, Mo.; E. E. Hairgrove, Sutton, Neb.; C. L. Funk, Pueblo, Colo.; C. D. Linderman, Adams, Neb.; W. D. Townsend, Omaha, Neb.; C. E. McGee and Wm. Howard, Easton, Kan.; L. L. Hein, Garden City, Kan.; G. H. Miller, Chanute, Kan.; Dr. J. B. Hungate, Weeping Water, Neb.; L. L. Wayland, C. B. Clapp and Dr. E. R. Hickerson, Moberly, Mo.; W. S. Allen, Raymore, Mo.; W. A. Smith, Greenwood, Mo.; J. W. Ackard, Fairplay, Mo.; Frank Hodges, Olathe, Kan.; G. W. Hayden, Paris, Mo.; J. M. Leech, Greenwood, Mo.; A. C. Holms, Rosedale, Kan.; R. H. Sykes, Beverly, Ill.; Lou. Erhardt, Elmer Hyde, W. G. Lytle and W. S. Ferguson, Atchison, Kan.; C. A. Damon, Buffalo, N. Y., of the Savage Arms Company; Jno. J. Hallowell, Bridgeport, Conn., of the U. M. C. Company; Col. A. G. Courtney, Syracuse, N. Y., of the Remington Arms Company; C. W. Budd, Des Moines, Ia., of the Hazard Powder Company; Mr. Herbert Taylor, St. Louis, Mo., of the Dupont Powder Company.

Paul R. Litzke.

The Equitable System.

New York, Sept. 16.—*Editor Forest and Stream:* In your issue of the 3d inst. I read with pleasure as usual Mr. Hough's report of the Minneapolis tournament, held Aug. 24-25. In that report he touched fully upon the "so-called 'equitable system,'" explaining its workings so that everybody could understand it.

Personally I have always been a believer in and a boomer of the Rose system, and still think it is the only fair and equitable method of dividing purses, no matter what others may think. I'm stubborn, I know; but I do believe, when you are shooting for money and not for sport, that the man who shoots the best should receive the greatest return for his entrance fee.

Under class shooting, with the old percentage system of dividing purses, it was and is perfectly possible for a man to break 20 straight and yet receive less money than another fellow who has only broken 18, or may be only 17.

Under the Rose system, with either the original ratios as formulated by Mr. A. R. Rose, viz., four moneys, 5, 3, 2, and 1, or with the ratios used at Haverhill's interstate the other day of 4, 3, 2 and 1, the high man is bound to get appreciably more for his score than the man in the class next below him.

But under "the equitable system" the man who breaks 20 or 15 straight receives only a fractional portion of the purse more than the man who broke only 19, while the difference is still very slight between what is paid to the straight scores and to those in the class three removes from them. See Mr. Hough's own example, as quoted from his report: "The man who breaks 15 gets $3.60, the man who breaks 14 gets $3.36, the man who breaks 13 gets $3.12 and the man who breaks 12 gets $2.88." Analyzing these figures, a supposititious case it is true, but yet a possible one, we find that the man who broke 15 straight only received 72 cents more than the man who broke 12, losing three targets.

Now take the case and apply the Rose system, with ratio points of 5, 3, 2 and 1. Three straights give 15 points; ten 14s give 30 points; fifteen 13s give 30 points, and ten 12s give 10 points, or a grand total of 85 points. Divide the purse—$120—by 85, and we have $1.41 as the value of each point; or the 15s drawn down $7.05 each; the 14s $4.23, the 13s $2.82, and the 12s $1.41. If the ratio points were reduced to 4, 3, 2 and 1, we should have the following figures: 15s, $5.84; 14s, $4.38; 13s, $2.92, and 12s, $1.46. For my part I like the Rose system, with the ratio points as last mentioned, 4, 3, 2 and 1.

Comparing the three sets of figures given above, it would seem as if there was really no comparison between the "equitable system" and the Rose system so far as "equity" is concerned. Any shooter knows how far easier it is to make an "all-but-one" than a straight score. Take a shooter who is running straight, the strain on him, even if he is an old campaigner, is quite severe toward the finish of his string; but let him lose a target, the strain is relaxed at once, and it is a comparatively easy matter to finish the string without another miss. The man who breaks a straight ought to receive a larger share of the purse in proportion to his score over the 14 man than the 14 man ought to receive over the man who has broken 13. There is actually far greater merit in a 15 as compared with a 14 than as against a 14 compared with a 13, and so on. The "equitable system" does not recognize the difference; the Rose system does.

Talking about the strain that a man experiences when making a straight brings to my mind a fact that E. D. Fulford called my attention to a few years ago. He asserted that a man's pulse after he had made a straight score and immediately upon his leaving the score beats far and away above the normal. We lay around, Fulford, self and others, waiting for an opportunity to test the truth of the assertion. We had not long to wait, and then Fulford's statement was proved to be true. Since then I have often noticed the same thing, even in my own case; and I think I owe to Fulford several targets that have got away from me at critical times, simply owing to my thinking about this matter and trying to count my pulse-beats! The experiment is a simple one, and I do not believe that anybody will find an exception to the rule.

If then a man's pulse gets away up when he's breaking a straight isn't he undergoing a strain far above normal? And doesn't he deserve more than the man who is not under any strain, or who is at best only under a very slight one?

There is one other point that I should also like to touch upon, and that is the mistaken idea that the "equitable system" and the Rose system are not class shooting. Mr. Hough apparently overlooks this fact, for he says: "* * * they still clung to the old ways, and more especially did the experts, who liked the class shooting idea." The last sentence should read more aptly, "who liked the old percentage system of 50, 30 and 20, or 40, 30, 20 and 10."

As a finishing touch to this letter, let me remark that the learned Cadi is giving the boys something to think about, and the way he squelched Moke last week—Moke, by the way, who "only shoots for sport"—was truly delicious. Long live the Cadi!

Edward Banks.

Trap around Reading.

Reading, Pa., Sept. 17.—The members of the South End Gun Club held a target shoot on its grounds to-day. Bluerock targets were used. Some very good scores were made. A large crowd witnessed the different events. The club is making arrangements to hold a large shooting tournament in about a month or two, which will be open to all amateur shooters throughout the State. At the next meeting of the club the committee will decide date, management and other business connected with the shoot, and as to the special prizes which are to be awarded. The scores of to-day's events follow:

Events:	1	2	3	4	5	6	7	8	9
Targets:	25	10	10	10	15	10	15	10	10
Essick	23	7	5	6	10	6	..	3	..
Shaaber	21	8	8	..	12	..	13	6	7
Shultz	16	6	6	6	..	7	..	6	6
Ball	16	8	6	8	10	8	10	..	..
Eshelman	19	6	5	5	7	6	9	6	..
Miles	..	7	4	2	13	5	..	..	..
Gicker	..	3	5	..	10	..	6	..	..
Saylor	..	8	..	..	..	..	..	..	..
Gerhart	..	6	6	7	8	..	12	..	..

West Chester, Pa., Sept. 15.—This afternoon in the midst of a rain and heavy wind storm the West Chester Gun Club defeated the Phoenix Gun Club, of Phoenixville, in the second of a series of three matches between these two clubs. Phoenix won the first, and the third or deciding match, which will be shot on neutral grounds, should prove interesting, as these two clubs are pretty evenly matched. Following the interclub match a number of interesting sweeps were shot, in which better work was done, owing to the storm having passed over. The scores of the team shoot follow, each man shooting 25 targets:

West Chester Gun Club—Henry 15, Gill 15, Hoar 15, Lumis 16, Beebe 18, Davis 16, Ford 17, Foulke 17—129.

Phoenix Gun Club—Trumbauer 16, Erb 11, Dotterer 18, Harris 16, Hodge 6, Leidy 15, Miller 8, Dunlap 16—106.

The scores of the sweeps follow:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	10	10	10	10	Targets:	10	10	10	10	10
Henry	8	8	7	5	10	Trumbauer	..	9	9	7	7

P Brinton	..	..	..	..	3	Harris	..	..	..	..	8

Phoenixville, Pa., Sept. 14.—There was some fine shooting at the Phoenix Gun Club's grounds to-day. A live-bird match between J. Buckwalter and Winfield Buckwalter on one team and Trumbauer and Holmes on another was very interesting, and attracted a number of sportsmen to the grounds. Each man shot at 10 live pigeons, the match being won by the Buckwalter team by the score of 12 to 11. Besides the live-bird match there was a club shoot at 25 targets per man over the magautrap. The score of the live-bird match follows: Winfield Buckwalter 8, John Buckwalter 4—12. Trumbauer 7, Holmes 4—11.

The score of the club shoot follows: Erb 21, E. J. Dunlap 22, J. Buckwalter 18, Hodge 17, Dotterer 16, Smith 10, E. L. Buckwalter 9, Phlert 8, Perot 6, Williams 6, Hallman 5, Miller 4.

Chester, Pa., Sept. 14.—One of the greatest shooting matches at live birds that has taken place in a number of years was that of the Evans Gun Club to-day at the Delaware County Fair. The contest was for a purse of $100, which the club guaranteed as first money, all ties to be shot at the same place on Sept. 22. In all, there were fifteen ties for first. Each man shot at 5 live birds, 21yds. rise. The score: Horace Jackson 3, 1, 0, 2, 5; John Williams 0, 4; John Leary 3, 0, 3, 1; George J. Hunter 3, 5; J. Copple, 1, 5, 1; Wm. Dunbar 0, 0, 0, 0; Parker Jackson 1, 1, 5; Wm. Hall 3; Hamilton 0; J. Evans 3, 5, 5, 5; B. Ellis 1; Harry Smith 5; Barney Connor 2; Wm. McKelvey 5; J. Clark 0; J. Pierce 0; W. Jones 5, 5; Marsden 2; Chamberlain 4; J. R. Williamson 1; Barlow 1, 5; Brooks 5, 5; H. Jones 5; Hunter 5, 5; Wm. C. Alexander 5; J. Packer 3, 1.

The above match was a miss-and-out, with the right to re-enter as often as one cared to, entrance fee $3.

Pottstown, Pa., Sept. 17.—The members of the Shuler Shooting Club held a practice match at targets to-day. Grubb carried off the honors, winning every event of the shoot. The scores follow:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	5p	Targets:	25	25	25	5p
Grubb	24	20	22	8	Saylor	17	..	..	..
Wickersham	22	18	17	..	Smith	16	19	21	6
De Witt	17	17	..	..	Davis	14	16	19	7
Pennypacker	..	..	21	..	Cole	..	..	15	5
Lynch	..	..	12	..					

Lebanon, Pa., Sept. 16.—A very large audience to-day saw Lebanon and Chambersburg break even in the second of the series of three intercity bluerock and live-bird matches. The Keystone Gun Club, of Lebanon, won the target match at 25 bluerocks per man, teams composed of twelve men per team. The score of the target match follows:

Keystone Gun Club, of Lebanon—Cooper 22, Langdon 15, Rapp 15, Smith 21, Shoemaker 20, Trafford 20, Zellers 16, Duffy 14, Worth 16, White 16, Bates 13, Witters 15—203.

Chambersburg Gun Club, of Chambersburg—Capt. Runk 17, Elder 21, Disney 19, Rhinehart 17, Vanderau 13, Rhodes 15, O'Leary 19, Kennedy 15, Henson 15, Minnick 16, Hobbs 16, Hummer 19—202.

The live-bird match resulted in favor of Chambersburg, each man shooting at 10 live pigeons, teams of twelve men each. The score:

Keystone Gun Club—Smith 9, Cooper 10, Witters 6, Trafford 8, Reinohle 7, Bollman 6, Duffy 5, Zellers 9, Langdon 8, Shoemaker 9, Rapp 9, Bates 9—95.

Chambersburg Gun Club—Capt. Runk 8, Humer 6, Hobbs 9, Rhodes 10, Vanderau 8, Elder 9, O'Leary 8, McGowan 8, Rhinehart 6, Kennedy 8, Henson 10, Disney 9—100.

The deciding match will be shot some time in October on neutral grounds. Each club has now one target and one live-bird match to its credit in this series.

Macungie, Pa., Sept. 12.—A live pigeon shooting match took place at J. O. Hill's hotel to-day:

First event, 5 birds: M. Brey 5, A. Desch 3, W. Schoch 4, H. Lauer 3, Wm. Richards 2.

Second event, 5 birds: M. Brey 4, W. Schoch 5, H. Lauer 5, Wm. Richards 3, A. Krauss 3.

Duster.

Audubon Gun Club.

Buffalo, Sept. 17.—Following scores are from Audubon Gun Club's club shoot. The feature of to-day's shoot was the inauguration of a series of shoots for a beautiful trophy, presented by Mr. R. H. Hebard, to be owned by the shooter winning most events in the year. The events are at 30 singles, with the shooters in the different classes having the following birds added to their scores: A Class—Scratch. B Class—Three birds added. C Class—Five birds added. The first event was won by Dr. E. S. Carroll, who scored 26 out of 30, with 3 added, gave him a score of 29. No. 3 event was the badge shoot. A. C. Heinold won Class A, Dr. E. S. Carroll won Class B, and Peter Stover won Class C. The tie between C. S. Burkhardt and Geo. Zoeller on last month's cup shoot was also shot off to-day and was won by C. S. Burkhardt. The next regular cup shoot will take place on Saturday next:

Events:	1	2	3			5	6	7

WESTERN TRAPS.

CHICAGO ATHLETIC CLUB.

Chicago, Ill., Sept. 17.—The regular shoot of the C. A. Club for the Edwards medal came off at Watson's Thursday afternoon, ten members appearing for the contest. The result of a spirited competition was a tie between Geo. Thorne and Johnnie Turrill, the latter allowed 25yds. and 3 birds, to Mr. Thorne's 28yds. and 2 birds. The tie will be shot off next week at the convenience of the two concerned. Mr. Turrill has not been shooting very long, and his improvement is notable. He shot the heavy gun which once made a reputation for itself in the hands of his father, Sam Turrill, for many years one of the best known sportsmen of the shooting regions of the Middle West. The skill of the father may well be transmitted to the son, and if so we may look for yet more at the hands of Johnnie Turrill, who is known everywhere in these parts as a very thoroughgoing sportsman in several different lines of sport. His successful rival, Geo. Thorne, is another well-known character in Chicago athletics and outdoor sports. Mr. Thorne is a finely built young man, with a powerful physique, and he has the pride of an athlete in his condition, so that he is always quite fit for the sport of the traps, at which he is younger than in many other lines of sport. He has held the medal before and is looked upon as dangerous in the later shooting. Thursday was a good flying day, and the birds were prompt and fast. Following the the scores:

A F Banks, scratch	222021120121010—11

MONTGOMERY WARD & CO. DIAMOND MEDAL.

Yesterday there were only sixteen entries for the Montgomery Ward & Co. diamond medal handicap, live birds. The reason for the falling off is doubtless due to the fact that the Illinois chicken season opened on the day previous to the shoot, so that many shooters of our gun clubs were absent in the fields. There was a nice little shooting crowd none the less, and the finish showed some sport, going into the 10 hole in the ties before a winner could be declared. Dr. S. Shaw, who shot a slashing gait all the afternoon, came out with the medal this time, thus putting it into the hands of yet another winner, and a very deserving one. Eddie Steck, the Stock Yards boy, came very near taking the medal home for a second time, but he lost the bird which would have kept him in the tie, and passed out after a plucky race and a good exhibition all the afternoon of steady shooting.

Mr. J. L. Alabaster, who came to the grounds late in the afternoon, after the shooting was well advanced, made a good, stiff run for a tie on first until the last few birds of his string. Another man, who proved dangerous for a long time, was Mr. F. E. Adams, who was using a 10-gauge gun with deadly effect. Dr. Carson also was in form, and he tied Mr. Adams. Mr. R. Simonetti, secretary of the Alpine Gun Club, was in the fight also, though he retired with 18. Mr. Barto, winner of the Chicago challenge trophy last week, was off his proper form to-day, and he withdrew at the 16 hole, having only one bird allowed him. Mr. Leffingwell could only figure out 17, and Paterson, with one bird allowance, tied with Lockie, who had 4, Levi, who had 5, and Simonetti, with 3 birds. Ties on second and third were shot at 3-bird strings and then miss-and-out. Adams shot Carson out at the end of 10 birds. In the tie for third Alabaster shot Paterson out at the 6th bird, which Paterson lost dead out, Levi having missed earlier. The birds were showing a marked improvement to-day over the speed shown in the later warm summer weather. Some of them were very fast, especially early in the afternoon, though toward night they naturally became slower. Shooting began before noon and was closed about 5 P. M., entries coming along till after 2 P. M. Dr. Shaw was delighted with his winning of this handsome medal, but who will be winner next time is a large-sized guess, as the conditions are such as to leave it a very much undetermined proposition among so many good shots as this trophy calls out for each contest. Following are the scores:

A Banks, 28, 3	20202010211012100112011 —15
W B Leffingwell, 30, 2	11112020010202220121111 —17

E M Steck, 29, 1	22221122121222121122 —20

Shoot-off:
Dr Shaw, 30, 1 ....2222222222—10 E M Steck, 29, 0 ...122211022 — 9

Dr Shaw won the medal.

Ties on 19 at 3 birds, then miss-and-out:
F E Adams .....1221021121—5 Dr Carson .....2112021120—4

Adams won.

Ties on 18, same conditions, Alabaster won, 6 straight, Paterson losing his 6th bird dead out.

ELLIOTT—GILBERT.

Jim Elliott and Fred Gilbert will meet a week from to-day, Sept. 24, at Watson's, this city, to shoot for the Du Pont cup, for which Jim has challenged. Should the weather keep cooler and the birds continue to improve we may look for some fun in this race, in which the winner is by no means to be picked until after the scores are shot.

PEKIN—PEORIA.

The gun clubs of the two pleasant shooting towns, Peoria and Pekin, this State, keep up their warm rivalry for shooting honors, in which first one and then the other has come out ahead during the past season. At the last team shoot, Sept. 12, Pekin team came over to Peoria and defeated the Peoria boys on their own grounds. The margin of 28 birds is one which is somewhat decisive, though it may be supposed the hosts of the visitors were glad to be beaten by their friends. Shooting was at 25 bluerocks per man, and the following were the scores:

Pekin—Jacob Hoff 20, Longfellow 15, Heilman 21, Baker 19, William Hoff 23, McQuade 21, Thompson 17, Bartson 17, Bornig 18, Ohl 21, North 21—213.

Peoria—Liesy 20, Bordeaux 16, Smith 13, Gus Portman 23, Schoff 21, Shortfellow 4, C. Portman 17, W. Weber 16, Mills 21, Frederich 17, Brown 17—185.

McLEAN COUNTY GUN CLUB.

In the regular medal contest, live birds, of the McLean County Gun Club, of Bloomington, Ill., Dr. C. A. McDermand was last week's winner in a field of fourteen contestants. McLean County Gun Club is one of the largest and most enthusiastic in the State.

MONROE TOURNAMENT.

The warm little shoot run off at Monroe, Mich., last week was a hummer, of course, being under charge of Jack Parker. Jack himself took down a modest share of the purses. Gyp, Spross, Wood, Allen, Foster and several others from Toledo, Wyandotte, Rockwood, Carleton and adjacent points, were also in the head moneys, and the affair was a good one, though not establishing any new records. Young Clark, a twelve-year-old shooter from Wyandotte, surprised all present by his performance, and bids fair to be one of the warm ones ere long.

MICHIGAN TRAP-SHOOTERS' LEAGUE.

Next week, Sept. 20-23, will see a hot shoot at the beautiful city of Detroit, Mich., the annual meet of the Michigan Trap-Shooters' League, Jack Parker shooting manager. The committee in charge will be Messrs. J. A. Marks, Jack Parker, George Avery, W. H. Brady, John Bortle, P. C. Wood and H. H. Fleucher. The prevailing custom of barring manufacturers' agents will be observed, the latter being allowed to shoot only for targets. There is abundant money hung up, and many trophies of interest will come into play. All in all, this should, under the beneficent influences of reviving business activity, prove a very well attended and pleasant tournament, one of the best shown this season in the State of Michigan, which is one of the strongest in the West in sports of all kinds, and not the least in the sport of the traps.

EAST END, OF QUINCY.

The newly organized East End Gun Club, of Quincy, Ill., is steady at work on its new grounds, and trying to master the intricate flights of live and inanimate birds. The members are enjoying themselves very much, and the club promises to become a good and strong one. At the club shoot this week, Sept. 12, the following scores were made in three events, two of 10 targets and one of 5:

Targets:	10	10	5	Targets:	10	10	5
E Burlingaine	7	..	5	G Lock	5	3	4
G Weibring	4	5	1	M Geise	4	5	3
J Ha	2	5	1	H Geise	8	..	5
H Mast	3	3	2	W Scheidt	3	1	2
S H Herman	2	1	0	J Coleman	9	6	2
J Griefert	8	4	1				

MONTANA CHALLENGE CUP.

The challenge cup of the Montana State Sportsmen's Association, 50 targets, was shot for last week by seven competitors—McGowan, Christianson, Shultz, Brownlee, Tuttle, Smith and Nell—the shoot taking place at Anaconda. McGowan and Christianson turned out a tie on 39, and shot further at 20 birds, McGowan winning. Heavy wind made the shooting difficult.

FAYETTE SHOOT.

On Monday, Sept. 26, the annual tournament of the Fayette Gun Club, of Fayette, Mo., will be held, on the grounds at Morrison's race track. Mr. Caleb Eaton is manager, and a very nice little programme is offered, of eight numbers, alternating 15 and 20 birds to the event. There will be one live bird event, a handicap, 26 to 30yds., at $7 entrance. There will be $10 added to the live-bird number, and $5 to each 20-target event.

GOOD TIMES.

Mr. Paul North, of the Cleveland Target Co., dropped in early this week for a chat. He says times are undoubtedly much better than for a good while, and he looks for more shooting and more shoots. He says that the number of magautraps put out by his company is steadily increasing, and altogether expresses himself as quite contented with the color of the world. E. Hough.

EUREKA GUN CLUB.

The Eureka Gun Club, of Chicago, held its regular weekly target contest Sept. 17. The day was a bright, sunny one, with a strong left-quartering wind. The attendance was only fair, possibly owing to the fact that many of the club's members were out of the city hunting chickens. The shooting nevertheless started in early and continued throughout the day.

In the trophy contest at 25 targets, known traps, unknown angles, Class A was won by F. P. Stannard; Class B by V. L. Cunnyngham, and Class C by H. B. Morgan.

Class A.

F P Stannard	1111111011111111111111111—24
A W Adams	0111111110111111101111111—22

H D James	0100101100001000001000101— 8

GARFIELD GUN CLUB.

The Garfield Gun Club held its nineteenth weekly target contest on the 17th inst., with a good attendance. The day was one on which good scores could be looked for. Considerable interest was manifested in the shoot-off for the medals. In a hot race for Class A trophy between Dr. S. Shaw and E. S. Graham they tied on the first shoot-off, each killing 22 out of 25. Dr. Shaw finally winning on 10 straight, his opponent losing 2.

Singularly the trophy in each of the three classes was won on 23 out of 25, the classes B and C shooters equaling Class A.

The following are detailed scores in the trophy event of 25 targets, known traps, unknown angles, classified. Class A was won by Dr. Shaw; Class B by Samuel Young, and Class C by Mr. Eaton:

Workman	1110111111111111111011101—22
Meek	1001101111011101111011111—19

EUREKA VS. GARFIELD.

Garfield Gun Club accepts the challenge of Eureka Gun Club, to contest for the Shooting and Fishing trophy, and sets the day of contest as Oct. 1, at 2 o'clock P. M., on the grounds of Garfield Gun Club, corner West Monroe street and Fifty-second avenue.

A. C. Paterson.

At Midland Beach.

Midland Beach, Staten Island, Sept. 14.—The 25 live-bird handicap shot at Midland Beach to-day had nine entries, and resulted in a tie of extraordinary length in the shoot-off between Capt. A. W. Money and Mr. T. C. Wright. The tie was miss-and-out, and 51 birds to each were required to decide it, 76 birds in all. Capt. Money's 76th bird, hard hit, took a narrow circle and pitched under an amusement pavilion which formed the right-hand boundary, and was a lost bird.

As to the arrangements for conducting the shoot, it would be difficult to imagine ones more crude and shiftless. A tent close to the right of the score formed the left-hand boundary, while the pavilion to the right formed the opposite boundary, and some telegraph poles in front of the traps did service for the rest of the bounds. The birds were as poor a lot as could be found if they were specially selected for their poorness. Bird after bird refused to fly till fairly driven to take wing, and then its flight was about as swift as would be that of a winged bootjack. The entrance was $10, birds extra, class shooting. Mr. Lewis Morris acted as referee in the main event. Mr. Fred Quimby officiated in that office for the contestants in the Staten Island cup, at 10 birds, entrance $2, handicap, open only to residents of Staten Island.

H. J. Sternberg, Sec'y.

The Natick Tournament.

Natick, Mass., Sept. 7.—As announced in the columns of the sporting periodicals, the tournament of amateur wing shots scheduled to take place here on the 3d inst. is now an event of the past. Considerable speculation was current regarding the possible success of an amateur event, owing to the fact that all experts were barred, but from the host of contestants that put in an appearance we should say that for a maiden effort it must be considered a success of the first character.

In all they were truly a lot of amateurs, but now and then we could not fail to observe expert marksmanship. We were not devoid, however, of a few good shots, but even then the best man did not average over 91 per cent.

Mr. Bowker deserves much credit by the manner in which this event was run off, and aside from a few balks everything went along very satisfactorily and agreeable, although the management did not get rich.

The comfort of the shooters seemed to be the first consideration. Awnings were erected over the shooter's stand, protecting each and every man from the burning rays of the sun, and thus making shoot very pleasant. Then there were two spectators' stands fully protected.

The writer observed many old acquaintances. There was Le Roy Woodard bewildering his listeners with tales of the Remington gun and the merits of Du Pont powder.

There was our jovial friend Henry Eager, of Marlboro, and Brother Wheeler, of the same place, just recovered from a serious case of typhoid fever, but nevertheless hale and hearty, and full of fight. Bucklin, of Worcester, loved by his friends for his evenness of disposition, but despised by the winged tribe on account of his alertness when the law is off. A. Wall, of Worcester town, with an eye for business, yet hospitable. Friend Snell, of Worcester, cool and deliberate.

Among other contestants were such good men as R. Walls, C. H. Goodell, Coffin, Ide, Reeves, of Worcester; Cole, Lyman and Fuller, of Waltham; Warren, Herrick and Tidsbury, of Ashland; Martin and Hooker, of Lynn; Isham and Warren, of Framingham; Henderson, of Hingham; Miller and Stevens, of Haverhill; Mayhard, Butler, Brown and Bowker, of Natick—about twenty-nine in all. We managed to throw about 4,000 targets.

The principal event of the day was No. 6, a merchandise event in which there were twenty prizes, ranging in value from $5 to $1. There were twenty-three entries, and of these twenty were successful, the lowest score taking a prize being 11.

The citizens of Natick and a few of our sporting goods concerns—and very few at that—deserve a vote of thanks. Tom Keller was willing to risk 200 of his choice loaded shells in the hands of novices, who will unquestionably profit by them and send him an order for a lot later on. We were sorry to miss Tom, however, as he was much more looked for than the gilt which he offered.

F. W. Gross showered upon us a good supply of Troisdorf powder. There were sixty prizes in all.

In the merchandise event an entrance of $1.25 was made, the receipts of which were given to the shooters in added money. It was just what the boys wanted. All were pleased with the event, which created more enthusiasm than the writer has experienced for a long time. It was all that could be expected, and was in itself a true amateur shoot.

The events and scores follow in their order:

Targets:	10	15	15	10	15	25	15	15	15	20	15
Eager	8	11	13	9	13	19	14	12	12	11	12

An Observer.

St. Louis Items.

There was an informal little tournament run off at Du Pont Park on the 11th. This attracted a fair attendance of local shooters, and those who participated were more than pleased with their afternoon's sport. The programme consisted of twelve events all told. There were five 10s, five 15s and one 20-target sweeps, and a two-man team race. The latter called for 25 targets per man. There were four teams entered, of which Read and Kling carried off the honors, scoring 20 and 21 respectively, giving them a total of 41. S. Thompson and E. Pendergast won second money, scoring 20 and 18; total 38. The others scores were: W. S. Thompson 18, Hanson 16; total 34. McFadden 15, Collings 13; total 28.

In the sweeps Kling was high man, which entitled him to high average; prize, a fine cane. Read came next and got second prize, a hunting coat. Then came E. Pendergast, S. Thompson, Hanson, Stroh, Mudd and Kling, Jr., all of whom received some kind of a prize.

The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	10	15	10	15	10	15	10	15	20

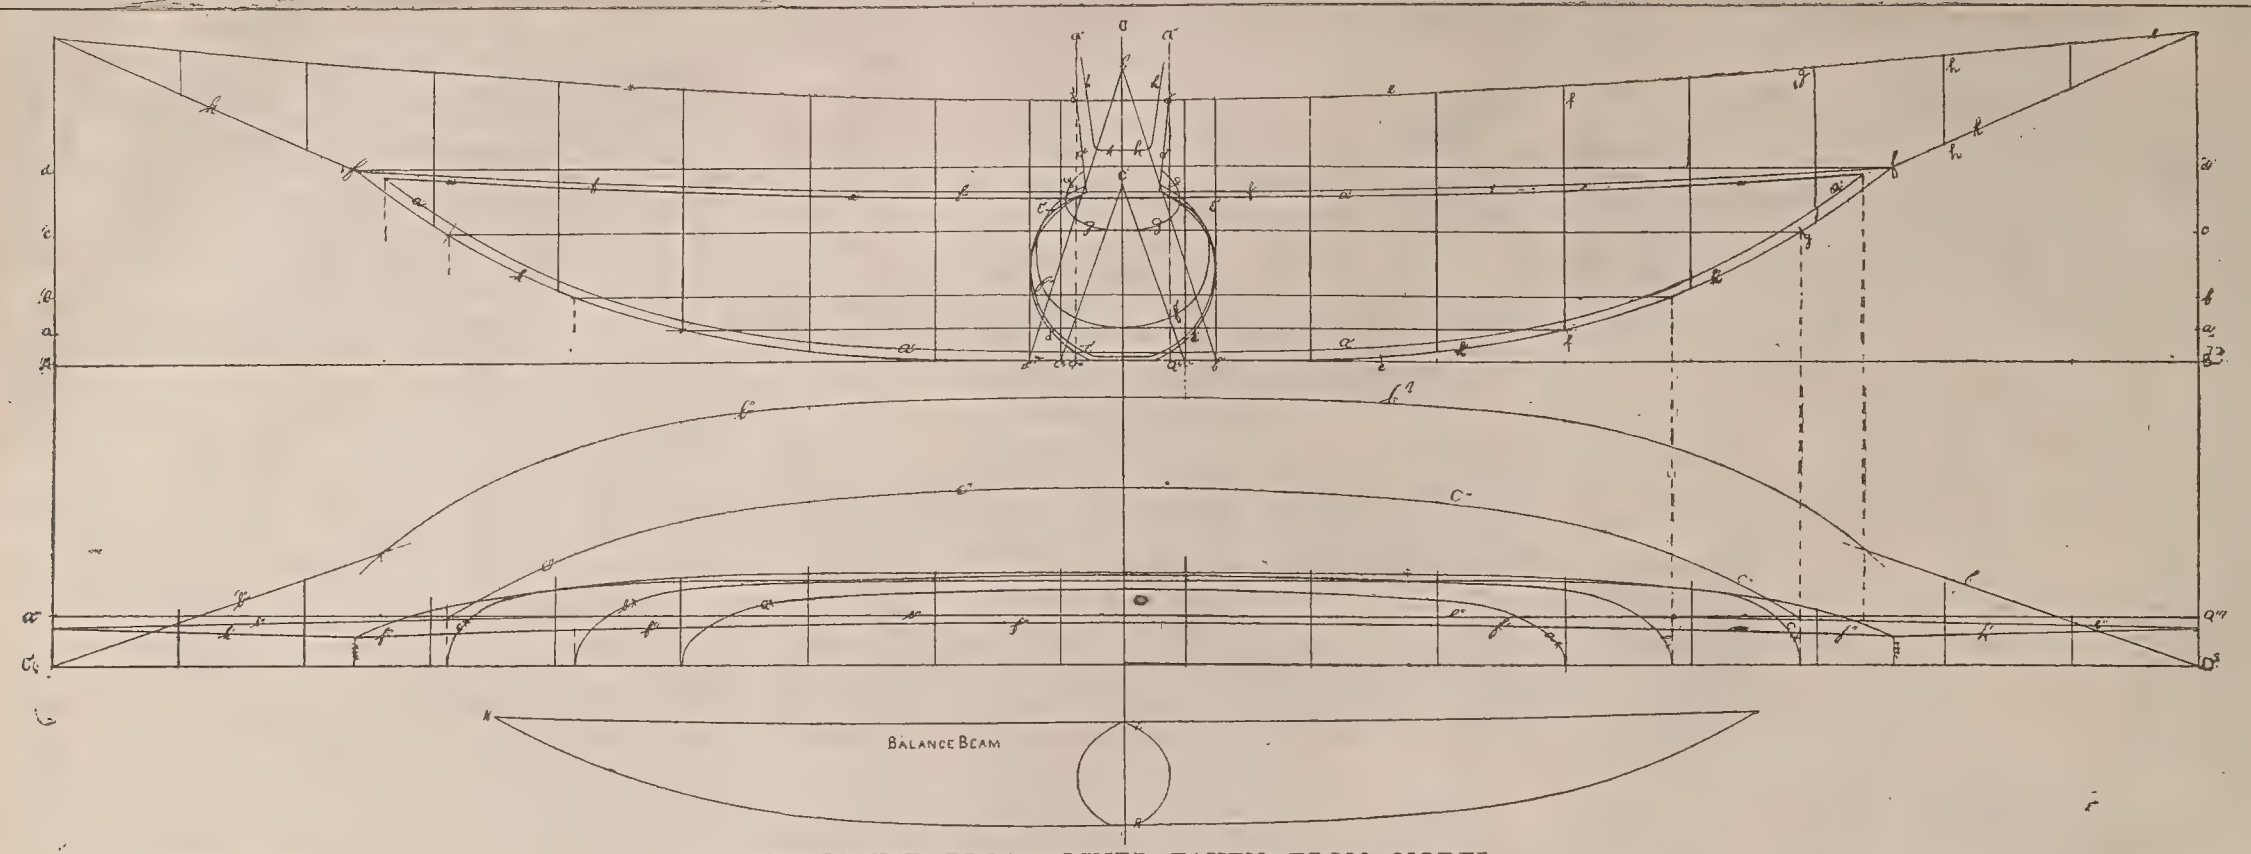
FALL TOURNAMENT.

Manager Corray, of Dupont Shooting Park, is out with an announcement of his fall tournament. He purposes holding a three days' shoot on Oct. 11, 12 and 13. Two days targets and one day live birds. It is his intention to make this tournament as attractive as possible, and with this object in view he will endeavor to have a big wad of added money. It is likely that the sum total will aggregate $300. The target programme will consist principally of short events, mostly 15 targets. The money in these events will be divided by the Rose system. The chief feature on live-bird day will be a 25-bird handicap. Due announcements will be made as soon as the details are complete.



Paul R. Litzke.

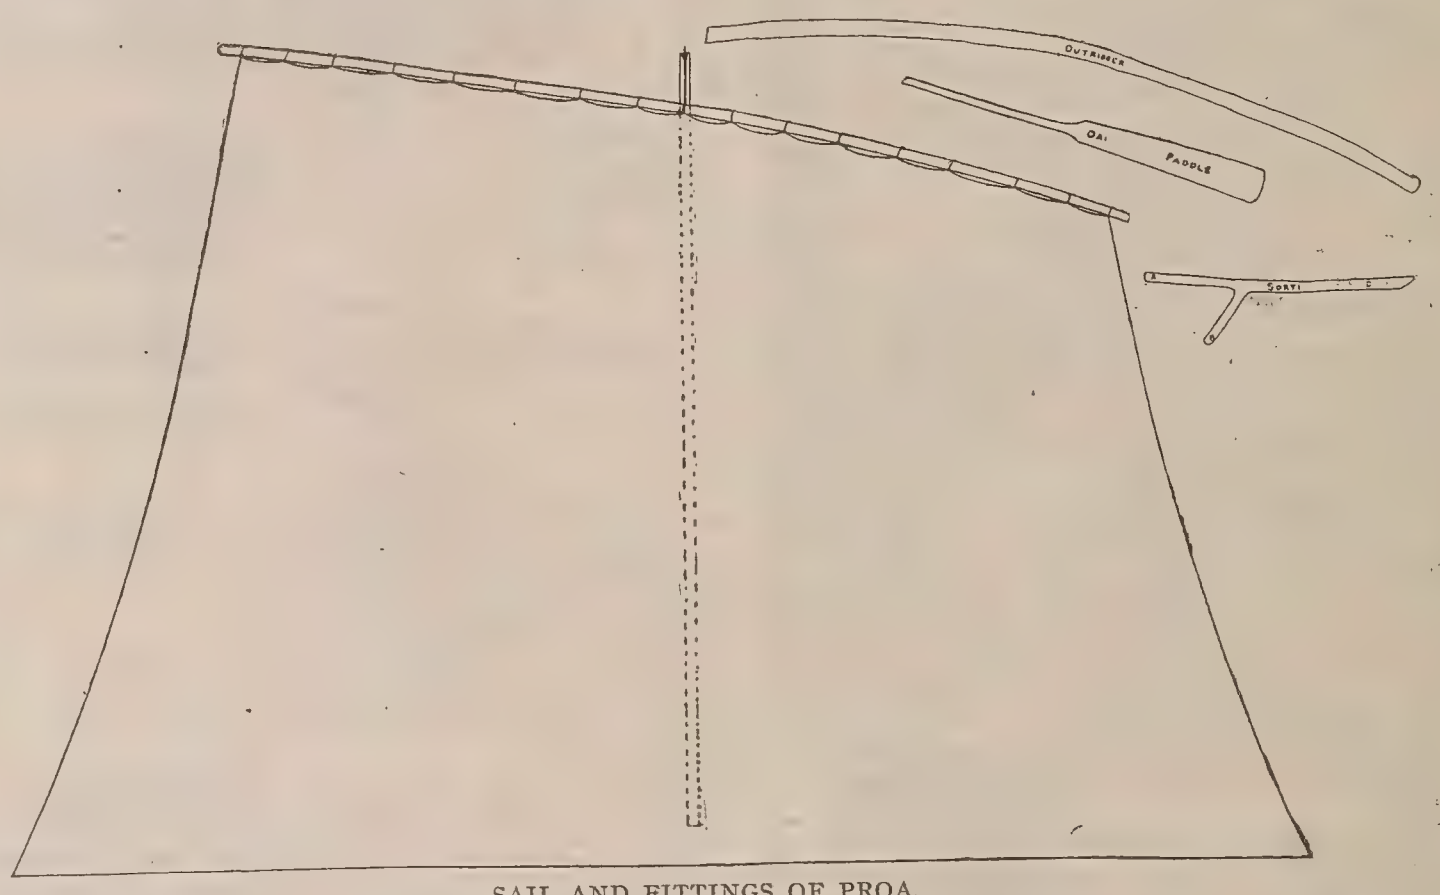
SINGHALESE PROA—LINES TAKEN FROM MODEL.

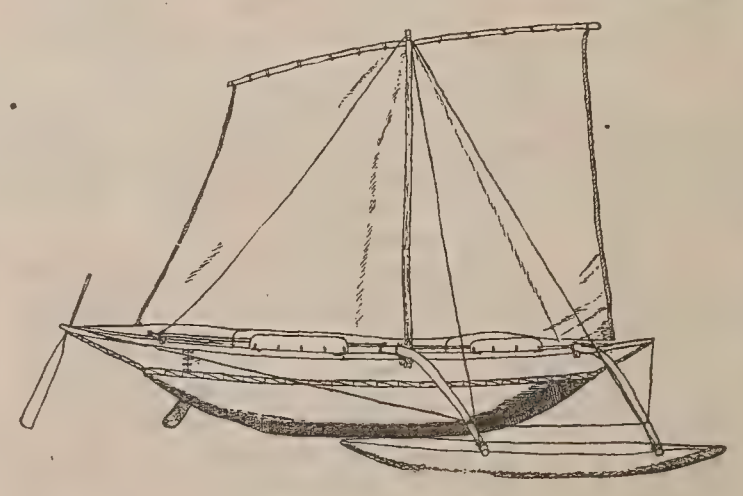
Yachting.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.



Another Proa.

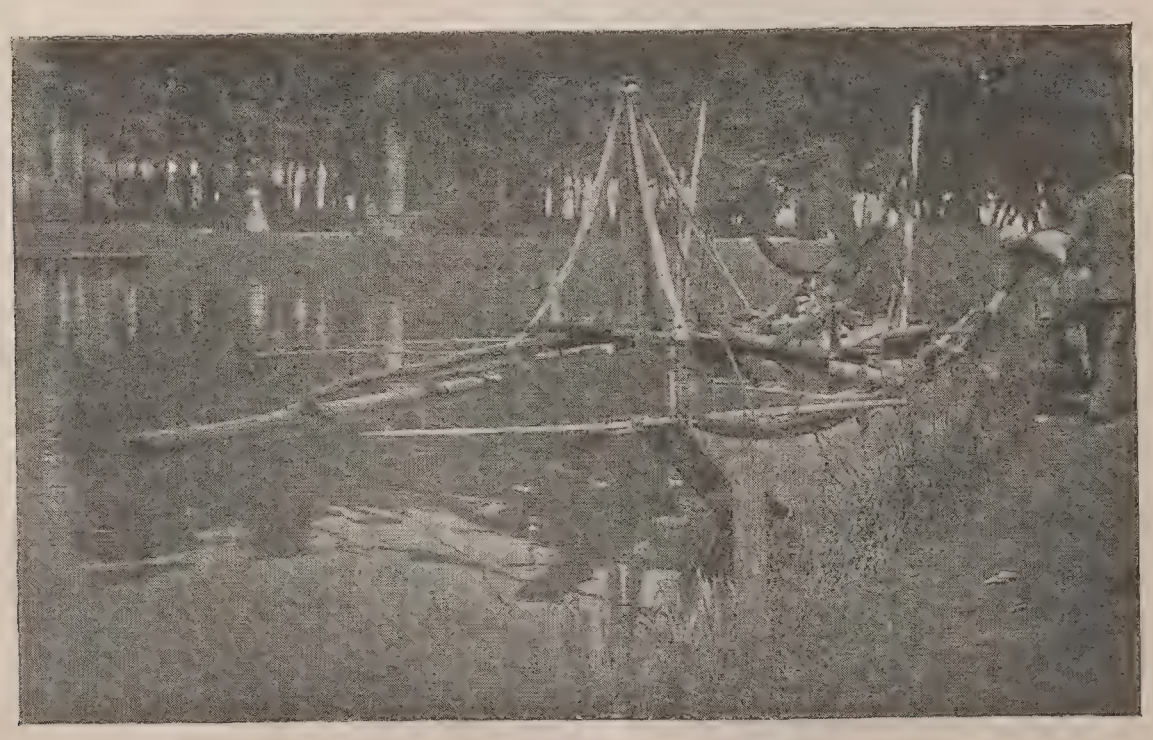
THE following illustration and description of a proa appeared in the FOREST AND STREAM of Oct. 23, 1890. The half-tone cut shows a similar craft of full size, exhibited at the World's Fair at Chicago.



The modern racing canoe is peculiarly a product of civilization, the result of a long course of study and experiment by men of education and intelligence; but, unique as it is, with its narrow beam, large sails and sliding deck seat, a parallel may be found for it in the work of comparative savages. The canoe here shown, though differing in many important particulars, is yet closely enough allied to the American racing canoe to make a comparison both interesting and instructive. Both are craft of narrow beam and light displacement, with little or no stability in the hull itself, but carrying very large sails by virtue of practical mechanical contrivances. What is done in the more civilized craft by the weight of the crew thrown far out to windward is accomplished in the other by a similar means, a fixed weight being used that serves at the same time as a counter balance in itself and as a support for live ballast in the shape of the crew outside of the hull proper. The craft here described is known as the Singhalese, Ceylonese or Pointe de Galle canoe or proa, and is used in the vicinity of the Island of Ceylon. The following drawing and description were furnished by Mr. John W. Kennedy, of Chicago. We hardly fancy that it will be necessary for some time to prohibit floating outriggers in the rules of the A. C. A., but the idea has already been tried by a Chicago canoeist, his canoe being fitted with a metal cylinder of about 70lbs. displacement rigged out in each side.

According to Folkard these boats have been in use for several thousand years, he supposes Pliny to refer to them. Anson, in his voyages, speaks of their speed in extravagant terms, declaring that they sail thirty miles an hour. Observations taken by British officers show them to have a speed of twenty miles an hour. Com. Wilkes, of the United States Navy, speaks of the speed of similar boats as inconceivable. The model from which these lines are taken was made by a native. It was sent from India by Capt. Baker, of Boston, who wrote: "These canoes are at once the safest and fastest boats that float. Their high wall sides and great rake of bows enable them to live in heavy seas, and their narrow beam and enormous sail give them remarkable speed. They easily sail around the fastest English pilot boats. They sail close to the wind, and make but little leeway. I have met them sixty miles at sea, and you need have no fear of crossing Lake Michigan in one of these canoes; but be sure of your fastenings! These boats make good headway under paddles." The sailing directions sent by Capt. Baker have unfortunately been lost. It will be seen that the sail must be managed somewhat as a dipping lug, and that the boat tacks without turning; the balance beam being always to windward; the sail being swung around, end for end, and the boat starting on the new tack with the end forward which was previously aft.

The main body of the canoe is made from the trunk of a tree, the upper third is formed of planking. The planks are lashed to the canoe portion by thongs; the angle of junction between the two parts being filled with a strip of bark or wood properly fitted in. The planks are joined to one another also by lashing. The seams are made water tight by pitch. At a number of points below the sheerline, especially where the mast is placed, and where the outriggers rest, a wooden pin pierces both sides of the planking extending across the boat and projecting some distance beyond it. By means of these beams the outriggers are lashed down across the gunwale, and securely held in place by a sort of figure of 8 knot. The mast stands on the lee side of the plank portion, with its foot resting on the canoe. It is lashed to a cross tie, and is properly sustained by guys. It is exactly amidships. The two outriggers are not placed at equal distances from the center, but they may be said to be led aft, so that the balance beam floats very much nearer one end of the canoe than the other. It is probable that this is only a matter of convenience, in order that one end of the boat may be utilized more easily and safely in landing, boarding, etc. About midway between the middle of the boat and the extremities, seats for the crew are arranged longitudinally, two on either side. They consist of a board resting with its inner edge on the gunwale. The crew sit on these seats, with their feet hanging in the canoe. These benches are secured to the cross ties.



SAIL AND FITTINGS OF PROA.

MODEL OF PROA.

The balance beam is a log of wood in general shape like a cigar. Near its upper circumference, toward either end, a notch is cut for the reception of the outrigger. Below this notch is a large hole which pierces the beam from side to side, through this hole the rope passes by means of which the properly notched outrigger is most firmly lashed to the beam. The beam, as will be seen in the cut, is not exactly alike at each end. Whether this variation be from accident or design is not known. It may be here remarked that in order that the balance beam shall secure equal stability to the boat on either side, it is necessary that its specific gravity should be just half that of water (that is, that its weight relatively to water should be such that in heeling the canoe would meet a like resistance whether it tended to submerge the balance beam or lift it from the water).

The outriggers are curved as in the figure, and made of natural growth as a bamboo pole. They should possess a certain spring. It is noteworthy that the curve of the outriggers is such that when the canoe rests upright on a plane surface (in trim) the balance beam just touches the surface, and also that what might be called the horizontal plane of the beam is not, when thus *in situ*, in correspondence with a horizontal (waterline) plane of the canoe, but that it inclines away from the water-

THE PROA AT THE WORLD'S FAIR.
Photo by B. Waters.

line plane of the boat at an angle of 38 degrees. So that the lashings of the outriggers to the beam do not look directly upward, but upward and outward from the canoe.

The paddles are of the shape represented in the cut with a slight curve on their face. It is probable that they are made use of as lee boards to prevent leeway. Projecting to leeward from the gunwale of the canoe is what may be called a counter balance. It is called by the natives a "sorti." It consists of a forked beam of wood something like the letter Y. The straighter arm A is lashed over the gunwale, while the oblique arm B rests against the side of the canoe where it joins the planks. The main branch of the Y, C, extends perpendicularly outward from the boat's side and serves as a seat. Upon this the natives sit when it is desired to diminish the drag of the balance beam, as during gentle breezes, or while the boat is being paddled. Extending from the canoe to the balance beam are man ropes, by the aid of which the sailors may walk along an outrigger to the beam. When carrying all sail in a high wind they straddle the balance beam to add to its efficiency by increasing its weight.

The various parts of the drawings are as follows: *A B*, Base line of sheer plan. *C D*, Center line of body plan. *C' D'*, Center line, half-breadth plan.

SHEER PLAN:

a b c d, Water lines. *e e e*, Sheer line. *k k k*, Lower side of hull. *a' a' a'*, Section lines. *f f f*, Line of junction of log hull with the planked portion.

BODY PLAN.

d' d', Midship section. *e' f' g* and *h*, Sections. *a'' a''*, Bow and buttock line (alike). *b' b'*, First diagonal. *c' c'*, Second diagonal.

HALF-BREADTH PLAN.

C D', Center line. *e'' e''*, Side line. *a''' a'''*, Section lines. *b'' b''*, First diagonal. *c'' c''*, Second diagonal. *f'' f'' f''*, Line of junction of hull with the planked portion. *k' k' k'*, Half breadth of planked portion at ends. *m m*, Junction of hull with planked portion at bows.

Yacht Measurement.

NEW YORK, Sept. 15.—*Editor Forest and Stream:* Even since the publication of the report of the measurement committee of the S. C. Y. C. in your paper of June 11, I have been studying it carefully and have also carefully studied the various articles published by you relating to it, in the endeavor to discover some way in which it met the requirement of encouraging the design and building of a speedy and seaworthy yacht of reasonable accommodations. Your answer to Sextant's article mentioned me, but did not meet my objections. I therefore trust that you will publish the following, since only by a carefully considered discussion in your valuable paper can any real advance be made.

My objections to the rule, considered alone, are as follows:

As to form:

First, it is unscientific, this you admit.

Second, it has no good empirical basis; (a) because you state that it is simply a development of a former rule, which has already been shown to produce a most objectionable form of yacht, having a short waterline for measuring, light displacement, large sail area and no accommodations. This you practically admit in your article of Sept. 17. (b) Because it imposes no restriction on the racing machine of sufficient amount to be effective and cannot be made to do so; thus in the 20ft. class it would be necessary to add at least 50 per cent. to their rating in order to secure any fair racing with the one-design knockabout. The fin-keel 30-footers would require the addition of at least 25 per cent. to their rating in order to secure any fair races with what would popularly be called a wholesome yacht, and do not yet represent the ultimate limit of design under the proposed rule. If the rule be applied to any of the yachts designed and built to the limit of the present rule, it will be found equally inoperative against them. It follows therefore that if the rule fails to reach present development it will be a failure in the future.

As to factors:

L. W. L.—Every yachtsman knows that this dimension, as measured, bears no fixed relation to the dimension sailed on. As a consequence, measuring the L. W. L. when erect does not measure one of the so-called speed elements. It puts a premium on the freak form, as you state in your article of Sept. 17.

S. A.—If this is measured by the present rule it is objectionable because inaccurate, and because it discourages experiment in rig. In Akista I either paid a penalty of 20 per cent. for using a triangular mainsail or used a sail I did not want.

Beam.—The same criticisms apply as to L. W. L.

Draft.—An important element only when outside ballast is carried, but is of no account in the wide centerboard with inside ballast. As draft is taxed it encourages the centerboard yacht with a flat floor.

Midship Section.—This factor is supposed to be an index of displacement. I have already shown (FOREST AND STREAM, March 26, 1898) how this provision can be easily evaded and that it is of no value as such an index, except in yachts of the same form.

Since then every element of the rule, as it is, bears a variable and undetermined ratio to the actual elements used in sailing, it cannot have any value even if the form were correct. Each one of its factors at present encourages the design of a racing machine of most objectionable form, and therefore cannot help but have eventually a very bad influence on yachting and further encourage the development of special classes, thereby adding to the labor of the regatta committees, decreasing the commissions of yacht designers, and discouraging general racing.

Taking up now the limiting paragraphs, it seems fair to conclude that if the designer is to be permitted to certify to midship section, lateral plane, draft, ballast and rudders, his certificate might be further taken that the yacht complies with requirements as to displacement, inclined load waterline and sail area; in other words, the measurement committee have by their own action removed the only objection which can be alleged against the rule suggested by me in March. Further, there has already been had experience in regard to the effect of a scantling table and specific restrictions in the Boston knockabout class, you yourself stating that the rule was of no avail to secure the kind of boat aimed at. The specific restriction in regard to lateral plane is an unwise one, because it either stimulates the production of a wide centerboard yacht or else requires the introduction into the design of a large amount of absolutely useless wetted surface. I have had experience with a fin-keel in extremely rough weather, and know that her behavior was better than that of a yacht of equal racing length, with a deep forefoot, vertical rudder post and ordinary rudder. Taking the rule then as a whole with its limitations, it is discredited by experience already had.

My suggested rule has these advantages:

1. The driving power for each yacht in a class is exactly the same.

2. All present yachts except a few racing machines can be raced under it by making a slight adjustment.

3. The designer is at liberty to use any form he pleases, but he cannot design a small displacement "freak."

4. No advantage can be gained by an exceedingly light construction, since the displacement would be fixed high enough to allow for good construction and stores. As a consequence no scantling table is required. The designer is at liberty to work out the best construction free from all restrictions, and every yacht will race in cruising trim, thereby saving an immense amount of trouble for the yachtsman who lives on board.

5. There will be no tax on experimental rigs; as a consequence the value of the various forms of rig can soon be determined.

6. It is impossible to defeat the rule except by false swearing.

If space permitted I should like to comment on some of the remarks made in your columns since June, and offer a more extended argument in favor of my suggestions.

GEO. HILL.

Model Yacht Racing Union Regatta.

THE first annual regatta of the Model Yacht Racing Union of North America, held off Communipaw, on Sept. 18, was a fitting end of the season's scheduled races, and was an unqualified success. The steamer Guide, Capt. Pitt, had been engaged for the accommodation of the three clubs composing the Union, their friends, the skiffs and last but not least the models. The Guide visited the club houses in turn, beginning with the Wave Crest, the American and finally the New York, at 152d street and North River, then proceeded to Communipaw Bay, where the races were held.

Two classes, the second and third class sloops, were started. Course, one-half mile to windward. Wind, southwest; velocity, about six miles; tide, none; sea, light. The starts were very fine indeed, the large number of starters making a spectacle long to be remembered in the annals of model yachting. In the third class race Star (Townley and Pigott) was disabled twice, but managed to win second prize, being only 55s. astern of Nymph, the winner. Summary:

Second Class.

	Start.	Finish.	Elapsed.	Corrected.
Comet	2 59 50	3 10 07	1 10 17	0 10 09½
Wasp	2 58 43	Disabled.		
Waterwitch	2 58 50	3 09 39	0 10 49	0 10 28
Uncas	3 00 43	Carried away bobstay.		
Dot	2 58 48	Carried away jib sheets.		
Lochlomen	2 59 40	3 16 56	0 17 16	0 16 58½
Siren	2 59 10	3 12 37	0 13 27	0 13 27
Froam	2 58 48	3 11 16	0 12 28	0 12 26½
Windward	2 59 34	Disabled.		
Majestic	3 00 43	3 19 00	0 18 17	0 17 50
Corsair	3 00 43	Disabled.		

Comet, first prize; Waterwitch second; Froam third.

Third Class.

	Start.	Finish.	Elapsed.	Corrected.
Rosey	3 46 30	4 03 00	0 16 30	0 16 28½
Star	3 46 05	3 58 10	0 12 05	0 12 05
Endeavor	3 47 11	Disabled.		
Nymph	3 46 43	3 57 53	0 11 10	0 11 01
Mabel	3 46 32	Carried away jib sheets.		
Minx	3 46 48	4 03 25	0 16 37	0 16 07
Wave	3 47 09	4 03 27	0 16 18	0 15 58
Momo	3 46 40	4 04 35	0 17 55	0 17 34
Sinbad	3 46 20	4 04 40	0 18 20	0 17 54
Viking	3 47 34	Disabled.		
Asthore	3 46 00	4 01 32	0 15 32	0 15 29

Nymph first prize, Star second, Asthore third.

The council of the Model Yacht Racing Union acted as regatta committee, with Com. J. H. Lane, of the American Model Yacht Club, as referee.

The Seawanhaka Cup Class.

NEW YORK, Sept. 15.—*Editor Forest and Stream:* In the issue of Sept. 17 you comment on the difficulty of securing a reasonable yacht for the Seawanhaka cup racing of '99. I would suggest the following rule:

Extreme L. W. L. when yacht is heeled to gunwale, 20ft.; limit of draft when erect, 4½ft.; actual sail area, 600sq.ft. in two sails (80 per cent. in mainsail), area of spinaker, 250sq.ft.; displacement, 3,000lbs.; ballast, exclusive of crew, 1,000 or 1,200lbs.; freeboard, 16in.; crew, three men.

It is my belief that these restrictions will produce a reasonably fast and entirely wholesome yacht, and that it will be impossible to so evade them as to secure any advantage except that which comes from perfection of form and rig.

GEO. HILL.

THE report of a new challenge for the Canada cup, now held by the Royal Canadian Y. C., is again current, but with little promise of definite results. The story goes that some yachtsmen from the vicinity of Toledo have been in communication with J. W. Hepburn, of that place, in regard to a yacht to challenge for the cup.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Seawanhaka Cup.

A SPECIAL meeting of the Seawanhaka C. Y. C. was held on Sept. 14 at Oyster Bay, at which it was decided to challenge again for the Seawanhaka international challenge cup. The following telegram was sent:

"Oyster Bay, Sept. 14.—Royal St. Lawrence Y. C., J. C. Almon, secretary of sailing committee: The Seawanhaka Corinthian Y. C. hereby challenge the Royal St. Lawrence Y. C. to sail a match for the Seawanhaka international challenge cup, during the season of 1899, in the 20ft. class. Letter will follow.

"Seawanhaka Y. C.,
"Per C. A. SHERMAN,
"Secretary Race Committee."

The following statement was made by Mr. Sherman:

"The Seawanhaka Club has decided that it would be a proper thing to challenge now for the cup. Before the meeting was held we received an official assurance from the Royal St. Lawrence Y. C. that if we filed a challenge now it would be accepted. We therefore last night telegraphed our wishes, and also said in the message that the more formal challenge would follow by mail. The letter has probably been sent to-day. The acceptance of our proposal by the Royal St. Lawrence Y. C. will show that all differences between the two clubs are settled."

New Yachts.

THE new Watson yacht, now building for A. J. Drexel, to replace Margarita II., will be of 2,000 tons burthen, and the finest craft of her type yet built. Under the Payne bill she cannot fly the American flag, and she will be liable to port charges wherever she may be in American waters. The steam yacht Josephine, sold last spring to the U. S. Government by P. A. B. Widener, of Philadelphia, will be replaced by a new yacht of elaborate design and construction, to be built by Neafie & Levy, of Philadelphia, builders of Corsair II. and Intrepid. She will be 240ft. over all, 30ft. beam, 18ft. 6in. in depth of hold. The hull will, of course, be of steel, with a single screw and quadruple expansion engines. The name of the designer is a profound secret as yet. The yacht will be completed in about ten months. The combined firms of C. L. Seabury & Co. and the Gas Engine & Power Company, at Morris Dock, have an order for a twin screw steam yacht of 135ft. over all, 110ft. l.w.l., 16ft. beam and 6ft. 6in. draft, schooner rigged, with composite hull, for Louis Bossert, Brooklyn, owner of the steam yacht Mayita, built by the same firm. The new Corsair III., designed by J. Beavor Webb for Com. J. P. Morgan, N. Y. Y. C., is now well in frame at Marvel's Yard, Newburgh.

Rochester Y. C.

THE Rochester Y. C. sailed a handicap race on Sept. 5, over two rounds of the six-mile triangle, the times being:

	Start.	1st round.	Finish.
Majel	10 02 00	11 10 15	12 30 00
Iris	10 01 10	11 05 30	12 26 30
Pedro	10 01 05	11 10 45	12 30 30
Facile	10 02 00	11 16 00	12 36 00
Amelia	10 01 15	11 14 00	12 39 00
Weno	10 01 25	11 16 30	12 48 00
Nydia	10 00 45	11 15 45	12 39 30
Nox	10 01 40	11 12 00	12 35 00
Keipie	10 02 00	11 45 30	1 07 00
Veritas	10 03 30	11 11 00	12 32 30
Zanita	10 06 00	11 49 00	.. .. ..
Iverna	10 01 00	12 20 00	.. .. ..
Quelia	10 02 00	.. .. ..	.. .. ..

Iris won easily on time, but Majel, though larger, had enough allowance to give her the Graham cup. She was protested for fouling a mark, but the protest was not allowed. Pedro and Facile tied for third place.

Cleveland Y. C.

THE Cleveland Y. C. ended its racing for the season on Sept. 5 with an exciting race of five miles to windward and return, in a reefing breeze. The times were:

37ft. Class.

	Start.	Finish.	Elapsed.
Shamrock, John Barth	10 03 33	11 59 35	1 56 02
Jane, George Campbell	10 02 15	Dismasted.	
32ft. Class.			
Gardner, Ernest Radder	10 02 25	12 09 35	2 07 10
Meteor, J. H. Sargeant	10 03 28	12 31 45	2 27 17
27ft. Class.			
Cygnet, Charles Prindel	10 02 00	12 32 35	2 30 35

The course of ten miles, in rough water, was covered by the Gardner in a little over two hours. The judges were: Com. G. W. Gardner, Harry Gardner and F. G. Overbeke.

Ice Yachts.

THE Spalding St. Lawrence Boat Company, of Ogdensburg, N. Y., has, as advertised in another column, added the building of ice yachts to its regular business. Following its usual policy in such matters, it has secured the services of an expert, Mr. George E. Buckhout, of Poughkeepsie, who will have charge of the new department. Mr. Buckhout is known as the most successful designer and builder of ice yachts, most of the Hudson River and other championships having been won by his boats. On the St. Lawrence River, which is generally frozen hard for three months of the year, Mr. Buckhout will have ample opportunities to thoroughly test his ice craft.

On Sept. 14 Mr. Will Fife sailed from New York on the Majestic, accompanied by Mr. McGildowney. Vice-Com. Sharman-Crawford and Secretary Kelly visited Toronto, where they were most hospitably entertained by the Royal Canadian Y. C., and then went to Montreal, taking the steamer from there. All arrangements for the match of 1899 have been concluded, and both sides are now at work in earnest over the challenger and the defender. The daily papers on both sides of the ocean are taking a great interest in the match, and to all appearances have assumed entire charge of it. They are now settling among themselves the designs, material of construction, skippers and other important details.

Knockabout Association Races.

The Knockabout Association, of Boston, sailed a series of three races for the regular raceabout class, with a handicap for some of the old knockabouts, on Sept. 6, 7 and 8. The courses were off Marblehead, and Messrs. H. H. Buck and E. B. Clarke managed the first two, while Messrs. W. S. Eaton and J. P. Loud had charge of the third.

On Tuesday there was a light and variable S.E. wind; Sintram, sailed by W. P. Fowle, very cleverly made the most of a wandering streak of wind, and worked out a good lead that brought her in well ahead. The times were:

	Elapsed.
Sintram, W. P. Fowler	1 53 41
Suzanne, F. Brewster	1 57 58
Chinook, Adams Bros.	1 58 40
Mongoose II., A. D. Irving	1 59 00
Jilt, W. O. Gay	1 59 49
Gosling, Clark & North	1 59 50

Volunteer	3 10 20	Did not finish.		
Annie	3 11 48	Did not finish.		

Isolde fouled a mark boat and was disqualified. The winners were Muzzy, Æolus, Wa Wa and Spook.

YACHTING NEWS NOTES.

The steam yacht Embla, John T. Williams, took fire while at her moorings off Shippan Point, on the afternoon of Sept. 7, and was finally scuttled to prevent her total destruction. It is said that the fire originated from an explosion of gasoline, used in cleaning the cabins. The yacht's cook, Frederick Morrison, was so badly burned that he died next day in the hospital, while Henry Stern, a mess boy, was dangerously injured. Every assistance was given by men from other yachts, but the fire was soon beyond control, so Capt. Frank Torrey scuttled her in 12ft. of water, at low tide. She was raised on Sept. 10 by the Merritt-Chapman Company, and taken to New York.

The American yachts which were about the Mediterranean at the outbreak of the war last spring, and which took refuge in nearby ports, have all fitted out and started home. Fleur de Lys, schr., George Lord Day, laid up at Lisbon, arrived at Southampton on Aug. 29 and hauled out at White Bros. for repairs. Varuna, steam yacht, Eugene Higgins, touched at Gibraltar on Aug. 27 and proceeded; Andria, steam yacht, John E. Brooks, was at Lisbon on Aug. 29, bound from Marseilles to London; Valiant, steam yacht, W. K. Vanderbilt, arrived at Marseilles from Nice on Aug. 19, for coaling and docking.

Eleanor, steam yacht, W. A. Slater, has been sold to Mrs. J. W. M. Cardeza, of Germantown, Philadelphia. Capt. Atkinson, lately in charge of Hermione, will command her. The yacht is still under charter to Col. O. H. Payne.

Syren, steam yacht, now owned and used by the U. S. Government, was sunk in collision with the British tramp steamer Topaz, on Sept. 5, at 3:30 P. M. No lives were lost, and the yacht was beached in the shoal water near the shore.

The schr. yacht Duen, of Copenhagen, is lying at anchor at the Royal Canadian Y. C. moorings, with the Danish ensign floating over her taffrail. She arrived yesterday afternoon in charge of Capt. Noland, her sailing master and pilot. The yacht is the property of Countess Adeline Grevinde Schimmelmann of Lindenborg, and that lady and her friends, Paul Friedrich, O. H. Oeumpaugh and Friedrich Wilhelm von Viebahn, are all registered at the Royal Canadian Y. C., being met on their arrival by Commodore Æmilius Jarvis. The Countess is widely known on account of the deep interest she takes in missions to sailors and fishermen. She and her friends will remain in Toronto for eight days, and it is expected that the Duen will then sail for Chicago. With the exception of the Countess, all of the party on board the yacht crossed the Atlantic in her on the voyage from Copenhagen. The Countess joined her vessel at New York.—Toronto Globe, Sept. 10.

Sylph, steam yacht, recently completed at Roach's Yard, Chester, where she was built from designs by Gardner & Cox, was purchased by the United States Government prior to the close of the war. She will be retained permanently for the use of the President of the United States. She is 152ft. over all, 20ft. beam and 8ft. 9in. draft.

Barracouta, steam yacht, has been sold by D. P. Reighart to Edward Kelly, of New York.

Canoeing.

The Shenandoah River.

BY THE COMMODORE.

I.—Description.

This beautiful mountain river is an ideal cruising stream. Flowing between the Blue Ridge and the Alleghany mountains, the scenery is picturesque and beautiful, and the climate bracing and healthful. The days are no hotter than those of New York and Pennsylvania, while the nights are always cool. Mosquitoes and malaria are entirely unknown, and the bass fishing is excellent when the water is clear. The surrounding country is a well-developed farming region, where supplies are easily obtained and railway stations are always within reach. The stream is bold and swift, and abounds in rapids and falls; and is navigable for canoes in the lowest stages of water.

The river consists of two streams—North and South Forks—which unite at Riverton, fifty-five miles above Harper's Ferry, where the Shenandoah unites with the Potomac. The North Fork rises in the Alleghany Mountains, and flows through the Shenandoah Valley, west of the Massanutton Mountains. It is the smaller of the two streams, and will not be described. The South Fork or main stream rises in Augusta county, and is formed by the union of three small streams—North, Middle and South rivers. It flows through the narrow Luray or Page Valley. It is very crooked, and winds back and forth across the valley, washing the base of the mountains on one side or the other continuously. It has a northeasterly trend, and its fall is about 800ft. from Port Republic to Harper's Ferry, a distance of 156 miles.

The river throughout its entire course runs over a continuous series of limestone ledges, lying more or less parallel with each other. Sometimes a single ledge will make a fall of several feet in height; again the ledges will succeed each other in a series of little terraces, extending for miles down the river. These are known as "falls" in local parlance, although the river has no literal falls or cataracts that cannot be jumped by a skillful canoeist. The ledges run parallel with the mountains, or up and down the valley, consequently the falls or rapids as a rule are found in the reaches of the river running across the valley, while the pools or "eddies" are found in the elbows or bends at the ends of each reach.

Before the building of the Shenandoah Valley division of the Norfolk and Western Railroad along the river, a great deal of boating was done—down the river only, of course. The products of the mines and mills were shipped to the railway stations at Riverton and Harper's Ferry in flat boats. To facilitate this traffic a channel was blasted through the reefs and ledges, and rough chutes were put in the mill dams. This channel is easily found by the cruiser, and is of material assistance to him, although much choked in many places with debris, and obstructed by fish dams, which can generally be shot by the canoeist, even in the lowest water. The chutes in the mill dams are now generally closed, but here and there one remaining open; they are generally very rough. The channel generally runs close along one bank or the other through the rapids and falls, rarely in midstream. In the longer falls the channel frequently changes back and forth from one side to the other.

The force of the rapids varies entirely with the stage of water. At dead low water they are not very rough, and the finding of the boat channel is a matter of necessity in order to get through the long lines of reefs at all. At a moderately flush stage—say 3 or 4ft. above low water—the river is very rough and boisterous, and the water rushes and roars down the rapids and over the ledges with big, spouting waves, which are apt to swamp anything but well-decked canoes. When the river is quite high it rushes swiftly and smoothly along on one general down-hill level, over rapids and pools, occasionally breaking up into vast rapids, whose huge waves must be avoided. From 6 to 12in. above extreme low water is the best cruising stage. There is plenty of water in the rapids, which are then quite rough enough to be exciting, while no difficulty is experienced in getting over the reefs and falls.

The last six miles of the river—from Bloomery to Harper's Ferry—is very rough, and at a flush stage is quite dangerous. There is a fall of about 100ft. in this six miles.

There are numerous springs along the river, and good camping places are abundant. The people of the valley are hospitable and cordial, and lodging can readily be procured for the asking at any of the farmhouses. The Shenandoah Valley division of the Norfolk and Western Railroad runs along the river from Port Republic to Riverton; the Virginia Midland road crosses at Riverton, while the valley branch of the Baltimore and Ohio road, from Harper's Ferry to Staunton and Lexington, joins the main line at Harper's Ferry.

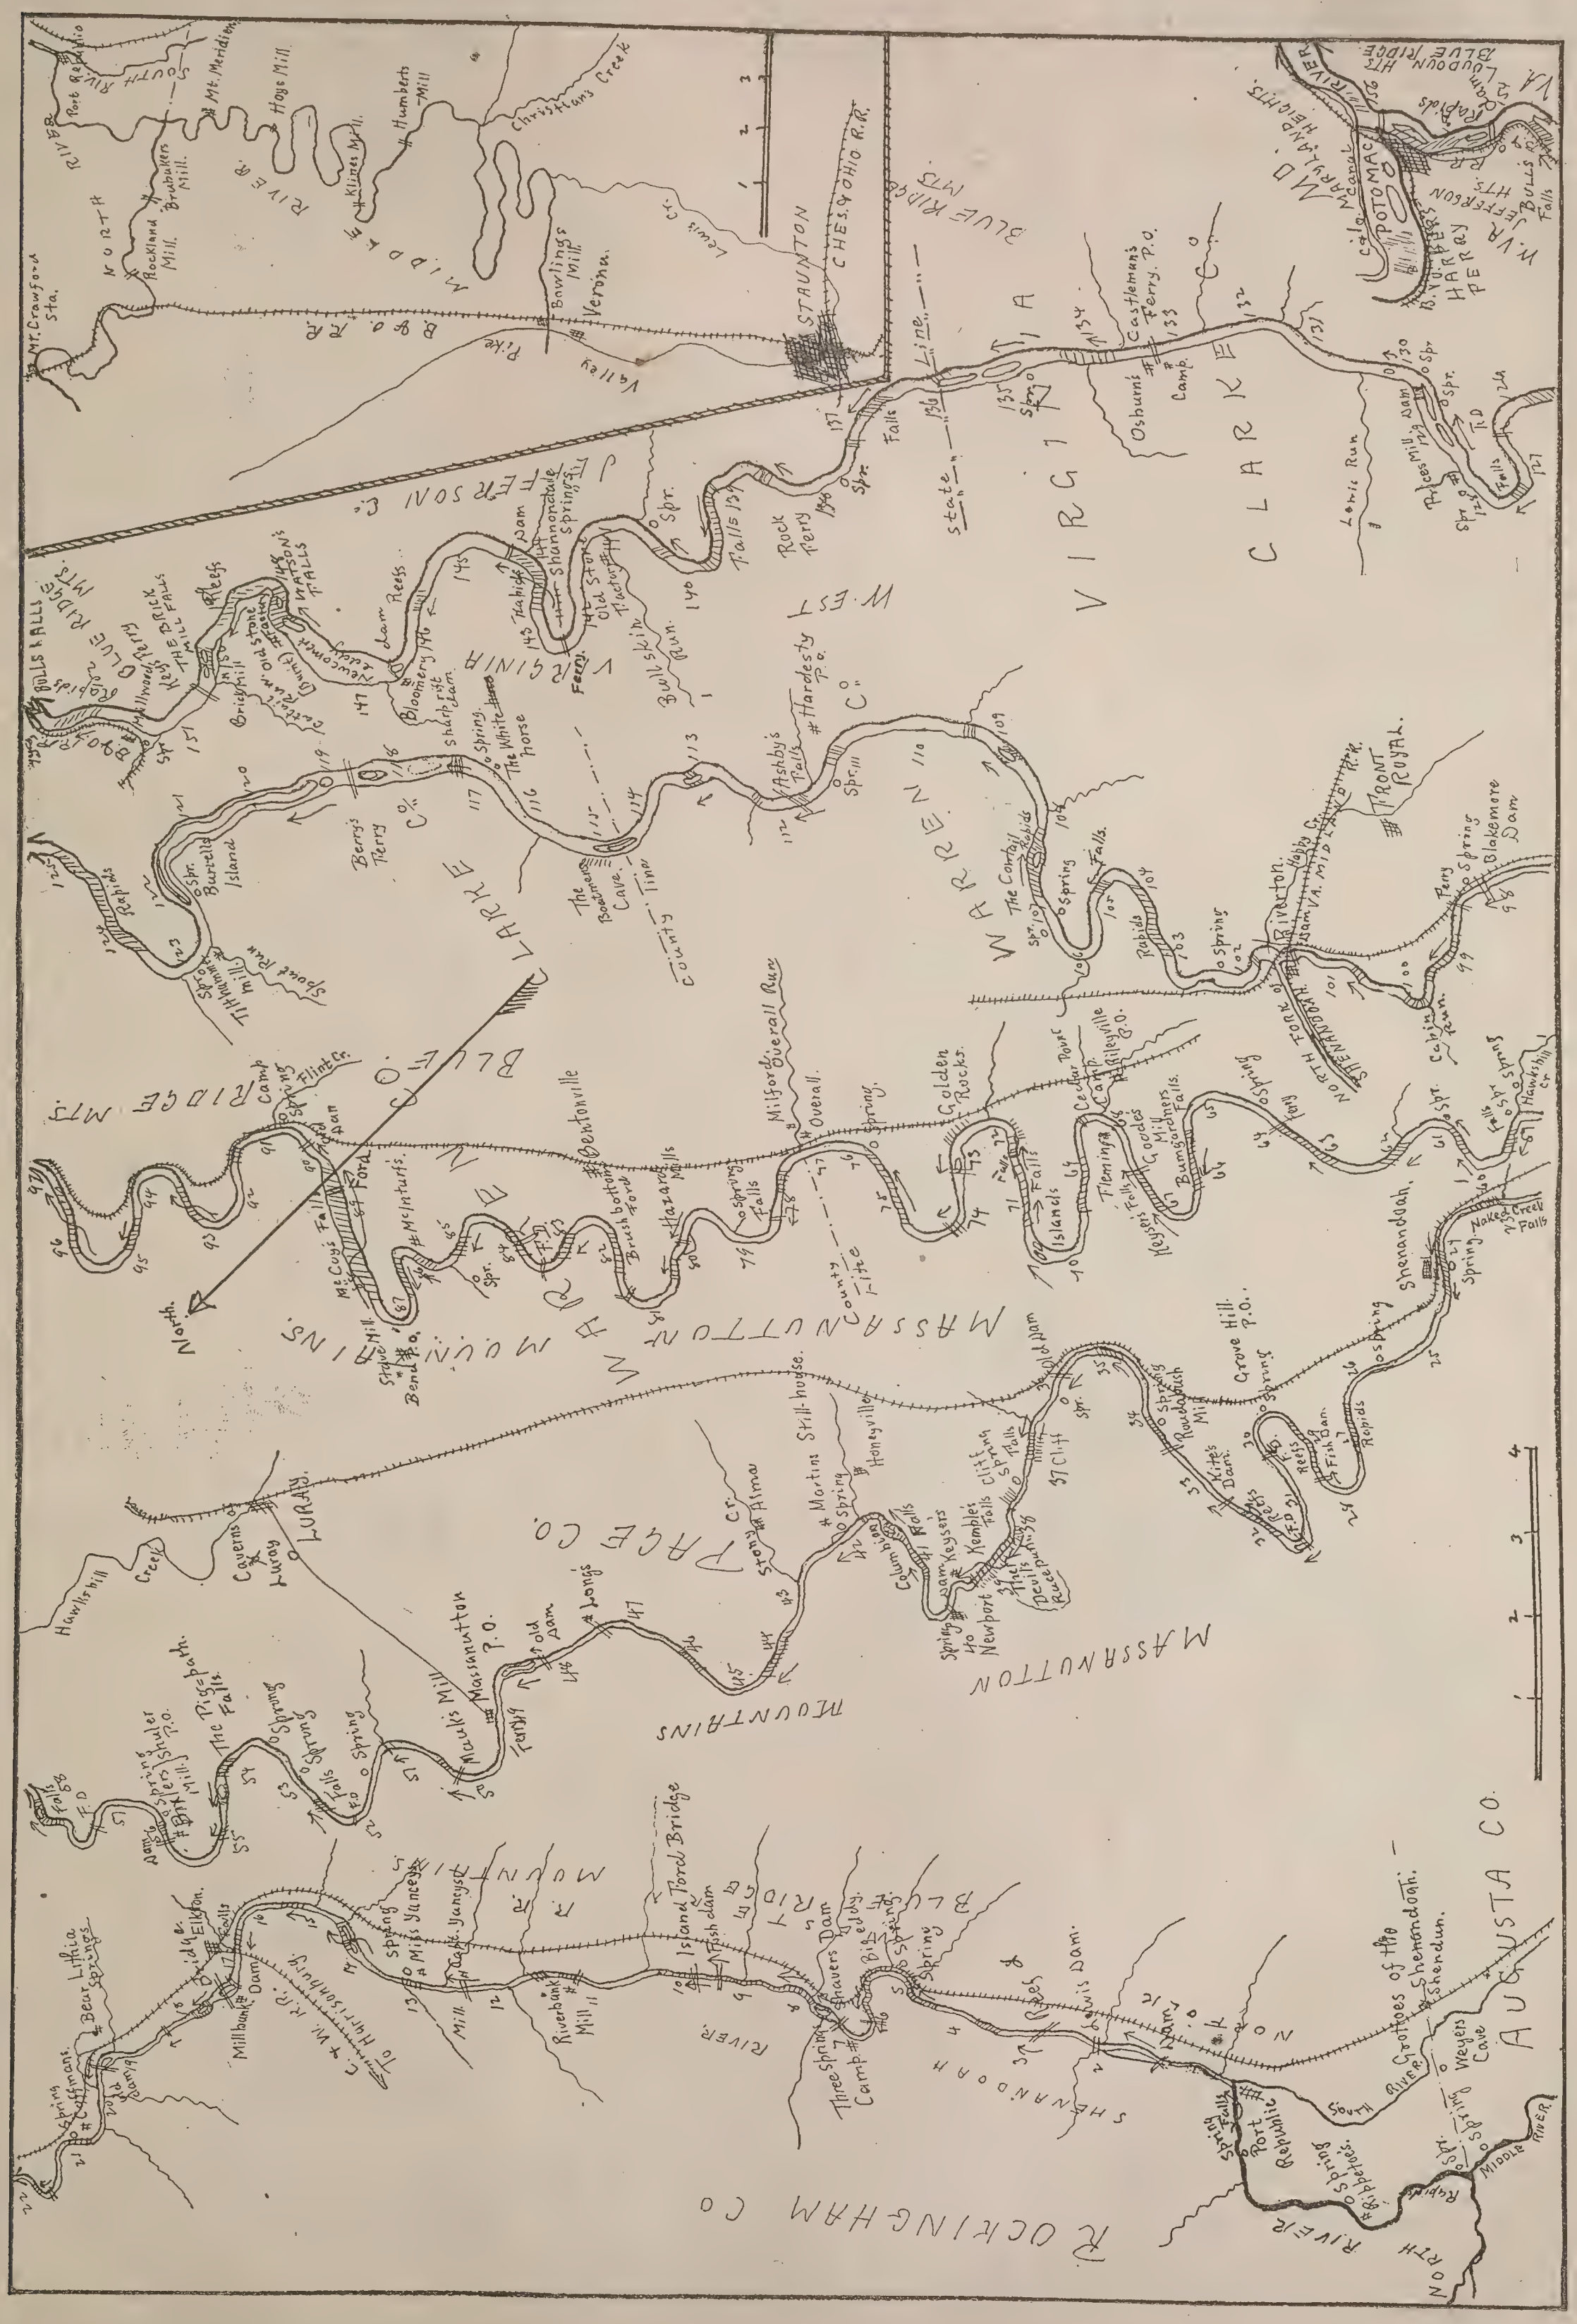
The Grottoes of the Shenandoah are on South River, three miles above Port Republic, and one and a half miles from Mount Meridian on Middle River. The largest of these—Weyer's Cave—is one of the old-time wonders of Virginia, ranking along with the Natural Bridge in point of interest. The caverns of Luray are three miles inland from Massanutton. The cruiser should visit both these places of interest.

The most convenient post-offices are Port Republic and Elkton, in Rockingham county; Shenandoah and Massanutton, in Page county; Riverton, Warren county; Castleman's Ferry, Clarke county, all in Virginia, and Harper's Ferry, West Virginia. There are no large towns or cities on the river. Port Republic, Elkton, Shenandoah and Riverton are villages of from 200 to 500 inhabitants. Conrad's Store, Newport, Massanutton and Castleton's Ferry are mere hamlets which the canoeist might sail right by without noticing; and even world-renowned Harper's Ferry is but a picturesque town of about 1,200 inhabitants, built all up and down the sides of the mountain.

The best place from which to start is Staunton. This little city is located on the Chesapeake and Ohio Railroad, but ten or twelve hours from New York and Philadelphia. The Valley Branch of the B. & O. road also goes through here. All supplies may be obtained here. From here the cruiser may ship his canoe down the pike by wagon to Bowling's Mill, on Middle River, two days' cruise from Port Republic and the Shenandoah; or by B. & O. to Mount Crawford station on North River, one day's cruise from Port Republic; or he may drive down the New Hope road sixteen miles to Mount Meridien, on Middle River, one and a half miles above its junction with North River. If the canoeist can spare the time the Middle River trip from Bowling's Mill is recommended. Middle River is quite a small stream at Bowling's, but two or three canoe lengths in width, but it is a beautiful and interesting little stream, and the canoeist will be well repaid for meandering down the thirty-six miles between Bowling's and Port Republic.

The best canoes for cruising the Shenandoah are those of the different modifications of the Rob Roy type. They should be small and light for easy portaging and handling, and of light draft with shallow keels. Both ends should be well rounded so the canoe will turn quickly under paddle, and will slip easily down over the fish dams and ledges. Sails and rudder are useless encumbrances. A reasonable amount of sheer and fullness of bow are desirable, to avoid plunging under in the big waves at the bottom of the chutes and falls. Decked canoes are better than open ones, as the waves in many places roll over the decks freely. Open canoes, if not too heavily loaded, may be safely used by experienced canoeists. Canvas canoes should be well protected with bilge keels.

II.—Pilot.



The figures along the river refer to the miles; they will also be used for reference in the following description. The cruiser descending either North or Middle rivers from Mount Crawford or Bowling's will need no special guide, as the streams are small, and what channels there are are plainly apparent. There is a rapid or fall in North River just above Port Republic that requires a little care in negotiating. The boat channel goes in at the top between the two flat grassy islands in the middle of the stream. On reaching the still water below the first reefs it veers close in to the right bank, along which it runs for the remaining extent of the falls. At the bottom veer sharply out to the left, and jump the last pitch close to the left of the small, grassy island. Cross over to the left bank of the river and follow the boat channel—which is plainly apparent—through the reefs under the bridge, passing under the first span from the left bank.

The Shenandoah begins here at Port Republic with the confluence of North and South rivers. There is a spring in the right bank in front of the village, and a good camping place under the willows across from the village. Descending North or Middle rivers there is a fine spring and camping place on the right bank at Rippetoes, three miles above Port, and another at Nicholas', in the right bank, a mile above.

No special directions are necessary for the first few miles of the Shenandoah; the rapids are easily run, and the mill dams are mostly low structures of rocks, logs or brush, and are easily shot at a fair stage of water, or portaged at a low stage. The Lewis dam is built at the head of a conglomeration of small islands, among which the river seems to disappear from view. Shoot or portage the dam at the channel nearest the left bank. There is a nasty little fall at 3. At a fair stage of water go over the reef in mid-stream without trouble, but at a low stage the boat channel over against the left bank must be taken.

The channel winds around the end of the reef with a twist to the right, and there is a treacherous mass of sharp-edged reef in the middle of it just at the head of the shoot. This rock is difficult to avoid, and I have seen several canoes wrecked here at various times, including my own on one occasion. The boat channel through the reefs around the bend at 5 is close to the right bank. In running the rapids at 6, below the big eddy, go to right of the rocks in mid-stream. Jump the fish dam at 6 to the left of center. There is a beautiful camp ground at Three Springs. The water gushes out of the ground in a great flood, while the ground is a sandy turf and well shaded. Supplies may be procured at Kyger's, on the hilltop, just above the spring.

The reefs and rapids below Shaver's dam, from 8 to 9, are passed on the right. The big fish dam just below 9 may be jumped near the right bank. Cross over to the left bank below the dam, and run the rapids above the Island Ford bridge close to the left bank. At 14 go in to the right, behind the small islands at the head of the rapid, until the first reef is passed, then veer out into the river. A little twist to the right is necessary at the foot of the falls to dodge the rocks. The falls just above the railroad bridge at Elkton are

run on the left. Pass close to the right of the small island below the wagon bridge, at 18. A good camping place is found at Elkton on the shady bank below the boat house, at 17, on the right bank. Shoot the old fish dam below 18 close to left bank, and the old Bear Lithia dam on the right. Supplies can be obtained at Coffman's.

In running the Naked Creek falls at 23, turn sharp to the left at the bottom. The mile or so of rapids in front of Shenandoah are passed close to the right bank. There is a small spring in the left bank opposite the railroad pump house at the lower end of the village, and another in the right bank a mile and a half below. A fine spring and good camp place is found on the right hand at Grove Hill. At the bottom of the bend below Grove Hill, between 31 and 32, go clear in behind small islands on left to pass fish dam. The reefs at 32 are passed on the right. A fine spring and good camp ground are found on the right bank at 34. The falls under the cliff at 37 are run on the right. Kemple's Falls is probably the worst place on the upper river, with the Columbian Falls, a few miles below, a good second. Work through the head of Kemple's Falls close to the left bank.

The long, swift, narrow canal close under the cliff on the left, below, is known as "The Devil's Race Path." Below the race path cross over to the right, and get through the remainder of the falls as best you can on this side until the fish dam at the bottom is reached. This is easily passed by going out around the upper arm on the left, after which draw the canoe back up under the dam, and slip along down under the face of the dam until still water is reached below. Supplies may be obtained at Keyser's, on the right bank, just below the foot of the falls. A good spring and camping place are found on the left bank below the Newport dam.

In running the Columbian Falls, go in close to left bank until the canoe is pitched out into the smooth water a quarter of a mile below. Enter the reefs below the smooth water, in the middle. A troublesome half or three-quarters of a mile comes next. Get through the reefs as best you can. Pass close to right of small island below the reefs, and veer to the left at the foot of the island. Work through the remainder of the falls on the left until the big fish dam at the bottom is reached; pass this close to the right bank, and work out into the river below by keeping up under the dam. Do not jump the reefs at the left end of the dam, as a smashed canoe is likely to be the result. I have tried it. A fine spring and beautiful camp ground are found on the right bank at 42, half a mile below the falls. The average canoeist may be interested to learn that there are two still houses for the manufacture of apple brandy at this place. Mail and supplies may be procured at Massanutton.

The canoeist wishing to visit the caverns of Luray will leave the river here, and reach the caverns after a pleasant walk over a picturesque limestone pike of three miles. The picturesque old Virginia village of Luray lies a mile further on, and is worth a visit. A single line of reefs between 52 and 53 causes a little fall of 3 or 4ft. Go in behind the small island against left bank, and a clear channel around it will be found. The Pig Path Falls lie around the bend to the left. Enter the reefs in mid-stream and veer to the left, following the lines of reefs. Go to the right of islands below the Pig Path. A small spring is found in the right bank below the dam at Shuler P. O., at 56. This is also a pleasant camp place. At 58 a veritable fall occurs, followed by a long succession of reefs. The boat channel is found to the left of the small islands over against the left bank.

By pushing up Hawksbill Creek a quarter of a mile a fine spring will be found among the rocks on the left as you go up, and a camping place that will answer very well. In shooting the falls, one-half mile below Hawksbill, at 57, go to left of small island just at top of falls, and turn out into the river again just below the first line of reefs. Continue through the falls on the left. The channel is on the left through the reefs from 63 to 64. Channel is on the left through Bumgardner's Falls, also through Keyser's Falls. There is a rough shoot on the left, in Goode's dam. Camp on left bank at Cedar Point, a mile below the dam. Supplies may be procured at Fleming's, on top of the bluff. A cluster of islands will be found in the bend below 70. Go to left of all of them.

After getting below the islands cross and skirt close along the right bank through the long line of reefs or falls which extends nearly to the Golden Rocks, several miles away. There is a steep fall of several feet in height near the bottom of this rapid, which may be run near the right bank. Pass to the right of the island at 73 below the Golden Rocks. A troublesome little fall at the bottom of the bend at 74 is easily passed by keeping close to the right bank. The reefs from 75 to 76 are passed close to right bank. A fine spring and good camp ground are found on the right bank at 76. The spring is hard to find, as it is concealed among the bushes. It is just above the foot of the falls or rapids, just after the river swings around the bend to the left. A veritable fall, as high as a mill dam, is found a mile below Milford, or Overall Station, at 78. It is readily jumped close to left bank. Keep in to the right bank through the rapids below the Hazard mill dam.

McCoy's Falls is the next point requiring attention. The river is very wide here, and very shallow, and the finding of the boat channel is a necessity. The channel goes in close to the left bank, and continues on this side for half a mile or more. At the top of the falls a long line of reefs and small, flat, grassy islands extends across the river. Some distance below is a similar line. The channel is inshore to the left of these. A third and much heavier line then puts across. Paddle out through the still water above this line, about one-half or two-thirds of the way across the river, when the channel will be found in the shape of a narrow, rippling little canal down through the reefs. It continues on the right for the rest of the falls, occasionally veering out toward the middle.

An old dam with a steep, rough rapid below it, a mile below the ford, may be shot on the right. Half a mile below this fall Flint Creek comes in, on the right, spanned by an iron railroad bridge, visible from up the river. A comfortable camp may be made on the point at the mouth of the creek. Water may be procured from a spring in the right bank of the creek, just below the railroad bridge. The rapids are troublesome in low water from here to Riverton, as the river is broad and shallow. Blakemore's dam is broken out at the left end, and a passage may be safely made with a little care.

Camp under the trees on the left bank, just above the big dam at Riverton. Water may be procured from the neighboring residences, or from a flowing spout across the river, a little beyond the foot of the bridge. The Shenandoah proper begins here with the confluence of the North Fork. The united streams make a considerable enlarged river, and the water is much better, particularly in low water. The rapids and falls are long, and at a fair stage of water, rather rough, but the channels are plainly apparent, with good water. The short fall at 105 is easily passed on the right. Go close to left of small island in the Cow Tail Rapids, at 107-8. A good spring in right bank at 107.

There is a fine spring and good camp ground at 111, opposite Hardesty P. O. Ashby's Falls just below consists of a single reef about as high as a small mill dam, with a good, easy shoot next the left bank. The White Horse is a huge sandstone boulder in the water's edge on the right bank at 117. There is a fine spring and good camping place here. Shoot the old dam at Sharplift, just below, to the left of center. Burrell's Island is three miles long. Pass to the left. A small spring in the left bank, opposite the foot of the island, will be hailed with delight by the thirsty canoeist.

Camp at Tilthammer mill. There is a good spring in the left bank, just below the mill. This mill, like all the mills below Riverton, while situated on the river, derives its power from a small stream flowing into the river, instead of from the river. There are no dams in the river below Riverton that cannot be readily shot by the canoeist, except the big pulp mill dam at Harper's Ferry. Pass to the left of the falls below 127. Price's mill is a picturesque old mill of the "sidewheel" persuasion situated on the river bank at 128. A small brook turns an immense 40ft. wheel. There is an excellent spring in the bank just above the mill. Go to the right of the islands just below the mill, as there is an old dam at the foot of the islands in the left-hand channel. Camp at Castleman's Ferry. Mail and supplies may be procured here.

The canoeist will pass into West Virginia at the foot of the lowest of the two islands below Castleman's Ferry. Pass the long falls at 139 on the right. Camp on the right at Shannondale Springs; permission to camp must first be obtained from the management. The long rapids below, terminating in an old mill dam, are best passed on the left. There is a broad chute in the dam next the left bank. Pass to the right of the island at Bloomery, and slip over the low dam. Newcomer's Eddy is a beautiful lake-like expanse, a mile and a half long and half a mile wide.

Watson's Falls, at the foot of the eddy, is the beginning of the 100ft. descent to Harper's Ferry, six miles away. This is the worst place on the river, and must be approached with care if the water is at all flush. Lives have been lost here. The walls of an old stone factory, burnt years ago, stand on the left bank at the head of the fall. There is no boat channel, as boats were passed around this place through a canal, with locks, behind the factory. The river makes a short, steep descent of 10 or 12ft. in the space of a quarter of a mile over a massive limestone ledge. In low water the river is lost in the innumerable fissures and crevices in the ledge, and there is no shoot, but the canoeist can easily slip down through the innumerable brook-like fissures without much danger by getting out here and there and assisting his canoe a little. In flush water the river rages and roars down the falls in a horrible manner, and a passage is made with great risk. A long island lies along near the right bank. In low water the best passage will be found out in the river, near the left bank of this island, veering well to the right at the foot of the island. In flush water go in behind the island, next the right bank of the river, and work along close to the right bank until the island is passed; then take your chances in the open river. A careful survey of this place is recommended before attempting it, be the water flush or low.

The Brick Mill Falls lie a mile and a half below. The river is rough and completely filled with reefs and fish dams between this falls and Watson's. Skirt close along the left bank after getting clear of Watson's Falls, and the boat channel will soon be picked up, when no further trouble will be experienced. The boat channel leads out into the river again, just above a low dam, which lies above the Brick Mill Falls. Do not attempt to run these falls, as what natural chutes there are are obstructed with fish traps. Skirt along inside the dam until the mill race is reached, on the left bank. This is also the boat channel; the boats were let down into the river again through a deep stone lock, which still exists, a short distance above the mill, though not in use. Follow the race down to the mill and carry the canoes down into the river again.

The fall of the river from the old stone factory at the head of Watson's Falls to the Brick Mill, at the foot of the Mill Falls—a distance of one and a half miles—is 37ft. The river is broad and stately for about three miles, until Bull's Falls is reached. A heavy rapid—it would be somebody's falls if in the upper river—extends for one-half mile above the falls. There is a good boat channel close along under the left bank, alongside the railroad. Bull's Falls is an almost perpendicular cataract over a limestone ledge some 6 or 8ft. high, and is easily passed by means of a canal cut through the rock along close to the left bank.

On reaching the head of the rapids above the falls, at 152, the canoeist should land and walk down a mile or more, and survey the rapids, the falls and the rapids below, which are also very rough. The boat channel led along close to the left bank below the falls, but is now unavailable, except in flush water, when it affords the only safe passage. In low water pick the best way possible through the reefs below the falls; over toward the right bank will be found the best passage. When the long dam of the pulp mill is reached, at 154, slip under the head gates on the left into the race behind the railroad. This is the old boat channel.

It is not worth while to attempt to run the mile of reefs below this dam. In flush water the river is horribly rough, and in low water not enough water will be found to float the canoe, as the dam diverts it all into the canal. Once in the canal no further trouble will be found in reaching the Potomac, except the mill itself, which is built squarely across the canal, and must be carried around.

The canal runs along inside the railroad between the mill for one-half or three-quarters of a mile, and then debouches into the river again a few hundred yards above the Potomac, and completely below all the reefs, rapids and falls. The pulp mill is right in the village of Harper's Ferry, about one mile from the railroad stations, and the canoeist can, if he so desires, end his cruise here, instead of taking the trouble to portage his canoe around the mill and into the race again.

F. R. Webb.

New York C. C.

The New York C. C. has had a very successful season at its home on Gravesend Bay; the club house offers every comfort to members, with rooms and restaurant, the sailing waters are unequaled, and the club has now a large membership and a fleet of canoes, sailing boats and small yachts. The one-design class established this year has proved very popular. After its old-time fashion the club held a fall regatta on Sept. 10, with the usual races and water sports, the results being:

Sailing open canoes, with lee boards: W. Carmalt, first; R. D. Bayley, second. Time, 40m. 30s.

Sailing races, three miles; record event: Louis May, first; F. C. Moore, second; J. C. Mowbray, third; W. H. Fales, fourth; H. H. Smyth, fifth; G. W. McTaggart, sixth. Time, 43m. 10s.

Maneuvering contest: F. C. Moore, first; G. W. McTaggart, second; W. H. Fales, third; J. C. Mowbray, fourth.

Paddling race; decked canoes, half-mile: A. A. Brennan, first; F. C. Moore, second; W. Carmalt, third.

Tandem paddling race; open canoes: Fredericks and Mowbray, first; May and Quick, second; Fales and McTaggart, third.

Club fours; open canoe: Canoe Jag, first, with Mowbray, Moore, McTaggart and Fredericks as crew; Canoe Nahma, second, with Bennett, Smyth, May and Quick as crew.

Water tournament; final bout: Quick and Moore bested Fredericks and Mowbray after a contest of 15m.

It is probable that by this time the burgee of the N. Y. C. C. is floating over the Philippines, as indicated by the following postal card:

Norddeutscher Lloyd Bremen, off Colombo, Aug. 13.—Just a line from the Indian Ocean to tell you that I have my canoe Caribee on board on the way to the Philippines, and that I suppose this is about the first time that the burgee of the New York C. C. has been unfurled in these latitudes. Hope to see you again about Thanksgiving time.

(Signed) Poultney Bigelow.

The Columbia River.

We have a request for information concerning the Columbia or Kootenay River from a correspondent who proposes to cruise on it in a canoe. He wishes to know in particular the best portions of the river for canoeing, and the proper season.

A. C. A. Membership.

Applications for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the Forest and Stream.

Central Division.

Associate member: Mrs. Frank L. Danforth, Buffalo, N. Y.

Answers to Correspondents.

No notice taken of anonymous communications.

F. L., Clifton Springs, N. Y.—The eye of my pointer bitch has become opaque, or partially so, and of a leaden color. The left one has been so for about a year, and the right one is becoming so. I think she can see but little if any with the left one, but some with the right. The whole of the ball of the left one has the leaden or opaque appearance, the right one partially so. Judging by a vein of the side of the right eye the trouble would seem to be in outer part of the ball. I have applied a drop a day of a solution of 2grs. of nit. of silver in 1oz. of water, but with no apparent results thus far. The dog is twelve years old and healthy. The eyes do not run. The veins around the edges of the eyeballs have a bloodshot appearance. What is the trouble and remedy, if any? Kindly answer in this week's number, as I wrote you about two weeks ago and have no answer as yet, but presume same has been overlooked or mislaid. Ans. Cataract, from your description, and a surgical operation is necessary to effect a cure. At your dog's age, it would be better to refrain from treatment.

PUBLISHERS' DEPARTMENT

The Early West.

Among the fall and winter publications to be issued by Mr. Francis P. Harper will be "Forty Years a Fur Trader on the Upper Missouri, the Personal Narrative of Chas. Larpenteur," edited by Dr. Elliott Coues from an unknown manuscript. This will form No. 2 of the American Explorer Series, which is the general title to a series of original historical narratives edited by Dr. Coues (2 vols., $6, limited edition).

Wild Fowl of North America.

Mr. Francis P. Harper will issue this fall a popular work by Prof. D. G. Elliott, entitled "The Wild Fowl of the United States and British Possessions," embracing the Ducks, Geese, Swans, etc., profusely illustrated, and issued uniform with this author's "North American Shore Birds" and "Game Birds of America," and with these two volumes will form a complete set of "Popular American Ornithology" ($2.50, large paper, limited edition, $10).

Bicycle Repairing.

The David Williams Co., New York, send us the fourth revised edition of "Bicycle Repairing," just published. This edition has been amplified and extended so that it may be called a practical and reliable guide to the proper repairing of every part of the bicycle.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 1, 1898.

VOL. LI.—No. 14. No. 346 BROADWAY, NEW YORK.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photography will be found on another page.

AN ANCIENT GREEK EPITAPH.

Ariston had a bird-hitting instrument, fitted for humble poverty, with which he shot geese on the wing, when creeping craftily he was able to deceive them while feeding with watchful eyes. But now he is in the realms of the dead, his weapon is devoid of sound and a hand, and the game flies over his tomb.

NOT ACCIDENTS BUT CRIMES.

THE shooting season of 1898 gives promise of equaling any gone before in its record of gun and rifle casualties. The papers almost every day report maimings and deaths caused by criminally careless or blamelessly unfortunate handlers of firearms, who shoot themselves or their fellows. To repeat the oft spoken warning in the truism and platitude, that a gun is a dangerous weapon and must be handled with caution, is never inopportune; nor unfortunately is it encouragingly effective; the people who might profit by the caution have already slain their victims or will surely slay them. "Though thou shouldest bray a fool in a mortar among wheat with a pestle, yet will not his foolishness depart from him."

The developments of this season in the woods and out of them give new point to the proposition which has been urged more than once in these columns, that the atrocious maimings and killing by the fatuous misuse of deadly weapons should have a place in the criminal code. Take the case of the veteran Adirondack guide who was a victim of his own astonishing injunction to his son to shoot at the first moving thing he saw in the woods. It was criminal advice, the obedience to it was criminal, the infliction of death which followed was criminal, each one truly so in effect, if not by the letter of the statute. Consider again the case of that fourteen-year-old boy who was shot for a deer and killed by an Adirondack hunter on Friday of last week. The unfortunate youth was in the company of deer hunters, when, as told in the newspaper reports, this is what happened:

"The party discovered deer tracks late in the afternoon. Accompanied by guides, they started in pursuit. Young Currier, who was an athlete, ran ahead. Suddenly the baying of the hounds announced that the game was near. As they neared the spot the rustling of the leaves attracted their attention. The hunters fired into the underbrush and then ran forward, expecting to find that they had killed the deer. They found young Currier lying on the ground with the blood flowing from a rifle shot through his brain. The boy died soon after in his father's arms."

That is a story which carries its own commentary. The boy's father says that the death of his son was an accident, for which no one was to blame. Sympathy of friend and stranger alike will readily interpret this declaration as the expression of a view commonly adopted by those who are thus bereaved, because they find in the accident and blamelessness theory a balm to assuage their overwhelming grief. The father bereft of a son, or the wife of a husband, shrinks from the bitterness of any other thought. Even were the harsher reflection to obtrude itself, or did the carelessness of the perpetrator stand forth in its actual criminality, this would but intensify a sorrow for which no infliction of a penalty, however well merited, could give solace. If then we shall delay for the relatives or friends who are most nearly affected by such shooting casualties to take any steps toward securing the proper classification of these accidents as crimes, we shall wait in vain. The matter indeed is one which has long since passed beyond a stage where it may properly be left to individual initiative. Shooting casualties among hunters because of their frequency and serious character have become a public scandal and a public concern. The community is called upon to take cognizance of them, to give them classification as manslaughter, and to punish them as such. When one person shoots another for a woodchuck or a deer, or blows out the brains of a companion with a gun that wasn't loaded, let him answer for it as for other acts of manslaughter.

Such responsibility for the unintentional infliction of wounds or death would not constitute any innovation in established legal principles. Accidents have their well recognized place in the criminal code. The law holds men responsible for criminal carelessness. Railroad engineers and conductors, motormen of street cars, foremen of mines or rock blasting gangs or street trench diggers, drivers of horses and motor vehicles, in short all persons engaged in any activity which is liable to cause accident or death are held strictly accountable, and are required to exercise forethought, caution and eternal vigilance to guard against the infliction of injury. On Monday of this week a New York cabman driving through one of the city streets collided with a wheelman, who was struck by the shaft of the cab, and was taken in an unconscious state to a hospital. The cabman was arrested, was charged with reckless driving in running down and injuring the wheelman, and is now held in $500 bail to await the result of his victim's injuries. This is the customary procedure when a person is engaged in his ordinary occupation; but if this cabman had taken a day off and armed himself with a long range rifle and killed his man unseen in the woods, it would have been reported as another accident, and no one would have thought of holding him for the deed. Yet in the reckless shooting is involved the higher degree of criminality. The collision in a city street belongs to that class of accidents which are inseparable from the complications of congested traffic, in spite of the unremitting exercise of care and caution and skill. The discharge of a firearm at an unidentified target is on the contrary a wanton and premeditated act of folly. Tens of thousands of the workers of the world are at this very moment performing their duty under the recognized obligations of responsibility, and if a casualty should come the law would intervene to hold them strictly to that responsibility; but the greenhorn with a gun may blaze away at the first rustling he hears in the brush, and kill his human victim, and it will be accounted an accident, and a legal penalty will be the last thing anyone will dream of.

SPORTSMEN AND SOLDIERS.

THE "Chatterer" of the Boston Herald, who writes many entertaining paragraphs, not infrequently gives expression to views which might invite controversy, were it not that the "Chatterer" wields a feminine pen, and all the world knows that it is futile to attempt to argue with a woman. Women are creatures of impulse, intuition and sentiment, but of logic they know little, and for reasoning care less. Here, for instance, is what the "Chatterer" has to say of the American sportsman and his relation to the war:

"For years he has been rendering the American buffalo obsolete, and now his work is almost accomplished. He has tried to exterminate the deer, and the fox and the wild turkey, and to rob all the streams of fish by inseine—one might say insane—methods, just to make a record for killing everything for the sake of killing. This passion has had another outlet in the recent war, and it must be whispered, I think it was for a much better end than in taking the lives of creatures unable to defend themselves in kind."

She thus identifies the taste for field sports with that patriotism which responds to the country's call; and she declares that both consist of the same passion for "killing for the sake of killing," be it deer or be it Spaniard. Thus in a sentence she gives us one measure for the American sportsman and the American volunteer; both, says this Boston woman, are butchers, who butcher for the sake of butchering.

This is not the bright red rose of truth, nor the lily pure of poetry; it is the sprouting of the potato eye in the cellar, an unwholesome sentiment bred in the dark. We surmise that the Boston sky-scrapers which have been built up about the Herald building on Washington street have shut out the sunlight from the "Chatterer's" desk. A week of outdoors in a Maine deer hunters' camp, or a day down on the Cape with the brant shooters, when the winds are whistling and the clouds are scudding and the spray is flying, would set her right as to the sportsman. Knowing him, she would know the volunteer; for there is after all this element of truth in her paragraph, that the American sportsman and the American volunteer are identified in spirit and personality. A census of the troops would show the sportsmen of the country to the fore. It would be easily demonstrable too, that because of their sportsmanship they were better soldiers—not, as "Chatterer" brutally declares, because of a "passion for killing," but for the well-known rule that indulgence in field sports prepares men physically and spiritually to assume the responsiblities, perform the duties, endure the hardships and win the victories of a campaign. The sports of rod and gun hold high place among the influences and agencies which go to making the vigor and stamina and endurance which are the strength of a nation in time of peace, and in war its defense and preservation. It is to the abiding credit of the sportsmanship of this country and this generation that it has been to the front in the Spanish war; nor is the credit likely to be depreciated by the fool chatter of mawkish sentimentality.

SNAP SHOTS.

Elmer Snowman, one of the best guides in the Rangeley region, has been arrested for guiding without a license. He took out a license the first year, but declined to make a return, as required by the law. He applied for a second license, but was refused by the commissioners, and the fee was returned. Since this he has gone on guiding without a license; though repeatedly warned by Warden Huntoon. The other day he was arrested, had a hearing before the local justice, where he appeared without counsel, and was bound over to appear before the Supreme Court at Farmington the next term. Mr. Snowman, we understand, expected to be arrested for guiding without a license, but refused to make out the required returns for the reason that he could not do it conscientiously and in justice to himself and the people for whom he had guided. He believes the law to be unconstitutional and unjust, and hopes his action will bring it before the people. His case is said to be exciting a good deal of attention and a good deal of sympathy. We have expressed the opinion that the Maine game law would stand the test of constitutionality. It is in line with many of those regulations and restrictions of individual action which have for purpose and justification the protection of game. If the State may constitutionally go so far as to prohibit entirely the taking of game, it may constitutionally go so far as to prescribe that game may be taken only by licensed hunters, or by hunters accompanied by licensed guides.

In his testimony before Gen. Breckenridge's board, appointed to examine into one of the Camp Thomas hospitals, Col. Elias Chandler, of the 1st Arkansas, described among other cases that of Private Simms, ill with pneumonia. "It had been raining and the water ran through the tent, thoroughly wetting the ground and soaking the bedding in which the sick man lay. I asked permission to put up a habitable tent for the sick man, and did so. Twenty-four hours later he was removed to it, and twelve hours after that died. The excuse given for not moving him sooner was because the ground was too wet. But this would have made no difference, because there was no floor in the tent, and the water from the hillsides drained through all the tents. No trenches had been dug around them, and the water flowed in a stream through the tents in which the sick men lay."

The flooded tents constituted only minor horrors of the Chicamauga Park hospitals; but it is worth while pointing out that this particular atrocity was one which might very readily have been avoided altogether if only the individuals responsible for it had applied to the stern business of war one of the simplest rudiments of the "gentle art of woodcraft." The veriest tyro in camping out knows better than to pitch his tent where water from higher ground will run into it; or using such a site he will ditch roundabout it so that the water will be carried off. If the novice does fall into such a blunder at first, he makes a move quickly enough out of it when the floods come. What sort of sportsman would he be accounted who should keep a sick comrade in a camp bed soaked with water running down hill into the tent? We are accustomed to credit the practice of sportsmanship with preparing a nation for war. It is a tremendous pity then that there was not more of the woodcraft element of sportsmanship at Chickamaugua.

The Sportsman Tourist.

Down a Slide.

One morning the daylight came dim and gray, there were no rainbow tints in the sky, and the giant cliffs had disappeared in the clouds which dragged their tattered skirts among the tree tops and settled there in little round drops of water.

Drip, drip, drip—everywhere the quiet noise of water falling, not like the rain, but with a soft, monotonous sound that seemed to lull one into a dreamy, no-account state. Billy grunted when he looked out of the door of the cedar bark shack, and he softly but forcibly "cussed" the weather after he got the coffee pot simmering and wiped a few big raindrops out of the back of his neck—that little strip of bare skin where the hat rim and the shirt collar part company, and both consider neutral ground.

Bluie yawned and reckoned "there wasn't any use of turning out—couldn't prospect anyhow." I got up, smelled the weather, and then lit my pipe to help me figure out a way to kill time.

Now a nasty, rainy day in the mountains is no pleasure party at any time, and a dull day in camp is the worst thing that can happen, so I figured out a plan while the bacon sizzled, and when Billy hollered "Time to feed," I had it all settled.

"I'm going up on the cliffs after a deer or bear or anything for meat—you fellows in it?"

"Ugh! Must be stuck on gettin' wet," was Billy's comment.

"I'll be busy sleeping," said Bluie. "Don't want to get soaked anyhow."

"Pshaw, you fellows are a couple of old women to stay in camp. Come on, let's go up and see what we can do."

"Nope. Not any," said Bluie, and he stayed in camp all day.

Billy looked at the weather, stowed away some breakfast and looked at the weather again. Everything was a solid gray up along the mountain side, and we could hardly see across the cañon.

"Mighty good day to get lost," ventured Billy.

"Got our compasses, haven't we?"

"Yes, but the blamed things pointed east by nor' yesterday, too. Reckon there's too much mineral in these hills to bet on compasses," was Billy's sage comment.

"Well, anyhow, we can't get lost, for all we have to do is to go down hill and we will come to the river, then we can get into camp easy enough."

"Guess I'll go along," said Billy, "but I won't promise to stay. If I don't like it I'm coming back to camp."

We shouldered our rifles and started.

"You fellows are chumps," said Bluie (and I guess maybe he was right, come to think about it).

We climbed up on the elk trail and crossed a little spur to the gulch where Mountain Home Creek came tumbling and sputtering down over the rocks, making more noise than a big river, until it got tired, and soaked itself out of sight in the broken rocks of an old slide. Steadily we climbed through the mists and fog, peering among the ghostly looking shadows for game, past the lichened cliffs, winding about among the huge boulders that had fallen thundering down in times past, over the soft moss beds and through the tangle of ferns that were only knee high now, but would be a jungle when berries were ripe.

When the loom of the cliffs came across our path we sat down and waited for breath. Grouse hooted from the shadow pines all about us, but we could see nothing 30ft. above the ground. Far away noises from the gulches above us told of snow banks that gave up to the melting rain from the tree tops, and came thundering down into the gulches, bringing rocks, trees and debris with them.

"Better not go up there," said Billy.

"Reckon I'll go on even if I ride back down on a glacier," I remarked.

We climbed up along the benches then and saw where deer and bears had been half an hour ahead of us, but saw nothing to shoot at; indeed we could hardly expect to with the cloud mantle wrapped around the mountains.

I had just got a restless notion in my head to climb, climb, climb, and as I was as wet as I could get already, I did not mind the drip from the trees. Billy got disgusted and started down to camp just as I struck a particularly fresh trail. I followed it up until it led among the snowbanks that chilled the air and made the fog denser than ever.

I sat down to rest and then it came into my mind that this was a foolish errand and a dangerous one—better go back to camp.

Boom, crash, biz-z-z-boom! The snowbank I had just crossed was smashing a track through the trees away down the mountain side.

Guess camp is a good place about now. I began to travel along the side hill, one eye open for down bound snowbanks, and the other for a feasible route to go down myself. As I climbed over a little spur of rock, I saw a smooth, wide path, like a nicely paved street tipped up until it stood at an angle of about 45 degrees. It was smooth and looked as though it might be good traveling, so I went down to investigate.

Recently a snowslide or glacier had taken that path down the mountain and left a beautiful trail. I figured that that was about my place to go down hill, and jumped out on the smooth looking place.

In ten seconds I had my rifle butt shoved down against the earth for a brake, and was making about a thousand miles an hour toward the cañon, where the river roared along by the camp. I had company, too, for rocks and dirt were loosened in my mad flight, and raced by me down the aisle that opened away dimly into the fog ahead.

In a few minutes I stopped, up to my knees in loose fragments of rock, and doubled up as small as I could until the trouble all went by (in big, hard chunks); then I looked at myself and at the slide I had just traveled over—it disappeared in the gray fog up the mountain side, but I knew all about it, and had no desire to climb up that nice, smooth looking road at all. My rifle stock looked as if it might have danced with a family of buzz-saws, the nails were torn out of my heavy shoes, my legs were bruised where the rocks had overtaken me on the way down and used me for a cushion to ricochet against.

I was muddy, wet, tired and disgusted. I struck a traveling gait for camp that took me over logs, rocks and everything else with about the same degree of grace that a bear uses when he is in a hurry, and when I got to the larch bottom at the head of the creek Billy was sitting on a log. "Come down in a hurry, didn't yeh?" he asked.

"Did you hear me do the snowshoe-toboggan-steeplechase act up there just now?" I questioned.

"Was it you making all that noise? Thought it was a bear starting a rough house or something," said Billy.

"Nope. I was in that. Let's hit the trail, there are several nervous snowbanks up there, and they may take a playful side jump and land just about here."

"Say, you must have made a big slide. I left you over an hour ago," said Billy.

"Well, I don't know how big a slide it was, but I was away above where you left me when I started, and that wasn't over fifteen minutes ago. Figure it out to suit yourself."

When we got into camp Bluie drawled, "Get anything?"

El Comancho.

An Old Man o' the Mountains.

Speeding down from Keating Summit in the Alleghanies, a domicile so startling and unique caught our eye that we stopped to investigate. In the porch were several well mounted specimens of elk heads, Rocky Mountain sheep, deer, etc., while more could be seen in the sitting room through the open door. On one side of the house, somewhat in the rear, was a great vault or tomb of masonry, and still beyond this a dog house, to which a full-grown coyote, or prairie wolf, was chained. In a paddock to the right of the house several deer were quietly feeding.

"The home of Col. P.," said my friend. "A gentleman whose acquaintance is well worth the making. Let me introduce you."

A tall figure, slightly stooped with age, but with clear gray eyes and ruddy complexion, bearing his eighty-five years well, you must admit.

"Come in," said the Colonel, in hearty Western fashion. His sitting room and bedroom beyond are well filled with Florida birds and Rocky Mountain fauna, shot by his own hand and mounted by his own skill—a mountain lion and its kitten and a splendid pair of buffalo heads being the most conspicuous. The Colonel has made three trips to the Rockies, and meditates a fourth, just to see the changes since 1842.

"I first went to the Rockies in 1842," he says, crossing one leg over the other, and throwing himself into a reminiscent mood. "I was trappin' then fur the Hudson Bay Company. No railroads then, so I sailed down the Mississippi on a steamboat to New Orelans, then up into New Mexico, and followed the Rocky Mountain chain up to the headwaters of the Columbia, and down that stream to its mouth. I had seventy men under me—drawn from all nationalities almost, principally Americans, half-breeds and 'courriers des bois.' We were independent, hunted about until we found a district with good signs of beaver and other fur, pitched our camp in the center of it and generally stayed there till we had cleaned it out. Of course we had many pitched battles with the Indians. I suppose you could fill this room with the redskins I've made good Indians of alone. The Comanches, Sioux, Blackfeet, Crows and Piutes were always on our trail, one or the other of 'em, some after ha'r, but more after our guns, clothes and skins. The Comanches were the worst Indians on the plains. They would kill a white man just for his hair. Scalps made the 'big Injun.' But the Sioux, Crows and the others killed more for the plunder they got out of it. I lost but one man in the two years, and they got him because of his own recklessness. We knew the Comanches were on our trail. I warned him; but he laughed, said he could shoot all the Injuns that could surround him before they could get within arrow range. The Indians carried bows and arrows then. He was my best man. He left the camp one afternoon, sun about an hour high, to hunt for antelope, our fresh provisions running low. By and by we heard a shot down the creek, then another, a third and fourth in quick succession.

"'The redskins are after Joe, boys,' I sang out. Ten of us that happened to be in camp mounted and rode full gallop to the rescue. Sure enough there was a band of about fifty Comanches riding around Joe, cracking away at him with arrows. They were always mounted on good horses too, and now they rode round and round poor Joe, who had his back against a big rock, each one shooting as he passed, and sheltering his body from Joe's rifle by slipping under his horse. We soon put them to flight, leaving twenty on the ground, but poor Joe was done for, literally shot full of arrows. There wasn't a place on him as big as your hand that hadn't an arrow in. He had killed six of them, so they paid pretty dear for his scalp.

"Oh, yes, I killed that buffalo out of a herd of I suppose fifty thousand. We continually met herds of from fifty to a hundred thousand in those days; now there is scarcely one. I know a thing or two about the extermination of the buffalo that isn't generally known. They were killed by order of our Government to keep the Indians from going out on the warpath, and keep them at home on the reservations. With no buffalo to kill the Indian would starve if he wandered off, and so was obliged to stay at home and be fed. I had a friend, a hunter, who was paid by our Government to kill off the buffalo, so that I know what I am talking about.

"My coyote, Jack; yes, you shall see him presently. It's a curious thing about coyotes. When I first crossed the plains there were timber wolves and plains wolves, but nobody had ever seen or heard of a coyote or prairie wolf. The next time I went, several years later, they were there in immense numbers. Where did they come from? I think they are a cross between the timber wolf and plains wolf. But come out and call on Jack."

Jack seemed very glad to see his master, but was a little doubtful of strangers. He leaped the length of his chain, showed his teeth and a strong inclination to get at us.

"Jack," said the Colonel, "will whip any dog in Cameron county, and he will do it because of his quickness—he can make two motions to a dog's one. He is the most affectionate brute you ever saw. I was away three or four days last spring, and I thought Jack would break his chain in his demonstrations of joy at my return."

The vault of masonry the Colonel designs for the last resting place of his wife and himself. He is a native of York State, but was one of the first settlers in this part of the Alleghanies. He tells rare stories of the herds of elk and antelope that could be sighted at the "elk licks" throughout all this section when he first settled here, about 1835-42. C. B. T.

The Adirondacks in 1898.

The Weather.

Old residents agree that they never knew such a protracted drought nor so hot a season as the one just past. But the depressing effects were nothing compared to those in the city, and the nights brought comfort and repose.

Insects.

Natives and visitors agree that the gnats, black flies and mosquitoes were never so troublesome before. A guide said that in twenty years' experience he never saw the like. Two dominies had an experience: They had gone into the woods to watch for deer. The pond was well chosen and well watched. In fact, there were more watchers than deer, and at dusk the winged watchers drove the other two back from the pond. On the hillside, among the spruces, is a smooth open place—there we can rest. The transfer of "duffel" is soon made, a little fire built to warm the coffee, and by the light thus afforded supper is eaten. Hark! There's a deer. We listen. Sure enough, a deer is walking in the water within easy range of our watching place. We take our rifles and creep to the pond. We can see nothing. He is in the shadow. Perhaps the moon will reveal him a little later. We wait. The insects don't. We are again driven away. The night is hot—the fires dies down; one wraps himself in mosquito netting (about his head) and a blanket, the other gets into a sleeping bag. Presently he says: "I wish you would start up the fire a little to drive off the insects." Soon there is fire enough to roast venison, but that is walking around in the pond and the man in the bag is roasting. He gets out. So does the fire. More deer come into the pond. It is too much. Both men pull on their shoes and steal through the alders to another place at the water's edge. Again they can see nothing, but they feel much. It is a case of "hunters hunted," and found without difficulty. The moon does not help things—the mosquitoes help themselves. We go back to the blankets, but not to sleep. Whack! Swish! Whack! The battle is on—blood flows freely on both sides, but neither will yield. On one side it is determination, on the other desperation. "This is almost enough to make a minister swear. In fact, if I were ever going to swear, it would be now; and I am sure that if it would ever be justifiable, now is the time." Whack! Whew! Whack! The air resounds, but not with usual forest sounds at night. Will the night ever end? The man in the netting sits up. He looks ghostly in the moonlight. He feels so in the netting. The gnats are there. He is an old soldier—a veteran of more than three years' service in the civil war—but he affirms that he never spent a night of such suffering. The horrors of the Spanish Inquisition are the only thing to be compared with it. In the morning the deer are gone, and we go home.

The hotels were generally full, and their managers proportionately happy. Rooms for August were booked much earlier than usual, and the frequent report was, "It is the best season we have had in years." There is no doubt that the war scare on the coast helped the early season, and the September heat the latter part.

The State and the Forests.

The State can hardly move too rapidly in the acquisition and protection of this magnificent forest. The wood pulp industry continues its devastating work, and, to those familiar with lumbering for other purposes, it is both surprising and saddening to see the small sticks—one cannot call them logs—allowed to pass as "markets." The spruce and pine are being rapidly cut off, yet these are important factors, not only as related to the water supply, but as affecting the condition of this great natural sanitarium.

Though much has been said and written on this subject, the importance of the Adirondacks from this point of view is but little realized. For the welfare of her own urban population the Empire State cannot afford to allow any further depreciation of the Adirondacks. Fifty years ago the historian Headley, after quoting from Prof. Emmons' geological report to the State, said: "After such a glowing description in our State reports, I think there is little danger that anything I shall say will be considered as exaggerated."* During many years the State has had information. Colvin's later reports fully sustain the earlier. Lately much has been accomplished, but much remains to be done, and the sooner the better. No such natural conditions exist east of the Rocky Mountain region. Their preservation and availability are important not only to every citizen of the State, but to all our Eastern population.

Suitably owned and cared for, the Adirondacks would be a source of large indirect revenue to the State, as well as of physical benefit and mental and moral inspiration to increasing thousands. For

"The bosom is full and the thoughts are high"

when one "in the love of nature holds communion with her visible forms." And here after all is the true end of sportsmanship. Dr. P——, a well-known Brooklyn sportsman, asked: "What do you go off into the woods

* Preface to "The Adirondacks; or, Life in the Woods," 1849.

for anyway?" I replied: "First of all, to commune with nature." So does every true sportsman, whatever his method of taking game or fish. And to my mind herein is the standard of "true sportsmanship" more than in the method.

Incidents.

A buckboard driver relates the following: A gentleman and wife were going in to one of the popular resorts. The man amused himself en route by target practice with a rifle. He shot well from the carriage. Speaking with the driver he said: "I have been coming up here four years, and have never seen a deer." The driver replied: "Perhaps you will see one before you arrive to-night." But the man was incredulous. Just before sundown the driver pointed out a deer quietly feeding about 50yds. away. Instantly the man leaped from the carriage and exclaimed, "Where?" Then seeing the deer began firing. At first the deer paid little attention, but at the third shot started off, and after the fourth disappeared. Then the man climbed into the carriage, shaking as if with ague. Did his wife laugh at him? The driver says, "Yes."

Another.

A fifteen-year-old boy was for the first time watching a pond alone and rifle in hand. A deer swam past him but a little distance away. He waited till the deer rose from the water at thirty rods and fired; four shots he tried, and the deer walked down the shore unharmed. Describing his experience, the boy said he found his hands and knees shaking, and that he could scarcely pick up the cartridges. On being rallied about "buck fever," he said: "No, I don't think I had the fever, for I only felt it in my hands and knees, and my whole body was cool." He also says he learned a "whole lot about deer hunting" that day.

One of the men shot and killed in the Adirondacks this year was an old resident, who is reported to have told his nephew, a young fellow who had never been in the woods before, "Shoot the first hing you see moving in the brush." The first thing was the uncle, who fell shot through the heart. Both parties were in fault: one, it is scarcely needful to point the moral, for his instruction, the other for his action. The sad result is sufficient emphasis.

A Noble Rescue.

A beautiful young lady, daughter of a hotel keeper at —— Lake, was out rowing, and by an accident precipitated into deep water. She went to the bottom of the lake, which she afterward said "seemed a mile deep," but coming up, grasped the boat and clung to it. Two lads —natives—were sitting on a dock nearly half a mile away. They thought there was an accident, but were not sure. However, to be certain, they sprang into a boat and rowed with all possible haste to the scene. Approaching, they discovered their unfortunate friend just as her strength was about to fail, and shouting, "Hold on and we will save you," hurried to make good their words. All honor to real heroism, whether in the war or in the wilderness! JUVENAL.

Haps and Mishaps on the Yukon.

Mac has an Experience.

THE cañon ends abruptly where the contracting wall of rock on the east side falls away to a jack pine flat 10 or 15ft. above the level of the river. On the west side the abrupt hills are close to the water's edge for the greater part of the distance to White Horse Rapids. While it is possible to land on the west side after shooting the cañon rapids, the eddy at the east is commonly chosen because it is on the same side with the upper landing.

The bay is fairly commodious, and the water next shore is deep, but it is not an easy landing to make, and it requires good steerageway and cool judgment to leave the swift current of the river and break through the wall of foam into the backwater of the eddy. Action must be taken the moment the cañon is cleared or the boat will be carried hopelessly beyond the landing.

Side by side are two currents, running in opposite directions. The one running north has a velocity of fifteen miles an hour, and the other a velocity of four or five. The boat must leave the one and enter the other diagonally, or she will be hurled around in a way that snaps jammed oars like pipestems, or whisks the oarsmen overboard before they know what hit them. It is easier to pass from the slower current into the faster.

After making our five trips through the cañon, Mac and I each took a boat, and in company set out to cross the river. Walking along the shore, we towed our boats against the strong back current to the lower end of the eddy, and then pushed off into the river.

The best water is first found in midchannel, and later on the west bank of the river. Midway between the cañon and White Horse is the roughest part of the rapid.

It was our intention to land before reaching this place, and for this purpose we had selected an eddy behind a small rocky projection. When the time came to swing inshore we kept as close to the point as we dared for fear of missing the eddy and being carried beyond by the swift current.

Night was fast approaching, and under the shadow of the wooded bank it was hard to discern objects plainly.

Just below the point a little group of black rocks suddenly appeared directly in our course. I managed to clear them, and called to Mac to pull on his right oar, a course which would have brought him into open water again. Either the noise of the rapid drowned my voice or he mistook the words. Instead of pulling on the right oar he pulled on the left, and a second later his boat struck broadside on with a crash that I could distinctly hear above the din of the river. My heart stood still, for I expected to see the boat turned over, and man and cargo thrown into the water. Fortunately, however, the rocks projected so far above the water that they held the boat, and she rested on an even keel.

Meanwhile I had been carried on down by the current, and found it impossible to get near enough to Mac to render any assistance.

As previously explained, Mac was not a born boatman, and in his present difficulty the first thought that presented itself was to get his feet on bottom somewhere. Ground was preferable to water, even if it was the bed of the river. He did not stop to reason, but acting on the impulse of instinct, put one foot overboard on the upstream side of the boat and probed for bottom. The boat tipped a little and over he went, half-way up to his neck. He was holding on to the gunwale of the boat and had one foot inside. He tried to get his foot out, but couldn't. The boat scraped off the rock and drifted into deep water below. She was in danger of capsizing any minute, and might be drawn into the dangerous rapid, but for the life of him Mac couldn't get either in or out. The only dry part of him was the one foot in the boat, and Mac would rather have had that wet than where it was.

A favorable set of the current carried Mac into slack water, and by the time I reached him things were satisfactorily adjusted. The terrific bump on the rocks had not injured the boat, and though the spot where she hit was scratched and dented the canvas did not leak.

Above White Horse Rapids.

The following day we lined two boats up against the current from our camp above White Horse Rapids to a cache of goods just below the cañon. Dawson advises a portage at the midway rapid, and the fact that we lined our boats past this tandem fashion shows their good qualities for river work.

"Lining" is towing by a shore line. One man walks along the water's edge and pulls the boat by a long rope, while the other either follows and keeps her off with a pole, or else sits in the boat and steers her with a paddle. Sometimes an arrangement of ropes called a "bridle" is used. In addition to the regular tow-line, a rope is made fast to the gunwale several feet back from the bow on the side next shore, and then to the main line a few feet ahead of the boat. Practically the tow-line is split and one piece tied to the bow and the other to the side further back. By this arrangement the boat will follow a course parallel with the river bank. When she tends to come inshore the bow line is slackened and the stress diverted to the side, and this of course throws the bow out again. For ascending the Yukon lining and poling are the only practical methods, as the current in most places is too swift for rowing or paddling.

Mac crossed the river safely first from the west side to the east, and later back again. Then I took the two boats in charge and shot the remaining part of the rapid, tandem. I tried the expedient of going through backward, and found that it worked like a charm. Steerage way was maintained by rowing against the current instead of with it. The boats could be handled perfectly, and they rose easily to the waves, and were comparatively dry.

I had discovered a little cove lower down than the usual landing for the portage around White Horse Rapids, and as it saved nearly quarter of a mile of the carry I brought our boats to this spot.

To reach it one has to drop over a reef of rocks spanning the river at a point near midchannel, and then row to the west bank over a shallow rocky stretch of water that is impractical for heavy boats.

This is just below the sharp angle the river makes preparatory to entering the straight sweep between low basalt walls that constitute the rapid proper. White Horse and the cañon incidentally are both "flumes" in the sense in which the term is used in the Adirondacks. Above the bend the current is smooth, though very swift for some little distance.

Disappointed Indians.

When I brought the last boats down I allowed them to drift sideways past the regular landing. There was a particular gap in the reef that I wanted to pass through, and I thought I could reach it more easily by keeping inshore of it, with my boats pointed out till I had rounded the point and seen its exact location.

Some Chilcoot Indians, who had come down to White Horse after their season at the pass was over, and were packing for the miners, saw and misinterpreted my actions. They supposed that I had made a mistake in the place of landing, and the moment I passed the whole tribe began yelling and running down toward the rapids.

Apparently they anticipated some fun, and their cries sounded more like a lot of boys promised a free treat at the circus than ejaculations of warning or dismay.

When I rowed quietly inshore and pulled up my boats on the tiny sand beach the Indians were a disgruntled lot. I felt that I had been ungenerous in not providing a spectacle for them. A few white men saw the occurrence, and one of them reminded me of it on the Hootalinqua River in midwinter. The majority of the white men, however, were too full of their own affairs and too anxious to get by the rapids expeditiously to pay any attention whatever. If the boats had swamped in the rapids it would have attracted little comment.

Priests and Levites.

An incident happened that same day which illustrates the absorbed single-mindedness of purpose with which the miners worked. Three men tried to line an empty boat down the opposite side of the rapids around the base of a precipitous bluff, 200ft. high. One became entangled in the rope and fell over a 20ft. precipice. He saved his life by a mere scratch, for he struck on a narrow shelf at the level of the water and was almost carried off by the rapid. As it was, he sprained his leg so badly that he thought it was broken, and so reported to his partners.

These men cut the boat loose and went for assistance. They were in such a tight place that one had to throw away his rubber boots, worth $20, before he could scale the rocks and gain secure footing.

I saw a part of the occurrence, and could easily have crossed above the worst water and lined down a boat and rescued the injured man, who was crouching on a rock at the water's edge, but could not bring myself to realize that he was in need of help. Men were passing constantly to and fro, and no one seemed to think anything out of the common had happened. I called across the river, but could not distinguish the man's reply.

Presently a miner came along who said the man's leg was broken. He spoke in a matter-of-fact way and without expressing any interest or concern, and would not wait to discuss the situation.

His information, however, gave me the needed impetus. I got a boat and lined her up along the shore with a view of crossing, but before I could take any further action half a dozen men from the mounted police encampment appeared on the scene with ropes and a roughly extemporized litter and rescued the man. They dragged him to the top of the 200ft. bluff, and afterward cared for him until he was able to proceed on his journey.

In scores of such instances the Canadian mounted police played the good Samaritan.

Through the Rapids.

Every once in a while last summer boats, empty, dismantled and battered were found on sandbars below White Horse Rapids. Of their occupants not a clue remained. Undoubtedly some of these boats had been carried into the rapids after dark, when no one witnessed their fate. Others were wrecked in broad daylight, in sight of their friends. It is said that thirty-five men are thus known to have been lost at White Horse in the season of 1897.

Early in June at the very beginning of the present season McKercher writes that ten men and two hundred boats have gone under at "yon place."

At the very end of the rapids is the most dangerous place. Here the entire volume of the river is drawn into a narrow, shallow channel a hundred feet across, and the river bed falls away suddenly. Down this chute the water dashes as if projected from the nozzle of some great fire hose in a series of perpendicular waves that a boat must smash through, because there is no time to rise over them. It is a veritable cataract, and only boats measuring 25ft. or more in length can hope to pass through safely.

It is possible, however, for the very smallest boats to avoid the final pitch. I came to this conclusion after an examination of the rapids from the shore, and shortly after proved it by practical demonstration. With a somewhat lighter cargo than that carried through the cañon, I pushed off into the current, keeping near the center of the river for two-thirds the length of the rapids. Then I began edging in toward the west side, and just before the worst part was reached I pushed the boat through a green wall of water curving out from a great boulder like the furrow from a plow, and shot into the partial eddy behind. Like a flash the boat was whisked about by the current end for end, and I found myself rowing vigorously instead of pushing. I landed on some rocks, and later at leisure dropped the boat down in shallow water close inshore to the regular landing below.

I took four boats through White Horse in this way, but as I only carried 300lbs. of cargo at a trip we had quite a little additional packing to do. Our last load was taken across on a sled found by the side of the trail, but there was so little snow that it was hard work for two of us to draw 250lbs., and we could have done almost as well packing on our backs.

Hepburn's Call.

We saw a good deal of Hepburn while at White Horse. This man, whose first name is John, if I am not mistaken, made a fortune in the snowy Cassiar mining district of British Columbia years ago. He went there with two bits in his pocket, and left with $30,000, having cleared his money from cattle and sheep driven hundreds of miles overland.

Hepburn made about $100 a day piloting boats through the cañon and White Horse Rapids. His charge was $20 for both rapids or $12 for one. He required two oarsmen from the crew of the boat to help handle her, and kept them rowing for dear life whenever they could find water with their oars.

He had several narrow escapes from drowning. In the eye of the cañon the day after my experience he got a boat sideways to the current and almost swamped her. He is a powerful man, slightly grizzled, and it was an impressive sight to see him swing around his long steering oar and pull like a demon again and again to throw the boat head on to the white water so close at hand.

Hepburn tried White Horse once too often, and though he escaped with his own life one of the men who accompanied him was drowned. He was taking a 20ft. boat through, and at the very end she filled and went under, through no fault of his.

Hepburn came up between two clothing sacks, which floated light, and got an arm over each. One of the oarsmen, who could not swim, caught the boat. The third man, whose name was Anderson, was a good swimmer, and tried to reach the shore. He made progress through comparatively smooth water, and the mounted police, who had put out in a boat to the rescue, passed him, thinking his companions most in need of help.

They picked up Hepburn and the other man and landed a mile down the river. Anderson swam till within 20ft. of shore, when a great swirl of rushing water bubbled up beside him, the center 3 or 4in. higher than the sides. It caught and sucked him under, and that was the last seen of the man. Hepburn said it was a warning, and gave up piloting.

Boats that came along after that were unloaded and cast adrift above the rapid, and two well-known and respected physicians made a living picking them up below at a charge of $5 a boat.

By a singular coincidence Anderson's next door neighbor in Seattle, a man named Freedman, was drowned in an ice jam below the Big Salmon a few weeks later.

Dawson Refugees.

At White Horse we met two men coming out from Dawson. They were young, athletic fellows, burned black as Indians and full of nerve and energy. They had had no bread to eat for several weeks, and we traded them a loaf of graham for a couple of whitefish they had traded from the Indians at Lebarge. They had a 16ft. Peterborough canoe, and poling and lining had reached this point in a month's time. These men were the vanguard of a host of others to come later, all leaving Dawson on account of the shortness of food.

The first to come along traded the Indians out of everything edible, and subsequent parties who were short of food had to go hungry. But that's another story.

At the Tahkeena River, fifteen miles below the rapids, we encountered our first mush ice. At first we thought we had run into an ice jam, for on rounding a bend the Lewes seemed filled with ice from shore to shore.

As we drew closer we perceived a narrow strip of black open water at the foot of the bluff on the east side, where incidentally miners got prospects of 10 cents to the pan, and we realized that the ice came from a tributary river. The Tahkeena was bank full of the slushy stream.

We entered the ice rather gingerly. Mac was afraid it would cut the canvas on our boats. A little experience, however, satisfied us that we had nothing to fear from this source. The ice was soft and easily broken, and aside from reducing our rate of progress caused us no inconvenience. It was harmless enough compared to the ice we were destined to encounter before long.

I have told of the grizzly that Henning and Campbell killed below the Tahkeena this same day, and also of the black fox and the great bear tracks we saw just before reaching Lake Lebarge.

Trading with Indians.

That night we put ashore in a storm near the Indian village, two miles below the head of the lake. The Indians at once discovered our camp and brought some fish with them to trade. They wanted white flour, and offered both money and fish for it. Silver dollars were produced, which was understood to be the price of a cup full. We had no white flour to spare, but remembering some spoiled figs resolved to try them on the Sticks, which is the name of the tribe.

"Here, John," Mac said, addressing the biggest Indian, who looked like a Chinaman, "try a few of these." The other Indians laughed. They are a good-natured and harmless people, and, like Southern negroes, are always ready to laugh. It happened that the man was called Jonathan, and they were amused at Mac's version. Jonathan ate one of the figs, and passed the others around. The Indians were pleased with the to us unpalatable fruit, and we secured what fish they had in exchange. Then they tried to buy various articles that took their fancy, from the clothing on our backs to the dishes we cooked with, touching the article and asking "how much?"—words which have become a part of every Yukon Indian's vocabulary.

When supper was ready we turned the Indians out of the bough lodge, where we had made camp, and ate the meal in peace. Just as we were preparing for bed, however, two bouncing young squaws, with ruddy cheeks and olive skins, entered unannounced, bringing in their train half a dozen children and dogs.

They wanted white flour in the worst kind of a way. We refused this, but eventually compromised by giving them a few biscuit that had been knocking around in the bottom of one of the boats for a week. They were the last of the batch baked by Billy Baskerville, and were so full of sand that we could not eat them. I put them in an old towel and gave them to one of the women. She immediately took them out, and breaking off a few pieces gave to the children, who ate the hard chunks as if they had been candy, while the dogs looked on in hungry-eyed envy. Afterward she put the other scraps away somewhere in her clothing and asked how much for the towel. I gave her the towel again, but she seemed to think it required an equivalent, and handed me a pair of buckskin mitts.

It was snowing and blowing from the north the next morning, when we made our preparations to start. Jonathan was on hand with a marmot skin coat with hood attached—a sort of fur parky—which he wanted to let us have for $10.

He tried to create interest much as a Baxter street clothier would drum up a trade. He strutted around with the coat on his own back and gave utterance to various expressions of pride at his gorgeous appearance. He stroked the fur admiringly, and turned the coat inside out to show the lining. Finding at last that all his eulogiums fell upon cold ears, he tried another tack.

Waving his arm to the snowy north and simulating a shudder he said: "Too much Yukon wind. Bimeby cold. W-h-e-w!"

The last word was drawn out to exasperating length and ended with an expressive shrug that nearly lost Jonathan's head in his shoulders. "Buy coat. Good!" He had worked up to a climax beyond which language could go no further, and stood smiling in anticipation. Jonathan's coat was a bargain. Parkies are valuable adjuncts to winter travel.

Hardtack and Bacon.

That night we camped west of Richtofen Island, on a tributary stream of fair size, and had a glorious supper of fish and gravy, bacon and fried hardtack, fruit and tea.

Representative John Allen, who has "had much experience with army rations and the want of them," said during his speech on cheese before the House the other day that good soldiers should not be coddled too much; that he "had not been real hungry since the war without craving hardtack and bacon." Mr. Allen's words are truthful and apt, as any man who has gone through severe physical exertion on coarse diet will agree. I never could abide beans before I went to the Yukon. The other day, during a ten minutes for refreshments seance at the railroad restaurant in Saratoga, I walked down the long lunch counter and found nothing to satisfy the craving of my appetite till I spied a dish of pork and beans. I knew then that I had what I wanted.

While living outdoors eating was a real and substantial pleasure. The keen edge was never taken from our appetites, and on more than one occasion we ate two full meals at an hour's interval.

Coming up the Yukon in January without tent or stove, we ate double the army ration, including sometimes 2lbs. of bacon a day.

A friend to whom I told this said: "When I was convalescing from a severe illness the doctor put me on a milk diet, and I got so sick of milk that I have never seen a cow since without feeling like going over and kicking it. I should think you would hate the sight of a pig.

"On the contrary," I replied, "I have learned to love and reverence the animal that furnishes bacon. My nature craved fat, and I would have eaten tallow candles or blubber if I could have gotten them."

J. B. BURNHAM.

The Ascent of the Grand Teton.

ST. PAUL, Minn., Sept. 20.—*Editor Forest and Stream:* The FOREST AND STREAM of Aug. 27 and Sept. 10 contain notices of the successful ascent of the Grand Teton, Wyoming, in which the claim is erroneously made that this is the first time the summit has been reached.

Your issue of Sept. 17 contains a letter from Luther B. Yaple, of Chillicothe, Ohio, stating the facts relating to the first known ascent, which are that James Stevenson and I reached the summit on the 29th day of July, 1872. Stevenson was the first to reach the summit, and I was but a few yards behind him. An account of our ascent was published in the Scribner's (now Century) Magazine for June, 1873. The aneroid barometer of Mr. Owen gives the elevation as 13,800ft. My aneroid (see page 148, line 13, Scribner article) gave it as 13,762. This is about as near as aneroid registrations usually approximate.

Natural History.

Humming Birds as Pets.

ST. AUGUSTINE, Florida, Sept. 15.—*Editor Forest and Stream:* I have no fancy for 'gators, bears, or coons. In fact, I do not care for any pets but birds, and the smaller they are the better they please my fancy.

My special pet is the humming bird, and I never weary of feeding and fussing with that lovely little creature. I tame them every year, and my interest in them never flags.

Last spring my wife and I were standing on the piazza and a pair of male ruby-throats—the first arrivals—came hovering 'round our heads, chasing each other in seeming play, and then lighting side by side on a star jessamine vine within a foot or two of our faces, without the slightest fear of us, which meant, of course, that they knew their ground, and when I brought out the little bottle that they always feed from, one of them came directly to it as if he had fed from it all his life. It's delightful to be remembered by the tiny creatures in this way, and nearly every season I have proof of their wonderful memory. This season at least two or three of my old pets have visited me, and all seem to be as tame as on the previous year, but the early birds that

A HUMMING BIRD PET.

are on the migratory move I cannot induce to stay. They nearly all go further north to set up housekeeping. I never expect to keep one for any length of time until the young birds appear in the early part of June.

During the month of June this year I had two or three quite tame, but one in particular never saw me anywhere round the place but he would come hovering round me, and I never failed to take his little bottle from my pocket and give him a sip or two. I have discovered that it is best to give them but little at a time, as they are apt to overfeed themselves. I often sit on the piazza to read my paper, and when I have a tame bird I hold the bottle—with the bow attachment—so that he can set and help himself without interfering with my reading; and this summer as I was reading I heard my pet, as I supposed, fly up and take his seat, and I paid no attention to him for some time.

I then looked up to see what he was doing, and to my surprise and delight there sat an old full-plumaged male bird—a friend of a previous year. But he never repeated the visit. Their movements in this latitude are a puzzle to me. Very few of them remain here to nest, and they all leave in a few months after the song birds appear, but where they go or why they go I can't imagine, for they have flowers without limit.

DIDYMUS.

[Years ago there was printed in the FOREST AND STREAM a story of wild birds—mockingbirds, thrushes and others—whose confidence had been gained by a Mrs. Hildreth, of St. Augustine, so that they would fly from the trees to alight upon her and feed from her hand. It is interesting too, to note that the orange and oleander and jasmine embowered home of Didymus is in the near neighborhood of Mrs. Hildreth's place, where the birds were petted a quarter-century ago. We reprint from a former sketch of these humming bird pets the illustration of one of them from a photograph.]

Muskrats Do Eat Fish.

IT is quite possible that the muskrat might plead an alibi—as old man Weller advised Mr. Pickwick to do when he was charged with breach of promise to marry by the old widow—in regard to his alleged proclivity to eat fish, under no better evidence than that given by Mr. Mather (FOREST AND STREAM, Aug. 27). Any lawyer might reasonably except to this evidence as being not sufficient for conviction. But I can testify to this depraved conduct of this disagreeable animal in addition to much more meanness. For I have taken him in the very act, and got the rat and the fish both at one shot, the fish being at the time in the rat's mouth. It was in this way: When I go a-fishing I am apt to waste a good deal of time upon other things, investigating whatever may happen to set me a-thinking; but especially when I see anything strange and curious. Once I had a field of corn on one bank of my pond, and the muskrats were—as their habit is—doing a great deal of mischief carrying off the ears and chewing up more of them which they did not carry off. Going one evening along the bank of the pond I saw one of these animals quietly plunge into the water and dive down. The fish were rising freely in the quiet evening, and as I was watching the breaks in the water I saw a good-sized trout leap quite out of the water, and immediately the back of a muskrat at the surface, evidently in pursuit of this fish. Instantly there was a struggle in the water and I saw the rat had got the fish. Getting my gun in hand, as the two came to the surface, I shot both the rat and the fish, and recovered them. The fish had been caught by the belly, evidently as the rat had taken it when it fell back into the water. This satisfied me that other evidence—circumstantial it is true—as that given by Mr. Mather is, but convincing, in the shape of bones of fish on the bank of the pond often seen near the rats' holes, was sufficient as to the fish-eating habits of the muskrat, as were the half-eaten ears of corn also found near these holes on the bank of the pond as to his vegetarianism.

I have frequently seen fish pursued by some animal whose back appeared above the surface as the fish leaped from the water, evidently when swimming with great rapidity and covering several feet in the air before they fell back again. Some of this may be due to minks or otters, but in this case there is no question that it was a muskrat which chased the fish out of the water, and caught it as it fell back.

H. STEWART.

HIGHLANDS, N. C.

Crows Destroy Sparrows.

PROF. PHILIP R. UHLER, provost of the Peabody Institute, Baltimore, tells the Sun, of that city: "One way, and a very peculiar way, of putting a check on the sparrows has been brought to my attention. Three years ago the Peabody Institute was simply swarming with sparrows. They built nests in the hollows of the balustrade on the roof, in the rainpipe gutters on the extensions, and fluttered and flew all over the place. They were laying hundreds of eggs up on the roof and about, and had gotten so bold as to fly down the ventilators right into the library. They were almost as thick on the top and steeple of Mount Vernon Place M. E. Church, across the street. Besides this, our roof was already tenanted by about 500 or more pigeons, kept by the janitor of the institute and his son, who set their traps up there and fed them. One day I noticed a crow on the roof of our building. I saw him look about curiously, up, around and down where the sparrows' nests were. The next thing he did was to get to work on the eggs. A few days passed, and I saw him again, this time accompanied by two other crows that were at the same scheme. The crows from that time on increased until twelve came to that spot.

"Meanwhile there was trouble among the sparrows and pigeons. Their eggs were being eaten at an alarming rate, and they were obliged to go. And go they did, so that now there is no a sparrow to be found on our roof or about the institute, where before there were hundreds. On the Mount Vernon Place Church they have vanished in the same way, and the pigeons likewise have disappeared. These crows have been coming regularly every morning to this place—one dozen of them. They appear to have a beat, and work between the Peabody Institute and Dolphin street on the north. In that space they have cleaned out many sparrows. The pigeons were as numerous as they were about St. Paul's in London, where people make a practice of feeding them. They have gone too.

"The fact of these twelve crows working in this way is very singular, and goes to prove that the crow has more brains than he is given credit for. The big crow roost in Anne Arundel county, back of Spring Gardens, is the gathering spot for thousands of them, where they scrape for the water snails. Every morning between four and five o'clock a big flock of them passes over the city. As they reach the Peabody there are exactly twelve, as I said before, that drop out of the flock and settle on our roof. The rest fly on, going up Jones' Falls, and even out as far as Towson, where they grub and dig around in the fields for worms and things. Whether our twelve crows are wiser than their brethren, who have not yet caught on to the game being worked, or whether the others don't care to take the extra trouble to get their food in this way, it is hard to say. Anyhow these twelve crows have a monopoly in the sparrow-egg eating business, and are working it for all it is worth. It is giving the sparrows a dose of their own medicine, but the number of crows is too small to have any appreciable effect on the millions of existing sparrows."

More About Animals at Play.

Forest and Stream:

ile roaming the Adirondack woods one day this er I found a fox hole on a side hill. Passing on a teps, I saw a well defined slide on the dry, hard d; where evidently the animals had attempted boggan act. The ground was worn quite smooth, he debris, such as grass, leaves and twigs, brushed ean. It lay at the bottom of the incline. The cleared was about a rod long and a little less dth. To make sure it was the work of foxes, I ed of my guide, who told me he knew the place, hat he had seen similar evidence of fox fun in r time.

ow Trump Saved Powder and Bang Saved Game.

UMP is a good dog. For that matter, there are good dogs. Some possibly as good as Trump. inly many worse. Trump is keen, stanch, a good ver, and take him all around, a fair, honest and true sman, in general assisting to bag game in a sports- ike way. The best of us occasionally sin, however, Trump is no exception, and thereby hangs a tale. way of it was this: It was a bright, warm day in mber, too nice a day to describe, for the mellow n summer sunshine loses its richness when re- d from paper. Mr. Trump, in company with two n friends (the scribe and Mr. Sawgun) and one y dog, yclept Bang, hied him forth for a hunt. quartette wended their way to a wood of hemlock cedar, through the midst of which ran a swift and ow river. This wood was known as a popular busi- center of the lordly and thunderous grouse. Trump the way into the cover with confident step and ng tail signals. Before many rods he fastened cious eyes and nostrils on a short, thick bunch dars. Eyes grew more intent, nose more confident, quarter-past twelve. "Whoa!" Still as a statue. by dog Bang tries his best to imitate Mr. Trump's essional pose, and save for limp crooks in his tail a few other discrepancies does very well. "Buzz! k!" Well, you know how a flying grouse looks a charge of nitro powder has driven an ounce of 6s into his smooth brown plumage. Mr. Trump tri- hantly retrieved, a process watched with greatest rest by Bang, such great interest in fact that it was d needful to place a restraining hand on his collar whisper words of admonishment into his reluctant

ter this first success Mr. Trump forged ahead with d confidence. We pushed along some distance. s alone with Trump, and puppy dog did a little work is own account with Sawgun. Suddenly in a rather place Trump froze to a point. I beat around, but d flush no bird. "Trump, you old liar," said I, 'll have to change your name to Ananias," but mp insisted that he knew more about it than I did. ut 6ft. in front of him was a small log, possibly 10in. ircumference. After a couple of minutes he crawled ly forward, crossed the log, and then began wagging ail. "I thought so," said I, but my verdict was too , for he stiffened again, pointing back toward the Out of patience, I walked up and kicked the log, ecting to start out a cottontail if anything. The nd kick shattered the log, when out ran a nice, lively ise. I held my gun ready, expecting the bird would and give me a shot, but he seemed to think feet bet- than wings. Suddenly there was dash, a hustle of s, and Mr. Trump returned with the sprinting grouse is mouth and rather a shame-faced look in his as though to say, "I know it wasn't good form, but he is."

ell, I forgave him, and examined the bird for nds, but could find no sign of injury, and finally came he conclusion that he was born tired and had fallen ctim to his own inertia. Mr. Bang came up just in to see the closing act in this small tragedy, and the t seemed to fill him with a wild, burning ardor to inguish himself. For a dog of ten months he had layed very fair talents in the way of pointing and king, but he had received no training whatever in ieving. The phenomenon as exhibited in its per- ion by Trump excited all his wonder and ambition. a short time a bird flushed, and crossing the river ck into cover on the other side. Sawgun decided to where he was, so I called the pup and splashed ss. Before we had gone far the youngster began show signs, but ere he had arrived at any conclusion grouse buzzed up far ahead. It was a bad chance, a quick snap started the feathers, and I thought the l dropped. I searched the vicinity diligently, but nd no bird. Finally I gave up, and walking some rds, came out in the open. In my search for the bird subsequent soliloquizing about my bad luck I very elessly forgot the pup. Perceiving his absence when eached the open, I began to make vocal demands for presence in no very pleasant tones. For ten minutes creeched and yelled in vain, and had just cut and nmed a nice slender sapling with painful and hostile ention, when I heard the puppy come rustling ough the underbrush. I involuntarily gripped my tch tighter and set my jaw, and—. Judge of my sur- e when the young gentleman crawled under the ce with a fine grouse in his mouth, trotted up and handed it to me as though it had been his regular duty for ten years, and then began a joyous waltz around me. I don't care if the deed was a trifle irregular; he had a good excuse for being conceited when I had finished talking to him about it.

It is a comfort to close a day's hunt by a clean, slashing shot, and it chanced that on this day we were comforted. We stood upon a wooded ridge, whose brush-covered sides sloped toward the west. The sun had set, but still flashed its scarlet danger signals in the sky—warnings that the black train of night was whirling in on a down grade. We were silently admiring the beauty of it, when Trump (who had other things in mind than sunset) came to a point some distance down the slope. It was a little dark to shoot, but we plunged down the side hill, thinking "just to hear 'em fly." The dogs stood in front of a small hollow, looking like white ghosts in the dusky cover. "No chance in this light," said Sawgun. "Well, we'll take what chance there is." So we placed ourselves in a hollow, that if possible we might see the game against the sky, and I picked up a large stone and tossed it into the thicket. My, what a bees' nest! Whir—whir! Three, five, six birds, but not a feather could we see. Whir—whir—three more! Ah, those are higher. Two swift-moving, dark spots against the crimson west. "Bang! bang!" Well, that was luck. "Fetch, boys; good dog, yes he was, both of him," and we started home well pleased with the dogs, and the dogs well pleased with themselves. "Happiness from giving others pleasure is surely a dog's religion," quoth Sawgun, as he patted his game pocket complacently.

Game in Western Nova Scotia.

THE shooting for a sportsman in western Nova Scotia begins at the seashore with the sand peep and ends with the moose away back in the wildest forest. First, there are the sand peep and the shore birds in August. From the first of September to the following March, black or blue-winged ducks are to be had along the shore of the Atlantic on the south, and St. Mary's Bay and Bay of Fundy on the north. On the extensive marshes that line the tidal rivers, and following the rivers back to the interior lakes, the blue-winged duck will always be found in season.

About the middle of November teal, sheldrake, red-reads and blue-bills come along, but these are only to be found near salt water. Before the duck shooting begins, from the 1st of August to the 1st of November, there is good snipe shooting in all the salt marshes and swamps. They are more plentiful than woodcock, but are harder to kill. I am speaking of what is called English snipe, that flush so closely, and with such startling rapidity; sight, gun and bird must be simultaneous. In August the sand peep flock, and like a silver cloud flutter, swerve and skim along the beaches and flats, with their incessant calling. It fills the heart of the small boy with delight to be able to see and hear the game, shut both eyes and bang away. I can remember in youthful days, too eager after the "bang" to bother with the gun, flinging it down in the muddy grass and water and starting on the run with both hands, gathering up the spoils; little balls of fat, juicy and tender.

Curlew and plover that were plentiful in former years are getting scarce. They are to be found on St. Mary's Bay and are in first flight about the middle of August. Jacksnipe come in a little later and are in flocks on the marshes in September.

To get to higher ground, the first bird of the season is the woodcock. They come to Nova Scotia the last part of March, and as early as the 10th of April young birds are hatched. They are on the wing the middle of August. The game laws make shooting legal the 1st of September. Go up any of the rivers, going back on either side to the bench land, which as a rule is the pasture land or back fields of the farms, and in the alders, swales and wet spots the woodcock are feeding. They feed everywhere, from barnyard to forest, and from ploughed ground to mountain spring. In woodcock or snipe shooting there is little need to worry over gun, shell or weather; the luck rests with the dog.

Every spring, when picking the first Mayflowers, the children and I never fail to hear the drum of the partridge, and I say to him, "All right, old boy, may your family do well and prosper." We stop picking flowers and listen to him as he begins with slow and almost measured beat, and quickens with a rush his drumming. The partridge family has a homelike fondness for old pastures and wood roads, the outskirts of old farms, and seems to like to be within sound of the axe at the woodpile, and the clanging bells of the farmers' cows. Off from the railroad and back from the post-roads, in nearly every part of western Nova Scotia, are old settlements, inhabited or deserted. In all these settlements good partridge and cock shooting are a surety; a sportsman is certain of finding game. This spring I happened to mention to a woodsman in one of the settlements that the Game Society had a new law passed that no person shall hunt, kill, buy, sell or have in possession any partridge for two years, that is to say, until Oct. 1, 1901. He would have taken it more kindly if I had hit him with a brick. "Why," said he, "there are 15,000 partridges in Dalhousie settlement that never saw a white man; tell you what, if they fly into my arms I am going to hold them tight; if they crowd into the house, some one is going to eat them." Nevertheless he cast a longing eye on the old gun hanging on the wall, and I am afraid this autumn there will be partridge feathers flying in the air. However, take warning, this is the law, Partridge—Oct. 1, 1901, for all of Nova Scotia.

Moose hunting is legal after the 1st day of October. On that date there will be hundreds of men out after moose with the callers in the backwoods of Nova Scotia. There are certain celebrated hunters and callers who have their own districts, and while all the woods of Nova Scotia are as free as the ocean, it is understood among the fraternity of hunters; that they stick to their own special territory. Notwithstanding this, one caller will often call up another instead of a moose. In October, when the clear moon is in the west, and just before daylight, the mist hanging low all over the bog, the call is answered, and then silence. The faintest breeze has to be reckoned with, the best judgment used as to shifting ground; listen! he is coming. The second call and no mistake about the bull this time. It is a rush, and "expedite order," as the war department would say. A crash through brush and timber, and he comes nearer with only your ears as witnesses, and then, just when you expect to see him, with rifle already at your shoulder, something goes wrong. The uncertain morning breeze has given the moose the scent of the hunters. Frightened by the click of a trigger or the snap of a twig, and after all the noise he made coming up, the moose vanishes. Listen ever so closely, strain your sight ever so much, it is no use. He goes away so silently, the fading mist before the rising sun could not disappear more quickly. Back to camp and breakfast; better luck next time.

Two parties once called one another up so that four people came together with mutual explanations and disappointment, and while these four stood talking in whispers at the edge of the bog the vapor lifted in front of them for a minute or two, and there, coming across in front, was as glorious a moose as ever trimmed a tree. The moose came on, walking slowly; so near every tip of his horns could be counted, and passed them; he disappeared, while these four mighty hunters stood as four statues, their guns as silent as themselves, until each with eyes unable to see the moose turned to gaze upon his companion, an idiotic interrogation point in each pupil. Jim told me how it was that they came home without meat, and when I asked how it was he did not fire, he said: "By the great horn spoon that hangs in the west, I never knew I had a gun in my hands, and if it ever happens again, may I be heartily shot myself."

For woodcock and duck shooting, try head of St. Mary's Bay, from Weymouth east, North Range and Digby Neck in Digby county, north and south along Annapolis River, in Annapolis county. For cock and snipe, Weymouth, Clementsvale, Round Hill, Tupperville, Belle Isle, Lawrencetown and Middleton, also along St. Mary's Bay. Moose districts, heads of the Jordan, Roosway and Clyde rivers; Tusket and Sissiboo rivers. The district south of Bear River and east of that. At Milford and south of Milford, at Kempt and Maitland, from these places guides and callers can be had, and canoes to the proper moose ground, West and East Dalhousie and the lands lying to the south and east.

The best route to reach the hunting grounds of western Nova Scotia is to take the Dominion Atlantic Railway S. S. Line from Boston. Information may be had by writing to Mr. J. F. Masters, the New England superintendent, at 228 Washington street, Boston.

F. C. WHITMAN.

ANNAPOLIS ROYAL, Nova Scotia, Aug. 26.

Ducks on the Ottawa Club Grounds

CLEVELAND, O., Sept. 24.—*Editor Forest and Stream:* As I wrote you about Sept. 10 that the indications were that the shooting on our Ottawa Club grounds was going to be good this fall, I thought you would like to hear about it. Two of our members were up shooting week before last, and one of them, Charlie Ranney, gave me this account of their shooting. They had told the keeper of the club house to call them at 3 o'clock on Tuesday morning, as they wished to go down in the lower marshes to shoot, and by the time they would get their breakfast and get down there and get blinded it would be about 5:30 A. M., and the ducks would be flying. Well, the keeper for some reason or other did not call Ranney until 5 o'clock, and he dressed and went down to Reynolds' room and called him, and told him it was 5 o'clock, and asked him if he was going out, and Reynolds said if it was so late as that he guessed he would not get up, so Ranney got his breakfast, and with his punter started off to the lower marsh, and this is his account of the shoot: "I went in through channel No. 1, and I put up hundreds of ducks, but I thought that the head of channel No. 2 would be a better place, so I went over to channel No. 2 and located right in the middle of a mud flat. Pulling the boat up on a muskrat cabin, we covered both ends of the boat with the flag from the cabin. We didn't get into the blind until about 7:30 A. M., but as there hadn't been any one into the lower marshes to scare the ducks up, it did not make any difference. As we scared the ducks up and were making our blind, they flew around us and did not seem to want to leave their feeding grounds. It seemed as though I had located right on the hub of a wheel, and all the ducks that came into the marshes flew right down the spokes to my blind. I had splendid shooting, and by noon I had forty ducks, mostly blue-winged teal.

"Along in the afternoon Reynolds came down and passed up Big Pond and located back of Dean Island, in Mound Spring. He did not seem to get much shooting and finally pulled up, and coming over my way, hailed me: 'Say! Ranney, every duck in the marsh seems to want to come to your blind; how soon are you going to pull up? I'd like to get some of that shooting myself.' As I then had fifty-three ducks, I told him I guessed I had all the ducks I wanted, and so I pulled out and he took my blind and got some shooting, although the flight was about over.

"On Thursday, the second day following, Reynolds got sixty-five ducks in channel No. 1. On Saturday Scofield came down in the afternoon and he got seventeen ducks up to 4 o'clock, and pulled out for the upper club house for supper. On Tuesday, Wednesday and Thursday of last week Scofield got ninety-nine ducks, and he told me that they were mostly green-winged teal; this duck generally comes down to our marshes the last thing in the fall, about the time the black duck or black mallard, as we call it, puts in his appearance. Scofield told me that on last Saturday most of the green-winged teal had disappeared, and the supposition was that they had gone back north, as the weather was so warm here. From this you can see that the indications of good duck shooting are proving true."

FRANK B. MANY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

Where the Birds Went.

CHICAGO, Ill., Sept. 23.—According to reports, a number of sportsmen of Galesburg, Ill., started out on Sept. 15 in search of a little prairie chicken shooting. The result was a large and unanimous disappointment. After hunting all day, one party managed to kill two prairie chickens, another got one bird and a third killed nothing at all. It was the general belief that the prairie chickens were all gone. Some of the shooters laid it to the "wet spring."

In connection with the scarcity of birds at Galesburg it may perhaps be suggested to mention the fact that during the past week a commission merchant by name of A. L. Weinberg, of Galesburg, was fined $254.15 for having thirty illegal birds in his possession something like a month before the opening of the season. Mr. Weinberg declined to state who were the parties who really shot the birds. As a matter of fact, it was well known that Galesburg shooters were killing chickens all through August. It seemed to be their belief that in view of the danger to be encountered by the prairie chickens in a "wet spring" it might be well to take them in out of the wet before they took cold. The general consensus of belief at Galesburg is that the prairie chicken is a hollow mockery, and in this position none is more firmly grounded that Mr. Weinberg.

Out in Minnesota, at St. Cloud, County Attorney John D. Sullivan and City Engineer Samuel Shute appeared before a justice of the peace and told what they knew about shooting chickens ahead of the law. They were assessed $14.75 each.

Season Ended.

We may say that the chicken season for 1898 is now practically over. It has simply been a question of protection. Where the law has been observed, there has been some shooting, and where the sooners have been in there has been no shooting at all during the legal season. Two weeks usually suffices to pretty well clean up the chicken crop after the opening day. In Wisconsin the chicken season is now regarded as practically closed. In some sections there was good sport, but from others come bitter complaints of the non-observance of the law. Minnesota had a good shooting season, and so did North Dakota. South Dakota I do not think showed up so well. In Nebraska the early days of the season were very hot, so that the dogs could not work very well, then came colder weather with frosty nights, and after that the quick packing up of the birds, which usually assemble in large flocks soon after the approach of fall. After the packing of the chickens it is hard to do much with them, unless they are on country where they can be followed some distance and scattered during the warmer hours of the day, when sometimes good sport can be had. In Arkansas the five-years close season expired Sept. 1, and at the expiration of three weeks the chickens are reported very much scarcer and very much wilder. It is thought that the next Legislature may put on another close term for this bird. Apropos of this restriction comes the rumor that so great has been the influx of non-resident shooters in the State of Minnesota this fall that there is strong talk of a $25 non-resident license for that State at an early time.

Ducks.

On the opening of its season last Thursday, the Duck Island Gun Club, of Illinois, had good sport at the club grounds, on the Illinois River, the total bag for the day amounting to 394 ducks. The following are the individual bags:

Canton members: W. H. Shaw, 25; Frank Grim, 28.

Farmington members: Woodruff, 22; Nappin, 15; Brimmer, 10; Wickwire, 12.

Peoria members: Lathy, 34; Clarke, 27; Bush, 15; McDougal, 27; Campbell, 20; Turner, 17; Allen, 24; Whiting, 22; Rayburn, 13; Fahnestock, 30; Armstrong, 10; Thomas, 3; Griswold, 1.

Pekin members: Albertson, 10; Strickfaden, 19.

Springfield member: Nelson, 10.

On the Horicon Marsh, of Wisconsin, the club members have not been having very heavy shooting as yet. There are a good many birds on the marsh, but they do not work well. The Northern birds have not yet appeared. Duck shooting is in full swing in the lake region of Minnesota this week. A number of parties have gone into Ottertail county, among others Messrs. E. N. Dellinger, P. J. Giesen and J. B. West, of St. Paul. The Wells-Dennis party, of Chicago, who usually make a fall duck hunt in Wisconsin, are talking of going out into Minnesota this fall, their location being not yet decided.

The law forbidding shooting before sunrise has been extensively violated in Wisconsin this fall. Two Menasha shooters were arrested by Warden Waite for shooting before sunrise, and were fined $29.45 each. They got one mudhen. This must be a gloomy world for them.

A duck shooting club by the name of the Decker's Lake Club has been organized at Salt Lake City, Utah, with a membership of twenty-four. They have leased Decker's Lake and the adjoining ground, and expect to have good shooting on wildfowl.

Killed while Deer Hunting.

It is stated that an insurance company in the East is hunting up information in regard to shooting fatalities in the State of Maine, with the purpose of getting up a new policy for sportsmen, it being thought that a great many sportsmen would like to go deer hunting and yet would like to leave their families something after death. At first sight it would seem that the risk of being accidentally shot in a wild and unpopulated region, such as that occupied by wild deer, would be something too small to notice, yet, as has often been pointed out in these columns, the number of men who are each year accidentally shot while deer hunting is very large. I have seen it stated that thirteen men were killed last year in the State of Maine in this way. These accidents are among the most deplorable and heartrending which can possibly occur, and one can conceive of nothing sadder for a shooter to carry through life with him than the remembrance of having carelessly shot a fellow sportsman. Especially sad is the instance of this nature which occurred at Merrill, Wis., last week. Two men were out hunting deer at night. They were both violating the game law, and neither knew that the other was hunting. One hunter saw the other, and fired at something he saw moving. He killed his fellow lawbreaker, upon whose head was found fastened a jacklight which he was wearing in the prosecution of his own search for illegal deer. This is the first of the fatal accidents of this sort to be recorded for this part of the West this season. We hear a great deal of talk about the justifiableness of shooting deer out of season by residents of the deer country, and a great many persons who ought to know better saying that the "local interpretation" of the law sanctions such killing. If nothing else can stop this unlawful work, perhaps the facts above related may serve to give it check. It is not necessary to give any names in relating facts so sad as the above, but I should think that there might be at least one illegal night hunter left alive who would now feel that he had played his part in the unsportsmanlike use of a gun, so that he might put aside the gun forever.

Back from the War.

To-day the FOREST AND STREAM office here received a pleasant call from a party of soldiers who are on their way home from the war. These men are Lt. Will Cave, Sergt. D. J. Hefron, Corporal Kennedy and Private Harris, of Troop F., Third U. S. Cavalry, Griggsby's Rough Riders. The above are all from Missoula, Mont., and with them is H. M. Reynolds, of Troop L, the same regiment, who comes from Butte, Mont. This regiment has been at Chickamauga Park all summer and never got to the front. They say that there was a great deal of sickness, not very much fun and no fighting at all, which was hardly their idea of what war ought to be. One of the amusing things was the workings of the U. S. army system, under which the cowboys of the far Northwest were put through horseback drill in order to teach them to ride. They had one or two lessons bareback and then it was concluded that they could ride, and all they needed was horses. Later they got their saddles and were found able also to ride with saddles, and not fall off. Lt. Cave is one of the best-known sportsmen of Missoula. He has been twice to Alaska on the Klondike trail, and was one of the passengers on the ill-fated Corona, which was wrecked. He lost his outfit in this shipwreck, and came back home, concluding then to go into the army, where he could have a quiet time.

A ROCKY MOUNTAIN GRIGGLY.
Killed by Dr. J. J. Noll. Photo by S. N. Leek.

Personal.

Mr. Bennett, of the Winchester Repeating Arms Company, and Capt. Dressel, of the U. M. C. Company, were both in town this week and have passed on, the former to St. Louis and the latter to Omaha.

Mr. G. W. Cunningham, of Portland, Ind., a well-known FOREST AND STREAM contributor, paid the office a pleasant visit this week.

Mr. John Waddell, of Grand Rapids, Mich., one of the best amateur fly-casters of that city of expert anglers, made Chicago a brief visit this week, and called among his friends of the Chicago Fly-Casting Club.

The many friends of Mr. Irby Bennett, the Southern representative of the Winchester Repeating Arms Company, will be glad to learn that his health, recently very poor, has been much improved by a sojourn at Ferndale Springs, near Nashville, Tenn.

The Trappers Entrapped.

This week Warden Harry Loveday came over to my office and left word to come over to Judge Richardson's court if I wanted to see some fun, for he had ten cases for violations of the State game laws on for trial, and they would likely all come up at about the same time. These cases proved to be a collection secured by Phil Goetter, an active deputy, who has been lying about the outskirts of the town watching the young bird trappers, of the sort to which I once this past spring called attention in these columns. The boys not only trap, but shoot song birds, and the deputy had made a good little round up. Twenty-three boys were arrested for assorted offenses of this ilk, and there was weeping and wailing in the Bohemian homes to which most of them claim allegiance. Among the cases settled by the justice were those of Fred Narjes and Sherman Clayton, who got $15 and costs for killing three woodpeckers and a dove; J. Chochole and Joseph Kuesknadit, $10 and costs, for two bobolinks and a lark; Paul Kobyleke, $5 and costs, one thrush; Stanislaus Kajava, one robin, $5 and costs. All these boys promised to pay the fines soon, and left an assorted lot of guns as security. Their mothers shed large, burning tears, and I doubt not landed frequently on the persons of the erring youths when they got home, showing them that home and mother are good things for boys.

At Blue Island there were five arrests on charges similar to the above, and five fines rattled comfortably into the pocket of Mr. Goetter in consequence thereof. At Morgan Park—another suburb—three cases were landed, and at South Chicago four arrests were made for shooting before sunrise. All in all, Monday was Mr. Loveday's busy day. He crowned this period of activity by seizing 800 teal duck, which some misguided mortal in Wisconsin had shipped into the Chicago market. Adding to this the little fine of $254, secured against Weinberg, of Galesburg, elsewhere mentioned, and it would seem that Mr. Loveday might go out and buy himself a large and expensive cigar and smoke it very cheerfully, having offered certain other persons material which they may smoke in their pipes.

In Darkest Minnesota.

In the opinion of Messrs. H. G. McCartney and his friend, Mr. Jennings, who are just back from a few weeks' exploring trip in the lake region north of Kabekona Camp, in the Woman Lake chain of Minnesota, the country lying north and northwest of Grand Rapids, Minn., is without doubt properly to be called Darkest Minnesota. This State is in many ways the banner State of them all in protective matters, but there are still a few localities where they need an expeditionary force before the inhabitants can be taught to be decent. Mr. McCartney told me that at Grand Rapids he ate moose meat at the hotel table, not knowing at first what sort of meat it was. He was told that moose meat was served there whenever it was so desired, and that moose and venison were staples there at any season. He said he found a number of men ready to take out anybody after moose or deer a couple of months ahead of the season. He saw one Chicago party, a man whose name I could not get, but who was said to be a man whose name would be very surprising if made public in this connection, and this man told him he had just made arrangements to go out on a moose hunt that week (about Sept. 15; nearly two months before the open date). Mr. McCartney and Mr. Jennings went out with a guide named Hank, who acted as boatman on their voyages, and who claimed to be a celebrated sportsman and guider of such. He said that no game warden could ever come into that region and do business. "Do you mean to tell me I can't kill a deer whenever I want to?" he asked; and he was grieved when told that he could not guide at Kabekona if he did illegal shooting. At Winnebegoshish Government dam they found no fishway, but they found in charge of the dam a man who said he always speared all the fish he wanted, and lived on moose meat or venison whenever he could buy it, which was oftener in summer than any other time. This man had a spear about as long as a horse and wagon, and he said he sometimes got muscallunge weighing 40lbs. below the dam. At Grand Rapids spears and nets were openly known. Going up to the Deer Lake region the travelers found a lovely lake, but did not find much fishing. A farmer told them that the market fishers from Duluth cleaned that out long ago. He said that ice fishing was very common in the past. Mr. McCartney said he came back feeling very

badly over the state of affairs he saw up in that country, for it did not seem that the men had any respect at all for the law, and cared nothing about keeping their game. A few weeks ago I had occasion to chronicle the arrest on Deer River of one outfit of skin hunters who had been doing a big business, but were rounded up. I am not indisposed to believe that after a while something may be heard to drop in the vicinity of Grand Rapids, in spite of the large talk of the residents. Of course, it is not all residents who make this sort of talk, but there is a big element of a lawless sort at that point or in that vicinity. Yet I have such faith in the Minnesota commission that I feel sure this state of things will not endure forever.

One sad thing which these gentlemen discovered in the Leech Lake region deserves public advertisement, and that is the shameful manner in which the Government timber is being stripped from the Indian reservations. Around Winnebegoshish the timber is nearly cleaned out over some areas. It seems that the law permits the cutting of burned timber under certain restrictions. The gentle lumber thief just goes in and burns over a section of country, then cuts off the timber, as he may "legally" do. Sometimes a little fire is built at the foot of a tree sought to be stolen, and its bark singed a little. It may then "legally" be cut down. Mr. McCartney and his friend came back disheartened by what they saw. They do not wish in the least to make any sensational statements, or to give any part of the grand State of Minnesota a "black eye," but they say all these facts are susceptible of easy proof. It is a pity they are.

At Gokey's Town.

Word from Dawson, N. D., which may more properly be designated as Gokey's Town, runs to the effect that friend Gokey was out not long ago and caught three unlicensed shooters from South Dakota. He assessed them properly on the spot and took charge of their guns until they shall forward the amount of their licenses. In Minnesota the wardens swipe the dogs of the sooners, and in Dakota they get the guns. I beg to call attention to the fact that the advertising columns of the FOREST AND STREAM are an excellent medium for the sale of good dogs and guns, if not too much shop worn, but I still think I shall first make a trip out that way and pick me out a nice dog and gun from the Gokey-Fullerton bargain counter. You can get them for a dollar thirty-nine up.

By the way, Warden Bowers, of North Dakota, played a low-down trick on two non-residents not long ago. He met them on the cars, and talked with them pleasantly, learning that they were coming back from a successful hunt. He asked them if they had trouble about their licenses, and they laughed at him joyously, saying that licenses might be paid by others, but by themselves never at all. Then the State warden pulled his card, and they concluded that they would loosen $25 each. Don't think, because a man is smiling, that he is necessarily not a warden.

At Dawson this week there are several parties from the East, among these Mr. J. R. Moore, Mr. J. D. Wright and Mr. Thompson, of New York city; Mr. J. N. Paterson, of Philadelphia, and Mr. C. D. Raymond, of Chicago, all of whom are said to be finding good sport.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Vermont Game Conditions.

NORTH FERRISBURG, Vt.—*Editor Forest and Stream:* On looking over Mr. Hough's letter in FOREST AND STREAM of Sept. 17 I find that he brings up a point which I have always claimed, that to shoot at ducks before sunrise or after sunset drives them from the feeding grounds, and that even the market-shooter will not allow it to be done if he can help it.

I find from observation and from local sportsmen that for some years our promise for a little sport in duck shooting at migratory birds has not been as good as the present one. The water on our marshes being very low, and the wild oat crop far above the average, give a sufficient guarantee that the ducks would be glad to tarry with us for a time on their way to their Southern home. But the booming of guns on these marshes may be heard at most any night from 4 to 9 P. M., and the echo has hardly died away before the morning shooting begins; and I wonder if we are on a par with the pot-hunter to allow it to go on. Why not follow the teaching of FOREST AND STREAM and help a good thing along by putting in a good, solid plank in the platform, by stopping the sale of game?

We find in the few days since open season on ruffed grouse began that this year is like the past few years in that this finest of all game birds is growing less; and going over some of the covers which in former years were well stocked we listen in vain for the whir of wings. The reasons for this are plain: First, illegal shooting before open season. Second, we find partridges on the market in nearly all the cities and villages of the State. Only two years ago the markets in a certain village were so oversupplied at 50 cents per pair that shipments were made to the two principal cities of the State.

I would like to ask the members of the Vermont League if this means protection. Since the game league of this State was organized I fail to know of any case being prosecuted for illegal shooting in this town. Still we have nearly every year been given a warden to protect the fish and game interests here. But he has generally proved himself a "sooner" or used his commission as a shield to cover his own shortcomings, and has proved of little benefit.

I think that all honest sportsmen are with me in hoping that when the lawmakers meet this fall they will grind out a law that will prohibit night shooting and the marketing of game, or else repeal all laws relating to the protection of fish and game, giving all men an equal chance while the small supply lasts.

FERRIS.

Readers are invited to send us the names of friends who might be interested in a current copy of the FOREST AND STREAM. *We shall be glad to forward a specimen number to any person whose address may be furnished us for that purpose.*

Notes from New Brunswick.

Sept. 20.—A very orderly but businesslike mob is now parading the main street of Fredericton. It is simply the .30-30 men lining up for the liquids. Judge Downs, of Stamford, Conn., has just arrived from McKiel Brook Lake, where he gathered in a big bull moose, which had a 52in. spread of horns, with the .30-30 at a distance of 250yds. The judge remarks that this life is almost too good for poor people. With the judge on the trip was Mr. G. C. Blickensderfer, also of Stamford. They had as chief guide William Griffin, of Stanley. They went into the woods Sept. 6, and have brought out two moose and a bear. Fourteen moose in all were seen on the hunt. Also a number of caribou, but none with the requisite quality of horns.

The people who believe that a quick-firing cannon is about the right thing for a bull moose are now in position to receive liquid nourishment at the expense of those who believe in the small bore. Up to a very recent date the well-known guide Adam Moore, of Scotch Lake, was a very eloquent defender of the .30-30 for big game. He had a right to his opinion, based upon the fact that last December he knocked down two caribou with one shot from the little weapon. But in these latter days we hear earthquake rumblings from the vicinity of Bald Mountain on the Tobique. It is Adam changing his mind. Writing the other day to a sportsman in this city, Mr. Moore remarks: "Be sure and bring the biggest gun you can find. Get the Maxim at the barracks if possible. We put thirteen shots from the .30-30 into a bull with a 5ft. head and it only made him happy."

Notwithstanding their experience with this bullet-proof monster, Adam's people seem to have had fine luck. They consisted of George F. White, A. Camman and another gentleman, all of New York. They brought out two moose, and one of the best caribou heads that has been taken for years on the Tobique.

Mr. Charles Reardon has just returned from a trip with Arthur Pringle on the Nor'west Miramichi. The season was almost too early for successful hunting on the barrens, but Mr. Reardon managed to bring down a very large caribou, which he prizes very highly as a trophy of the trip. He will return in November for a still-hunt on the snow.

Senator Baird and two sons, of Perth Centre, had a very successful hunt on the head of Tobique. They accumulated two moose and narrowly escaped a third.

John G. Prouty, of Spencer, Mass., who has been hunting for two weeks on the head of Cain's River with Arthur Evans as guide, had a fleeting glimpse of the moose that belonged to him, but there was something wrong with the time-table and Mr. Prouty was unable to connect. In a personal note Mr. Prouty says: "I had a very good trip in some respects, but no hunting luck, only seeing one bull moose, and he 400yds. away at 7 o'clock in the evening, when too dark to get him. Arthur and Dick Evans did all they were able, working as hard as any men could, and it was no fault of theirs that we did not get the game, but simply hunters' luck. We saw plenty of signs, and Arthur said it looked as if when the moon came full the chances would be good."

Dr. E. Morrison and Fred Morrison, of Northwest Territory, have left for their Western home, after a three weeks' cruise in the Temiscouata region. They had fine fishing and secured several caribou and deer.

A postal card coming by bob-sled express from the head of Little River announces that Mr. Charles Randolph, of this city, who has W. H. Allen, of Penniac, as guide, has secured his moose. The party saw five moose and thirteen caribou in ten days. Mr. Allen's next party will be Mr. J. H. Ehrich, of New York, who is due here Oct. 3.

Fully twice as many American sportsmen are here this fall as last. They are mostly readers of FOREST AND STREAM, who have figured out for themselves when and where to go. It is hardly to be wondered at that some of them fail to secure their game. It is not much use to come to New Brunswick after moose if the sportsman has only a week or two at his disposal. As the old Indian guide used to say: "Sartin, if you want moose you got to hang!"

A party of New York sportsmen, consisting of Samuel P. Blagden, Jr., Crawford Blagden and J. G. Forbes, emerged from the wilderness to-day, after a stay of about three weeks on the Sisters Lakes. Their guide was Edward Norred, of Boiestown. They brought out two fine moose heads. The largest, having a spread of 52in. and palms 15in. wide, fell to Mr. Samuel Blagden. The other was a "combination" moose, in whose demise all hands took a lively part, the chief honors of the affray falling to Crawford Blagden. Seven shots from the .30-30 in the head, neck and shoulders were required to bring down this moose. The American sportsmen, who are coming out with their trophies these days, are about as happy as the law allows. Their genial and sportsmanlike qualities make them immensely popular with all classes.

Messrs. A. Weed and J. D. Foote have returned from a short hunting trip in the Rocky Brook Lake region. They had as guides Tom Craig, of Stanley, and the well-known expert "caller" Ed. Church, of Shirley, Me. Both Mr. Weed and Mr. Foote had some exciting experiences with bull moose. One moose was called up on the night of the 12th, but got away, though twelve shots were distributed in his vicinity. Mr. Weed called up an immense moose on the 15th and struck him three times with a 40-82 (smokeless), and wounded him severely, but lost him, though the animal was trailed for some distance by the guides.

E. N. Graham, of Godalming, England, Henry Braithwaite's first party, has just emerged from the Crooked Deadwater, where he shot a fine moose and a remarkably large caribou.

Word has been received from Major Hallowes, who is now in Braithwaite's country, under the guidance of Tom Pringle. The Major went in last week and has already bagged a nice caribou.

The only report thus far received from the Canaan country is that of a moose shot by George Heyss, of New York, who had as chief guide Cyrus Kierstead, of Fork Stream, one of the most efficient hunters in that locality. This moose had a horn spread of 45in.

Three exceptionally massive and perfect caribou heads arrived in St. John on Friday. Two of these came from an American party piloted by John Connell, of Bartibogue; the third was shot on upper St. John waters by J. J. Hale, of Woodstock.

Mr. S. L. Crosby, the Bangor taxidermist, has already received this season one head from New Brunswick with a spread of 60in. This moose was shot on the Restigouche. I have not been able as yet to learn the name of the fortunate sportsman.

FRANK H. RISTEEN.

The Repeating Shotgun.

THERE is a class of sportsmen that always say "If you do not use the implements of sport that I do, you are anathema!". If your rod weighs an ounce or two more than theirs, your line runs a strand heavier or you shoot a twelve where they favor a sixteen gauge gun, you are either no sportsman or else one of a lower order and to be viewed at all times with grave suspicion.

Under ordinary circumstances this class of arbitrary bigots might well be dismissed with the same scant consideration that was accorded the voluminous eloquence of the "New Issue Darkey" who had denounced an "old-timer" with thunderous and high sounding invectives.

"Is you done?" said the old man.

"Yes!" was the reply.

"Then, suh," said he with slow deliberation, "all them things what you call me you is."

The unqualified and sweeping denunciation of the man who uses a repeating shotgun is one of the most prevalent forms of displaying this uncharitable spirit by the would-be dictators, who find themselves so situated that the principle of domestic economy does not influence them in selecting a shotgun.

They base their arguments on a false theory entirely, apparently believing that the repeater is necessarily the weapon of the sportsman with questionable ethics, or pot-hunter. That this is by no means the case any fair minded devotee of the gun can testify. There are other circumstances, besides the mere question of taste, that men should and do consider when buying a gun. It is the man and not the gun that must be classified. As an anti-bicycle Englishman said to a friend just returned from the wilds of Africa, who was much interested in his first view of a bicycle, and asked what made it go at such terrific speed, "It is the d—— fool on it."

So it is the breed of the hunter and not the brand of the gun that makes the sportsman, or the reverse.

The $20 pump gun, carried by hunters in jeans and brogans, has committed much crime in the name of sport; but the $300 double gun carried by dudes in imported corduroys and moose hide boots has committed more.

Private cars have hauled more shooters afield who presumed on their elegant outfits to commit outrages than ever were committed by reason of the opportunities afforded by the facilities of the inexpensive repeaters. You cannot change a hog's nature by curling his hair and polishing his hoofs; nor can you change the instincts of a man by changing his gun.

You can trust a gentleman, arm him with what you please, and there are many of them that shoot the repeating shotgun. It is not the gun that a real lover of guns would prefer for sport, had he unlimited means and nothing to consider but his inclination in making a selection. A good double-barreled gun, of any standard make, is to be preferred to any pump gun, by the man who hunts for sport and regards his morals; but for the man of limited means, who will not be satisfied with an uncertain shooter, the pump is a great blessing. The writer has used one occasionally for the past few years and can truthfully say that it has not been a source of demoralization.

For the amount invested, it has given the best results of any gun he ever bought. It is the gun that is "reached down" whenever any extra hard long-distance work is wanted, and it does it well. When he feels justified in replacing it with a high grade double, he will do so; but until that time comes he will go right on shooting it and shocking the delicate and highly organized nervous systems of those effete sportsmen—many of whom left to their own resources could not afford even a pump gun—who think that opportunity is the sole demoralizer of the sportsman. Shoot the best gun you can afford to own, boys; but do not indulge in sweeping denunciations of those who do not agree with you as to which that is; or who cannot afford as fine grade as yourselves.

LEWIS HOPKINS.

A Maine Center for Fish and Game.

TRINITY COLLEGE, Sept. 12.—*Editor Forest and Stream:* During the month of August and the first week of September I fished on Big Fish Lake, Aroostook county, Me. Although my luck was variable, I can say that the lake fully lived up to its name. The largest trout I caught weighed 3¼lbs., while my guide caught one that weighed 4lbs. Parmachenee-belle seemed to be the favorite all-round fly, and was always on my leader. With bait you were almost always sure of a good string of small fish, with an occasional large one. The best lot caught on the lake during July and August consisted of eleven fish, total weight 25lbs. At any time it was possible to get 150 trout in the brooks, averaging perhaps 4oz. The supply was apparently inexhaustible. We never caught any more fish than we used on the table, and threw the rest back, including all the small ones.

Big game was plentiful. One evening after a hot day, while paddling along a mile and a half of the shore, I counted eighteen deer. We saw only two caribou, but in the back country tracks were fairly thick. Moose were much in evidence, and in the same "bogan" we saw eight moose at different times during our stay. In the country toward the Musquaycook Lakes the guides reported moose very thick.

Tom Bennett, who, with Fred McNally, runs a camp on Moose Point, has certainly a genius for cooking, and I never lived better in my life than when he was catering. Chas. M. Sutherland, better known as Plum, and Fred McNally were our guides, and deserve the high reputation they already possess.

W. McA. J.

Adirondack Deer Hunting Conditions.

Editor Forest and Stream:

I believe Mr. Burnham is right in saying in "Adirondack Deer Hunting Conditions," in your last iissue, that the non-hounding law does not suit most of the native hunters and guides of that region; also in suggesting that a selfish motive is behind the law. I differ, however, as to the early opening of the season. The "city guests—business and professional men, college students and the like—who found it more convenient to hunt in August and September than later," form a very large proportion of male visitors to the Adirondacks, and have as good right to their legal quota of deer as residents, or the smaller proportion of city sportsmen who can hunt whenever they choose. But with most of the former class it is a deer in August or September, or never. The season is not too long for fairness all around. Again, it is affirmed that in many sections deer are increasing from year to year. But this is not due to the fact that hounding is not permitted. Competent judges, veteran guides and veteran sportsmen, agree that at least half the deer run by dogs escape. But it is true that the keeping of dogs tied up during the close season has had a salutary effect.

Another phase of the operation of the present law: From conversations with reliable guides this summer and from statements by a gentleman whose business brings him into touch with nearly all the Adirondacks, I am convinced that far more deer were killed last fall than in previous seasons. The killing was done largely by guides. They were indignant at the law—it interfered with their business by keeping many sportsmen away, and those who were there could not hunt as usual; as a consequence the guides could not earn their living in the usual way, and so they clubbed together and slaughtered deer for the winter's meat. Who can blame them? They and their families must live, and they must live off the forests. In the absence of sufficient paid employment, they worked for themselves and their loved ones, and a large toll of deer was the price of their labor. This, I am credibly informed, is the simple fact of the case through a large portion of our beautiful North Woods.

On the other hand, however, it is believed that the Maine woods have drawn a part of the sportsmen who formerly went to the Adirondacks. Possibly more vigorous efforts at restocking our trout waters would help to turn the tide back again. State interests would certainly be promoted by such restocking.

JUVENAL.

Two Opening Days.

DUNBARTON, N. H., Sept. 16.—*Editor Forest and Stream:* Sept. 15 was the opening day of the shooting season in New Hampshire. Long before I was up in the morning, in fact, as soon as it began to grow light, I heard guns in all directions. I had arranged to go out with one of my neighbors, and we started about 8 o'clock. I had heard a good deal of shooting on the grounds we proposed to hunt, and in consequence we did not find a single brood of birds which had not been broken up. A single bird here and there, or at most two in a place. At half-past 1 o'clock we had killed eleven grouse, five to my neighbor's gun and six to mine. We came home then.

Twenty-five years ago I started out on the opening day to hunt over part of the same ground I was on yesterday. I owned then a young setter, which I thought very promising. I had spent a great deal of time training him during the preceding spring and summer, and he proved to be the best dog I ever owned. My intention on his first day after grouse was not to hunt him much, to let him find and point the birds I killed, and to accustom him to hearing them get up. I found the first brood of birds in about five minutes after leaving my house. I shot at and killed the first bird which rose, and left the rest. I went on in this manner during the time I was out, getting usually from one to three shots on each brood when the first rose. I did not try to follow them up, but went on after another brood. About 2 o'clock I had killed ten grouse, and I then gave up for the day.

Now to compare the two days. There was not very much difference in my two bags, but there was a vast difference in the number of birds found on each day. Yesterday we followed up each bird we started, and we got most of them. On the other day I did not follow up any of them, and I left in each brood three or four times as many birds as I killed. On the opening day of twenty-five years since I did not meet nor hear of any one else out hunting, nor did I heard a single gun other than my own. Yesterday there was plenty of evidence that gunners were numerous. The sharp crack of nitro and the heavier report of black powder was almost incessant in all directions. Surely the opening day of 1898 was celebrated as it never has been before in this vicinity in such a truly orthodox Fourth of July manner.

C. M. STARK.

The Maine Moose Student Case.

UNTIL a month or two ago there was widespread complaint made about the moose law that was passed two years ago. Mr. Carleton asked that the absolute imprisonment clause be added to the law in order to carry terror to the hearts of the men who could easily pay a heavy fine for killing moose out of season. He pleaded so earnestly and so eloquently that the Legislature granted his request, and the bill became a law. All went well until the famous "students moose case" came up in Piscataquis county. Then it is claimed that Mr. Carleton veered off on another track, for what he claimed were sentimental reasons, and used his every endeavor to clear the boys who had confessed to the crime. He even went so far as to make an eloquent plea before the Governor and his council, asking that no papers be issued for the purpose of bringing the boys back to trial. When he succeeded a howl went up from eastern Maine that was echoed in all the papers. Mr. Carleton contended that as the criminals were mere boys and as this was their first offense they should not be punished. The hunters argued that if a moose law meant anything at all, it meant justice to rich boys from Connecticut and Pennsylvania as well as justice to hungry hunters in Maine. They further contended that questions of youth and responsibility were matters for the court to decide and Mr. Carleton was meddling with what was none of his business when he stepped in and diverted the course of justice. If the court believed the boys deserved clemency the judge could suspend sentence and place the case on file. Perhaps this one case had more to do with bringing the game laws of Maine into contempt than all the other illegal acts that have been committed in Maine for years. Beyond a doubt Mr. Carleton made a mistake in allowing his sympathies to run away with his judgment, but he has done much to atone for his error since the boys gave him and his law the laugh of defiance. He has been prompt, careful and industrious to investigate all reports of game law violation. He has devoted a great deal of hard study to learn how the laws may be enforced. He has shown himself loyal to the best interests of Maine in many ways. Just now he is advocating the repeal of the "absolute imprisonment" clause in the moose law, and making the penalty imprisonment or fine at the discretion of the court. As a heavy fine means imprisonment to most poor hunters of Maine who violate the law, and as most of the hunters who come to the State are well to do, such an act seems an unjust discrimination against the citizens of Maine and in favor of the visitors, though it is possible that Mr. Carleton can put another interpretation upon his idea.—Bangor News.

Are Bull-Bats Game?

ASHEVILLE, N. C., Sept. 20.—The boys have been having great shooting at night hawks, which are called bull-bats in Virginia and southward, and last night some scores of the birds were killed on the baseball ground within the city limits, an hour before sundown. The birds have been flocking in large numbers in this vicinity at intervals during the past six weeks, but will soon leave for Louisiana and the South. They afford excellent practice for Stevens' rifles, as well as for scatter guns, and are easy to hit after one has learned their flight movements. For September shooting bull-bats afford better sport than reed birds, to my notion. At all events we on the mountains have our chances for legitimate early field practice, as well as you uns on the marshes. Just why this particular flight should have selected the ball grounds for their evening quest is not altogether clear; though one can seem to trace a close analogy between bat and ball when the game is on! If the bat doesn't happen to hit the ball, the ball is likely to hit the bat, don't you know?

We had a platter full of the birds on the breakfast table this morning, and as a comestible they were not half bad, as our English friends put it, the flavor being like that of many beach birds, or perhaps of a jacksnipe, and there is quite a good lump of meat on the breast. I don't see why they should not come within the category of game birds?

Night hawks are common in the Catskills and Green Mountain ranges, and I have found them breeding in considerable numbers in late June on the St. Lawrence River plain, among the Thousand Islands. As far as I have observed, there and in Massachusetts and elsewhere they invariably drop their eggs on the flat of a bare rock, trusting more to the radication of the summer heat to hatch out the young than to the maternal body warmth. Nests are easy to locate, if one watches the movements of the mother bird, but they are not so easy to find. The fledgelings are so nearly the color of the rock on which they nestle that I have inadvertently stepped on them in spite of great caution in my search for them. On the whole, they are among our most interesting birds, their structure and markings being as singular as their habits. They are exclusively insect-feeders, and their quest is wholly in the upper air.

CHARLES HALLOCK.

The Ontario Deer Law.

CHIEF GAME WARDEN EDWIN TINSLEY sends us a copy of the circular of inquiry he has sent out to deer hunters. It runs: "During the last session a good deal of discussion took place as to the legislation respecting deer, and particularly as to the change in the law prohibiting the killing of deer in the water. There have been very divergent opinions expressed regarding this provision of the act, and there always have been extreme differences of opinion, apparently about equally divided, as to the propriety of allowing the hounding of deer. Admittedly the coupon system has had a useful effect in limiting the number of deer brought out, and there are those who urge that the prohibition of hounding would very much reduce the yearly slaughter of deer. The views of sportsmen on all matters affecting game are valued. Sometimes, however, their opinions are not founded on considerations of game protection or limitation of the number of deer or other game which may be taken. It is, however, thought that it might be useful to have the views of those who last year received licenses to shoot, on some of these matters, and I accordingly enclose herewith a blank form with questions, which I will thank you to answer and return to me. It will be most advantageous if you will in the first place give your answer either affirmatively or negatively, and then add any reasons which may occur to you.

"Questions.—(1) Do you approve of the hounding of deer? (2) Do you think the abolition of hounding would conduce to the increased protection of deer? (3) Give reasons for your answer to No. 2. (4) Do you approve of the killing of deer in the water or when just leaving the water? (5) Give reasons for your answer. (6) The protection of deer being the object in view, please make any suggestions which you may consider useful to the Government or the commissioners on the subject."

Under date of Sept. 23 Mr. Tinsley writes: "Sufficient returns have not as yet reached me to enable us to determine what the ultimate result will be. So far there is a large majority in favor of hounding, also in favor of prohibiting the killing or pursuing deer in the water. The allusion to this matter in your last issue is substantially correct."

Night Rifle Shooting.

IN FOREST AND STREAM of Sept. 10 your contrib Backwoods gives his plan of night shooting, notabl coons. He is no further back in the woods than I, I can suggest some things on the subject that have improved and approved by the experienced.

I have so far advanced in the higher ethics of sp manship that I do not like to kill animals any more when it is necessary or judicial I want them kille humanely as possible. Therefore I ask you to what has been fully established as the best metho shooting animals by night, particularly those that into trees.

Instead of depending upon the light of the m which is not always where and when you want it, under its best conditions will most often cause the sl er to miss and maim, let Mr. Backwoods merely miner's lamp, or wheelman's lamp, or any small lig his hat or cap, immediately over his eyes. If he then glance along the sights of his rifle, and if he reputable marksman, he need seldom fail to place his let fairly between the eyes of his victim, thus killi instantly and not injuring its pelt often.

The eyes of a coon or any other animal that cl trees will be directed to the lamp, will shine like balls of fire, and it is an easy performance to pl bullet squarely between them, as the rays of the gleam along the rifle barrel and over the sights. darker the background the better the method pr Try the experiment at a piece of white paper i dark, Mr. Backwoods, and profit thereby. In th sence of a small lamp that you can attach to your h cap, a lantern held or placed behind the shooter, s its light will gleam along the gun sights, will an but is not as good as a smaller light attached t hat or cap. I will undertake to kill ten coons straigh shoot them all in the head, if you will get 'em u decent tree. You may have the night as dark a can fix it.

RANSACK

SHASTA MOUNTAINS, California.

Boston Gunners.

BOSTON, Sept. 23.—Not one of the Boston gu that went down to Maine last week has returned any partridges. The universal verdict is that tridges are exceedingly scarce. Not much bett ports are yet to be had from the covers of New H shire. Leonard Chapman, the boy of seventeen the broken-stocked gun, is winning laurels as a tridge wing shot. He took two more on Mond the Reading woods. His dog, a pup of his own ing, pointed the birds, and when flushed the b took them both. He has also shot fifteen gray sq since the season opened. A Boston policeman h over the same ground all one day last week, with dogs, but did not get a shot. C. H. Tarbox has one day after the birds in the vicinity of Byfiel without getting a shot. The Plum Island gunners not yet reported any good flights of shore birds. weather has continued too fine for such sport, birds fly too far out to sea. From Monomoy are more good reports of bird shooting. L. S. H brought up twenty birds on Monday, and believe he could have doubled the number if he could stayed another day.

Some big trout have lately been taken at the Dam, Me., since the cooler weather, but none monsters that have been taken there in days go Trout up to 4 and 5lbs. were taken there last we the regular fishermen, who have been waiting days for them. N. G. Mason has had good fishi Richardson Lake, though the water is the lowest ever seen there. Low water is doubtless the str reason why the big trout have not yet run up in pool below the Upper Dam.

SPEC

The Sporting Mauser.

NEW YORK, Sept. 21.—*Editor Forest and Strean* last week's issue Mr. E. Hough remarks tha Opie Read would like to get hold of o those Mauser rifles to shoot squirrels with. is a regular sporting model of Mauser rifle o market, which is sold by Schoverling, Daly & of this city. This sporting rifle differs from the tary rifle in the stocking and finish only. It h greatest penetration, longest range and flattest traj of any rifle made, and I do not doubt that Mr. Opie could kill a squirrel with it—and an elephant too, ever had the chance.

U. F. BEN

Virginia Shore Birds.

CHINCOTEAGUE ISLAND, Va., Sept. 16.—Atlantic birds of all the sorts are in the greatest abunda this writing. The only way to account for an u quantity of birds this summer and fall is the c rains that we have been having. The island peop me that plenty of rain will always bring the birds. rains will also have the effect of fostering the gro the grass on the under water bottoms of our bay, will give us a good supply of red necks and black this winter.

THOS. G. ELLI

Don't go by an Old "Brief"

No more than you would consult a last year's tab your train time. The latest Brief index is dated 15. If you have a July, 1898, or an August, 1898 Sept. 1, 1898, indexed Brief, send us the index le we will send the one for Sept. 15, 1898. If you h Brief which is index-dated prior to July, 1898, you get a new one. Forest and Stream Publishing Co

The FOREST AND STREAM is put to press each week on T Correspondence intended for publication should reach us latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Where to go.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

Down Among the Fishes.

ONE hot day in July a great and ancient pike was lying at his ease in the shadow of his own roof of lilypads and blossoms in as good humor with himself and all else in his watery world as was possible, for he had just swallowed one of his great-grandchildren a foot long who had recently done the same by a young perch who had just dined on a plump minnow.

Having all these diners and dinners inside him and no room for another, he was obliged, if not quite content, to be at peace with his fellow fishes, while he waited on digestion. Some of his lesser kinsfolk being aware of his enforced amiability, gathered about him in the hope of learning some useful lessons from his long and varied experience. Those who knew themselves to be too large for him to swallow ventured quite near, but those who were of a size that might find easy or even crowded accommodations in his maw modestly took back places. Even at that distance a creeping feeling shivered along their scales when the old pike turned a cruel eye upon them, as if calculating their length as to that of his own stomach.

"Say, Uncle," a 5-pounder of the inner circle remarked, by way of starting conversation out of the channel of commonplace observations on the warmth and clearance of the water, "I s'pose you've had some pretty clust shaves one way 'nother?"

"Glump!" The patriarch belched out a mouthful of water contemptuously. "You bet your gills, if I hadn't kep' my eyes peeleder 'n some o' you young fellers does I wouldn't be a-layin' here!"

"Course," said the first speaker. "But didn't them 'at was older 'n you never put you up to things? That's what we want." And the 5-pounder rubbed a bleeding jaw on a lily stem that moored a purple-bottomed pad to the great root below.

"Ah, I see!" The old pike grinned to the gills, disclosing every one of his cruel fangs. "You've been a-foolin' wi' some o' them cussed men's contraptions. Drowned 'em! I do' know why they can't torment what's ashore, instead o' comin' here a-botherin' us! We don't go a-travelin' 'round on land arter things 'at lives there. Not but what I'd admire to swaller one o' their young uns if I could git a holt o' one 't would go down, but I never saw one 't was small enough. Frogs looks like 'em, an' that's one reason why I luf tu swaller 'em. There is one pokin' his nose over the edge o' that lilypad up there," he observed casually, as his keen eyes detected a white chin a little beyond the purple rim of a leaf, it's owner quite unconscious of the danger lurking so close beneath it. "Now, if I was the least mite hungry, or had an inch o' room inside of me back o' my mouth, I'd just bump my nose agin the under side o' that pad an' off he'd jump, an' then—" he opened and shut his jaws suggestively, and at the hint a pike drifted upward from the inner circle of the audience until he struck the lilypad smartly with his snout. The startled frog sprang overboard all asprawl, and had scarcely made a stroke before the jagged jaws closed upon him.

"Pretty well done, nevvy!" the old pike was pleased to remark, as the chief performer in the brief tragedy complacently resumed his place in the circle. "But I da' say you'd ha' grabbed him jes' so careless if he'd 'a' come along past here straight-legged wi' a string haulin' of him?"

The unblinking eyes of the successful frogger asked, "Why not?"

"Course you would," chuckled his old kinsman, "but le' me tell ye, you do' want ter tech no frog 'at goes without kickin', 'cause he's got a hook in him, an' he's a-bein' towed, an', furder 'n that, you do' wanter never tech no sort o' thing—fish, frog, grub, worm, fly, nor bug, genawine or so seemin'—'at's got a string hitched to it, 'cause you may depend there's one o' them men to t'other end on't a-figurin' to ketch ye, an' if you tech his riggin' you'll git hurt, or wus."

"That's so," he of the wounded jaw affirmed, very emphatically. "It hain't more'n two hours sen' I found that out to my sorrow. I was hungrier 'n a mud turkle," he continued in reply to the inquiring eyes turned upon him, "an' there wa'n't so much as a drowned bug or a worm 'at had got adrift. I was as holler as an' ol' caddis shell, when along come a boat wi' some men in it an' scairt me int' the weeds. I noticed they was a-draggin' a string behind, but didn't think nothin' on't, an' then, as I lay, I see somethin' 'at looked like a shiner, an' when it got ag'in me I just lit out for it. Great gars! When I shet on to it, it was harder'n a clam shell, an' broke one of my best teeth short off, an' next I knowed there was a hook snagged in my upper jaw, an' I was a-bein' yarned along spite of all my back-finnin' an' crookin' my tail, an' takin' water into my mouth faster 'n I could pump it out o' my gills. Then I see it was that plaguey string that was a-fetchin' of me towards the boat, an' I could see one o' them men a-haulin' it in slow and steady. I changed ends, but it wa'n't no use. I was keeled over or turned 'round every time, an' so when I was most busted an' choked to death wi' more water 'n I could hold I gin up an' let 'em haul me, a-cussin' my foolishness every inch I went. When the man pulled me up alongside an' both of 'em grinnin' like two clams—it didn't seem as if there was a wiggle left in me—an' I thought it was all up with me, when the man h'isted me out o' the water by the hook. It hurt so tormentedly 'at I give a kick wi' my tail, an' happened to hit the side o' the boat, an' the hook le' go, an' back I come. You may scale me if I didn't hustle for the bottom, an' here I be."

The old pike grinned unsympathetically, whereat the other with evident pique said, "Wall, I heard the feller 'at had a holt o' the string say, as I was a-goin' down, 'That's the biggest fish I ever see, an' I've lost him!'"

The patriarch laughed till the water boiled around him. "You big! Oho, my gills. That's what them men always says when they lose a fish, if it hain't no more'n a minny."

"You are about as big as they make 'em," said another, admiring the proportions of the aged patriarch.

"Well, I hain't exactly a minny," said the old pike, swelling his sides a little more, "but you'd ought to seen my grandfather."

"Bigger 'n you be?"

"Glumph! he could ha' swallered you as easy as I could a shiner. There was lots to eat them times, an' a pike had a chance to grow afore he run ag'in some o' them men's devilish contraptions."

"What come on him?" the younger pike inquired.

"Oh, he got half-blind an' kinder childish when he was about fifty year' old, an' he went an' got ketched in a seine. Oh, them men is the worst enemy we've got. Kingfishers an' herons an' fish-hawks, minks an' otters, all hain't a chaw of a minny to 'em, an' they get thicker every year. I wish 't there'd come a flood an' drown'd the hull bilin' of 'em! They hain't got me yet, but I spect like's not they will some time, always a-studyin' some new devilment. Long ago, as when I wa'n't more'n a foot long, they didn't troll wi' nothin' more'n a rag o' red cloth an' a piece o' pork rine or a strip o' pickeral's belly, wi' one hook, ol' humpback grannies a-paddlin' log canews an' a-smokin' their pipes slow an' comfortable.

"Then they got up shiney contraptions, some 'at wobbled an' some 'at whirled. They didn't look like nothin' we'd ever see' afore, but you'd wanter ketch a holt on 'em an' find out what they was, an' one thing you allers would find, an' that was a hook hitched to em', jest as ye will now to every consarn they drag 'round in the water. Now they've got sham frogs an' sham minnies 'at looks nat'ral as life, but there's hooks to 'em all, like as not half a dozen to ketch ye by both jaws.

"There hain't only one safe way, an' that is to steer clear of everything that's hitched to a string. Then there's nets, an' they're made o' strings too. They've had a slap at me wi' most all them fixin's, an' so's all the critters that goes for us, but they hain't got ol' Long Face yet," and the old veteran looked wise and self-satisfied, smiling complacently to the corners of his jaws.

"Now say, Uncle, you tell us all about your scrapes, won't ye?" entreated one of the larger of his audience.

The garrulity of age was upon the old pike, and he needed little coaxing to become reminiscent. So after a few preliminary gulps to clear his throat he began, while those about lent attentive ears.

"About the first clust shave I remember a-havin' was when I wa'n't more'n six inches long. I was a-swimmin' along in the ma'sh a-lookin' for a small frog or minny t' eat, when an' ol' water snake 'at was on the same errand popped out'n a bunch o' rushes an' grabbed me by the tail. My gills! wa'n't I scairt, an' didn't I dig int' the water wi' every loose fin! But his ol' gooms stuck like grim death, an' he started for the shore, which if he got me onto he'd finish me mighty quick. I've seen 'em since, when they'd git a fish on t' the shore where he hadn't no holt on the water, an' they'd down him in two skips of a water bug.

"I could see the dead weeds a-linin' the shore an' the grass on the bank above, an' thinks, says I, 'it's good-bye, little pickerel.' But just then I felt his jaws slip a little mite, an' he le' go to git a better holt, but he wa'n't quite quick enough, an' I made my fins fly like a popple leaf an' out I slipped, his jaws poppin' together a scale's breadth from my tail like bustin' in an air bladder. Afore he got over bein' astonished I was fur 'nough away, an' you bet your gills I kept my eyes peeleder 'an a skinned eel for such critters till I got so big they was fearder o' me 'an I was o' them.

"About the disagreeablest feelin' I ever had inside of me was oncte when I'd got to be 'bout as big as you be, I come acrost a water snake 'at I reckoned was about my fit, an' so I grabbed him by his ugly mug jest out o' spite for the scare one of his kind had gi'n me years afore. He tangled his self 'round my jaws an' squirmed an' hel' back like a good feller, but I chawed away at him, an' finally gathered him in. He tasted wus'n a nest o' young stake drivers, but that wasn't nothin' to the feelin' of his tail, 'at kept a wigglin' in my throat an' a ticklin' of it till sundown, an' it was in the mornin' I ketched him; I never hankered arter another sech fish."

He spat out a mouthful of water disgustedly and continued his story:

"Another time when I was a little feller I was a-layin' in a shaller a-sunnin' of me, an' the' come a blotch of a shadder a-skivin' over the water, an' stopped a piece off from me. I looked up to see what made it, an' there right over me a bird was a-stan'in' still in the air a-flattening his wings an' a-lookin' down at me.

"Then all of a sudden he shet his wings an' come down head first, quick as a raindrop. Think, says I, 'suthin's killed him,' an' I gin a stroke of all my fins so't he wouldn't fall top on me, an' he jest missed it by an inch, comin' ker slosh int' the water, an' pretty nigh scarin' on me out o' my skin. Then out he went as quick as he come in, a-clatterin' like pourin' gravel onto a rock, an' hung himself up in the air ag'in to dry, I thought mebby, but in a half a minute down he come ag'in, an' that time right top o' one o' my brothers, which he carried off in his mouth an' I seen him swaller, settin' top of a stake. Arter that I kep' shy o' him an' his kind till I got too big for their use."

"I got chased by minks an' sheldrakes an' loons an' big fish an' had some mighty clust chances o' keepin' the scales on my back, an' the wust on't was I hadn't no sooner outgrowed one lot on 'em 'an there was another waitin' for me. When I got too big for a blue heron to spear me, one day, when sleepin' in the sun, down come a broad shadder o' wings, an' afore I was half awake the claws of a fish hawk was sot on my back an' the next minute I was a thrashin' the air with my tail, ten foot above the water. I wiggled an' twisted an' snapped my jaws, but it wa'n't no use. Up I went furder and furder, our images growin' smaller an' smaller on the water beneath us 'til his'n looked like a swaller an' mine like a minny, an' then a-gittin' dizzy, I looked up an' see a bigger fowl 'an my fish hawk a-comin' for us.

"The hawk got his best flop on, but it wa'n't no use, the big feller's shadder covered him, an' his claws was a-reachin' for the hawk's back. Havin' all he could 'tend to to take care of hisself, the hawk le' go of me an' down I went head fust, an' then it 'peared it was me the big chap was arter, for he gin the hawk a slap wi' his wing 'at sort upsot 'em both, an' then he came a-scootin' for me. But I struck the water a secunt ahead on him, an' slid down, down, till my nose struck the mud, an' he come down ker slosh right where I lit.

"He gathered himself up an' went off a-raining like a cloud at every flop of his wings, till he got to the top of a big tree, an' there he sot a-sulkin' an hour, while I lay in the weeds a-nussin' my sore back, an' the scars shows yet.

"Mr. Fish-hawk's gone, but you can see that same ol' eagle 'most any day a-watchin' out from a tall tree or a-swimmin' the sky above the top o' the world."

ROWLAND E. ROBINSON.

[TO BE CONTINUED.]

Bass Fishing on the Greenbrier.—III.

THE country is as dry now as it was wet during the summer, and in this the latter part of September the river has dwindled until the bass are in the pools, and they can be butchered by those who know how. The fisher can stand in the water and good-sized bass come up and swim before him, but the motion of the rod frightens them, and they rarely take the bait in his sight. To those that fish in muddy water it may be a mystery how bass perform when they take the bait. I have seen several bite lately. The bass takes the bait by making motions with his fins as if he were working, and having got a good hold, moves off steadily, if he has no competition. If there is another bass to rob him, he will go off with the rush that is so exciting.

With the waters at this stage the wisest thing a man can do is hunt for a pool where he can see fish swimming about, and then go in to catch them. If the bass are moving they can be caught. The first bass is an indicator of the wealth of the pool, for all the bass which are ready for the sacrifice come crowding around the one struggling in the water, and the keen-eyed fisher is electrified by the sight of a mass of moving fins, indicating there is a lot of sport awaiting him. When caught the bass generally ejects the bait, which slips up on the leader, and is presently flipped off in the fight, and nabbed by some of the pack at his heels. The bass that gets that bait needs to have harness on his throat or he will be the next victim.

I was fishing in the Burnside Hole one afternoon lately, and had a bass nearly up to me, when the big white crawfish bait was torn loose, and one of the biggest bass that ever grew flashed by and took it. This particular fish is no doubt hook proof, but if it is ever caught it will be in the papers.

Fly-fishing is over for this year. The fish will simply not take a fly in sufficient numbers to justify fishing that way. I cannot endure to work more than twice as hard fly-fishing for the bag of fish that could be secured by bait fishing. It is the finer sport to take them with a fly, but if barren of results the man had as well be sentenced to penal servitude at once. I used to be conscience struck when I had caught fish with bait, while my companion had faithfully fly-fished and caught nothing. He would put on such a conscientious look of having done his duty, and not dirtied his hands with bait fishing, that he deserved to be immortalized as a martyr to fly-fishing. Then Francis Francis solemnly lays down the rule for all men, to either confine themselves to fly-fishing or bait-fishing if they would be orthodox. He does not entirely bar the bait-fisher out of the kingdom. My motto is: "Get fish—with the fly if you can, but get fish!" and if that be treason, gentlemen, make the most of it.

Is the mind of man, which has wrought such changes on the face of the earth in establishing the civilization as it exists to-day, too small to enable him to become proficient in both branches of this art? Can he not master both? The born fisherman would wile the fish from the water if he were a castaway on a desert island in overalls. The living, breathing, progressive man ought to take all the bass which are hungry for fuzz and feathers with fly, and then catch the rest of the family with good wholesome bait.

There are some fly-fishers who will class me as being worse than an infidel to thus express myself. But there is a lot of fraud practiced by some fly-fishers. I saw a line in this journal where a gushing fly-fisher says to his friend: "You'll be catching 'em with fly with the best of us some day." What a pat on the shoulder! What encouragement! What a future that man has to look forward to! They had me cowed once until I thought only the elect could fish with a fly, until one day when I had failed bait-fishing I put on an old battered bass fly, and caught fifteen before I stopped. That was an eye-opener for me, and I profited by it. I made the same discovery as to trout, and from the first found that on some days I was more destructive with fly than bait. Now, when the aristocratic fly-fisher puts on any airs about me, I feel like dropping into slang and saying, "You ain't so warm!"

These waters have recently been visited by two London gentlemen, who came here directly from Norway, where they had been trout fishing. One of them, Mr. E. T. G. Wilson, is an eminent lawyer of London, and owner of the Ormonde House, and the other, Mr. Bromley, is a gentleman of leisure. Neither had ever seen a bass, and I am sorry to say that their entire catch was about one to every thousand miles traveled. I had

the pleasure of introducing them to the fishing here. We went up the river about four miles, where the valley narrows. When we came to compare fishing tackle, I saw a Castle Connor rod for the first time. It was bought by Mr. Bromley near Castle Connor, Ireland, and it caused me to make a bad break and become very much embarrassed. A Castle Connor rod does not jam in the joints. What I thought I saw was a one-piece rod, broken in the middle, and clumsily tied with a wax end. My intention was good to take out some silk thread and splice the rod decently, when the owner very gently explained that it was a Castle Connor rod and that was the way it was made. It looked to me to be a pretty decent fishing pole which had been broken before it was sold.

The Englishmen had hundreds of trout flies, many of which were midgets, and some flies which I called bass flies, and they called salmon flies. Then I learned that the lordly salmon and the husky bass rise to the same lure.

We camped under some trees and started fishing. We met at lunch time with sixteen bass, which we cooked at a rousing big fire and had something to eat. We caught nine after dinner, making twenty-five for the day, with some big ones. I do not remember how the catch was apportioned. Both the Englishmen were good fishers, but did not understand the quick impetuous bass; they would make a good cast, but would not retrieve the line for several minutes. I fished with bait with fly-fishing on the side, in the way I enjoy most.

Persons living in the town of Marlinton have the finest of rivers to bathe and fish in, and the finest woods to hunt in and ramble through. We have nearly 200 people here, and the woods come down close to town. The mountains are piled all around us, and we look up to the top of Elk Mountain, one of the highest points in the Eastern States. Nature has spread out all this wealth at our doors, but some of my companions in adversity revile me and call me Tug when I go fishing, or walking, or hunting in the after part of the day instead of joining their councils and shaving a fine plank with my pocket knife.

I appeal to the sympathies of the reader and ask him to say whether, if he were living in Marlinton, he would go fishing or loaf. So far my score this season is 242 trout and 311 bass, and every one a sensation. Of course, I do not count the little ones put back. They are the stars in the fisherman's crown.

I think every man should cultivate a taste for outdoor life. It prolongs life and it makes us stronger to bear the pain of living. I want to justify my course, and take every occasion to do so. As long as we, as a nation, go in for the things the FOREST AND STREAM encourages, we will be unconquerable. When we sit on our ancestors' graves and have a good time instead of taking pleasures afield, we will go to pieces like China. For mental and physical health go fishing. I have a stock quotation, "Better to roam the fields for health unsought than fee the doctor for a nauseous draught."

ANDREW PRICE.

MARLINTON, W. Va.

Turtles on the Beach.

SEABREEZE, a popular resort, winter and summer, on the east Florida coast, opposite Daytona, has a broad beach, perfectly straight, except where broken by Mosquito Inlet, ten miles south. The beach makes an ideal bicycle course, on which wheelmen, bug-like by day, a firmament at night, constantly ride. From May to August they hunt turtle eggs at night. The turtles are enormous. A heavy specimen weighs several hundred pounds, and is larger than a washtub. Their strength equals their size; we have seen one of them carry a large man on its back several rods with ease. One would hardly suppose that creatures so large had been hatched from eggs smaller than those of barnyard fowls. The eggs when fresh are delicious. If the law does not intervene they will be hunted as long as human beings care for moonlight spins and good eating.

The turtles usually come ashore to lay when the moon is full. The trail they make at such times is like the tracks of two broad corrugated wheels set about 30in. apart. This leads to the dry sand above high tide, where a nest with twelve or fifteen dozen eggs in it is ingeniously concealed. The imitation of surroundings is carried out in detail. The beach above tide mark is hard beneath the first few inches of dry sand. The turtle reproduces this over her nest by filling in from a second hole, then packing by spinning upon the earth thrown in, and afterward leveling with loose sand. To complete the deception, she decorates the surface above her nest with bits of grass and weeds. The second hole is then filled up carelessly, as if to attract attention.

Jackdaws, crows, raccoons, foxes, bears, human beings (the worst type of hunters are the bicycle riders) all know that the egg of the turtle is a luscious morsel and never cease hunting for it. It is difficult to see how a nest ever escapes being found. So much rivalry, of course, causes many bitter disappointments. I remember talking turtle one time with some friends from up the beach. Their cottage was near a sanitarium of "Mental Science." It was an unsafe neighborhood up there, I thought. But they did not imbibe any misleading notions except a sublime faith in their ability to find eggs if they only hunted long enough. Their enthusiasm was remarkable. They might have surrendered with honor to their constant bad luck. One night after hunting the beach for miles and returning to join a group of disappointed riders near home, some one proposed willing a turtle to come out of the surf. Everyone felt that their faculties could be trained on that kind of thing without much effort, so all sat around on the driftwood and willed. The moonshine shimmered on the seething sea, the surf sang a song, a softly lulling lullaby, the mosquitoes bit, the wind parched, but those people just sat on their logs and threw thoughts oceanward. It was grand. And the turtle came out. All fell off the logs then to scramble up the bluff and hide in the sea oats. Some of the hunters forgot to will in climbing the club, or lagged on "come out of the sea," when others were ahead on "come up the beach," and the turtle hesitated. This aroused concentrated effort and she was made to come up the beach as if led with cables. Up and up she came, slowly but surely, till she was immediately under her tormentors, and then she made a nest.

When the affair reached a stage where hearts throbbed, pulses sang and souls soared in delirium, two outsiders appeared, and in spite of hat waving and wild shrieks from those on the bluff, started the turtle off to sea about as fast as she could waddle. There were explanations after she had left that did not entirely clear the atmosphere. If the watchers' attention had not been concentrated they would have seen the interlopers in time to will the latter into the Atlantic. "Mental Science," I think, hardly received a fair test.

A few evenings after I heard this story our next door neighbor stopped in. Go egg hunting! No, never, not he, if he lived a hundred years on that coast. He had lost too much sleep. A comfortable bed was more to his taste. There were not enough turtles on earth to supply the demand. All the men, women and children about were after them. When he and a friend found a turtle laying the previous week, every chick and child in that part of the country dropped off the bluff to say something. There were no eggs. The turtle scuttled off to sea—to lay in Africa, he hoped.

Another man on the coast one summer failed to bring eggs home after finding a nest. He was taking them from the nest as they were laid, and piling them about, when he looked over his shoulde and saw an enormous bear 10yds. away dancing on its hindfeet to the music of the surf. Man and bear left quickly in opposite directions without the eggs. They say the hunter had been very attentive to a pretty boarder all summer, and after that they spent their evenings out front discussing what the bear might have done to him.

I was determined to find a nest of eggs, if possible, before the season was over, and went time and again until I was successful. I earned the eggs the trip I found them. There was a dance at the hotel, so I was alone on the beach. The riding was so soft and the moonlight so dim that I hardly used my wheel. After digging my finger nails to the quick at the first trail I discovered, scarcely a mile from home, and finding no eggs, I plodded ahead on a beach that seemed to be without end. Surely the lighthouse I faced was leaving me rapidly. Overcome by fatigue at times, I fell over my wheel and lay in the sand awhile, wondering whether it was worth getting up to face a situation with so much discomfort it it. Once I climbed the sand bluff to a deserted shanty with a view of sleeping there, but when I saw the hordes of crabs scuttling about the premises the place seemed too horrible. Later I found a short, narrow board on the beach that made a comfortable bed for a person in my state. The net morning I dug twelve dozen eggs at the first trail found. What omelets they made.

H. R. STEIGER.

DE LAND, Florida.

Some Odds and Ends.

ST. LOUIS, Sept. 25.—Some weeks ago Mr. Mather in one of his interesting articles said that the white bass of Lake Michigan had practically disappeared as a game fish. This is a mistake. These fish are still abundant in the waters adjacent to the eastern shore of Lake Michigan. In Black Lake, near Holland, and at the mouth of the Grand River, at Grand Haven, many of these fish are still being taken with rod and line. At Holland they are captured by the thousands during the month of May, when they appear to come in from the big lake. They are mostly caught at night, and hundreds of boats go to the harbor entrance where, by the light of a lantern, the fish are taken. Later on the fish seem to scatter over the lake, and are caught but a few at a place. I have recently been at both the places mentioned above, and know that the white bass is yet an important factor to the angler; he is a game fish every inch of him, and if he broke out of the water like the black bass, anglers would travel a thousand miles to catch him.

A little experience at Black Lake demonstrates how fearless fish are when they cannot see the angler. My nephew has a boat house and through the floor he has a small opening into the water, through which he can hang his minnow bucket. While at this place during August, I hung my minnow bucket over night through this opening, and when we went to the boat house in the morning I threw a dead minnow out of the bucket into the water; immediately a large black bass, which seemed to stay under the boat house, came up and seized the minnow. In an instant I had the hook baited with a minnow and dropped it into the water, which was about 2ft. deep. The bass again came up, sucked the minnow into his mouth and spit it out before I had a chance to "yank" him. I waited a moment, and this time he took it into his mouth, when I gave a big pull, and, of course, his head struck the flooring and the hook was broken. I put on another hook and bait, and the old fellow again came up and pursued the same tactics; with my usual good luck the fish again struck the floor, and the snell broke, letting him down into the water. I tried him again, but he did not appear to take any more interest in the proceedings. Next morning my partner and myself went to the boat house and thought we would see if Mr. Bass was still hanging round. My partner this time said he would show me how to catch fish. He dropped in a live bait through the hole and immediately the bass made his appearance, sucked the minnow in and spit it out, the second time taking it in for keeps. Jim, for that was my partner's name, gave a yank, and the snell broke off. Putting on another hook and bait, he again dropped it in, and in spite of his instructions as to how he would catch the bass he jerked him up out of the water, when the line broke and he fell back in again, and this time he disappeared. The next morning a big wind was blowing, and the water was too rough under the boat house for further experiment. Here was four times that the fish had been jerked against the board and he did not seem to be frightened. At the same hole by holding a minnow on the surface a small rock bass came up to take him, and we twice lifted him out with a net and put him back into the water. He did not seem to be a bit frightened. Of course, the boat house was dark, which accounts for these actions; if the fish had seen us they would have scuttled away.

While fishing on the Grand River I lost three minnows in succession, and, of course, suspected there must be some monster who was thus stealing my bait; finally I struck a fish and a small bass popped up out of the water like a cork out of a champagne bottle. At the same time the little rascal spit out three minnows which he had stolen from my hook.

The same day I caught a small bass, about ½lb. in weight, which had a No. 1 sproat hook, with snell, fastened to his throat. No doubt some angler had sworn by the great gods that a 5lb. bass had broken his snell from his line.

Just before I left Grand Haven a large muskalonge weighing in the neighborhood of 25lbs. was killed several miles up the river by a man with a boat hook. It seems the muskalonge had endeavored to swallow a large catfish whose spines had been set, and the fish could neither get him up or swallow him; he consequently became exhausted, and was wallowing in the water when the boatman killed him.

This has been the poorest season for fishing in this section of the country for many years. Heavy rains during the summer have kept the rivers high and muddy so that at many of the clubs there has practically been no fishing, only during the last few weeks. While it has been unpleasant to the angler, it has been a good thing in allowing the fish to grow and escape from the men who want them. Unless we have unusually heavy rains fishing from now until the 1st of January in southern Missouri and northern Arkansas will no doubt be first-class.

ABERDEEN.

Ottawa Bass.

Editor Forest and Stream:

While glancing over the advertising columns of your paper in the latter part of July, the advertisement "Bass—best fishing in the world—send for booklet, Hotel Cecil, Ottawa, Canada," caught my eye. I wrote for a copy of the booklet, and thinking the outcome might interest your readers, I will give it. After some correspondence, I found myself, bag and baggage at the Grand Central Depot one Sunday evening, and at 11:20 A. M. Monday we pulled into Ottawa. I was agreeably pleased to learn that the proprietor of the Cecil, Mr. Genslinger, was to start on a fishing trip that afternoon, and he invited me to accompany him. I was greatly pleased at this unexpected turn of affairs. I had counted on a lonely fishing trip—having no friends in those parts.

At 5 P. M. we boarded the train on the Gatineau Railroad. The road runs along the river bank, and superb views are obtainable from both sides of the cars.

A short distance out my attention was attracted to the number of logs floating down the river. The lumbermen of this district fell the trees, cut them to a certain length, stamp them with a number and drop them into the water and allow them to drift to the mills in or about Ottawa. As this body of water is not open to navigation the utilizing of the water as a sluiceway must be a great saving of time and money to the dealers.

Further on the country took on a genuine rural air. I was led to believe that it was part of a rich farming section; judging by the climate and soil I should say this would be a good spot for some of our bright young men to branch out as farmers.

About 7:45 we arrived at the little town of Gracefield and were driven to the hotel. The hour of 4:30 A. M. found us seated on a buckboard. The air was cool and bracing, but as my companion had taken the precaution to bring along coats, we were prepared to sip the ozone to our hearts' content. A rattle of wheels and we were off. In a short time we were in the absolute depth of the mountain forest; from each side came the songs of the birds as they flitted from branch to branch, and the stately mountain looked on as though in silent approval. As we drove along it seemed to me that this should be the paradise of the lover of the forests, with its panorama of mountain, river and stream. To the artist of the new school, who is tired of the bombastic, manufactured and labored methods of the old school, I would recommend a journey here. As on we rode a stream or outlet would occasionally appear to add to the beauty and picturesqueness of the scene, but above all would loom the beautiful, quiet mountains, indeed it was a wilderness of wooded mountain, and as we approached our destination an occasional clearing was seen where the hand of man had laid his axe on the huge old kings of the forest, and swept them away to do service in different capacities in the towns and cities far away. As we alighted from the wagon the beautiful crimson ball of fire in the heavens came out in all its glory, and our surroundings took on new life and nature's happiness was communicated to our spirits. In all my wanderings in the woods of the States I do not recall an awakening of the woods like this.

After breakfast arrangements were made with a boatman to row us up the beautiful sheet of water called Blue Sea Lake, from its prevailing even shade. Though I have been a great admirer of minnows for bass, my companion had persuaded me that live frogs were the proper bait, so in a basket we had twelve dozen from about 1in. to 2½in. in length.

Luck seemed against us for about an hour, when I struck, and a splendid black bass jumped out of the water three boat lengths away. A typical game fighter, he leaped a foot out of the water, then made a downward sweep; and so went rushing and fighting till I landed him in the net—a 4½lb. beauty. Fifteen minutes later I landed a 2-pounder. Luck seemed to change then, for my companion landed three within the next half-hour, one 3 and two 4lbs. A half-hour passed without a bite, then I took two more, after such a game fight with one magnificent bass that in the struggle my rod was broken just as he landed in the net. It was then about 11:30; and with seven black bass to our credit we put ashore for lunch at a quaint old log house, or a typical woodsman's shanty, where we were furnished with a bountiful meal from the larder of the housewife.

Twelve o'clock found us seated in an elegant cedar boat belonging to my companion, with a new boatman at the oars, following the meanderings of a beautiful mountain lake. With deft strokes the oarsman took us to the most inviting places; without looking he seemed to know just where lay the fish. After we had struck and almost landed four beauties who had gotten

away with our hooks, I realized that we were now to have the best sport of the day, for we were to do battle with the kings of their class. The sport was grand, with my companion on one side and I on the other, we frequently pulled in magnificent fish, fighting and pulling from the same pool. And so it went till the yellow sunlight had ceased to illumine islands and water.

Eight o'clock found us seated in the quaint home of our boatman. We were the possessors of thirty-nine bass and one pike, and huge appetites. I would give a good deal to have a picture of that scene. The log cabin was divided into three rooms, of which the middle was the dining room. Here and there were hung guns and fishing utensils; in the corner stood a combination dresser or sideboard which must have been a hundred years old; the walls were decorated with old-time daguerreotypes; at the foot of the bed in another room was seen the old-time spinning wheel which had spun for many a year.

The next morning found us in Ottawa, where we were the center of an admiring group at the Hotel Cecil. The news of our splendid catch soon spread, and the fishermen and critics shortly appeared—the fishermen to congratulate and the critics to dissect our work.

We had caught so many big, heavy, thick-shouldered fish, some weighing at least 6½lbs., that when the bag was emptied into the basket these fellows seemed to have worked their way to the top as though to display their beauty. The "ubiquitous funny man" on observing this drew the attention of the assemblage to it, and proceeded to investigate the bottom of the basket, and found there several equal to if not larger than those on top, and his consternation, when he found the occasion removed for the exercise of his constitutional and valued prerogative of guying, was laughable to behold. I spent a few days after this viewing the sights of the capital. The Parliament buildings are elegant. I was particularly struck by the vim and enterprise of the merchants of the little town. Most of the streets are wide and regularly laid out, and thoroughly macadamized and asphalted, making it a paradise for riding, driving and bicycling.

As the train pulled out of the Ottawa depot I thought: I shall return for another outing on beautiful Blue Sea Lake and its sister waters. W. J. McEvoy.

ANGLING NOTES.

Lake Trout.

There is a belief existing that while most species of trout prey upon their own species, the lake trout, *namaycush*, is exempt from cannibalism. How this belief gained ground I cannot say, but I have been assured over and over that it was true. Of course it is not true, but the most remarkable case of cannibalism in lake trout was told to me this summer by Mr. Harry Watrous, the artist, who has his summer home on Lake George, and who is the president of the Lake George Fish and Game Association. Mr. Watrous was watching some men suspected of illegal fishing, when he saw something white on the water, and going to it found a lake trout about 15in. long apparently choked to death by another fish. This fish proved to be a lake trout, and when it, the other and second trout, was opened, it also had a small trout in it its stomach. Truth, particularly in matters pertaining to fish and fishing, is stranger than fiction.

Sea Salmon in Fresh Water.

When the work of stocking the Hudson River with sea salmon was commenced in 1882, the fry were planted in trout streams far up at the headwaters of the river, more than 100 miles above tide water, with impassable dams and falls intervening. The work was finally discontinued in the streams so far above tide water, and the plants of fry and yearlings were made in streams nearer to the sea. Several years after the final plants were made in the upper waters, I heard of "salmon trout" being caught in Millington Brook, near the Glen, a stream never used for planting salmon. Thereafter from time to time I heard of other salmon trout being taken from the stream, which was always a famous trout brook, but which had never been planted with any kind of fish. Little heed was paid to the reports for the reason that people are given in some regions to applying wrong names to the fishes, although I was told that in this instance they were fish I had planted. As I had never planted fish of any kind in the stream, I assumed that the "salmon trout" were bright trout which had run up from the river after a visit to the white sand in the main stream.

Very lately I met on the train Mr. Albert Thomas, ex-county treasurer of Warren county, and a well-informed sportsman, who told me that a salmon of 4lbs. had been taken in Glen Brook, and that he saw the fish and recognized it as a sea salmon, beyond question. He then added that nearly every season for a number of years before the 15in. law was passed he had caught salmon up to a pound or so in weight in both the Glen and Millington brooks. Ten years or more ago sea salmon fry were planted in the Glen Brook, which flows into the Hudson from the right bank, while the Millington flows from the left, but their mouths are not far apart. The only explanation that I can give of this condition of affairs is that the salmon have bred in the Glen Brook without going to sea, for had they gone to sea they could not have returned to the stream mentioned, and that from the Glen Brook they have wandered to the Millington Brook. There is in fact no other explanation to be given, for I am sure that it is more than ten years since any salmon fry were planted in the upper Hudson contiguous to the streams I have named, and there is no chance for them to get back from the sea once they have descended the river, and as fish of a pound weight, and now four pounds, are annually taken in the brooks, they must have bred in the streams and become what is generally called landlocked.

Last June, while salmon fishing on the Ristigouche, Mr. Archibald Mitchell gave me a clipping from a Scotch newspaper, containing a summary of a report by a commission of experts and scientists that had been investigating the life history of the sea salmon. Among other things the report took the ground that the sea salmon was a fresh-water fish that had acquired a sea-going habit, and that its habitat was originally confined wholly to fresh water. I know that this is not popular, but why not? The eggs of the sea salmon will die if placed in salt water, and so will fry when first hatched, and that should not be a characteristic of a salt-water-fish. The sea salmon will breed in fresh water without ever going to sea, as we know from the late Mr. Mowat's experiments in Canada, and the landlocked salmon is the sea salmon that has not acquired the sea-going habit, so it is not particularly strange that sea salmon planted in Glen Brook should remain there and breed without going to sea. Nevertheless it is a curious fact.

Ristigouche.

One evening last spring I was at the Ristigouche Salmon Club on my way home from the upper waters, when Mr. Percy Baker, the superintendent of the club, asked me why I always spelled and pronounced the name of the river Restigouche, and I said because I supposed it was correct. He produced an old map and several papers more or less antique, to show me that the correct spelling of the name was Ristigouche, and here I make amends for spelling it the other way.

CHICAGO AND THE WEST.

Westerners in Canada.

Chicago, Ill., Sept. 24.—Mr. J. M. Oliver, an attorney of this city, who takes many sporting trips of a very delectable sort, this summer spent the month of August on the Nepigon River, and reports a most delightful experience. Others of the party were Judge Showalter, of the U. S. Circuit Court, Chicago; Judge Bunn, of the U. S. District Court, Madison, Wis.; Attorneys W. W. Evans and Wm. H. Holder, of Chicago, and Mr. John Knight, of Knight & Marshall, Chicago. Mr. Oliver says that he was told there were more parties on the river this summer than were ever known there before in any one season. They went to Camp Robinson, fishing from Hamilton to Split Rock, it being the custom on that stream for parties to respect the camps of others, and not to intrude on their territory. The largest trout taken by any of the party was one of 6lbs. 2oz., by Mr. Knight. Mr. Oliver's largest fish was 5lbs. On one day he took eighteen trout, averaging 2½lbs. Mr. Evans one morning took twenty-nine fish, 2½ to 5lbs. weight. Judge Bunn, who, like Judge Showalter, is a very skillful fly-fisherman, frequently landed fifteen to twenty fish daily, of 2 to 4lbs. They found the Jock Scott and Lord Baltimore flies the most killing. Of course no one dreams of using anything but the fly on the Nepigon. There were thirty parties on this stream in the month of August, among others that of Gen. Noble, formerly of President Harrison's Cabinet; the Speaker of the Parliament, of Ottawa, with many bankers, etc. Mr. Moore, of New York city, who is now out at Dawson, N. D., shooting ducks, was on the Nepigon in August.

We have a number of salmon fishers in Chicago, though they need to travel a long way for their sport. Mr. Murdock, of Murdock & Fisher, Chicago, has a lease on a Quebec stream in the Gaspé Basin country, and Mr. Jas. L. High, a noted Chicago lawyer (author of the work "High on Injunctions"), in partnership with Judge Hitchcock, of St. Louis, has a very desirable lease on the Nepissiguit River, in New Brunswick. As near as I can learn, it costs about $12 a minute to fish on any of these expensive leased streams, and newspaper men have to use stop watches.

After Bass.

Messrs. Fred N. Peet, Jim Clarke, Geo. Morell, H. G. Hascall, A. W. Smith, A. R. Letterman and C. F. Conly, all of the Chicago Fly-Casting Club, spent a day on Deep Lake, near Lake Villa, Ill., this week, averaging six or eight bass each, Mr. Hascall having the credit of a 9lb. pickerel.

'Lunge and Great Northerns.

In another column I have mentioned the trip made by Mr. McCartney and Mr. Jennings, of Chicago, into the country adjacent to Leech Lake, Minn. Here they went into Thunder Lake, and had all sorts of fun with the Great Northern pike, of which on two days they took a great number, each day getting at least ten fish which would run over 15lbs. each. They got two good ones, one 17lbs. and one 17½lbs. They say that these fish are the hottest sort of fighters, and run and jump as well or better than the muscallunge. They think a 6lb. Great Northern pike will outfight a lunge of the same weight. Mr. McCartney says he has read a lot about hearing the "line cutting through the water," but that never in his life before did he actually hear a line cut or hiss in the water until he got to playing these pike, whose swift runs were a revelation. He says there is no mistaking these fish for the pickerel which make such a nuisance in those waters, for a pickerel will not fight at all, whereas a pike is never doing anything else after being hooked.

As to the supply of muscallunge in Minnesota, the records of the Woman Lake chain show that 225 muscallunge were taken by the 125 Kabekona guests last year. Not a very big per capita showing, yet the fish ran very heavy in average. This year there were 175 to 200 anglers in there at last accounts, but the total number of muscallunge did not run so large. In late fishing reports from there, there were only fifteen muscallunge taken in fifteen days, but they were big fellows, nearly all over 20lbs., some of 28, 29 and 30lbs. It seems a peculiarity of those waters that one catches very few small muscallunge. Sometimes a day would pass and no one would bring in a 'lunge, but when one did come it was very apt to be a big one.

Dope.

I have often mentioned the good fly dope whose discovery is to be attributed to Col. Fox, of Grand Rapids, Mich. Another gentleman, who writes from Kalamazoo, the same State, sends me the formula for a fly dope which he says he finds very good to keep off mosquitoes and deer flies, though he has not tried it on midges. The formula of tar, penny royal and vaseline is a very old one, but my informant says the proportions in his formula are somewhat different from those commonly used. He states these as follows:

"Vaseline, 2oz.; pure pine tar, 1oz.; oil penny royal, 1oz. Have druggist mix cold in a mortar. First add tar to vaseline, mix thoroughly and then add oil penny royal. Apply freely to all exposed parts. Use as often as may be necessary. This mixture does not evaporate from face and hands as soon as most of the preparations I have tried."

E. Hough.

1200 Boyce Building, Chicago, Ill.

Codfish and Chowder.

Boston, Sept. 26.—Oct. 1 opens the Maine season on deer, and greater preparations are being made by hunters than ever before. Now that the deer shooting season is about to open again, if a thrill of caution could be sent through the nerves of every man or boy who proposes to use a gun! Never shoot till you are dead sure as to what you are shooting at. There is almost always time for a safe and sure shot. Nothing is gained by shooting nervously, and at every moving object, while the chances are many that you will either wound or kill your brother hunters.

Boston merchants are sportsmen; some of them dyed in the wool. Mr. Samuel Johnson, a man of successful business years, is a lover of yachting and fishing. He makes many trips off shore in his own craft, and with his own men, for codfish, etc. Last week he invited Mr. Alfred B. Hall, another well-known State street merchant, to be with him on a codfishing trip off Nahant to a celebrated fishing ground, well-known to some of the merchant fishermen. Mr. Hall caught a 15lb. pollock, and Mr. Johnson followed him with a codfish of 15lbs. They fished earnestly till lunch, taking a barrel full of cod and a tub full beside. A skate of about 60lbs. was also landed by Mr. Johnson. The chowder, such as Mr. Johnson's cook knows how to make, was the delight of the trip. Mr. Johnson remarks that taking many trips a year for several years, he has never yet made a trip to the point they fished when, by persistent fishing, fish enough for a good chowder could not be obtained. This, with the possibility of some of the good hauls frequently made, made a sport that "is good enough for anybody." On this trip a curious little episode was experienced. When more than a dozen miles from land a bird lighted in the deck of the yacht, apparently the female of the thistlebird or yellow-bird. It was evidently a good deal exhausted. At first no one disturbed it, but soon it seemed quite tame. It would run between the legs of the men, and soon flew up on to Mr. Hall's knee, as he sat fishing; then mounted up to his shoulders and head. It did not seem afraid of anybody. It remained with them for some time, then quietly flew away. It did not eat crumbs of bread thrown to it, but would dart like the fly-catchers, evidently in pursuit of insects.

A large delegation of the Appalachian Club is off for a fortnight in the vicinity of Dixville Notch and the Rangeley Lakes. Mr. J. Ritchie, Jr., guides the party.

Boston marketmen say that a good many partridges are coming in from game hunters near home, but none yet from Maine. A Lewiston, Me., letter says that the proprietor of Hotel Atwood got a good bag of partridges in the woods in the near vicinity of Lisbon. He is about the only successful partridge hunter mentioned thus far.

Special.

Castalia and Toledo.

Toledo, O., Sept. 19.—*Editor Forest and Stream:* The Upper Castalia Club closed its season for 1898 on the 15th inst., and the record shows it to have been the most successful in the history of the organization. The register indicates that from the opening day, on March 15, to the close, on the date above given, the total catch of trout was 5,632, with an aggregate weight of 1,911½lbs., a little short of a ton. It is probable that the actual catch would run up to the latter figure, as in many instances fishermen hurrying to make their trains would leave the grounds without stopping to have their fish weighed and registered. Under the rules of the club, no fish may be taken from the water which is less than 8in. in length, and the wonderful capacity of the stream as a trout producer is evidenced by the fact that the number of fish taken the present season is 1,303 greater than the total catch of last year, while the excess over last year's weight is 575lbs.

Toledo, whose fishermen invade all the waters of the country wherever a game fish swims, has recently sent a number of her most skilled "rodsters" into the Triton tract, and they returned home a few days ago much pleased with their new experiences. Three different Toledo parties were on the waters of this preserve at the same time, but so widely were they separated that only once did any two of them meet. The list included Will B. Geroe, Clarence Brown and Chas. B. Reynolds, one party; John Berdan, James Secor and Fred B. Shoemaker, in another, and Noah H. Swayne, T. W. Childs, W. J. Walding, Rev. Emory W. Hunt and Frank W. Annin, in the third. Mr. Shoemaker was fortunate enough to shoot a fine caribou shortly after the opening of the season.

Jay Beebe.

[What an abominable word is rodster.]

Mullet in Northern Waters.

The striped mullet and the silver mullet migrate as far north as Cape Cod in summer, and sharks prey upon the large fish, while flukes capture many of the young. It is an interesting sight the jumping of the mullet when chased by an enemy, and sometimes apparently for the fun of it.

When I recover from the stiffness and fatigue following my rough work I will send you something for publication on spearing sharks, skates, flukes, etc., and "fire-lighting" strange fish at night. I have never before been so struck by the scarcity of snipe of all kinds in this region. In only one place have I learned of a flight of yellow-legs worthy of the name, and that was at Oak Island last Thursday, where about 100 were seen in a day.

T. H. B.

In the Louisiana Lowlands.—II.

BY FRED MATHER.

[*Continued from last week.*]

SAM did not accord with my views of killing only for our needs; there was a market for food of all kinds in Alexandria, and now that we were capturing fish and turtles in greater number than we could use, he naturally desired to utilize them for that market. From his point of view it was the height of idiocy to turn loose catfish and turtles which had a marketable value; he could not understand it. As for me, I had not journeyed to the lake on a commercial venture; Prof. Baird wanted an "alligator snapper," a species of turtle, and wanted one that would weigh at least 60lbs., hence I had engaged Sam to care for me on Catahoula Lake, and had put out the lines for turtles, as has been detailed.

After Sam had insisted that the ferocious soft-shelled turtle was a "snapper," because it "snapped," there was little confidence in his knowledge, or classification, of turtles. It was like the old story of the sportsman who was looking for woodcock, and was taken into tall timber where woodpeckers were numerous. Sam knew turtles in his way, but his way was not mine. Therefore, after removing the catch and rebaiting the hooks, Sam asked: "Has yo' eber had a snappah roasted in de shell?"

"No, I have never eaten turtle except in soup, steak and stew. If you have a new way to cook one, go ahead and do it."

"Den I takes dis little one, he's big nuff fo' us, an' I'll kill him to-night an' roas' him to-morry, 'caues it takes long time fo' him to die w'en he's haid is cut off, an' I do' wan' him a-kickin' in de fiah." So he cut off the "haid" and hung the turtle up by the tail to be attended to on the morrow. We fished for bait for the turtle lines, and from what little I had seen of turtle fishing on this trip I got the idea that suckers were the best turtle bait, because they caught the most turtles.

More Turtle Talk.

On the third evening we caught several soft-shelled turtles, one snapping turtle such as is common from Canada to Mexico weighing about 20lbs., and an alligator snapper of nearly the same weight. This latter animal has the same general outlines as the other, ranges from the Gulf States up the Mississippi as far as Wisconsin, but prefers the warmer waters of the South, where it "grows to a length of 40in., or more," says Jordan. It has been known to weigh 150lbs., and is "perhaps the most ferocious, and for its size the strongest of reptiles." In the old Aquarium at Broadway and Thirty-fifth street, New York, in 1877, we had one that weighed about 80lbs. This beast would eat the little painted turtles from the ponds, 4 to 6in. long, shells and all, biting through them at one grip of its powerful jaws. I believe that the one we had could bite a man's leg off, bone and all, at one bite.

"Dah," said Sam, "is two 'gatah snappahs, but I 'spec's dey ain' as big as yo' wants. But we bettah keep 'em 'cause we may get no mo'."

I had a shoe box in which we brought some of our canned goods and other things, and in this I intended to put a big turtle on its side, so that the carapace and plastron would be against the sides of the narrow box and it could not get right side up. I gave the snapper to Sam and put "de gato' " in the box, for, as he said, we might not get another. It was small for the box, and I wedged it in with a piece of board and some sticks. Somehow a tap on the head and an admonition not to let its angry passions rise did not quiet it at all, for it struck out and snapped at everything in reach. There was more of viciousness and bad temper in that boat than one often sees.

"Sam, you call these turtles all one kind, but they are different, the one in the box is an alligator snapper, while the other is the common snapping turtle; don't you see the difference?"

"No, sah, I don' see no 'stinction; we calls 'em all 'gato' snappahs, an' dem sof' shells is jes' common snappahs."

"Now, Sam," said I, in an educational effort to make this man and brother more observant of things, "look at the one I gave you; its eyes are close together and near the top of its head, its head has a soft skin. Look at mine; its eyes are on the side of the head and wide apart, while its head is covered with something like large scales. The snapper has only a trace of a ridge in the center of its back, while the 'gator has three ridges." I did not try the names of science upon Sam, and I spare the reader. I have given the main points of difference between these two very distinct, yet nearly related species.

Sam thought a moment and then remarked: "I 'spect yo' is right; I ain' nebbe' notice' all dat befo'." What he thought was probably on this line: "Dey's w'ite men has eyes close togedde' and some wide apart, an' some's got red haids, some's got black haids an' somes got bald haids, but dey's de same kin' o' man, an' heah is yo' young man fum de Nawth come a-tell me dat dese tu'ttles is differ'n', an' 'cause dey's got differen' eyes an' haids he's a differen' tu'ttle; I'se fished heah in Catahoula Lake since I was a pickanny an' I knows dese tu'ttles 'ca'se I was brung up wid 'em."

Baking a Turtle.

Our fishing for bait and for camp occupied most of the day, as we had 300 hooks to bait, and I was preferring suckers. The fish bit very fast, and in eight hours we could get enough for bait, and a few catties for Sam and some perch and crappies for me would be selected. Then getting wood, cooking and overhauling lines, eating and sleeping consumed the day and night.

I watched Sam prepare his new dish, bent on learning a new form of camp cookery, and knowing that all such knowledge is prized by readers of FOREST AND STREAM in their desire to vary the necessarily restricted menu of camp fare, I give the details of roasting a soft-shelled turtle in camp, first stating that none of the four species are found in eastern New York or New England, and that they rival green turtle for the table.

Sam took the turtle which had been killed the day before, cut through one side of the plastron and removed the whole interior arrangements and replaced them with balls made of flour, canned corn, condensed milk and the turtle's liver, with salt and pepper. Then he closed the plastron, encased the turtle in some 3in. of a sandy clay, which he found somewhere, and put it in a pit where he had been burning wood for hours, and covered it up with coals. If Sam had been where he could have reached olives, curry, tobasco sauce, rice or Philadelphia "scrapple," no doubt all of these things would have gone into that turtle. He simply played the limit; and therefore, if I ever am guilty of publishing a cook-book, I will say: "To roast a turtle in the ashes, first draw your turtle, not for the sake of getting rid of any portion of its economy, but in order to make a place for whatever you may have in camp." I am sure that this was the rule that Sam had in roasting a turtle, for he used up a portion of all the things we had except the canned tomatoes, at which I drew the line. I can eat them, cooked, as a side dish, but to spoil the flavor of a chop with them or in any other way is not agreeable, and old Sam was surprised when I would not allow him to put tomatoes into his turtle. "Here, Sam," I called, "put in these onions, you've overlooked them"; and then I wished for one little clove of garlic instead of the onions.

A dream which, as Byron says, was not all a dream came as I lay on the cot, and the odors of baked turtle suggested a feast. I am a firm believer in dreams. I believe that we have dreams; what more? Why then I believe in them, at least as in Longfellow's Christus:

> "Do you believe in dreams?" "Why, yes and no.
> When they come true, then I believe in them;
> When they come false, I don't believe in them."

My dream was of some epicurean delicacy, bred, no doubt, from hunger and a savory whiff from Sam's turtle. It was that sort of disturbing dream that awakens a man instead of sending him into deeper sleep. The sun was nearly down, and Sam was removing the coals and ashes from his turtle, and had begun to dig it out from its warm bed. He broke off the clay and the skin came with it; then removing the plastron there was steaming savory turtle meat literally on the half-shell, and it was most excellent. I had eaten birds cooked in this way, but roasted turtle was a new dish, and I have pleasant recollections of it even now, a quarter of a century later.

Sam's Turtle Pen.

These soft-shelled turtles are very flat and have a leathery shell, which is soft and flexible at the edges, a long neck with a flexible tube-like snout that is like a pig's in having a rooting appendage to it. There are four species, but all have these characters.

I had modified the orders forbidding Sam to reserve any game for market, so far as turtles were concerned, for I considered them to be destructive to the fishes and they would bear the little thinning which we might do, so Sam built a log pen to confine them in; it was 8 by 10ft. and 4ft. high, with a log flooring to prevent their digging out, and it was evident that he knew their habits, if not the distinction of species. The camp was now in good running order, and we had baitfish enough in the pen to afford a day off, so taking trolling lines, with spoons and minnow gangs, and the gun, with Sam at the oars, I proposed to see more of the lake.

Some Frogs and Other Game.

Among the voices of the night I had noted the chest tones of many a frog whose lower register proclaimed him to be classed as "an old lunker," and I coveted their legs. Keeping along shore I saw one, rigged a fly hook on a short line tied to the rod, and told Sam to back the boat near the musician. The hook passed close to his nose, he snapped at it and was my frog. Killing it by a rap on the head, I skinned the saddle and put it in the tin pail. Sam's eyes were wide open. "What yo' gwine do wid de frawg?"

"Going to eat it for breakfast, but I want about two dozen more, I reckon you can eat a dozen."

"No, sah, I do' wan' no frawgs fo' my b'e'kfas'. I heah people say dat Yankees eats frawgs, but I don' b'l'eve it; en du'in' de wah dey said Yankees had hawns awn dey haids, but I nebbe' b'l'eve dat. Yo' said yo' 's a Yankee, so yo' mus' know if dey eats frawgs; does dey?"

"Some of them do and some don't, but I've seen frogs for sale in the markets of St. Louis and New Orleans, so other people must eat them. Do you know of any animal that is cleaner than a frog?"

And so the talk went on. I picked up the two dozen and could have got several hundred, killed four blue-winged teal out of two small bunches, caught two catfish of about 10lbs. each, several gars and a "bowfin" (*Amia*). That night I got the big turtle I was after, an alligator snapper that looked to weigh at least 60lbs., and I gave all others to Sam, taking the precaution to put the big one in the box, leave the hook in its jaw, nail the snood to the box and put the box in Sam's pen.

In the morning I rolled the frogs in cracker dust and fried them, while Sam made the tea and set the table. He watched the frying with great interest, merely remarking: "Dey does look nice, fo' a fac'."

He had fried some bacon for his breakfast, and as all was ready I put a frog on a piece of toast and set it before him, when he remarked: "I do' wan' no frawg, nebba eat dat kin'; smells good tho'; how does it tas'e?"

I was polishing the bones of frog No. 4 by this time, but stopped to say: "You know how much better soft-shell turtle is than the hard shells?"

"Yas, sah, fo' a fac'."

"And you know how good chicken is?"

"Yah, hah! 'Deed I does."

"Well, Sam, these frogs are as much better than chickens as a soft-shell is better than other turtles. If you don't believe it, try one, it won't kill you. Some people call 'em swamp squirrels; you can think they are squirrels if you wish."

Sam was beginning to weaken. He was longing to try them, but his life-long prejudice was in the way. I said no more, but kept piling up the frog bones, Sam dallying with his bacon, while looking from me to the frog before him. Finally he said: "I'll jes' tas'e dis yah to see how it goes." From a corner of one eye I could see him nibble at it, but I would not embarr him by a direct look. He paused, considered, and ga his opinion as: "Dey ain' bad."

"What ain't bad?"

"Dese yah frawgs," taking a good bite this tim "golly, dey's mighty fine."

I had nearly reached the end of my dozen, and al of my appetite, but I said: "Sorry you like 'em, Sa but take another," and I left him to finish the lot, af which he said: "I dunno w'at my ole woman an' chill'en 'll say ef dey knowed I'd eat a frawg, I 'spec hab some fo' b'e'kfas' ebby mawnin' w'ile we's heah, I do' know 'bout tellin' de ole woman. I 'spects get some fo' her an' cut off de feet an' tell her de swamp squ'ls; den I'll hab to get out w'en she finds de frawgs. But it'll be fun, an' she'll get obah it, fo' fac'."

Last Night at the Lake.

The week had passed quickly, and as I had my l turtle for Prof. Baird, my mission was ended, but the was my promise to Col. B. to spend some days w him after his family returned; and the camp on t lake was preferable to a stuffy room in Alexandr which was then a small village on Red River, and "best house" mainly a bar room frequented by a lo class of river men, whose manners, conversation a morals were several degrees tougher than the carap of any leather turtle it had been my lot to meet. The fore we stayed on the lake, believing that one night Alexandria would be enough, and more.

Sam had taken up the set lines, and as I had gi him the large 10-0 hooks with wire and snood, he h them carefully inserted in some soft bark, cottonwoo think, and counted out about 250 of the original 3 He had killed all his turtles, some twenty or more, a weighing from 5 to 20lbs. each, perhaps in all so 200lbs., so that we brought out more weight than took in. We had roasted our teal in the same w that the turtle was roasted; had eaten two and had t cold for luncheon on the way, and with frogs, potat and tea for breakfast we started.

Trolling along the lake to the inlet, which we ca down, I caught my biggest catfish on a spoon ho Sam reckoned that it weighed 20lbs., while I put it 15. Sam looked at me pleadingly and asked: "" ain' gwine let him go, is yo'?"

"No, Sam, you may have it, but if we had killed kept all the things we've caught you would have nee another ark like the Lazy Lou to carry them in. man has no right to kill things that he does not need, as I pay you for your work, I had no right to take fr Catahoula Lake one bird, fish or turtle more than needed for our food. But, believing that the l will furnish more food by letting you take these d tructive turtles from it, I have allowed you to take th to sell, as a perquisite, a tip or reward, if you und stand me, but where nature provides so bountifully man has a right to waste her gifts."

This was a case where I was conscious that I "talking over the heads of the audience," but no ot words were handy, and I watched my missionary ef of planting seed in virgin soil. The old man's face sho how he struggled with this, to him, new and abst problem. He tugged at the oars and was silent some minutes, then he said:

"Yas, sah, yo' 'flosofy am correc'; no man has a ri to was'e the good t'ings w'ich de Great Creator befo' him; dat's a sin, as yo' say, an' I nebba was gu of it. De good Lawd He sen' de tu'ttle an' de cat fo' de feedin' ob us po' mo'tals down heah below, an' preachah say 'all t'ings is made fo' man,' an' as yo' a man has no right to was'e de gif's o' nature, I quite on'stan' how yo' let all de fish go."

Anent Game Hogs.

Here was my precept, and example turned against From Sam's point of view I had wasted many "gift nature" in releasing fish which might have been m keted, to our profit. He interpreted the law of dominion of man over "the beasts of the field" i different manner from my interpretation. His appl tion of the law was purely personal, like that of game hog and the fish hog, who, although they not kill for market, as my old colored guide dic his honest way, kill for brag. They think that a which sends them an extra lot of birds or fish is to credited to them as great sportsmen, and don't k that they are men of that abominable class called h I have a whole vocabulary of words to describe th but the editor would blue-pencil them all. They bel they are great sportsmen, they "have the record numbers." The fact is that, chance, luck, fortun whatever you may term it, threw an extra amoun game in their way at that particular time, and killed all they could. We have all known extra days and extra bad ones, caused by influences be our control, chance, if you will; the fish were there, were not feeding, the ducks were flying wild or not a and so it goes.

For my Sunday Dinner.

Sam accepted the catfish if he did not accept my p sophy, and he rowed away pondering on it. We ent the stream in silence, and the Lazy Lou was g along well against the feeble current, and no word been spoken, each being in a meditative mood, wh saw a mallard coming down the creek, and as it she off to the left I raised the gun from its rest or knees and fired. The report startled Sam from reverie, but he saw nothing to cause the shot, fo bird had dropped on land. We had quite a hunt before it was found at some distance from where I marked it down as well as I could from the boat it was a drake mallard, young, handsome and fat. stroked its breast and asked in a tone which I u stood: "What is yo' gwine to do wid de duck?" was too polite to ask if it was to be wasted.

"The duck is for me, Sam. You have enough to your family for a month, and the bird will be cooke my dinner to-morrow. It will be Sunday, and I clean up and rest before I present myself to Col. Monday. You know the Colonel, I suppose, as y always lived here."

The Colonel.

"I knows him since he was a baby. His

owned my mammy an' me, an' de Cunnel he's so neah my age I can' tell who is de oldes', but we boys went a-fishin' an' coon huntin' togedde', an' w'en Ise old nuff to wuk in de fiel's young Massa George, we called him, got me off fo' a hunt many a day, an' w'en I got a wife in de nex' parish he jess bought her so she lib awn de plantation."

"As I had only formed the Colonel's acquaintance by accident on the steamer, I am glad to know something of him before I meet him. Tell me all about him."

"De ole Cunnel died w'en de wah come on fust, an' den Mas. George was de Cunnel, an' he—"

"Did he go to the war and become a colonel?"

"No, hees wife die, an' he ain' got no time to go to wah, wid his trubbles, but hees two boys, young Mas. George an' Mas. Tearl,* dey went. Young Mas. George was a cap'n and got killed at some place in de State ob Atlanta, an' Mas. Tearl he come up fum Po't Hudson wid a shot in de lungs, an' he pine away an' die. De ole Cunnel he los' hees boys an' he los' hees plantation fo' a time, an' we black boys, who was 'mancipated by Linkum, went back to wuk fo' de Cunnel, who had been good to us, an' raised him craps dat put him awn his feet ag'in; an' one day, w'en I fotched in a whole deer, he said to me: 'Sam, yo' is free, go wuk fo' yo'se'f an' don' min' me'; I cried.

"I took my wife an' chillun away an' felt as if de whole worl' had dropped out undah me; somehow it seem wrong to see de Cunnel look so an' wuk so, an' one day I went up an' said dat I was comin' back, an' he said: 'No, Sam, fo' two yahs deys been good crops an' I lif' de mawgage in two more, yo' is makin' a good libin' fo' yo' fambly, an' I'se jess as much obleege', an' I'll 'membe' it.' I do' zackly know w'at he meant by liffin a mawgage, but took it dat he was gettin' along, dat's how it was; he's up awn hees feet ag'in, an' stid ob sendin' him deer, tu'keys an' bear fo' Chris'mas, he dun sen's 'em to us."

Over the Log Again.

The same old log was met and passed in the same way as before, only the freight had to be piled on it more carefully. The turtles had to be evenly balanced as they were piled up on it, and we required more room. At the landing we found the same boy and mule. As the old man piled the turtles into the wagon young Sam said "golly" several times, and seemed to anticipate a feast.

A shave, a general cleaning up, a stroll by the river and Sunday was passed; I was ready for a few days' shooting with the elderly planter, Col. B.

[TO BE CONTINUED.]

* That's the way the name looks on my note book, taken phonetically from the old darky; possibly the name was Terrill.

Surf Fishing at Harvey Cedars.

Editor Forest and Stream:

The following is the result of eight days' fishing at Harvey Cedars and Barnegat City, N. Y., by C. A. Atkins, A. C. Atkins, Peter Both, and Victor de Wysocki, of Asbury Park; H. K. Boyer, of Philadelphia, and L. P. Streeter, of Morristown, N. J. The fish were all caught in the surf with rod and reel:

Chas. Atkins—Sept. 20, a channel bass of 19lbs.; 21st, one of 21lbs.; 22d, two of 22½ and 19lbs.

V. de Wysocki—Sept. 14, one striped bass of 10lbs.; 16th, a channel bass of 24lbs.; 18th, one of 30lbs.; 20th, one of 24lbs.; 22d, one of 19lbs.

H. K. Boyer—Sept. 18th, a channel bass of 20½lbs.

Peter Both—Sept. 21, a channel bass of 19lbs.; Sept. 22, three of 28, 19 and 17lbs.

L. P. Streeter—Sept. 17, a channel bass of 20lbs.: 19th, one of 30lbs.; 20th, one of 21½lbs.; 21st, three of 19, 19 and 16lbs.; 22d, one of 19lbs.

Mr. A. C. Atkins also took a 12lb. sheepshead and a 12lb. black drum. There were in all 426½lbs. of channel bass; and the total catch was 24 fish, weighing 460½lbs.

L. P. STREETER.

Another Veteran Fisherman.

CONGRATULATIONS to Mr. Eastman, of Rutland, Vt. Please tell him that Mr. R. C. Allen, of Jersey City (also a Vermonter by birth and sixty years' residence), now in his eighty-second year, on the last Saturday in August rode five miles in an Adirondack guide boat and then tramped a mile and a half of rough trail to fish an accustomed trout stream. Result: Twenty-five beauties, mostly 7 to 9in. in length (a dozen were taken from one place), and a day of pleasure akin to that enjoyed in old Vermont by Eastman and Allen and Rowland E. Robinson in the long ago of their boyhood days. The woods help one to keep young as well as strong.

JUVENAL.

Snapper Fishing on Long Island.

SAYVILLE, Long Island, Sept. 24.—Good catches of large snappers (young bluefish) are now the rule. The dock is full of fishermen, who, as one enthusiast puts it, have "more fun than a barrel of monkeys," for the fish are fast biters, lively fighters and beauties when brought to hand. Many are taken too at the mouth of the Gnat River.

THE DEACON.

The National Beagle Club.

NEW YORK, Sept. 22.—*Editor Forest and Stream:* A field trial meeting of the National Beagle Club was held Monday, Sept. 19, at 15 Broad street. Members present included Messrs. Kernochan, Bateman, Purinton, Appleton, Schellhass, Wright, Post and Wharton.

The committee on grounds made a most favorable report in regard to holding the trials beginning Monday, Oct. 24, at Hillsdale, N. J., on the New York & New Jersey Railroad, about one hour from Jersey City. They said that they had been over the grounds and had found them full of rabbits and in every way suitable, the country being hilly, but open, with large weed patches. Permission to hunt over one farm of 300 acres was promised, and the best of sport can be looked for.

After an informal discussion of the matter the meeting was adjourned.

G. MIFFLIN WHARTON, Sec'y.

The New Era of Field Trials.

IN a very pleasant letter of recent date, the well-known sportsman, Mr. Thomas Johnson, writes concerning field trials as follows:

"As you know, we have tried to raise their prestige by using every legitimate, honorable means we know. Our first work was to eliminate the kickers and those who thought only of the dollars and cents. I give most credit to our amateur organization, the Western Canada Kennel Club. They first held strictly amateur trials. The sweets of victory encourage them to bigger efforts, and in consequence the winners usually go to the open trials. The result is that Manitoba can hold successful trials without outside entries, but with these coming in also it is doubly interesting.

"This year we held our championship stake near the city, and I can safely say that we had the best attendance ever known. Of course, our flat, open prairies, where you can drive everywhere, give us unusual advantages. These were recognized by a concourse of visitors in every kind of vehicle, from the family brougham to ladies on bicycles. A conception previously held by lots of people of a field trial was that a race opened the proceedings, the dogs chasing after birds, and when one of the dogs caught the bird it wound up with a dog fight for its possession. This fallacy has now been removed in Manitoba, and next year our best people will encourage their sons to interest themselves in field trials as one of the cleanest and healthiest sports we have. We always lacked in Manitoba the interest of the press. Now, however, as you will note from the editorial clipping I enclose from our leading paper, the Manitoba Free Press, we are getting every encouragement in that direction. Manitoba, as you know, is 100 per cent. in every kind of legitimate sport, and it is very pleasing to me to note that one in which I have been identified through all kinds of weather is now recognized as equal to any, and as I have always contended superior to most. The clipping mentioned is as follows:

"'The field trials of '98 have been run, and brought to a satisfactory termination, and the sportsmen of Manitoba extend a hearty invitation to their visiting brothers from less favored regions to come another year and bring the best their kennels hold. For nothing tends more to the advancement of true sport with the gun than the co-operation of man's best friend, the dog. Wildfowl shooting 'tis true is most glorious sport, and the man who can drop unerringly his couple of mallard by a neat right and left, or pull down a full-grown honker by a well-directed shot, is no mean disciple of the trigger, but take it all in all the acme of sport is reached when a clean kill results from a staunch point.

"'He who has a well-broken pointer or setter is hardly likely to sink to the level of a mere pot-hunter. He knows there is a deeper, truer joy in following the almost human indications of his humble companion, and the weight of the bag then becomes but a poor index of the pleasures of a day in the field. The more broken dogs we have, and the more the younger generation see of their marvelous intelligence, the better for the future of the feathered game of the prairie.'"

THOS. JOHNSON.

A. K. C. Meeting.

A MEETING of the American Kennel Club was held on Sept. 22, at the club rooms, 55 Liberty street. Mr. H. H. Hunnewell presided. The treasurer reported that the receipts since Jan. 1 were $5,773.21, and the expenses $5,681.08, with a total balance on hand of $4,368.62, as compared with a balance of $3,729.75 in September, 1897.

The principal business before the meeting was amendments to the rules for the benefit of Pacific Coast shows. Apparently the members on the coast had agreed upon certain requests submitted a month ago. The main one was indorsed by the Kennel Club rules committee, but owing to the receipt of a telegram from the San Francisco Kennel Club secretary, as to the meaning of which there was some doubt, the subject was laid over until the December meeting. The only adopted amendments of importance were regarding the winners' classes, which must now be specified in the premium list, and from that there can be no subsequent deviation. It is optional with the club to announce such winners' classes as they see fit, and three wins therein entitle a dog to the title of champion and an American Kennel Club medal.

The resignation of James Watson as secretary of the Stud Book committee, a position he had held for many years, was accepted, and Marcel A. Viti, of Philadelphia, was elected to fill the vacancy.

Champion Count Gladstone IV.

WE publish this week a portrait of champion Count Gladstone IV., famous as a competitor in many field trial contests. He is now owned by the Verona Kennels, of San Francisco, Cal.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

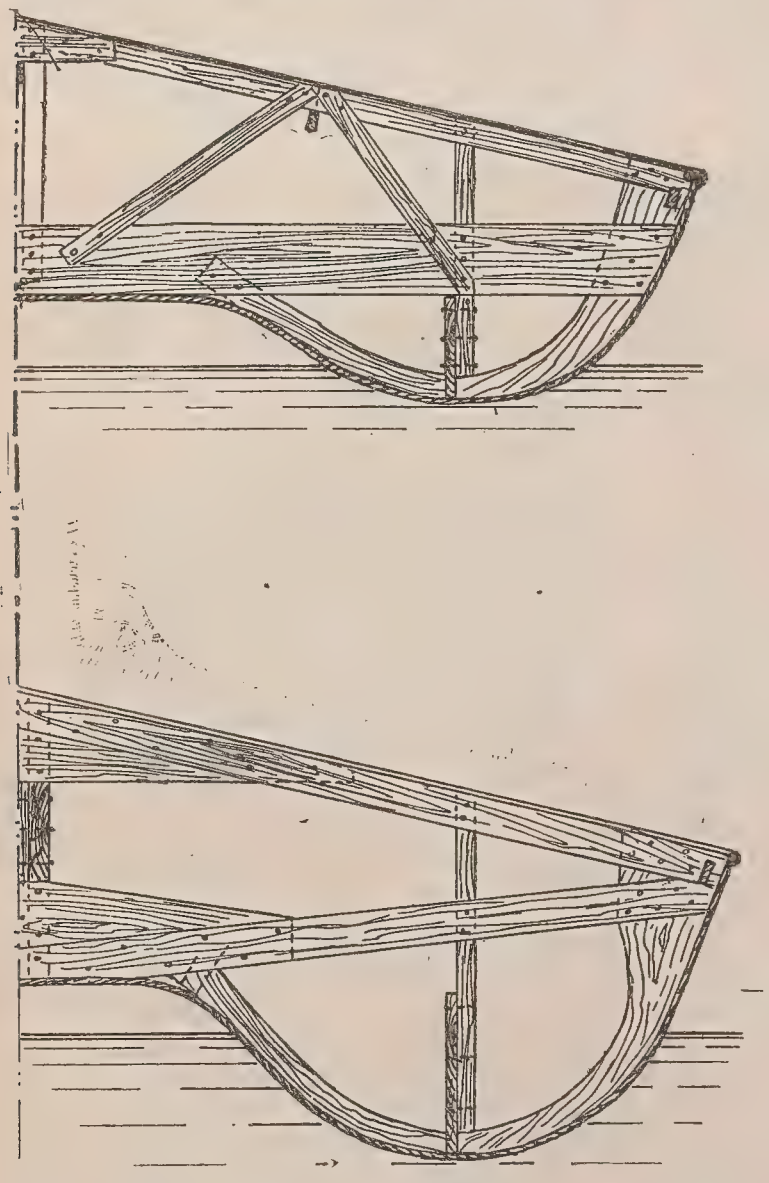
All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Yachting.

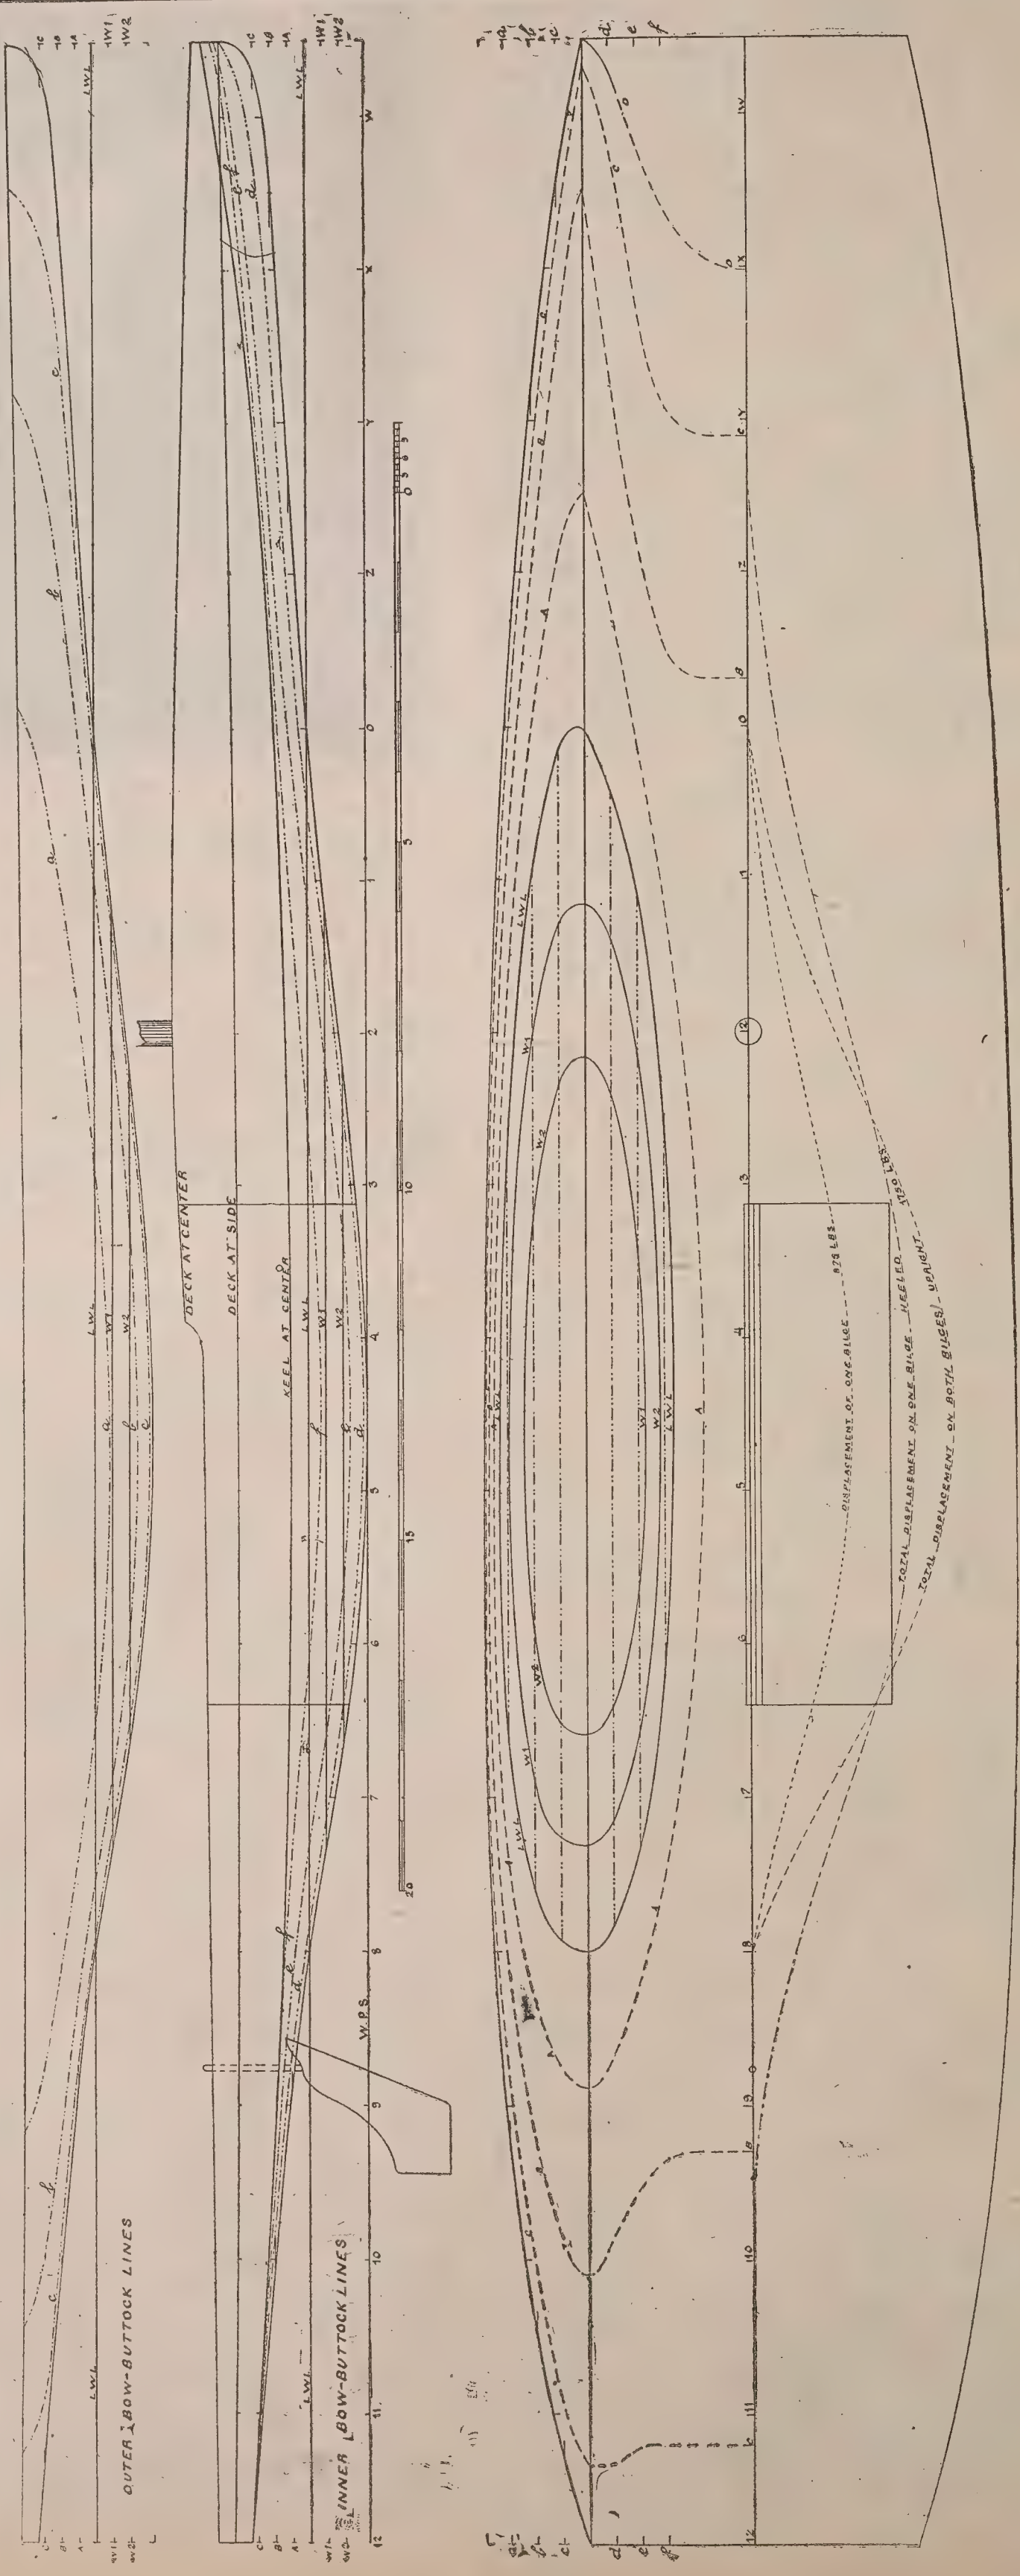
As the yachting journal of America, the Forest and Stream is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.



The most important question to be considered at the coming meeting of the Yacht Racing Union is that of the measurement rule. There has been for over a year a general expectation that some final action in the adoption of an improved rule would be taken at this meeting. The indications now are that this expectation will not be realized, as nothing has been done during the past summer in the way of deliberation and discussion. It is impossible for the members or the council to frame a new rule in the very short time available for such work at the coming annual meeting, and the probabilities are that the new building season will begin with the measurement question in the same confused state as in former years.

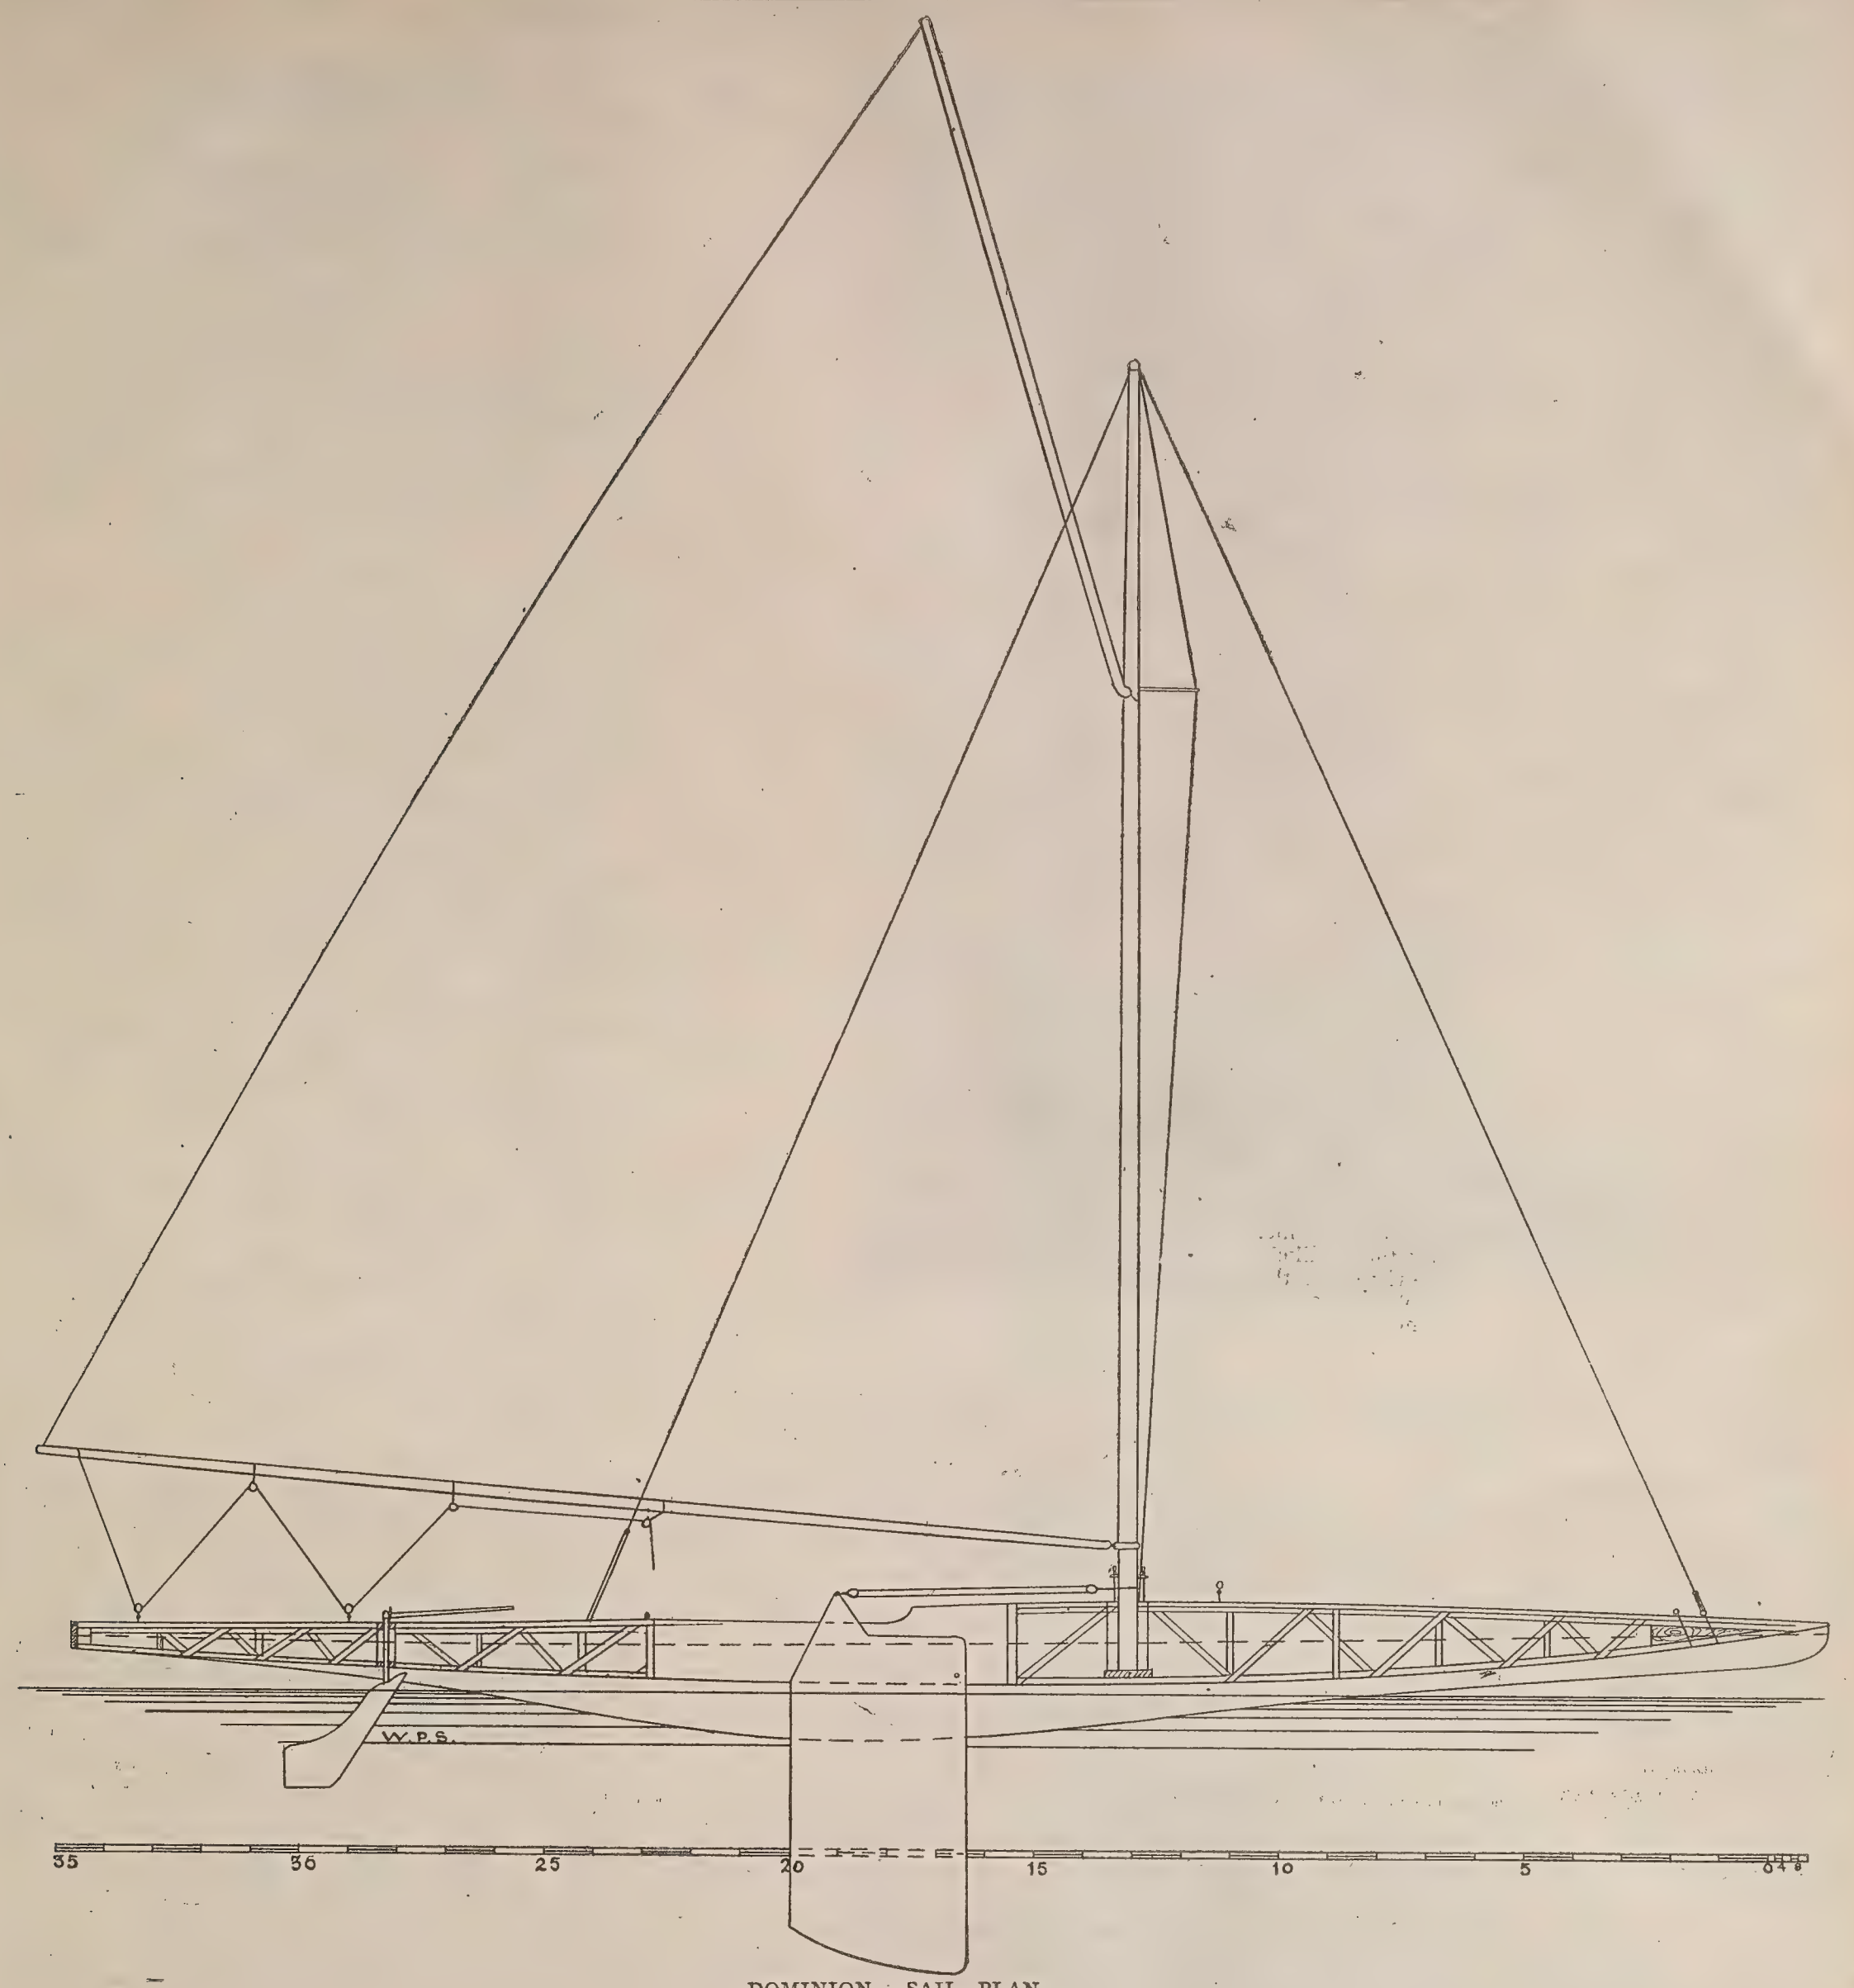
The formal challenge of the Seawanhaka C. Y. C., practically the same in wording as the telegram already published, was received in Montreal on Sept. 22, and will be accepted by the Royal St. Lawrence Y, C. Nothing has yet been proposed in the way of amending the conditions.

One of the best known of the old-time yachts, the schooner Rebecca, modeled by George Steers in 1855, and since in regular service, came to her end on Sept. 21, being wrecked on the new works of the Delaware breakwater at 4 A. M., while trying to find shelter under the lee of the breakwater. She was returning to her home port, Philadelphia, from Bar Harbor, with her owner, Robert H. C. Brock, and friends on board. All hands were rescued by tugs after taking refuge on the rocks of the new work.



Dominion.

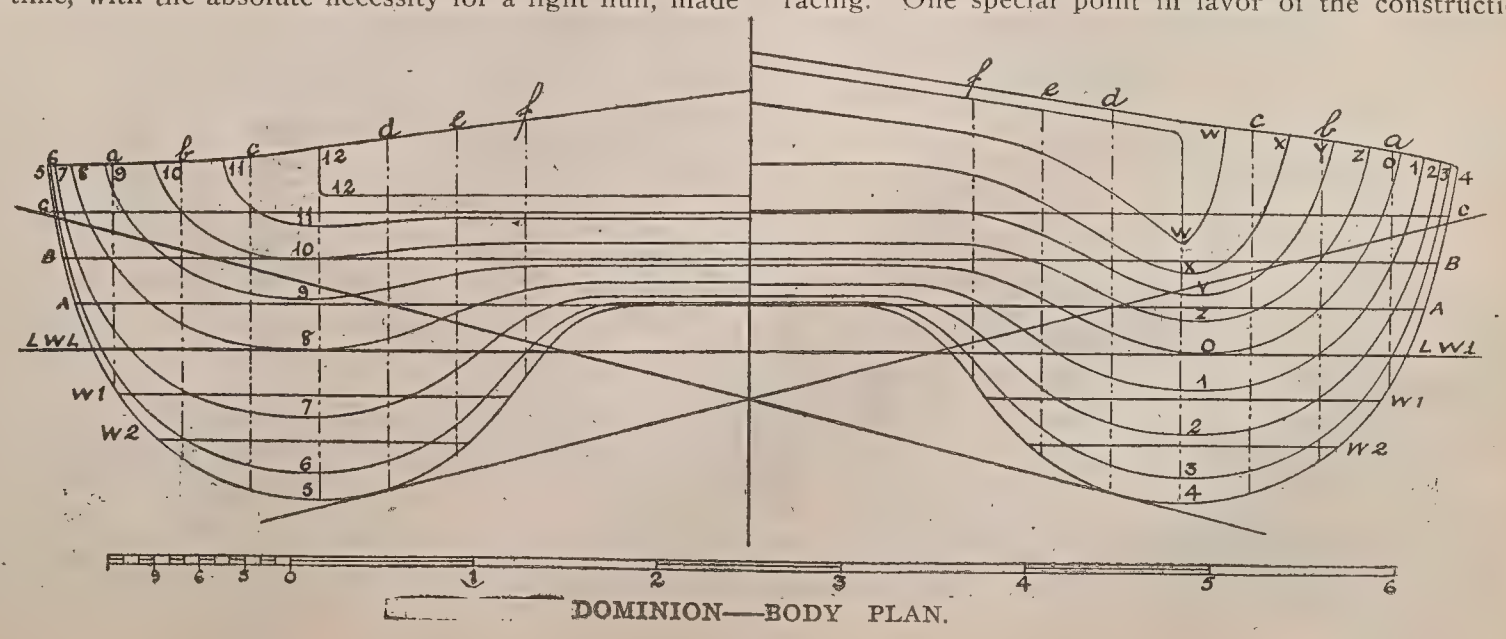
The Canadian 20-footer Dominion, the defender of the Seawanhaka international challenge cup, is remarkable as the most extreme and at the same time the most successful of the fin-de-siecle type of racing machine. She has already aroused a lively discussion that is likely to result sooner or later in a radical revision of the rules governing the class, and possibly of the general rule governing all the smaller classes. The situation at the present time seems to be that either this new type must be recognized as legitimate in all classes, or some material change of the rules must be made to bar the extreme scow type to which she belongs. We are indebted to her designer, Mr. G. Herrick Duggan, of the Royal St. Lawrence Y. C., for the design and various sketches illustrating the details of construction and other important points. The original design was contracted, the longitudinal scale being 1in. and the transverse scale 1½in., but it has been redrawn in its true proportions. The dimensions of Dominion are:



DOMINION.
Sections showing construction.

Length over all	35ft. 10 in.
l.w.l.	17ft. 6 in.
Beam, extreme	7ft. 7½in.
l.w.l, over all	7ft. 1½in.
l.w.l., one bilge	2ft. 5½in.
Draft, hull	10 in.
with board	6ft.
Freeboard	1ft.
Sheer, bow	3 in.
stern	none.
Displacement	1,750lbs.
Area midship section, total	2.88sq.ft.
Sail area	500 sq.ft.

DOMINION—HOLDER OF SEAWANHAKA INTERNATIONAL CHALLENGE CUP.



DOMINION—SAIL PLAN.

In many details Dominion is no more remarkable than others of the 20ft. class produced within the past two years. The "barn door" deck plan has been seen on Akabo and Vagary, and in a modified form in Skate and Question. The notable departure that has aroused so much hostile criticism is the hollowing of the floor, so plainly shown in the body plan. The object of this, as explained in previous articles, is to perfect the form of the bilge when sailing (as all the boats of the class are sailed) at an extreme angle of heel, and with the entire weather side of the boat clear of the water. The rig and general fittings are much the same as in other of Mr. Duggan's boats, Speculator and Strathcona of this year, and Glencairn, Avoca, Glenowen and others of last year. The centerboard is built up, of wood and sheet steel, weighing about 250lbs., or about 150lbs. less than in last year's boats; it is situated amidships, in the center of the hull, as in the other boats. The rudder is of a different form from last year, very wide below, but is of the same construction, a light iron tube for stock, two sheet steel sides, and wood filling, making a strong and light piece of work. The rig is of the same length on the foot, and the center of effort is at the same height as in Glencairn II., but the gaff is peaked up, making a higher rig. All of Mr. Duggan's sail plans this year show these same proportions, looking like Momo of last year.

One of the peculiar features of Dominion is the shape of her deck. The boats of last year, Avoca in particular, were distinguished by a great crown and a peculiar curve to the beams; this year, in Dominion, the curve has been abandoned, each side of the deck running up straight to a ridge in the center, like the roof of a house. This plan gives a great depth where it is needed, above the highest part of the floor, and especially for the housing of the mast, it aids in the transverse trussing, as shown in the sketches of the construction, and it gives a weather deck that in sailing is flat and almost level. So far as the deck work and the handling of the light sails are concerned, Dominion is far ahead of anything yet produced. Her crew is able to walk about from end to end, reaching the end of the boom easily, while in jibing over the spinaker it is only necessary to walk around forward of the forestay with it.

The cockpit is comparatively small, but it is carried down to the bottom, its floor being merely light strips laid on the floors. There are no bulkheads, the boat being open from end to end.

The great length of the yacht, the large area of deck, the limited depth, due to the hollow under the floor, and the fact that only one side of the hull is water-borne at a time, with the absolute necessity for a light hull, made the problem of construction a difficult one; but it was successfully solved by Mr. Duggan, who planned the entire construction and followed it closely during the building; the yacht being built at the shop of the Yacht Company of Canada, on the yacht club grounds at Dorval. So far as tested by the trial trips, practice sails, trial and cup races, covering the six weeks following July 9, the construction is a success in the important detail of strength. After the third cup race, the most severe trial of the season, she showed when hauled out no signs of straining, except some checks in the white enamel on some of the seams amidships; the planking was intact, the form unaltered, and apparently the boat was good for several seasons at least of sailing and racing. One special point in favor of the construction

DOMINION—BODY PLAN.

DOMINION.

is that only the cheapest and simplest materials were used, such as are found in any boat shop, and there was no call for special skill on the part of the workmen; as we have stated before, all of the Duggan boats for the past two years have been built by a pattern maker who has turned boat builder for the occasion.

The first point in the construction was to secure a sufficient depth of hull amidships, by means of the central ridge, giving depth for a fore and aft girder, and also stiffening the transverse trusses. The hull as a whole is made up of three fore and aft trusses, and sixteen transverse trusses. The fore and aft trusses are located one in the center of each bilge, and the third exactly between these two in the center of the hull. The lower member of each side truss is a vertical keelson of 5/8in. white pine, 8in. wide amidships; the posts are of white pine, 1 by 1in, and the diagonals of the same wood, 3 by 1/2in. The details are similar to those of the central truss, as shown in the sail and sheer plan.

At each of the stations shown on the design, spaced 2ft. 2in., is a transverse truss, forming the main and deck frame, also of 1/2in. pine from 1 1/4in. to 3in. wide, the curved members being merely sawn from straight stuff without regard to the grain. The two sketches show the details very plainly. The members are carefully disposed and well fastened by numerous boat rivets. At the two after stations under the travelers solid frames are used, and at the partners solid planks are used above the level of the middle floor. The skin is laid shiplap, of about 3/8in. thickness, with three light bent frames between each of the trusses. The deck is also shiplap, just under 3/8in.

The weakest point in all the boats of the class has been about the mast, there being usually no keel or keelson to carry the weight. In Dominion the mast step is suspended by four 3/8in. steel bolts from two fore and aft pieces of oak, about 2 by 2in., running over the tops of the transverse trusses and transmitting the strain to several of them. In this way there was no direct strain on one point of the bottom.

The construction as a whole is simple, cheap, homogeneous and apparently amply strong and durable. In these respects it compares favorably with that of the Crane boats, which was ingenious and carefully worked out, but at the same time called for materials unknown in boat shops and unfamiliar to the average boat builder, and depending for success on the use of metal in combination with wood, instead of one material alone.

From the above description it will be seen what Dominion actually is; we hope next week to go into the question of her relation to other modern racing machines. W. P. S.

North American Yacht Racing Union.

THE following was sent out last week by Secretary Jones, of the N. A. Y. R. U., to members of the Council.

In accordance with article 8 of the articles of association of the North American Yacht Racing Union, the annual meeting of the Union shall be held on the first Saturday in October in each year, which this year falls upon the first day of the month.

The place of the meeting is to be determined by the Council. No action having been taken at the last meeting of the Council regarding the place of meeting, a mail vote will be required to determine where the meeting shall be held. It is suggested that the meeting be held in either New York or Boston. Kindly inform me by return mail, if possible, of your choice as to a place of meeting, so that notices can be sent to representatives as early as possible. I also desire to know whether it will be convenient for you to attend a meeting of the Council on the day previous to the annual meeting of the Union.

The Riverton Yacht Club, of Riverton, N. J., has applied for membership in the Union. A mail vote upon the application of this club for membership is also requested.

The majority of the votes favored New York, and the meeting will be held at the Windsor Hotel, Fifth avenue. On Friday evening a meeting of the Council will be held.

Motors for Small Sailing Craft.

THE great improvement of late years in the small motors using gasoline, naphtha, kerosene and other liquid fuels has already resulted in the production of a new type of yacht, the small auxiliary, a sailing yacht with such auxiliary power as will at the least bring her home in a calm against the tide. While the best of the engines now in the market are far from perfection, some very useful and serviceable yachts have already been turned out, and with the improvements still being made in the directions of lighter weight and more efficient performance still better results are to be looked for in the future. We have lately had two inquiries for information in regard to this class of vessel, one from a correspondent interested in a motor suitable for a canoe and who is looking for descriptions of such craft of very small size as have been thus far built. The other is from a correspondent in the tropics, where the intense heat makes it undesirable to use naphtha. He is looking for a motor using kerosene or a similar fuel, suitable for a sailing yacht of 25ft. l.w.l., 8ft. beam and 2ft. 6in. draft. We shall be glad to hear from any of our readers who have had experience with either size of yacht.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Sept. 28-29.—Bloomfield, Ind.—Bloomfield Gun Club's target tournament.

Sept. 28-29.—Harrisburg, Pa.—Annual fall tournament of the Harrisburg Shooting Association.

Sept. 29.—West Chester, Pa.—All-day shoot of the West Chester Gun Club.

Oct. 1.—Holmesburg Junction, Philadelphia.—Live-bird opening and challenge cup shoot of the Keystone Shooting League.

Oct. 1.—New Brunswick, N. J.—Central New Jersey League shoot.

Oct. 4-6.—Des Moines, Ia.—Iowa State Sportsmen's Association; open to all.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's tournament, open to all; one day live birds. W. A. Kidd, Sec'y.

Oct. 6-7.—Fort Wayne, Ind.—Tournament under the management of C. H. Miller and Lewis Melsheimer.

Oct. 7-8.—Altoona, Pa.—Tournament by members of the Altoona Rod and Gun Club; targets and live birds. U. S. Houck, W. S. Bookwalter, G. G. Zeth, Committee

Oct. 8.—Woodlawn, L. I.—Team contest between Endeavor Gun Club and New Utrecht Gun Club, on grounds of the latter.

Oct. 11-12.—Mt. Sterling, Ill.—Mt. Sterling Gun Club's two days' tournament. J. Breldenbend, Sec'y.

Oct. 11-14.—Baltimore, Md.—Fourth annual fall tournament of the Baltimore Shooting Association; two days at targets, two at live birds. $100 added each day. Geo. S. Harrison, Sec'y.

Oct. 12.—Reading, Pa.—South End Gun Club's all-day target tournament. Peter Texter, Sec'y.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Oct. 12-14.—Dayton, O.—Rolla Heikes' tournament; one day live birds; $200 added to target events.

Oct. 18-21.—Belle Meade Stock Farm, near Nashville, Tenn.—Two days at target; two days at live birds; $500 added. W. R. Elliston, Manager.

Oct. 25-27.—St. Louis, Mo.—Tournament at Dupont Park.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

1899.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

May 22-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Greenfield Gun Club, Pittsburg, Pa., will hold its sixth monthly shoot on Oct. 5, commencing at 1 o'clock. There are ten events, 15 targets, $1 entrance. It is a handicap shoot. Shooters known to average 85 per cent. or better will shoot at 15 blue-rocks; those averaging from 75 to 85 per cent. will shoot at 16; those averaging less than 75 per cent. will shoot at 17. This is arranged with a view to an equitable competition, and is deserving of the stanchest support. Moneys divided by the Rose system. Targets 1½ cents. The targets will be thrown by a magautrap. The Greenfield Gun Club's grounds are open for practice shooting every Tuesday and Wednesday. Practice targets 1¼ cents. Take Second avenue electric cars, transferring at Greenfield avenue direct to shooting grounds. Mr. John C. Knode, secretary, Greenfield avenue, Pittsburg.

Mr. C. C. Beveridge, better known to his friends as the Dominie, is smashing targets in a way that denotes he is in his usual good form. At the Red Cross shoot he scored 100 out of 107, and Sept. 20 he scored 123 out of 130. The Dominie is at present in Pittsburg, but he goes to Philadelphia soon. In a letter to a friend he writes: "The smoke around here makes just the right kind of a light for targets. I suppose that I will have to get smoked glasses when I leave here. You may not believe it, but you can't wear a white shirt more than a week in this town before it needs washing." How different from New York, where a shooter can wear the same shirt a month.

The Clearfield Gun Club, Riverside Park, Clearfield, Pa., will hold a live-bird, target and rifle tournament Oct. 4-6. Shooting begins at 8 o'clock each day. There are seven events on the first day, three of which are at live birds. Total entrance for the day, $15. There are seven events on the second day, of which two are at live birds. Total entrance, $19. Money divided 40, 30, 20 and 10 per cent. There are five rifle events on the third day. Address all communications to Mr. Charles T. Noll, the secretary.

Mr. Dan R. Scammon, Eau Claire, Wis., writes us that he will hold his first annual tournament on the Eau Claire Gun Club grounds, Nov. 15 to 17. Two days will be devoted to targets, one at live birds.

The race between Gilbert and Elliott for the Du Pont trophy last Saturday at Watson's Park, Chicago, was a great race, Gilbert winning by a score of 97 to 94.

Mr. R. G. McCants, secretary of the Greenwood Gun Club, Greenwood, S. C., informs us that his club has claimed the dates May 24 and 25 for its annual live-bird tournament.

The dates of the tournament to be held at Fort Wayne, Ind., have been changed from Oct. 5 and 6 to Oct. 6 and 7, as they conflict with the Greensburg, Ind., shoot.

On Oct. 8 there will be a friendly match between teams of the New Utrecht Gun Club and the Endeavor Gun Club, on the grounds of the former, at Woodlawn.

The regular monthly shoot of the Boiling Springs Gun Club, Rutherford, N. J., will be held on Saturday of this week.

The South Side Gun Club, of Reading, Pa., has claimed Oct. 12 for its annual all-day tournament. Peter Texter, Secretary.

On Saturday of this week the New Utrecht Gun Club holds a shoot on live birds, at Woodlawn.

BERNARD WATERS.

Trap around Reading.

READING, Pa., Sept. 24.—At the last meeting of the South End Gun Club, of this city, it was decided to hold an all-day open shoot at targets Oct. 12, to commence at 9 A. M., at their shooting grounds, in Boyer's Meadow, which can easily be reached by three trolley roads, being only five minutes' ride from Penn street. The club has a fine shooting park, with an excellent background for either target or live-bird shooting. It was decided by the committee to place in competition a fine trophy, in the shape of a sterling silver cup, which is being made at present by a manufacturing jeweler, Chas. G. Willson, of this city; and those who have seen the design say it is something handsome, and the club winning it can be proud of it. The committee will put it up for a team shoot of either five or six men, at targets. There will also be events at 10, 15, 20 and 25 targets, at a very reasonable entrance fee, so as to enable all to enter. Up to date the manager has yet not been selected, but

be at the next meeting of the committee. Invitations will ent to all gun clubs in Pennsylvania, and it is hoped that who can will be present at this shoot, especially teams for rophy shoot, as the team winning the cup will not be getting nmon "tin cup," but a sterling silver loving cup, which will rnamented with fine silver trimmings, and valued at about

netown, Berks County, Sept. 21.—A live-bird shooting match eld at the Red Lion Hotel, this village, to-day, in which about ve birds were used. The majority of the events were matches een shooters to settle long-existing rivalry as to the merits e shooters. The first event was a match between John Slipp, irdsboro, and Theodore Lacy, of Stonetown, each man shoot- t 10 birds, 28yds. rise, for $10 a side, loser also to pay for the . The score:

BOILING SPRINGS GUN CLUB.

therford, N. J., Sept. 24.—Fifteen shooters entered in the 100- t handicap of the Boiling Springs Gun Club to-day. The her was unfavorable for good scores, the light being leaden a heavily overcast sky, and there was sufficient wind to the flights very erratic.

e feature of the shoot was the quickness and accuracy of Edward Banks. He shot in excellent time. He got 25 ght in his first 25, missed only 3 out of his next 50, but lost his last 25, making a score of 92, which, with his handicap, him an even 100. Mr. F. G. Wheeler, of the Rough Riders, eed the race, and afterward tried his hand and eye at target hing, a pleasure which was denied him for many weeks, while as in Cuba doing some shooting about Santiago. He broke raight in two events, then shot at 5 more, making 25 straight, at there is no doubt but what he will readily get back to his form with the shotgun. Messrs. Pentz, Wise, Hobart and rs did the handicapping.

e conditions were 100 targets, $5 entrance, Rose system, 5, nd 1, with a handicap allowance of misses as breaks. Banks lone in first; Huck was alone in second; Dudley and Nelson ed third, and Money and Van Dyne divided fourth.

EAST SIDE GUN CLUB.

Newark, N. J., Sept. 22.—The weather was cloudy, with a stiff cross wind. The birds were good, with a mixed lot of flights. This was the club's first shoot of the season, which begins in September and ends in June, 1899. It took place on Smith Brothers' grounds. All stood at 28yds. The first event was the club match, point handicap, sweep optional.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Woodlawn, L. I., Sept. 24.—A fairly good attendance, interesting events, and poor weather characterized the semi-monthly shoot of the New Utrecht Gun Club at Woodlawn to-day. The scores made do not do the shooters justice, they certainly having nothing in their favor. There was no particular feature in the shooting, with the possible exception of De Wolfe, who shot in very good shape.

In the cup shoot Hegeman was the only man who could tie Van Brunt, with his allowance, so Van Brunt shot up his of 1 bird, thus winning the cup.

In the gun event, No. 4, it was the same, Thompson having to break only 1 of his allowance to win out. In the event for 500 shells George and F. A. Thompson tied at 20 each. They shoot off this tie at the next shoot. Live birds, Saturday, Oct. 1:

E. G. FROST, Sec'y.

Cleveland Gun Club's Tournament.

THE eighteenth annual tournament of the Cleveland Gun Club Co. was held on the 21st and 22d inst. at the club's shooting park, at the foot of Kershaw street, in this city. Among the gentlemen in attendance from out of the city were Dr. D. A. Allen, George A. Spross and H. H. Hess, Toledo, O.; James Eadie and R. C. Hopkins, Glenville, O.; E. W. Hull, Akron, O.; E. J. McMahon, Elyria, O.; Thomas Cathan and Oliver Burton, Chagrin Falls, O.; William Spangler and J. L. Ward, Columbus, O.; F. H. Andrews, Youngstown, O.; W. G. Lyman, C. A. Smyth and Mart. George, Kent, O.; L. B. Douds and P. W. Schwartz, Canton, O.; and J. P. Lochary, Hartford City, Ind.

The weather conditions the first day were perfect, and while the largest entry in any one event was thirty, all the gentlemen present seemed to enjoy the sport. It was expected that there would be at least forty entries the first day, but the tournaments at Detroit, Mich., and Sistersville, W. Va., attracted a number of gentlemen who would otherwise have come to Cleveland. The programme each day consisted of ten events, 150 targets, for cash prizes, $10 added to each event, and one event of 15 targets, for five merchandise prizes. The club also gave prizes for the four highest averages in the two days, and on the second day a new feature in the way of a special handicap event was introduced. By agreement of the gentlemen present, the scores made in the two merchandise events were not considered in the average.

On the first day two of the local men—Snow and Grant—finished in first place with a score of 139 out of a possible 150. The weather man the second day demanded pay in full with interest for the fine weather furnished the first day, and before noon the boys thought they were on a duck marsh, as the rain fell in torrents and the wind blew a gale directly into the faces of the gentlemen at the score. Although there was a roof over their heads it did not shelter them much, and the targets would seemingly climb into the air like mallard ducks over decoys. None but the faithful appeared, and they stayed until the programme was completed.

It was thought on the evening of the first day that Snow or Grant would win high average, as they had a lead of 4 birds, but on the second day Upson had on his shooting clothes. Grant dropped out of the race at the end of the fourth event by missing 12 out of 50 targets. Snow shot a good race, and did not drop out until the last event. Upson simply demonstrated what he has shown to be true in the past, that he is one of the most skillful target shots in the country. His record the second day of 143 out of 150, .9533 per cent., is simply phenomenal, when the weather conditions are considered.

The special handicap event proved to be a big success. The handicap was fixed on the actual record made by each gentleman during the two days' shooting, and the handicap allowed was simply added to the actual score made, hence the allowance was reduced to fractions. The general average prizes were given as a reward for good shooting done by the best shots present, but the most valuable prizes were reserved for the handicap event, so that everyone who shot through the tournament should have an equal chance to win the most desirable prizes. The experiment was a success, and it will probably be used by this club again at future tournaments.

Mr. A. M. Jenkins, the inventor of the magautrap, was present and took part in eight events the first day. Mr. Jenkins is a quiet, reserved gentleman, but any one, in the words of the Western editor, who can create a trap that costs $30 per year to borrow is not very slow and will bear watching. The writer has been compelled for years to wear glasses with which to shoot, and recently he met brother Jenkins at a tournament, and he noticed that he had on a pair of glasses, each lens being at least 2½in. in diameter. One of the gentlemen present suggested that Mr. Jenkins intended to use his plate glass fronts with which to break targets by reflection. Nothing was thought of this kind remark until after a picture was taken of the gentlemen present at this tournament. Mr. Jenkins occupies a position in the front row, and his glasses stand out like locomotive headlights. Our friend Kelly, who was kind enough to act as photographer, claims positively that Jenkins has ruined his camera. We in Cleveland think a man unkind who will create a trap to throw a bird with English and then take further advantage of us in other ways.

WEDNESDAY, SEPT. 21, FIRST DAY.

Allen	300	231	.7700				

Special handicap event, 25 bluerocks: Snow, scratch, 25; Hull, 25; Upson, scratch, 24; Allen, 3¾, 21¼; Elliott, ½, 23½; Spross, 2½, 22½; May, 1¼, 22¼; Grant, ¼, 21¼; Page, 4¼, 21¼; Alexander, 2, 21; James, 2¾, 19¾; Hess, 3¾, 17¾; Griggs, 2, 17.

First, Snow and Hull, Standard sewing machine; second, Upson and Allen, $10; third, Elliott, carving set; fourth, May, box of cigars; fifth, Spross, half-dozen silver forks; sixth, Page and Grant, pair suspenders; seventh, Alexander, pair slippers; eighth, James; special prize, two low guns, $3.75 each, Hess and Griggs.

GRANT.

Catchpole Gun Club.

WOLCOTT, N. Y., Sept. 23.—The scores below were made today at the invitation shoot given by the Catchpole Gun Club, on their grounds. The attendance was good, considering that this is the open season for game shooting. Mr. Beyer, of Rochester, N. Y.; Messrs. C. Wagner and Hunter Bros., of the Hunter Arms Co., Fulton, N. Y., and others from adjoining towns were present. Uncle Ben Catchpole, probably the oldest trap-shooter in the State, was on hand, as our club bears his name. He did himself proud by making a straight score in one event, and making sport for the boys. The programme consisted of twelve events, money divided in 40, 30, 20 and 10 per cent.

Following is a list of shooters and scores:

	Shot at.	Broke.		Shot at.	Broke.
Beyer	155	144	Weeks	40	19
Wayte	155	141	Miller	90	67
Smith	125	104	Fowler	30	16
L Hunter	145	111	Wadsworth	55	36
Wride	125	102	R Hunter	130	113
Uncle Ben	30	24	Tassel	130	103
Hopkins	155	116	J C Hunter	85	57
Granger	60	26	Wagner	95	91
Turner	130	84	Chapman	50	42

E. A. W., Sec'y.

Sidell Gun Club.

SIDELL, Ill., Sept. 17.—Scores made by W. A. Gray and H. J. Sconce in the second match for the Vermilion county championship medal, which was won by Mr. Sconce, Sept. 8, and was challenged by Mr. Gray. This medal is, like the majority, to be won five times to become the personal property of the winner. Mr. Sconce has won it twice. Mr. Cadwallader, of Danville, is the next man that will contest it, but the date is not settled on yet. Below are the scores:

W A Gray .....1111111011101101110111111—21
1111111111111001110111011—21—42

1011011111111111111111111—23—45

SECRETARY.

Confabulations of the Cadi.—VI.

The committee met at the appointed time, as per adjournment, to further arrange the details for the tournament of the Egyptian Gun Club. In the meantime the members had informally talked over debatable matters with each other and with every shooter whom they had "met up with," all with a crafty purpose of learning what would be the most popular policy, but with the common result that each one was then further from an opinion of his own than he was in the beginning—a perfectly logical consequence when men base their opinions on the circumstances and policy of the moment, instead of independently and honestly on the principles of justice and eternal right.

The committee convened in the shade of the lodge, each member sitting or reclining in a picturesque posture of ease rather than of grace, and all alike looking greasy and flushed from the excessive heat; for it then was still the sweltering summer time. The sun shone fiercely hot. Shimmering heat-waves glared on the trees; on the fences, the rocks, on everything that its fiery rays struck; therefore the shade was uncommonly grateful to the group of philosophers who had succeeded in evading the work and cares of the day and who had no thought of the morrow. The ceremonial of the cider bucket had been observed with due solemnity and vigor, so that the committee felt that its little world was full of the music of sweet song birds in a rose-colored atmosphere.

The prattle of excited children could be heard, with now and then Hopie Jane's squeaky voice rising highest in uttering commands. The barefooted, bareheaded, frowsy group soon came in sight, tugging bravely at a tree top, which they were dragging to the house for fuel, and chattering with hurried interchanges of advice, as if they were so many magpies. As they drew near, the good Cadi pressed his right hand firmly in his right side, rolled his eyes in a set look skyward at the same time twisting his face into the most agonizing wrinkles and seams; for it was meet that Hopie Jane, his beloved wife, should note that he sought the shade because he was an invalid, and that the outward signs of comfort exhibited by his companions were something apart from him and something for which he was in no wise responsible. Moreover, without some visible signs of his consuming disease, even Hopie Jane might forget that he was an invalid, to say nothing of the harsher judgments of an unfeeling world.

When she saw that an agonizing twinge had seized the good Cadi, a shadow of pain passed over her own face, and in her simple way his sufferings were her sufferings. To her the good Cadi was not a mere man. He was her idol, and he surpassed all other men, as her children, by beauty and brightness, surpassed all other children. More still—he was reputed very wise in the neighborhood, and indeed he had delivered some notable speeches at barbecues and at reunions of sons of their fathers, and had adjudicated the differences of neighbors; besides having written some very long and very learned papers, which were published in the local Bazoo, and to which he had signed his own name, the latter being a feat which even much greater men than the Cadi dare not perform, if it in the least involves the proclaiming of an independent opinion, or the running counter to public beliefs. With all these graces and talents, to Hopie Jane the Cadi was a very distinguished man, a prince of the earth, as all husbands are to their wives for a while.

As the group of toilers drew opposite the group of philosophers Hopie Jane raised her hand as a signal to the children to cease effort and rest a while, for there were moments in which the good dame could not utter a word. Moke, who wished to be civil and keep the group in countenance, remarked to her that it was an awfully hot day. She attempted to reply, but could not articulate; bracing her lanky form erect, her tangled Titian red hair standing about her head in a halo of glory, she took a half-twist in her closely compressed lips, and squirted an amber-colored stream of snuff juice with wonderful precision at an old plow about 10ft. away, and remarked then: "Yep, it's dratted hot out here in the sun." Then she patiently resumed her burden and went on her drudging way. The momentary alarm of the philosophers, as to whether the lovely woman was bent on peace or war, was groundless, for Hopie Jane had merely stopped to expectorate.

A MODEL SECRETARY.

"You will please come to order," at length said the Cadi, in due official tones. "This is an adjourned meeting of the committee, and we have lots of unfinished business to transact in respect to our forthcoming tournament. We will begin the order of business with the report of the last meeting. Moke—that is, excuse me, I should say Mr. Secretary—be so good as to read the minutes of the last meeting."

The secretary rose in an acute state of stage fright, pulled out of his pocket a piece of brown paper, which had done service as a wrapper for a plug of tobacco, and nervously smoothing out the creases, he read as follows: "The gentleman from Coon Hollow has changed his mind, and it is the sense of this meeting that it would be his gain and our pleasure if he also would change his shirt." Then he hurriedly sat down.

"Finish reading the minutes," commanded the Cadi, impatiently.

"Those are all the minutes that I have," retorted Moke, with some asperity. "Do you want the earth?"

"I beg your pardon," said the Cadi, gravely. "Those minutes, Mr. Secretary, are all right. They after all are good average official records of a gun club meeting, and you, Moke, are not far from being a good average gun club secretary, so far as attending to the duties of your office is concerned. This meeting will not act on the official report of the secretary, which so painstakingly sets forth the doings of the last meeting. What is your pleasure, gentlemen?"

"I move you, Mr. Chairman, that the report be approved and adopted," said Le Loup.

"I second it," said the secretary, hastily.

"Carried," declared the chairman.

THE SUBTRACTION OF THE ADDITION.

"Cadi," said Le Loup, as he slowly began to cut up some plug tobacco with a broken-bladed knife, "I have talked with a number of our club members about running this tournament on business principles, and most of them say that we should run it to make some money. We can run it that way just as well as not, and everyone will have his fun just the same. We want some money; as to the amount, it should be about all the money the shooters have in their pockets. There will be a good many of the shooters from a distance who will have plenty of money to spend, and it is our duty as hosts and promoters of sport to devise ways and means to help them spend it, so as to do them some and us the most good. We can make a great hurrah about giving them a good time and the keys of the city, and call them brother sportsmen in our programme, after which our club will skin them in a pleasant, genteel way, as the experts are doing in their more thoughtless, noisy way."

"Them's my sentiments," said Moke. "We should make some money in a nice, sportsmanlike way if we can; but anyway—we should make some money."

"We'll have lots of sport, sure enough," unctiously interposed the gentleman from Razor Back Hill. "If we can give our visitors an attractive song and dance, and at the same time make some money, my vote is for that. But how can the trick be done?"

"I have already told you that the men who do the thinking become very expert in time. Also, I have told you that there is as much professionalism in clubs as there is amongst the so-called wolves," said the Cadi, quietly. "The easiest way to make some money is to offer some added money. 'Added money' is really subtracted money. Subtracted money is called 'added money' because added money is more pleasing to the ear, and more equitable in its significance. You add and you subtract at the same time, but you chiefly subtract. You thereby make money if you are on to your job."

"The hot sun is addling your brains, good friend," exclaimed Moke, with much concern. "You are talking contradictions."

"Not so much as you are, wise Moke, when you are talking sport in the abstract and money in the concrete. This tournament is simply a sharp business enterprise, if conducted on the lines that you contemplate. The paradox of the addition and subtraction is very simple. You subtract the added money from the pockets of the shooters by increasing the price of targets from 50 per cent. upward. Then you give them a small part of it back under the pleasing term 'added money,' and the balance you put in your pocket. It really is not 'added money' at all; it is only guaranteed money. We ordinarily charge the stranger 2 cents for targets, and make money at that. Make your rate 3 cents at your tournament and you will make as much money as the game will stand."

"You must be talking without thinking," said Coxey. "One cent added to the price of each target would not make much difference one way or the other."

"I agree with Coxey," said Moke. "I don't understand how money can be made from any little penny game such as that."

"Of course you do not," replied the Cadi. "I never expect you to understand any proposition, however simple, on the same day that you hear it. I will endeavor to make my meaning clearer with a few figures, although I know how easily figures lodge crosswise in your head, Moke. At all events, you know that to make money the receipts must be greater than the expenses. We will suppose by way of example that our club holds a two days' tournament, using 6,000 targets. The expenses would approximately be as follows:

3 trappers, Sergeant system, at $1.25	$3.75
1 man of all work	1.50
1 cashier	5.00
1 assistant cashier	3.00
1 scorer	1.50
Incidental extra expense	5.00
6,000 targets, at $6.50	39.00
Total expense for each day	$58.75

"The above expense might be cut down materially in one way and another, as when a magautrap is used, and the members act as cashier, squad hustler, trap-puller, etc. If we charged our usual price for targets, that is, 2 cents, the receipts for one day from 6,000 targets at 2 cents each would be $120, a net gain of $61.25; or a gain of $122.50 for the two days. We want more money, however.

"Now, to stimulate shooting through the programme as much as possible throughout the two days, we will give $50 in 'added money.' This we will divide 50, 30 and 20 per cent. amongst the three highest shooters who shoot through the entire programme. With this generous addition in evidence, we feel justified in adding 1 cent more to the price of targets, which therefore makes the charge 3 cents. In the two days, 12,000 targets are thrown, and as we gain an additional 1 cent per target, the result of the 'added money' is that we add $50 and take back $120, making thereby on that matter a net gain to us of $70. In other words, if the programme calls for 150 targets, we assess each shooter $3 if he shoots through the programme, or each is assessed relatively for any less number that he may shoot at.

"Many of the 80 per cent. men, more or less, as the case may be, have not the remotest chance of ever getting a cent of that money back again. They therefore will lose in our tournament not only according to the chances of the competition, but they lose absolutely a fixed additional amount every time they fire a shot, since the shooting could be arranged on a scale just as much cheaper. The experts are getting most of their money in the regular sweeps, and our club is raking off a fixed amount constantly from their little winnings, a little of which goes to the men who have already won the most money, and the rest of it goes into the club's coffers. In short, in a nice way, under certain well established business forms, we will see that the ordinary shot suffers from a double skinning—and then we will all sit down and wonder why he will not play any more. I know very well, gentlemen, that you are actuated by the purest love of sport, and therefore that you feel that if you can make your own tournament a success you will generously permit some one else to look after the matter of reform. But, good Moke, returning to the subject, do you understand now that added money, as we are applying the scheme, is really subtracted money, and the addition of 1 cent per target means a great addition to the revenue when several thousand targets are used?"

"Yes, I do; and I understand that you are quite off in your reasoning, for in horse-racing there are sometimes thousands of dollars added to the stakes, and if it is all wrong, how can the practice of adding money be in such general use?" queried Moke, with a cock-sure air of victory.

"Easily explained, good Moke," said the Cadi. "Horse-racing has means of revenue that trap-shooting has not and never will possess. It has gate receipts which amount to thousands of dollars; it has bar and book-making privileges which are worth thousands of dollars more, and from this immense revenue it is an easy matter to add large sums of money and still have revenue left for profit. Managers do not draw this money from the pockets of the competitors, and even if they did so draw the money it would have a more equitable division, since horses trot or run under a very close handicap, or classification, as the case may be. There is no analogy whatever in the matter of the added money as it concerns horse-racing and as the same concerns trap-shooting. But suppose that 3-minute horses trotted with 2-minute horses, where would the moneys go?"

"Well, are the figures you give those of any tournament?" queried Moke.

"The figures are only given by way of illustration, wise Moke," replied the Cadi. "They are not the figures of any tournament, but the abused principle of the 'added money' is all there. Sometimes the money is 'added' piece by piece in one event and another, instead of going to the highest averages; but the majority, when no handicap obtains, have not a shadow of a chance to win any important part of it."

"But," interposed Le Loup, "the added money will make our tournament more attractive for all, and in many of the events the 80 per cent. man has a chance."

"Well, if I grant that—which I do not—tell me why the men who rate at a less per cent. than your 80 per cent. man should be arbitrarily taxed a fixed amount to go to the men who can win regularly? And tell me why nearly all programmes are arranged so that the man of 80 per cent. and less has hardly any show to win anything. A 10-target event is about his only chance. Three moneys would just let him in for third. In a 15-target event, the 80 per cent. man breaks 12, and if there are only three moneys he is out of the money then entirely. If it is a 20-target event, the man aforesaid gets 16, and he is out of the money even if there are four moneys. And you must also keep in mind that in nearly all tournaments the poor shots are expected and required to stand on even terms with the best crackajacks that the country can produce. We concoct different systems to win the admiration of the so-called amateur. The systems generally apply to some division of the money, and not to any equitable adjustment of the competition. You must give the poorer shots a handicap if you expect them to play in your yard, for the day when this neck of the woods abounded in what is commonly called 'suckers' is gone forever. In that day, a learned friend once told me that the theory of the crackajack was that

"'"'Tis music' to the gambler's ears
To hear the sucker moan,'

and yet most men are slow to perceive that the 'sucker' as an economic factor no longer exists. His education has been vigorous, costly and heroic, and he is wise in his day, as is becoming a man who can profit by a few thousand calamities."

"Well, now that you have been so good as to give us your opinion," said Coxey, "will you be so good as to tell us the application of it?"

"Certainly, Coxey, I will cheerfully endeavor in assisting you to understand it. My opinion is that such clubs as ours, which add money merely as a pretext to rake off a percentage so large that it is beyond all reason when compared with the services rendered, are a detriment to the sport, and if they held no tournaments the shooting world would thereby be a gainer. Added money which is so placed that it augments the winnings of shooters who are already chief winners, makes the competition too expensive for the average shooter. The meager winnings of the latter have a percentage deducted for the advantage of the best shots, and the added money which is subtracted gives a pretext for raising prices. Understand distinctly, however, that all clubs which add money are not running the tournament with the ulterior purpose of getting the shooter's money into the club coffers. Some clubs add $5 or $10 to each event, charging only the ordinary price for targets; and in every way but the right way—that is a handicap—protecting the rights of all the shooters. What I have said in no wise reflects on such clubs."

"But all this heap of talk doesn't settle anything about the tournament and making some money," objected Le Loup.

"A few clubs leave many important matters to be settled after the tournament begins, therefore let us put off till to-morrow what we can do to-day," retorted the Cadi.

"It's funny," said Moke, "what a difference there is in shoots."

"What is the funny difference?" queried the Cadi.

"This," replied Moke. "Patrick de Clam, our old friend, shot off his arm, and it hurt only himself. You shoot off your mouth and it hurts only us."

"'This meeting stands adjourned till next week," said the Cadi, contemptuously.

Bernard Waters.

Belle Meade Gun Club.

The programme of the Belle Meade Gun Club's tournament, Oct. 18-21, provides for two days at targets, two at live birds. The target events are alike for each day. They number eight, each at 20 targets, $2.50 entrance, $20 added money to each event, with $10 to first and $5 to second high guns for the day. There also is a gold medal for the contestant making the highest general average.

There are three live-bird events on the programme of the third day. No. 1 is at 7 live birds, miss-and-out, $5 entrance; experts 30yds., amateurs, 28yds. No. 2 is the William Gerst handicap, 15 live birds, $15 entrance; $50 added, birds included in entrance; handicap from 25 to 31yds.; three moneys, 50, 30 and 20 per cent. Event No. 3 is at 10 live birds, miss-and-out, entrance $7; experts 30yds., amateurs 28yds.

The programme for the last day is the First Annual Belle Meade Handicap, 25 live birds, $25 entrance, $100 added, birds included, handicaps from 25 to 31yds., four moneys, 40, 30, 20 and 10 per cent. The Southern Turf offers a handsome silver loving cup to the winner.

Mr. W. R. Elliston, Nashville, Tenn., will furnish all desired information. The catalogue contains the following for the general information of shooters: "There will a special train on the N., C. & St. L. R. R. leave the Union Depot every morning at 8:30 o'clock, returning after the programme is shot out. Grounds will be open for practice Monday, Oct. 17. Target events will be shot over the magautrap and one set of expert traps set in the Sergeant system. Price of targets 2 cents. Live-bird events will be shot from two sets of underground traps, and the retrieving will be in charge of Fred Irbb, of Lafayette, Ind. All shooting will be class shooting. American Association rules to govern, except in targets, where magautrap rules will be used. The referee's decision will be final. Ten-gauge guns and black powder barred. This is the only handicap with the exception of the live-bird events where a shooting handicap will be used from 25 to 31yds. Shells shipped in care J. Legler & Son will be delivered to grounds free of charge. A watchman and three bull dogs will be at the club house at night, and guns, etc., can be left there with perfect safety. No one is barred, and all arrangements have been made to make this the largest tournament ever held in the South, and no pains will be spared to make every one have a good time. Arrangements are being made to secure one and one-third fare over all roads, and shooters will be notified through the sporting papers. Lunch and barbecue will be served on the grounds every day free of charge. Loaded shells will be for sale on the grounds. All money guaranteed by the Belle Meade Gun Club. This shoot will be strictly 'on the square,' and the management will not tolerate any dropping for place, and any one doing so will be asked to withdraw."

Audubon Gun Club.

Buffalo, Sept. 24.—Following scores are from Audubon Gun Club's regular club shoot. The third event was the club badge shoot. C. S. Burkhardt won Class A badge, Dr. E. S. Carroll won Class B, and J. E. Lodge won Class C. No. 4 event was the monthly cup shoot. Jacobs and J. J. Reid tied, each getting 2 on first string. J. J. Reid won in shoot-off. On Saturday next the second shoot for the Hebard trophy takes place:

Events:	1	2	3	4	5

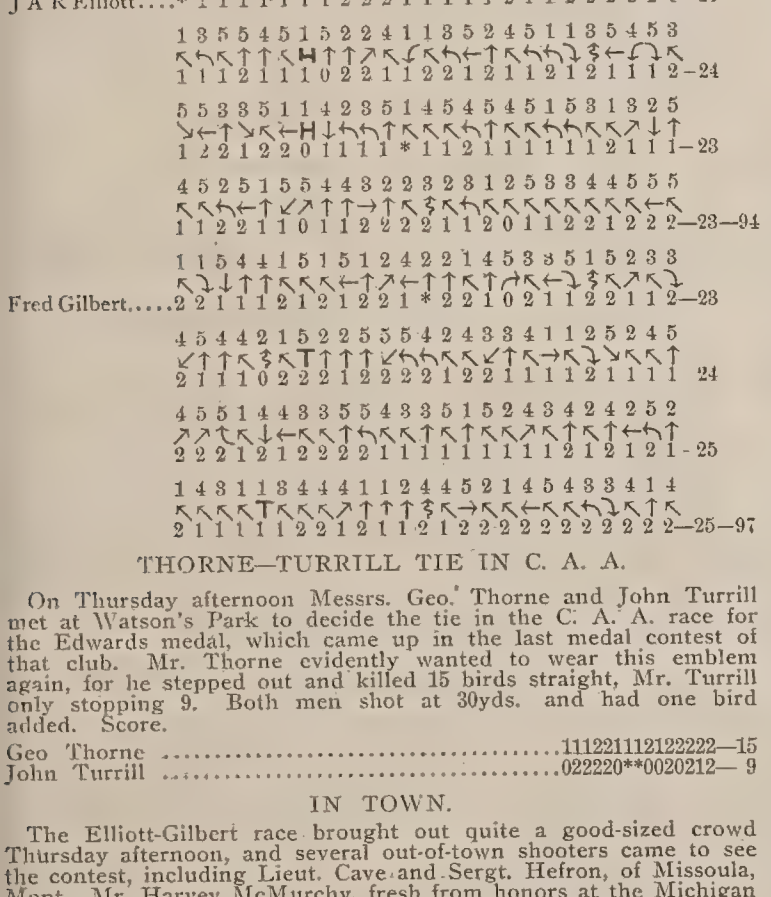
WESTERN TRAPS.

GILBERT—ELLIOTT FOR THE DU PONT TROPHY.

Chicago, Ill., Sept. 24.—To-day, with the magnificent score of 97 birds out of 100, Fred Gilbert defeated J. A. R. Elliott, challenger for the Du Pont trophy, thus winning it for the third time out of the four contests the two have shot for this emblem. Elliott's score, 94, was by no means a bad one, and those who consult the records of Watson's Park will find very few scores of 94 shot there by any of the cracks in the great races, but it was too hard to beat a man who could run 69 straight without a skip or a break.

The weather to-day was warm and bright, with fair wind, not very strong. The birds were prompt, but not so fast as one would have liked to see. The moulting season is perhaps now over for pigeons at this latitude, but they are still light in plumage and easily stopped. It could not be said that the birds were extremely hard, and the weather conditions were good for high scores. The result is shown in the two high scores that were made. Elliott had two birds flagged and Gilbert one. Elliott in the luck of the game had one or two birds the worst of it. He lost two birds that hit the wire and fell dead just across, barely able to lug out to the wire. Gilbert lost one bird just over in the same manner, but in another case he got his bird inside, it hitting the top of the wire and falling inside instead of outside.



Elliott led off by losing his first bird, after his nearly invariable fashion in an important pigeon race. This bird, a strong blue, was well cut up, but hit the wire and was lost dead out. Gilbert came back to him at the unlucky station of the 13th bird, which he lost in almost identically the same fashion in which Jim lost his first bird. Gilbert then lost his 17th, which sprang very fast and high, and went away only feathered. This put Jim in the lead, and he completed a run of 30 straight, losing a high slate blue bird, on which he was very slow with his second. Gilbert undershot a high driver, his 30th bird, and lost it, putting Elliott again in front. Then the men ran along even to the 50 hole, where they stood Elliott 48, Gilbert 47. They entered the third string of 25 in grand shape, both men using perfect time and either fit to win. The larger number of single-barrel kills will show that they were not finding the game a hard one. But on the 57th bird Elliott caught a fast one after a lot of medium birds, and he could not catch up with it. This brought the men into a tie. Thence on Fred simply smothered every bird he shot at, and did not open any gap. Jim missed his 62d, which hit the wire and dropped over, and his 82, which was a fast, high starter and was not much troubled by either barrel. His 92d was another fast one after several slow ones, and he did not get on it full with either load, though it was damaged somewhat in its running gear. These made the only birds he lost. Gilbert ran clean out after his 30th bird.

Elliott was careful with his 9th bird, and needed care. His 10th was flagged. His 23d was saved by the second. His 27th was very fast. His 29th was cut too low, but scored. His 33d was a high bird, lost by a slow second, and his 35th was caught by a good second. His 43d was killed at the wire, and brought out applause. His 50th was a grand kill, far out in the field. His 60th was a fast one, but a quick first dropped it. His 62 went over the wire by an inch. His 74th was flagged. His 87th sprang very high, and its stop called out applause. His 96th was a screecher, and this kill again brought out hand-clapping.

Gilbert had a hard one in his 8th bird, but negotiated it. His 10th was flagged. His 13th, lost dead out, was a fast, low bird. His 15th was a good stop on a hard one. His 17th was a very fast starter. His 35th was a fine strong flyer, and was only stopped by the second. Again on his 40th he was asked for a grand second-barrel kill, and it brought applause. His 52d needed the second also. His 53d was a matter of luck, hitting the wire and toppling back in. His 83d was a fast white bird, low and far, and his stopping of it called out applause. His 88th was a lucky stop with the second, as it was hardly hit with the right. His 99th was also a fortunate affair, killed far out with the second.

Both men were apparently in fine physical condition, and certainly they both shot well. The wind was in the direction of a left-quartering driver. John Watson was referee. Retrieving by four dogs. Elliott used a Winchester pump, with 45grs. Hazard Blue Ribbon powder in Leader shells. Gilbert shot an L. C. Smith gun, 3½drs. Du Pont, Leader shells. Scores:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

THORNE—TURRILL TIE IN C. A. A.

On Thursday afternoon Messrs. Geo. Thorne and John Turrill met at Watson's Park to decide the tie in the C. A. A. race for the Edwards medal, which came up in the last medal contest of that club. Mr. Thorne evidently wanted to wear this emblem again, for he stepped out and killed 15 birds straight, Mr. Turrill only stopping 9. Both men shot at 30yds. and had one bird added. Score.

Geo Thorne	111221112122222—15
John Turrill	022220**0020212— 9

IN TOWN.

The Elliott-Gilbert race brought out quite a good-sized crowd Thursday afternoon, and several out-of-town shooters came to see the contest, including Lieut. Cave and Sergt. Hefron, of Missoula, Mont. Mr. Harvey McMurchy, fresh from honors at the Michigan Trap-Shooters' League shoot at Detroit this week, was present. Mr. McMurchy goes West for a brief Middle West trip this week. Lastly, but not leastly, Phil Bekeart, of San Francisco, the popular and well-known manufacturers' agent, whose name is a household word on the Pacific slope, appeared to witness a race at Watson's, which is always held to be a privilege. Mr. Bekeart goes from here to Omaha and Des Moines. He appears well contented with the world.

FALL CIRCUIT.

It would seem that the trap circuit had well exhausted its charms by this time in the season, but such is by no means the case. The fall circuit is perhaps the best part of the whole show, and offers strong attractions. There is very strong talk of getting up a special car party to start from Chicago, to take in Des Moines shoot, going thence to Rolla Heikes' shoot at Dayton, thence to the great Belle Meade shoot at Nashville, thence to Cincinnati shoot. When you come to cast an eye over that programme, it has very powerful incentives to jine.

THE DADDY'S SHOOT.

The Daddy of Them All, which is Rolla Heikes, has put out a very fetching programme for his shoot, at Dayton, O., Oct. 11-15. He adds $200, slates the now celebrated Minneapolis Gun Club "equitable system," uses the Sergeant system of trapping, and offers a whole day for live-bird shooting, handicap shooting, 26 to 31yds. Best of all, he does the graceful act of putting up for competition the E. C. target championship cup lately won by himself from Fred Gilbert. The programme of this shoot, showing as it does the manner in which the winning of the E. C. cup will be decided, is very well worth printing. It appears that it will need a three days' target average in mixed rules and at 300 birds to settle the question.

MICHIGAN TRAP-SHOOTERS' LEAGUE.

The big shoot of the Michigan Trap-Shooters' League at Detroit this week was a good and pleasant affair. On the first day McMurchy was top man, though outside the bars. He ran two straights and one 24 out of 25. Marks, Murray, Osmun, Cady, Scott and Halstead were among the high winners. W. H. Thompson, of Jackson, won the King Smokeless Powder Co.'s trophy for the third time, and now becomes the permanent owner of it. P. C. Woods won the individual expert championship from Mr. Thompson.

DU PONT, OF OMAHA.

The amateur tournament of the Du Pont Gun Club, of Omaha, this week, proved a good one, entries running to sixty. The Minneapolis "equitable system" again proved itself a thorough-going success, and gave perfect satisfaction. A large contingent of outside shooters added to the local atendance, and the whole event proved a gratifying success. It will serve very well to offset the deadening effect of the big wolf shoot there this past season, which came pretty near killing shooting for the whole State.

VINCENNES SPARROW SHOOT.

This week at Vincennes, Ind., a live-bird shoot was held on English sparrows, of which some 350 had been caught at the chimney of Balmer's greenhouse. There were thirty odd shooters. Balmer and Tindolph tied for first, Barrowman and Litherland divided second, and Eluere and Linsey split third. The special prize, a gun, was sold off for $20, winners of first dividing this.

ONAWA, OF IOWA.

Onawa Gun Club, of Iowa, will hold its annual fall shoot Oct. 13-14, with a good programme. The club is in prosperous condition and will give a rattling good shoot.

AUDUBON GUN CLUB.

A small crowd turned out for the regular medal shoot of the Audubon Gun Club last Wednesday at Watson's Park. The weather was bright and still, and the birds were not so sharp as they might have been had the wind been stronger. Chas. Morris won the medal over the three who appeared to contest with him, he having four birds given him in the handicap. Silas Palmer tied with Morris, but was beaten in the tie. Score:

J M Gillespie, 28	2101011021101011100 –13—1—14
J H Amberg, 20	1020102222021020222—14—1—15
Chas Morris, 28	2210111001121021111O—15—4 -19
S Palmer, 30	0221211211121101021l—17—2—19
Tie:	
Morris	0112222112 9—1 10
Palmer	1012210222— 8—1— 9

JOHN WATSON'S LIVE-BIRD SHOOT.

All lovers of a hard live-bird game will do well to keep their eyes on John Watson's coming live-bird tournament, which will be held at this city about Nov. 1. It goes without saying that this tournament will be a warm one, and will bring out some live-bird history, since it is sure to call together a number of the best pigeon shots in this part of the country. John Watson's World's Fair shoot was an event of considerable importance, and we may expect his 1898 tournament to assume equal rank in interest. We are having considerable live-bird shooting in Chicago this year, and this will be a grand addition to the record.

COMING EVENTS.

Fort Dodge Gun Club, of Fort Dodge, Ia., will hold an amateur tournament Oct. 12, open to State amateurs, at live birds and targets.

Mt. Sterling Gun Club, of Mt. Sterling, Ill., will hold its third amateur tournament Oct. 11-12, at targets, $50 added. Division of moneys on second day will be four moneys, equitable system. There will be no handicaps. Sergeant's system of trapping will be used, 16yds. score.

FREMONT SHOOT.

Fremont Gun Club, of Fremont, Neb., held open house last Monday and ran off a very good tournament. The weather was warm, but not unpleasantly so. Ten events were shot, the entry running from a dozen to sixteen. Mehl, Lucraft, Hanks and Montgomery were among the high guns the greater part of the time.

URBANA SHOOT.

The seventh annual tournament of the Crystal Lake Gun Club, of Urbana, Ill., was concluded last week. Rain spoiled the fun on the second day. High average for the two days was won by Craig, 417 targets out of 440 possible. Clark, Jones, Vorhees, Purcival and Jackson showed often among the high guns. In the 50-bird event on the second day the following scores were made: Clark 45, Smoke 44, Vorhees 44, Craig, 46, Irle 43, Miller 45, Cad 43, Sconce 45, Dietrich 46, Steck 42.

KANSAS CITY GUN CLUB.

At the last regular monthly medal shoot of the Kansas City Gun Club, of Kansas City, Mo., ten contestants, J. M. Curtice won the medal with 25 straight, Smith and Fletcher close behind him with 24.

PEORIA TROPHY.

Mr. A. Heilman, of Pekin, on last Tuesday won the Herald trophy, which has been in competition at Peoria, and which was won in the last open event by James Morton, of Kingston Mines. The score was 24 to 21.

PASTIME, OF DETROIT.

At the last medal contest of the Pastime Gun Club, of Detroit, Wolf won the A medal, Shaberle the B medal and Randolph the C medal.

OTTUMWA GUN CLUB.

Ottumwa Gun Club, of Ottumwa, Ia., has a season prize of a Parker hammerless gun for which ten shoots have been held. At the last shoot the contestant Schwartz was the winner with a total of 47. Gebhart scored 48, but did not qualify, having won the event in the four previous contests.

BLOOMINGTON WATERMELON SHOOT.

The Bloomington Gun Club is steadily growing and turns out a good delegation at each of its semi-monthly shoots. At the last contest the first prize was a 60lb. watermelon donated by Mr. Hitt. This is a very practical emblem, as it seems to me. A medal worn on the outside of one's coat is not so grateful and comforting as a watermelon on the inside of the same.

FOR CONGRESS.

I have already stated that Mr. R. B. Organ, one of the best-known sportsmen of this city, is a candidate for Congress in the 1st District of Illinois, which includes the southeast corner of Chicago from Thirty-sixth street down. Mr. Organ thinks that he will make a good pull for success. If this should fall under the eyes of any shooters qualified to vote in that district, I trust a word to the wise will be sufficient. Vote for Roll Organ, the shooter's friend. There are worse men in Congress and none better.

E. Hough.

1200 Boyce Building, Chicago, Ill.

CHICAGO CHALLENGE TROPHY.

The shoot for the Chicago challenge trophy, between Silas Palmer, challenger, and J. B. Barto, holder, will come off on Thursday, Sept. 29, at 2:45 P. M., at Watson's Park, Burnside Crossing, Ill.

EUREKA VS. GARFIELD.

The race between the Eureka Gun Club and the Garfield Gun Club for the Shooting and Fishing trophy will take place on the grounds of the Garfield Gun Club Oct. 1, at 2 o'clock. The team of the Eureka Gun Club will consist of W. D. Stannard, A. C. Paterson, Ed Bingham, F. P. Stannard and E. M. Steck, with A. W. Adams as substitute. The race is liable to be one of considerable interest, as the clubs are very evenly matched, and are in fact the only clubs in Cook county which are rivals for first place in both target and live-bird shooting. It is very difficult at this time to pick the winners, although favor tends toward the Eurekas, who won the trophy originally, and successfully defended it several times.

WATSON'S PARK.

Commencing Dec. 13 John Watson will hold a four days' tournament on his improved grounds, at Burnside Crossing, Ill., using two sets of traps. The contest will be at live birds only. The special event will take place on the second day, and consists of a 25-bird handicap. A large number are expected to be in attendance, and it is needless to say that as good a lot of birds will be trapped as can be found on any grounds in the West.

EUREKA GUN CLUB.

The Eureka Gun Club held its regular weekly target contest Sept. 26. The attendance was small, owing to the number of its members who attended the Gilbert-Elliott match. The day was one on which good scores could be looked for. Several of the members' wives put in an appearance during the afternoon. All events shot from five traps:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	25	30	20	25	50	Targets:	25	30	20	25	50

GARFIELD GUN CLUB.

The Garfield Gun Club enjoyed a pleasant shoot on the club grounds, with a fairly good attendance, Sept. 25. There was a right-quartering wind and a strong sunlight. Scores in the practice events follow:

Nos. 1, 2, 3, 4 were at known traps, unknown angles, and No. 6 was at 30 singles, one man up and 10 pairs. No. 7 was 10 pairs:

Events:	1	2	3	5	7	Events:	1	2	3	5	7

Rolla Heikes' Tournament.

On Oct. 11-14, one week prior to the big tournament of the Belle Meade Gun Club, Nashville, Tenn., Rolla O. Heikes will hold a tournament at Fairview Park, Dayton, O., the first three days at targets, the fourth at live birds.

The programme for the four days runs as follows: First day—Five 15-target events, $1.50 entrance, $10 added to each purse; two 20-target events, $2 entrance, $10 added to the purse. These seven events are at unknown angles. In addition there will be one event at 20 expert rules, one man up, $2.50 entrance, and two events at 10 pairs each, also $2.50 entrance.

Second day—Four 15-target events similar to those on the first day, and two 20-target events, also similar to those on the first day, all at unknown angles, with $10 added to each purse. Also two 20-target events, expert rule, one man up, and two events at 10 pairs; the entrance in each of these events is $2.50.

Third day—Six 15-target events and one 20-target event, all unknown angles, and all similar to those set down for the first day, $10 being again added to each purse. Also two 20-target events, expert rules, and one event at 10 pairs, with same entrance fees as above.

An analysis of the above for the three days will show that there are five 20-target events, unknown angles; five 20-target, expert rules, one man up, the five traps down; and five events at 10 pairs. These fifteen events will constitute a race for the E. C. championship trophy recently won by Mr. Heikes, but redeemed by The American E. C. & Schultze Powder Company, and put up for open competition at this tournament. The person making the highest aggregate on the above 300 targets will be entitled to hold cup and title, subject to challenge as in the past.

In all the unknown angle events the "equitable system" will be used in dividing the purses. In all the other events there will be five moneys, class shooting, 30, 25, 20, 15 and 10 per cent. All targets 2 cents each.

All known 90 per cent. men will be taxed $2 a day, which will go to form a fund to be divided among those shooting through the series of unknown-angle events who do not draw back their entrance money.

For the fourth day Mr. Heikes has arranged the following programme: 25 birds, $25, birds included at 20 cents each; handicaps from 26 to 31yds.

Cars run direct to the grounds from the depot. The Phillips House will be headquarters in the city. Both shells and a good dinner can be found at the park, nothing being left out that could add to the comfort of the shooters.

The above goes to form a programme of events that ought to attract plenty of attention from the shooters of the country, the open competition for the E. C. cup being of itself a good drawing card. Coming as they do right after the Des Moines tournament, and just one week ahead of the Belle Meade shoot, Mr. Heikes should have no fear of lack of support.

Ammunition shipped care Jas. Dodds, or Starks & Weckesser, will be delivered on the grounds free of charge.

Brockton Gun Club.

Brockton, Mass., Sept. 17.—The scores, averages and prize winners of our summer series which came to a close to-day are given below. The highest percentages for the series were Le Roy, .940, Worthing .830, Grant .800, Allen .77. Leonard won the watch charm. Our next shoot will be Sept. 29, including a 50-bird handicap.

Merchandise event:

Grant	1111111111111111111110111—24—4—25
Barrett	1111011100111101101111111—20—4—24
Le Roy	0111111111111111111111111 —24
W Woodard	1101100101110111111011010—17—7—24
Worthing	1111101001111111111111111—22—3—25
Stanley	1111101110111111111010011O—20—8—25
Allen	0111111011111111101111101—21—5—25
Donaghue	0111101101101111001001110—16—9—25

Watch charm event:

Barrett	0011001111111101011011110 -17—4 21
Leonard	1111111101110100111111111—21—9—25
Le Roy	1111111111111111111111111 —25
Worthing	101001111111110w
Allen	1111110100000011111111101—17—5—22

The winners of prizes for the season under handicap system are as follows. Le Roy did not compete for prizes: Grant first prize, Allen second, Stanley third, Worthing fourth, Barrett fifth, Stork sixth, W. Woodard seventh, Donaghue eighth, Leonard ninth.

Actual averages for the season of 1898:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Le Roy	400	377	.940	Barrett	600	453	.750
Worthing	525	439	.830	W Woodard	275	189	.680
Grant	555	446	.800	Stanley	300	200	.660
Allen	575	448	.770	Donaghue	300	174	.580
Stork	250	191	.760	Leonard	400	221	.550

A. A. Barrett, Sec'y.

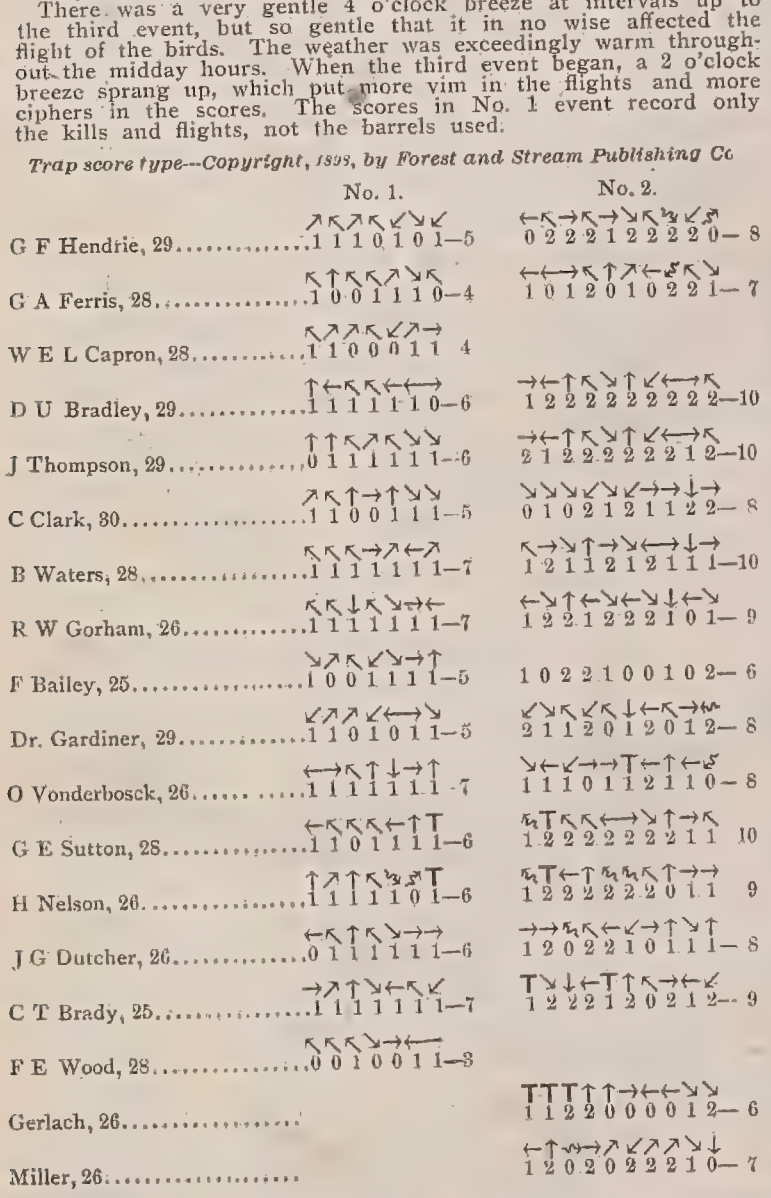
The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Mount Kisco Handicap.

Mount Kisco, N. Y., Sept. 22.—The two events constituting the programme of the Mount Kisco Handicap were a most pleasing success in every respect. The number of contestants was all that could be expected by the most sanguine; the weather was pleasant and the birds were an exceptionally good lot for this season of the year. Had there been a wind of any consequence they would have been a hard lot, the season of the year considered. The shoot was conducted without a flaw from start to finish. The members strove to make the event pleasant in every wholesome way, and they succeeded admirably.

Much credit is due to Mr. G. E. Sutton, of Mount Kisco, who worked indefatigably to engage interest in the handicap and make it a success.

Mr. D. Gray filled the exacting office of referee with satisfaction to all. He was alert, prompt and perfectly impartial. Messrs. Otis Arnold and Frank Fowler, considering the number of shooters present whose records were unknown, handicapped the contestants very nicely. Mr. A. Betti acted as trap-puller in the programme events with satisfaction to all.



There were two events on the regular programme, one at 7 birds, $5, the other at 10 birds, $10, handicap 25 to 32yds., class shooting; over twelve entries, four moneys. An extra event, same conditions as No. 1, was shot after the programme was finished, after which the shooting changed to miss-and-out.

A few practice birds were shot before the regular contests began, and from the clean manner in which the birds were killed it was evident that the race would be a hot one. In the first event, at 7 birds, only one man was out of the money.

Dr. Gardiner's gun had a very sensitive trigger on the right barrel, which he was not quite accustomed to; in consequence of which the gun was discharged several times before he was ready, with a corresponding loss in the score. J. Thompson shot remarkably well, as did also Gorham, Vonderbosck, Sutton, Nelson, Dutcher and Brady, the latter doing very pretty work at 25yds. with a field gun.

There was a very gentle 4 o'clock breeze at intervals up to the third event, but so gentle that it in no wise affected the flight of the birds. The weather was exceedingly warm throughout the midday hours. When the third event began, a 2 o'clock breeze sprang up, which put more vim in the flights and more ciphers in the scores. The scores in No. 1 event record only the kills and flights, not the barrels used.

Connecticut State League.

Meriden, Conn., Sept. 22.—About thirty-five shooters were present at the fifth tournament of the Connecticut State League, on the grounds of the Parker Gun Club, at Meriden, Conn., Sept. 22. Shooting commenced at 9:30.

The Parker Gun Club provided a sheep roast for its guests, under the skillful care of Mr. Bailey, of Bristol, whose fame as a chef in this special field of the culinary art towers above that of all other chefs. The hot dinner was disposed of in a manner which demonstrated that all were scratch men on a baked sheep and the palatable food which accompanied it.

Mr. L. J. Gaines acted as referee. Messrs. C. S. Howard and Francis Stevenson were cashiers. Mr. Marshall Butler was scorer. There were thirteen events, including the team race, as follows:

Events:	1	2	3	4	5	6	7	8	9	1	011	12

TEAM RACE.

The team race at 20 targets per man was one of the exciting features, and much interest was taken in the individual scores of this event. Wilbur Parker was the captain of one team and U. M. C. Thomas, of Bridgeport, captain of the other. Each captain selected eleven shooters. The U. M. C. team won:

U. M. C. Thomas 17, Stevens 17, Edgarton 17, Clark 17, King 17, Treat 14, Longdon 19, Gaines 11, Norton 13, Merriman 14, Hart 13; total 168.

Wilbur Parker 18, Bristol 15, Savage 16, Avery 16, Fruit 18, Taylor 13, Thorpe 13, Post 15, L. Parker 17, Fairchild 11, Savage 5; total 157.

The Winchester Repeating Arms Co., New Haven, Conn., have recently issued a new catalogue, containing 158 pages, which will be sent to any address on application.

Stray Items.

ST. LOUIS DOINGS.

Little Rock, Ark., Sept. 22.—On Sept. 18 there was quite a live-bird event pulled off at Brooks, Ill., a small station on the Clover Leaf Railroad, in which many St. Louis shooters participated. In fact all the sheckels, glory and honor were scooped in by the Mound City contingent. That clever and consistent young shooter, Ed Pendergast, by virtue of his 25 straight got most of the glory as well as 40 per cent. of the purse. P. M. Kling, the old and tried St. Louis shooter, and Fred Fink, another youngster also from the same city, divided second on the capital score of 24. Kling, through overconfidence, lost his last bird. Sumpter, Hirschey and Aultman divided third, each scoring 23. A like number divided fourth money on a bird less. Beggerman, Stroh and McFadden got in on this division. Nine out of twenty-two entries got a part of the purse.

The conditions of the race were 25 live birds, entrance $5, four moneys, 40, 30, 20 and 10 per cent. American Shooting Association rules governed. The weather was perfect, and the birds were an average lot.

CHANGE OF DATES.

Owing to the dates selected for the St. Louis tournament conflicting with those set for the Dayton, O., shoot, and as the announcement of these appeared first, Manager Corray, of Dupont Park, St. Louis, advises me that he has decided to change his date to the week following the Belle Meade tournament, and his shoot will therefore be held Oct. 25, 26 and 27, with good added money as the chief inducement.

Kansas City, Sept. 16.—There was a good attendance at the regular shoot of the Washington Park Gun Club, and an interesting contest resulted. The contest is at 15 live birds, 30yds. rise, otherwise American Shooting Association rules. Six of the contestants—Dave Elliott, Walter Bruns, N. Jarrett, W. S. Allen, Lill Scott and Chas. Wright—tied on straight scores. In the shoot-off, miss-and-out, Walter Bruns won by killing 6 straight. The scores made are as follows: Scott 15, D. Elliott 15, Allen 15, N. Jarrett 15, Howe 14, Kelley 13, Laidlaw 13, Dickinson 11, Gregory 11, Fairman 10, W. Bruns 15, Wright 15, Broch 14, Dr. Planck 14, Parsons 13, Bruns, Sr., 12, Rickmers 11, Moore 10, Groff 5.

Paul R. Litzke.

Trap at Chambersburg.

Chambersburg, Pa., Sept. 19.—The Chambersburg and Lebanon gun clubs met at the latter place Friday, Sept. 16, for the second of a series of three shoots, the final shoot to take place at Harrisburg, Sept. 28. In last Friday's contest the Chambersburg marksmen excelled at every point, making some pretty and difficult shots in the live-bird event. The Lebanonites had strengthened their team somewhat, importing Fin Cooper, who led in their target and live-bird scores.

The live-bird event resulted as follows:

Chambersburg.		Lebanon.	
Runk	12*2101121— 8	Smith	1112012112— 9
Humer	2212202*00— 6	Cooper	1111111111—10
Hobbs	0212112212— 9	Witters	1201012100— 6
Rhoads	2111121121—10	Trafford	1011202121— 8
Vanderau	2011*21221— 8	Reinohl	1220221001— 7
Elder	1112212022— 9	Bollman	2001012022— 6
O'Leary	1222222222—10	Duffy	0100212200— 5
McGowan	2220222101— 8	Zellers	1121102111— 9
Rinehart	2210020220— 6	Langdon	2112*22101— 8
Kennedy	2222102011— 8	Shoemaker	1211102221— 9
Henson	1122222122—10	Rapp	1221222021— 9
Disney	1*22122222— 9—101	Bates	1201221212— 9— 95

In the ten-men bluerock match, 25 targets, the Chambersburgers were beaten by only one target, which result was due to their shooting for the first time over a magautrap, with a large cornfield as a foreground, and two questionable decision of a Lebanon referee.

As will be seen, the scores in the live-bird event are very creditable. The Chambersburg shooters went to Lebanon in a special car, and were accompanied by half a dozen other members of the club.

The Chambersburg Club last week brought suit against Joseph Poper, of Antrim Township, Franklin county, for illegal fishing. Justice Haulman imposed a fine of $100 and costs of $20 on Poper.

Auburn Gun Club.

Auburn, Me., Sept. 18.—The Auburn Gun Club is still alive and doing business at the same old stand. We have been having good attendance at the weekly practice and badge shoots, and the boys have all put up good scores. The club sent two five-men teams to the State shoot at Waterville, Aug. 30-31, and the first team, composed of Hunnewell, Norton, Conner, Cobb and Berry, landed the championship, breaking 219 out of 250; Waterville second with 218. It was a hot race all the way through. This brings the State shoot to Auburn next year, and we shall try and give the boys a good tournament. The Auburn Gun Club team will go to Portland, Sept. 24, to shoot the Portland team for the Lowell diamond challenge badge.

A hot race was shot at the club grounds Saturday afternoon for the tin cup. Francis and While shot against Fletcher and Ashley. Conditions, 30 birds, 10 regular, 10 unknown, 10 reversed. Fletcher and Ashley won by 2 birds, and are waiting for another challenge, this being the second time they have won it. Following is the score for the afternoon shooting. Collins won the badge on 24 out of 25.

Team shoot for tin cup, 30 birds, 10 regular, 10 unknown and 10 reversed:

Francis	1111111110— 9	1101100111— 7	1100110101— 6	—22
White	1101111011— 8	1000110111— 6	1011111011— 8	—22—44

Herron Hill Gun Club.

Pittsburg, Sept. 20.—The regular monthly shoot of the Herron Hill Gun Club was held at the Davis Island grounds this afternoon. In the shoot for the silver cup Dominie broke 47 targets, missing his 13th, 25th and 30th bluerocks. Fleming broke 44 and Pills and Cochran 43 each. In the 20 bluerocks race Uncle John broke 20 straight. The results follow:

Cup shoot:

Dominie	1111111111101111111111101111011111111111111111111—47

Woonsocket Gun Club.

Woonsocket, R. I., Sept. 19.—The regular shoot for the championship trophy was postponed last Saturday, on account of the absence of two of the competitors. Members and friends present indulged in practice shooting and made the following scores:

Getchell 23, Mills 21, Darling 17, Callen 13, Edwards 13, Swe 6, Trafton 14, Seagrave 21, Ellis 15, Allen 16, Ballou 20.

Rifle Range and Gallery.

Cincinnati Rifle Association.

The following scores were made by members of the Cincinna Rifle Association, Sept. 18, at Four-Mile House, Reading Roa Conditions: 200yds., off-hand, at the German ring target. Ginde was declared king with a score of 207. Hasenzahl wins th Dietrich medal this month with a score of 69 on the honor targe Hasenzahl wins the Uckotter trophy this month with a score 218. A tricky 4 to 8 o'clock wind was exasperating to the contes ants to-day, and good scores were hard to make:

King target:

Gindele	24	21	19	16	21	20	22	16	22	24—2
Payne	18	20	19	24	20	16	21	25	22	18—2

Shell Mound Range.

San Francisco, Sept. 12.—Shell Mound range was well patronize yesterday by marksmen. The weather conditions were favorabl as there was very little wind. F. P. Schuster in contesting for th diamond medal of the Germania Club made the fine score in shots, 25 ring target, only one entry, of 234 rings.

Scores of the day:

San Francisco Schuetzen Club, monthly class, 20 shots, Germa 25-ring target: Champion class, F. P. Schuster, 426 rings; fir class, Nick Ahrens, 419; second, John Gefkin, 382; third, R. Ste tin, 407 (final); fourth class, D. Salsfield, 366; best shot, L. Be del, 24; best last shot, N. Ahrens, 23.

German Schuetzen Verein, monthly class medals, 20 shots, Ge man 25-ring target: First, champion class, Dr. L. O. Rodger 438 rings; second, champion class, L. Bendel, 398; first class, H Stelling, 399; second class, J. Gefken, 390; third class, Willia Goetze, 362; best first shot, F. P. Shuster, 24; best last shot, W liam Goetze, 25.

Columbia Pistol and Rifle Club, monthly class medals, 10 shot Columbia target, rifle—Champion class—D. W. McLaughlin 5 F. E. Mason 66. First class—O. A. Bremer 51. Second class A. Hinteman 116, M. J. Barley 117. Third class—E. N. Moo 99, C. F. Waltham 119.

Re-entry rifle matches, same conditions: Members' rifle medal O. A. Bremer, 56, 63;, J. E. Gorman, 59, 73. All comers' rif medal—D. W. McLaughlin, 46, 57; F. E. Mason, 51, 53; D Rodgers 54. Bushnell military rifle medal—C. F. Waltham 45.

Pistol, 50yds., 10 shots, Columbia target, medals for membe only: Champion class—Dr. Rodgers 49, C. M. Daiss 50, J. Gorman 59, M. J. White 74. First class—G. M. Barley 46, F. Mason 72, D. W. McLaughlin 73. Second class—A. Hinterma 81, Mrs. M. J. White 84, C. F. Waltham 120. Third class—Mr C. F. Waltham 74, J. P. Cosgrave 76, Mrs. G. Mannell 80, Mannell 80.

Re-entry matches, Siebe pistol medal, open to all comers: M. Dais, 36, 39; J. P. Cosgrave, 54, 61; G. M. Barley, 61.

Small rifle, .22 and .25cal. and Roos trophy, for ladies: Mr C. F. Waltham, 33, 34, 40; Mrs. G. Mannell, 42. Roeel.

Answers to Correspondents.

No notice taken of anonymous communications.

Pike County.—In the Game Laws in Brief I find no mentic of Pike county, Pa., which heretofore has had special provisions, in the case of Long Island. I judged in consequence that th State laws were enforced these, but learn that they are and hav been shooting grouse since Sept. 15, and offering them for sal which is wrong according to the laws of Pennsylvania, accor ing to the Brief. My Brief is dated Sept. 1, 1898. Will yo kindly set me right in this matter? Ans. The Pennsylvania gam act of 1897 repealed all acts inconsistent with its own provision and among them the special Pike county law of 1878. If grou have been shot there prior to Oct. 15 the law has been violate just as it has been by the sale of the game.

PUBLISHERS' DEPARTMENT.

The Milam Reel Gold Medal.

The gold medal of the World's Fishery Exposition at Berge Norway, has just been awarded to Messrs. B. C. Milam & C of Frankfort, Ky., for their Milan reel; and the honor was we deserved as a recognition of an American product which has we fame the world over. The reel has an interesting history, for was invented in 1839 by Mr. B. C. Milan, who is still, after th lapse of sixty years, the head of the firm, and doing business the same old stand.

"The perfection of the gearing is the secret of the ease wi which the Milam reels run. When they were first made, back the 30s, there were no gear-cutting engines in this country, a at great cost these tools were brought from Switzerland, ve good gearing was made with them, but Mr. Milam," says th Frankfort Call, "has improved their methods, and made speci cutters, and attached other devices of his own invention, till no it is not possible to buy a tool to make such gearing as is used these reels. There is absolutely no friction, the teeth actually r one into another, and enough weight to break a tooth cannot put on the spool. The steel from which the pinions are ma is manufactured specially for this purpose in England, and of wonderful strength and temper. The proof that this geari is all that is claimed for it is the fact that the reels made fifty-ni years ago are in use to-day, and the gearing is in perfect orde Bevel gearing is not the best for use in a reel, but answers ve well where smooth running cannot be secured with a parallel.

"Always looking to improvement, the Milams were the first put jewels in fishing reels. Some years since, when bicycles a ball bearings came to the front, they received inquiry about p ting ball bearings in their reels. This not being practicab because the pivots are too small, they introduced jewels. The jewels, like the pinion steel, and in fact all the other materi they have made specially for them. The hole jewel is as ha as diamond and extends the full length of the hole, so that t bearing is all the way upon the hard and polished surface of t jewel. Break? The suggestion has never been heard; it is n in the range of possibility for the jewel to be injured in any wa they are so set they are securely protected, and will last as lo as time."

"Forest and Stream" Book Catalogue.

A new edition of the Forest and Stream Catalogue of Boo on Outdoor Sports is in preparation, to be issued shortly. R quests already in hand for the catalogue will be honored as so as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 8, 1898.

VOL. LI.—No. 15. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

No drink insures better health, and produces a more equable tone throughout the whole system, than the exclusive use of unadulterated water, nature's gift, the only beverage to which all animated creation instinctively resorts to quench the natural cravings of thirst. Dr. Elisha J. Lewis.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

THE CARE OF FIELD DOGS.

ONE'S dog contributes much to the success of a day's sport afield, and much more to its enjoyment. Without the dog, the sportsman finds but little to shoot, even where game is plentiful; and the sport further is then divested of its chief charm. In his swift stride, the dog in a day covers miles of field and fen, brush and brake, hill and vale, giving a touch of life to the scene in his efforts to seek game, and thereby to serve his master. His keen nose, ever alert for a scent of the quarry, detects its presence however cunningly it may be concealed, and in his canine manner he rejoices when able to inform his master of its whereabouts; and he enters with as much zest in the efforts to capture as if it were a matter in which he was chief instead of subordinate. The game being killed, he retrieves it from brush or briar, mud or water, with as much patient industry and enthusiasm as if he were on the neatest lawn. For a day of the hardest toil, his heart beats in delighted response to a word of praise or a pat of approval, and in this his reward is amply found.

At the end of the day, the good dog would fight for his master if need were, although he has had much the most laborious part of the sport for his share, for to him has fallen all the labors of seeking or pursuing. No selfish ambition nor hope of reward impels him in the rôle of companion, servant and defender. He serves his master because he loves him and enjoys the sport.

His master may walk homeward at the end of the day with heavy steps, yet the dog may be still more weary. Pleasant pictures of the dog galloping across great fields, or swiftly seeking in nooks and corners, or standing spiritedly on beautiful points, fill the shooter's mind, yet rarely does he think that the good dog has a stomach that needs good food after such labors, and bones that need a good bed in a good, warm, comfortable place for their comfort and recuperation. The nerves and stomach of the dog have their needs when he is making pretty pictures in beautiful landscapes, and if he could talk or write he would describe his enjoyment of a good meal at the end of the day as feelingly as does his master. Yet many a good sportsman, from pure thoughtlessness maybe, sits by a comfortable fire in the evening toasting his shins, and contemplating happily the incidents of the day's sport, while his poor dog lies shivering on the door step, with a stomach filled with scraps of any food that was left over, and fed to him perhaps by a hand other than that of his master.

Be considerate of the dog that has worked for you at his best, be that work good or ill. In his way he has done his best according to his light. It requires but little effort to make a dog comfortable. All he needs is enough good food, a dry, comfortable place to sleep in, and his coat and feet kept clean, dry and free from mud and burrs.

As to the food, it is an easy matter to take a supply of dog cakes when one goes on a hunt away from home. The local butcher shop will afford a supplementary supply of food, for dogs when at work should have an abundance of animal food. Put no faith in table scraps for your dog at work. Consider him as a companion to be provided for by forethought, not by chance. If circumstances should so combine that the dog's food is not available, divide your own meal with him.

The most flagrant ingratitude against the dog is in the neglect of his sleeping quarters. Sportsmen who feed their dogs well are many times thoughtless as to whether the dogs are comfortably housed or not. In warm weather a dog needs no attention in respect to sleeping quarters. In stormy or cold weather he requires shelter and comfort quite as much as does his master. It is an easy matter to provide a comfortable place for him to sleep in. If in a prairie country, there is always an abundance of hay for bedding. An old log stable with cracks in it which the dog can jump through is not proper shelter. Old boards and sticks can be placed inside after the manner of a lean-to, and all well covered with hay on the outside, and plenty of hay for bedding on the inside, will be as comfortable quarters as any dog would desire. If there is no stable or corn crib or suitable building for the dog, drive some stakes in the ground after the manner of a tepee, and cover them with three or four feet of hay; if there be neither hay nor stakes, take the dog in the house. If, at the end of the day, he is wet, let him dry out thoroughly before the fire; and if his coat is full of burrs, a good comb and a few minutes' effort will remove them. The feet particularly should be freed from mud or burrs, special attention being given to the toes. Thus cared for, a field dog will work with more spirit, prove a better companion, and live a longer and more useful life.

SNAP SHOTS.

The author of the story of a cruise down the Wisconsin, of which the first chapter is printed to-day, sent with his manuscript a deprecatory note suggesting that his were not the remarkable experiences and exciting adventures which are supposed to furnish material for the most entertaining literature of the field. But such supposition is well founded in part only. Most of us do relish in our reading a certain proportion of the lively element of thrilling situations, hazardous exploits and hairbreadth 'scapes; but since our lives are for the most part made up of less enlivening and more commonplace incidents, and even our pleasures are more likely to be placid than wildly exciting, we are quite apt to be pleased with a tale which reflects experience answering to our own, or of the class we may compass. We enjoy the common incidents if they be not commonplace; and simple happenings, if only they be not trivial.

Indeed their simplicity is one of the qualities which give abiding charm and compensation to the sports of rod and gun. Angling was the contemplative man's recreation in Walton's time, and such it is to-day. It takes us to the woods and the waters, reveals the curious ways of nature, and introduces us to the woods folk. The attractions of fishing may thus be simple in the extreme, but thousands of devotees testify to the satisfaction found in them. Were it otherwise, did our enjoyment of outdoor sport depend upon making long journeys to foreign parts, or going up and down the earth in quest of thrilling adventures, the opportunities now so generously open to all would sadly be restricted. In our home fields we may recognize and admire the familiar "primrose by a river's brim"; while but to a fortunate few is it given to pluck the orchid glowing in tropical forest or the edelweiss amid Alpine snows.

We regret that in the printed report of the recent hunting casualty in the Adirondacks, upon which we commented last week, an implication should have been contained that the hunters were employing hounds for chasing deer, a practice forbidden by the law. It is due to Dr. Currier and to his son, whose lamented death was recorded, to say that no hounds were used; both were too good sportsmen to violate the game law themselves or to permit its violation by others in their employ. The alleged hounding was an imaginary detail invented by the daily press reporters; it had no basis in fact whatever. No more had most of the other imaginary particulars given by the newspapers, notably the sensational report printed by the New York Herald, with its insinuation that Dr. Currier himself might have fired the fatal shot, and its statements respecting his presence with the hunting party and his actions at the time. It is sufficient to say in absolute contradiction of all such accounts, whether they were direct statements or cruel and infamous insinuations, that at the time of the accident Dr. Currier was not accompanying the hunting party, but was in camp a mile away.

It is a great pity that the stray specimens of rare animal life discovered here and there in unexpected quarters should not have immunity from pursuit by men with guns. There was that doe in Columbia county of this State, a district where the deer has long been extinct. A correspondent tells us in a note to-day how the creature was done to death in the excitement of the moment by two men who chanced upon her. To have looked for anything else on their part might have been asking too much of human nature, for the unexpected apparition of the deer doubtless stirred every drop of their hunting blood, and the quick action which followed was as natural and as inevitable as is the sudden scramble of a troop of performing dogs when some one throws a sausage on the stage.

A fate as summary as that of the Columbia county doe befell the eagle discovered and killed by Walter Sumpter, of Valley Stream, Long Island, last week. The eagle is in this region a rare bird, so infrequently seen that the chance sight of one always adds interest to a landscape and commands admiration. Long Island is continually advertising its native attractions for city folks, and exhorting the people of the town to come out and enjoy the country at so much per week with special rates for the season. These same city folks pay money to provide a menagerie in the Central Park, where they may go to gaze upon forlorn specimens of eagles in cages; and it is reasonable to assume that they would be gratified if, when they go down to Long Island, they could watch the majestic soarings of free eagles in the upper air. Yet Long Island views with astonishing complacency the destruction of its few remaining eagles, and the local paper records Sumpter's violation of the game law without a hint of protest. The Valley Stream eagle killing has been so publicly advertised that Chief Protector Pond should find no difficulty in punishing its perpetrator.

The Sportsman Tourist.

Climbing Blackfoot.

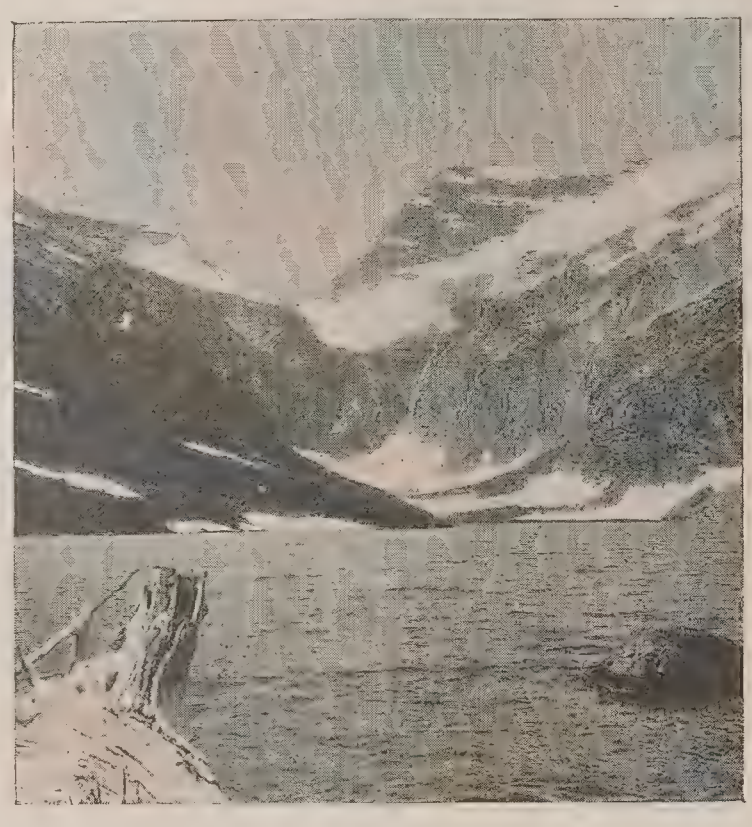
It was midsummer. The ceremonies of the Medicine Lodge were over, and the camp was breaking up. Everywhere women were tearing down the lodges, packing their possessions on horses' backs or on the travois, and preparing to scatter out over the broad prairie to their different homes along the stream. A party of white men were just leaving the camp to make a little trip into the mountains. Among them were an artist, a photographer, a newspaper writer, two cow punchers, three hunters, two prospectors, an ethnologist and a naturalist. So there were three of us, and we had two pack horses, three saddle horses and Nancy Hanks' colt—unattached. Two days' travel brought us well up on the narrow trail that runs along the side of Goat Mountain, and the next day found us working our slow way among the down timber, brush and swamps that lie in the narrow valley of the St. Mary's River, above the head of the upper lake.

The winter of 1897-98 had been very severe in northern Montana, and more snow had fallen in the mountains than for many years before. Spring had been late this year, and the snows had really scarcely begun to melt before summer, and now, in mid July, the streams were bank full and were rushing torrents. There is a tremendous momentum in a body of water 4ft. deep and rushing down hill as fast as it can go; and when we reached the river bank we did not need to look long at the north branch of the St. Mary's River before deciding that we would seek for an easier crossing place than the usual ford. A year before Jack and I had thoughtlessly ridden into the stream about the first of June, when it was swollen, and with our horses had been violently thrown down, bumped on the bottom and soused about in the tumultuous waters, sometimes right side up and sometimes wrong, until at last we had drippingly crawled out on either shore and counted up our bruises and the loss of axe, hat, overcoat, rifle, and other articles, which are usually considered essential to the comfort of a camping excursion.

This year, therefore, we two, who had been swept away the summer before, promptly shied off when we came to the water, and after a mile or more of difficult uphill travel found a crossing where we forded the stream with entire comfort, not even the little colt being swept off his feet. A few hours later we reached the south branch of the river, and there found things quite different. A tall fir tree had been undermined by the rushing water, and had made a bridge across the stream over which one of the party crossed on foot, sounding the depth with a stick as he went. The stream proved to be from 4 to 6ft. deep, and while to swim the river would not have been difficult, this would have insured the wetting of our bedding and provisions, and more or less serious discomfort for the next two or three days. Turning off to the right, therefore, the right hand or northwestern bank of the stream was followed up until nightfall, when we camped in the thick timber, tying up most of the horses, as there was but little for them to feed on, and there was danger that during the night they would wander off in search of grass and so be lost.

By half-past ten the next morning, after an exhausting struggle through huckleberry brush, alders, and down timber, during which the axe was continually in use, and a constant ascent of slopes that were almost vertical, we reached the edge of timber line and there pursued our way along over the snow fields along the mountain side by well-known trails to the old camp on one of the streams which have their heads in the Blackfoot glacier.

It was not yet noon when we made camp, but the rest of the day was devoted to lounging about and recovering from the fatigues of the morning. The flies and mosquitoes were as bad as they usually are in the mountains at this season of the year, and they paid unceasing attentions to us and our horses. The horses suffered especially, and smudges were built, into which they eagerly crowded. The insects were certainly a nuisance, but one who should visit this spot at the time when there were no flies would fail to see the wealth of alpine flowers spread out on the green meadows and among the white snow fields. To describe them all a botanist would have been needed, but they were certainly of all sorts, sizes, colors and degrees of beauty. Yellow perhaps predominated, in the dog tooth violets, some crocus-like flowers and a great columbine, but there were also reds and blues and purples, now carpeting the ground, and again piercing with their stalks the thin margins of the retreating snowbanks, and blooming above them.



At 6 o'clock the next morning, Jack and I, armed with ice axes and a coil of rope, set out to see whether a way might be found to the summit of the Blackfoot Mountain, which had long been the goal of all his hope to one at least of the party.

Seven or eight years before this, I had taken up to the head of the St. Mary's River the first party that had ever visited it, and a few years later had led thither a Government party. I had made a rough map of the region, and had named the principal peaks here, and for years it had been my special ambition to climb Mount Jackson and Mount Blackfoot, the two highest of them all. In the summer of 1897 Jack and I had made a quick run to the head of the river, and having been wonderfully fortunate in the matter of weather, had succeeded after a hard day's work in reaching the summit of Mount Jackson, from which all the kingdoms seemed to lie spread out before us.

The Blackfoot Mountain lies further back than Jackson from the highest point in the valley to be reached by horses, and while we believed that its height was only about that of Mount Jackson, yet since it was partly hidden by a high shoulder of itself, over which only the main peak showed, and since to reach it the great Blackfoot glacier must be crossed—an ice river which might present all sorts of difficulties and perhaps even force us to turn back—it seemed a much more desirable peak to conquer than had the nearer and really more imposing Mount Jackson.

Thus we were about to attempt the ascent of the mountain of which we had often talked, Jack with the cheerful optimism which leads him to believe that he will accomplish whatever he may undertake; I with much enthusiasm, but rather hopelessly, for I regarded success as something quite beyond either my deserts or my powers. However, we were now to make trial of the difficulties of the mountain and their overcoming.

To men whose legs for a year past had only been accustomed to gripping the flanks of a horse, the climb

GUNSIGHT LAKE AND PASS.

Shoulder of Mt. Jackson on left, and of Fusillade on right.

upward, among the dark firs, over the frozen snow banks, seemed long and tiresome. Yet before the upper edge of the timber had been reached both Jack and I had got our "second wind," and went along more easily. Now there rose before us a tall precipice, broken at intervals by deep and steep ravines, some of which were occupied by great banks of ice and snow, fingers of the retreating glacier, and others by huge piles of morainal drift, brought down by the ice river from the peaks above.

Scrambling up one of these depressions, the more gradually sloping surface of the glacier a few hundred feet above was reached, and there, ascending a slight elevation, we began to study the great ice field before us in order to discover the easiest path to the peak of the Blackfoot Mountain, which just showed itself over a

MT. JACKSON FROM GUNSIGHT LAKE.

nearer shoulder. The shortest way seemed to be to the right, and either over a bare cliff which rose above the ice, or else around this cliff's shoulder and then up the sag through which the main ice field flowed. This was the cut-off—the hypotenuse of a right angled triangle, and to follow it would save many steps. But at the foot of the bare cliff were abundant evidences that the ice was frequently breaking off from the field above, and between the climbers and the cliff the glacier seemed broken and contorted by many crevasses. Up the sag the path seemed smoother and safer, yet even here it could be seen that the face of the glacier was very steep, and that one or two long crevasses stretched out nearly or quite across it. Immediately before us, however, or nearly due south, and distant perhaps three miles, rose a shoulder of rock, at first low, but rising toward the west, over which, if it could be reached, there was good going in the direction of the main mountain peak; and although to reach this and pass along it meant to follow the two sides of a right angled triangle, yet to push for the lower end of this shoulder seemed the better policy. So we set out for the lowest point of this ledge.

For the next three or four hours we had monotonous but easy climbing over the gently-sloping surface of the glacier. The old snow upon its surface was soft enough to give good footing, but was not very slippery. Occasionally we were obliged to make a long detour to avoid an unexpected fissure in the ice, and some of these crevasses into which we carefully peered were awful in their depth, and in the coldness of their dry blue sides. The sky was absolutely cloudless, and the glare from the surface of the ice would have been painful and dangerous to the eyes had we not both, before leaving camp that morning, thoroughly blackened our cheeks and noses with charcoal. We took the further precaution of tying handkerchiefs across our faces just below the eyes, so as to protect them from the blinding glare from the snow at our feet. This, to my mind, is a more effective and less troublesome protection to the eyes than the ordinary colored glasses which are commonly worn for this purpose.

We were plodding slowly along and were more than two-thirds way across the ice, when suddenly our movements were arrested by a shot, followed in quick succession by two more, and then a pause and a fourth shot, and another much longer pause, and then a fifth. After that there was nothing. "Well," said Jack, "that sounds to me as if something had jumped up in front of him and he had wounded it, and then finally killed it with the last shot."

"Yes," said I, "to me it sounds as if something had jumped up in front of him, and he had fired at it and missed it, and then it had gone out of sight and come in sight again long enough to give him one shot, and then disappeared and shown itself again, and he had shot at it a long way off and missed it. We'll see when we get back."

At length we reached the border of the glacier and the rocks, pulled ourselves up, and took our way along the gentle ascent of the shoulder. Even as high up as this a little vegetation grew in the scanty soil; a bright green moss-like plant like a round pincushion, dotted with delicate pink flowers, was very striking and beautiful. Here, before long, we came upon the fresh track of mountain sheep going in the direction we were pursuing; but nothing living was seen. Almost at the crest of the shoulder we sat down and took a long rest, looking over the valley beneath us, seeing the green waters of the Upper Lake between the peaks of Little Chief and Almost a Dog, and seeing too to the south the valley of tributaries of the Flathead River, and the wooded slopes of many a tall mountain. Mount Stimson, to the east, no longer towered above us, as it had for the last two days. We were almost on a level with it.

When the pipe was knocked out, we moved on to the very top of the shoulder, and then climbed down its southwestern face into a cavity between the rock and the glacier. Here the action of wind and sun had melted the ice back for 30 or 40ft. from the rock, making a cañon with vertical sides, in which we stood. The ice wall was 25ft. high and quite soft, and Jack promptly began to cut steps in it and to ascend. It seemed to me that it would have been less laborious and would have taken no longer to have walked 100yds. or so to the right and then to have climbed up the more gentle ascent which there presented itself; but before long we had both surmounted the ice wall and were again working our way over the sloping snow field, which lay upon the main mountain.

In the next half-mile lay perhaps the only dangerous part of the climb. Here the ice field fell away sharply, and we were working across it at right angles to the direction of its slope. For 1,500 or 2,000ft. below us this slope continued or grew steeper, and then there was an abrupt fall into a rocky couloir far below. If one had slipped on the traverse, he would have brought up in another state of existence. The rope now came into play, and tied together we made a progress which was still more slow and careful. One man usually had his ice axe firmly planted in the hard snow before the other moved. It was really a relief to reach the edge of the glacier, and to be treading once more on solid earth and stone, steeply sloping though it was. We threw ourselves down by a little rill which trickled from a snow bank and rested there for a few moments. The view before us to the north and west was beginning to open out in a wonderful way. Mount Jackson, which we had climbed the year before, cut off a part of the outlook, but now we could look far down into Pinchot's icy basin at the head of Harrison's Creek, which looked like a little section of the Arctic region. Nothing was to be seen there save snow and ice, except where now and then some dark rib of gray rock showed its shoulder above the white of the snow field. From the steep sides of Jackson twenty small glaciers sent down their streams to swell the greater one that lay in the valley below. Mount Kainah, which from the camp towered so far into the blue sky, seemed now, as we looked down on it, only a valley.

Starting on again, we toiled up the steep mountain side, now winding in and out among great rocks, again pulling ourselves up over tiny precipices. As we neared the summit, nothing was to be seen under foot or about us except these great masses of lichen-covered rocks. We scrambled up over the last of these, and when only a few feet below the comb, Jack, who was in advance, with a fine courtesy and a thoughtfulness that would be matched in few companions, stopped, turned to me and motioned me to go ahead. It was a touch of delicate generosity which gave an insight into my friend's character; for, as I have already suggested, to me it did mean a little something to place my foot first on the summit. As I thanked him for his consideration, Jack responded: "It's easy to give up things that you don't care anything for." Half a dozen steps more brought us to the mountain's crown, and as we lightly hurried on to its very highest point, all the labors of the morning seemed to us as nothing.

As we stood upon the top, however, my heart was in my mouth for a second or two, for there before me was a huge stone freshly turned over. Could it be that

other people had already been here, and had begun to build a monument on the summit? A second glance, however, served to show that the stone had been turned over by a bear in his search for mice.

After the first hasty survey of the country, we sat down and smoked and talked, and in a general way located all about us the different landmarks that we knew. There at our feet to the southeast was the Pumpelly Glacier, which we both had always believed ran down from the Blackfoot Glacier, but until now this had never been definitely ascertained. Mount Jackson still cut off the view to the northwest, and Mount James that to the southwest, but in all the country near

MOUNT KAINAH AND ICEFLOW BETWEEN MOUNTS KAINAH AND JACKSON.

us there was not except these two any mountain so high as the one we sat on. Far away to the north, lying somewhere near the Waterton Lakes, were two great mountains, which in previous years we had called Mount Cleveland and Mount Hoke Smith. They were mighty masses, but too far off for much to be known about their height. The spirit level, when used, showed Mount Jackson to be very slightly higher than the Blackfoot Mountain, and Mount James not so high as Jackson, but perhaps a little higher than Blackfoot. All the other mountains were, as Jack remarked, "mere holes in the ground."

Two or three hours were devoted to determining by means of prismatic compass the relation of Blackfoot Mountain to its neighbors, and to entering in the note book such observations as seemed worthy of record. Then rather regretfully we started down. The crest of the shoulder where we had rested on our way up was reached

CROSSING A SNOW FIELD, MT. JACKSON IN BACKGROUND.

without incident, and here again we stopped to rest. As we sat there looking over the country below us, what seemed like half a dozen fleas dashed out from a rocky rib of Mount Kainah over the ice, and then turned and moved back again. "Look at the sheep," cried Jack, and thereafter we watched these tiny black dots playing about on the edge of the snow field like so many puppies. We looked down on them for quite a long time and at length the sheep returned to the rocks and lay down. Hardly had they done this, when up the steep rock walls which overhung Pinchot's Basin, at the head of Harrison Creek, an old goat clambered and started along the rocks to come up toward us. But he was a long way off, and the sun was beginning to fall toward the western horizon, so presently we got on our feet and started down over the rocks. At length we reached the glacier, passed on over that, and after a long descent came in sight of the camp.

Here our comrade was seen moving about near the tent, but no red meat gleamed on any tree, nor was there a fresh hide pegged out on the grass. Closer and closer we came, sometimes sliding down over the rough snow, and at length, when almost in camp, there, on the snow bank, close to the tent, was seen the hide of a harmless little porcupine; this, it was learned, was the game which had called forth the fusillade of the morning.

The next day was as bright and balmy as its predecessor had been. Jack and I moved the horses from the place where they had gnawed down the scanty feed over to a bare spot among the snowbanks on the slope of Mount Jackson, where, if there was no grass, there was at least abundant green. Then we took a long round across the shoulder of Mount Jackson toward the Gunsight Pass. Down at these lower levels there was some life to be seen—tiny brown butterflies were flying about the flowers; we heard the occasional shriek of a mountain marmot, voicing his suspicions of the strange animals which have invaded his territory; here and there in the snow banks were the tracks and feathers of the white-tail ptarmigan. In a little fir tree in a ravine which we crossed a pair of bridled titmice had their nest, and were tremendously busy with housekeeping cares. Among the rocks and on the snow field higher up were frequent pairs of gray crowned finches, which the field glass often brought up to within a few feet of the eye.

Passing over the shoulder of Jackson, we rounded a little point of rock and saw before us, 200yds. away, a mighty ram, slowly picking his way over the snow. Before he had seen us we had sunk out of sight, and for half an hour we sat there on the warm rocks and watched him. Jack lamented that we had no gun, and expatiated on his probable fatness and tenderness; while I declared that he was probably thin in flesh, tough and stringy, and at this time of the year strongly flavored with garlic. After a time the ram lay down in the shade of a great rock 500yds. away, and we arose and pursued our course. At this the sheep too got up, and made good time toward the summit of Mount Jackson.

Several hours later we saw, far off, seven more sheep lying down on a grassy meadow at the very summit of the Continental Divine, and it was true of all the game we saw, except the big ram—which had just been down to the water—that they were as high up as it was possible for them to get. Of course, the flies and mosquitoes accounted for this. We reached camp late that afternoon and found that the artist had made an effective study of Mount Jackson.

The next day we packed our goods on the horses and set out again for the prairie.

GEO. BIRD GRINNELL.

Down the Wisconsin.

In Two Parts—Part I.

IT has been my practice for a number of years to spend from one to three weeks of every summer with one or more companions boating down some small stream navigable for canoes, camping at night upon its shores, and fishing during the day, when humor prompted or our bill of fare demanded it.

In this way I have exchanged certain weeks of time which must pass, whether I would or no, for a store of pleasant experiences, the memory of which is and always will be a delight.

Little rivers have been given the preference for our trips, because they offer so many more charms to the boating tourist than larger streams. I like to be able to distinguish the vegetation on either bank at a glance, or to note the small bird and other life without changing the course of the boat.

An occasional portage around some dam or other obstruction must be made, which would be avoided on a larger stream; but it is so much easier to select a suitable camping place, when you have a nearby view of both sides of the stream, that we always like the upper waters of our rivers best. A number of streams in Indiana, Illinois and Michigan have been explored in years gone by, but this time we concluded to go further afield and try one in Wisconsin. It is very difficult to get the information you require in order to determine

MT. JACKSON, WITH MORAINE IN FOREGROUND.

upon the right stream; there are several features we consider absolutely essential: clear and at times rather swift water, gravelly or rocky bottom, and occasional "riffles" or rapids. Of course, we expect to encounter in a hundred or two hundred miles of boating all sorts of conditions, but we also want a reasonable quantity of the attractions enumerated above. I wrote to several parties and had as many different streams recommended, but finally settled upon the upper Wisconsin, principally because your genial Chicago editor, Mr. E. Hough, who is a recognized authority on all sports of the field, besides having a most charming literary style of his own, wrote me that I would find "riffles and rapids a plenty" on the Wisconsin, if that was what we were after. Our party for this trip consisted of four persons, Professor B. and a couple of college freshmen, T., of Ann Arbor, and R., of Yale, and lastly the writer.

I said the party consisted of four, but there was another who may have to be mentioned further on, and to whom I will give a place here: Sancho, a rough-haired

combination of a water spaniel and Newfoundland, good-natured, but courageous, who had been on river trips before, and apparently enjoyed the change of scene and habitation from day to day as much as any one of the party.

A week before we proposed to start our boats, tents and most of our supplies were shipped to State Line Station, Wisconsin, which, as its name indicates, is upon the boundary line between, in this case, the States of Wisconsin and Michigan.

The railway station is only about two miles from the Wisconsin River, but about five miles from Gen. Thomas' place on Lac Vieux Desert, where the river comes into being as a stream only a few feet wide, starting from the southwest "corner" of the lake on its long journey to the Mississippi and the Gulf of Mexico. Here we proposed to launch our boats. These last are deserving of special mention. They are much larger than are usually taken on such a trip, but are made light enough to be portaged when empty by two persons without difficulty.

The Otter is a cedar boat, built by R. J. Douglass & Co., of Waukegan, Ill., in 1893; a double-ender 16ft. long by 48in. beam, decked 3ft. at each end; a very convenient arrangement for the storage of many articles of camp outfit, which you want to have at hand, but always where they will be protected from rain.

The other boat is one of Mullens' make, a steel double-ender, 15ft. long, christened Osprey. Neither of the boats have cross seats, but instead zinc lined lockers or boxes 18in. long, 1ft. wide and 10in. deep, with hinged lids, are used as seats when the boat is in use. These are fastened in place when used as seats, but when we camped they were carried ashore, and contained all the principal articles connected with the commissary department. Individually these lockers were convenient seats about the camp-fire, and when placed together they formed a table 2ft. by 3ft.

When the Otter was stripped of everything she weighed only 125lbs. The Osprey under the same circumstances weighed 140lbs.

Our tent was one of Comstock's 8 by 8, 10oz. Protean tents with two flies; the best and most convenient tent ever devised. Canvas carry-all bags contained plenty of extra clothing, and eight pairs of blankets, wrapped in the rubber floor cloth of our tent, always insured us dry bedding. Having plenty of room in our boats, we took along a varied assortment of provisions, believing it is foolish to do without anything which could be taken along without inconvenience. Accordingly our stock comprised such goods as assorted canned soups, canned pork and beans, sausages, canned cream, olive oil for salads, claret, etc. Mason's fruit jars are very convenient for carrying many articles, and our lockers were made of such size that the jars would fit in snugly and stand right side up.

Our cooking utensils were such as are commonly used except the stove or range, which is the Professor's own invention, and is such a very useful and convenient article that it deserves a particular description.

When open it is simply a grate of three bars of 1 by ¼ iron about 3½in. apart, the bars being edge up, of course. At each end are cross-pieces, to which the grate bars are loosely bolted or hinged, the bars being given a half-twist at each end, so as to bring the flat surface against the corresponding surface of the cross-pieces for convenience in hinging.

At each end of the cross-pieces, and consequently at each corner of the grate, are attached legs of ⅝ round iron pointed at the lower end; these are fastened by means of an "eye" into a larger hole in the cross-pieces so that they will work freely.

When packed for traveling the grate collapses together so that the bars are almost in contact with the legs folded down against the grate, and the whole forms a compact bundle which can be stowed away in the bottom of a boat, taking up scarcely any room, and a perfect treasure in making a quick camp.

It can be set up in half a minute, and you have a grate raised just as much above the fire as you wish, always level, for you drive each leg into the ground independently, and can set it on a side hill if you wish, and have it exactly right.

A week after our boats and other things had been shipped by freight we took the C. & N. W. train from Chicago for State Line Station, which we reached about noon on Aug. 11, and found to our satisfaction that the freight had arrived the night before. The next question was where to launch our boats, and how to get them to the river.

The railway agent said the distance by the railroad track was only a mile and a half or two miles, and that he could take everything down on a hand car for three dollars, but could not go until after 6 o'clock P. M., so as to be assured of a clear track. There was not a team and wagon of any kind in the place, but we were told that Len. Thompson, who keeps a kind of a resort at Lac Vieux Desert, had one large enough for the purpose. The Professor volunteered to walk the five miles from the station to Thompson's place, and see what could be done, while the rest of us put in the time by walking down the track to the railway bridge, with a view of determining what sort of a place we would have for unpacking our goods and preparing for embarkation, if by any means we were not able to get transportation to the lake.

If we came down from the station after 6 o'clock, on the handcar, it would be necessary to go into camp at once, without making any start that afternoon, as the river ran through low, marshy ground for a long distance below, and it would be advisable to have several hours of daylight before us when we started, so as to have plenty of time in which to find a camping place. There was no suitable place near the bridge, and we came away decidedly of the opinion that we must somehow or other have our things taken to the lake. There was nothing to do but to return to the station and await our companion's return from his tramp to the lake. About 3 o'clock we were agreeably surprised to hear the rattle of a wagon coming through the pine woods from the direction of the lake, and soon the Professor appeared in a big box wagon drawn by a pair of horses which suited the vehicle in size, with an intelligent looking young fellow for driver, whose dark complexion proclaimed his connection with the original owners of these wilds. Thompson, the elder, has lived on his present place since 1859, when the whole region around the head waters of the Wisconsin was indeed a wilderness. His wife is a half-breed Ojibway, the daughter, it is said, of a United States surveyor, who located meridians and ran boundary lines through this region in early times. The children of the present generation are bright and intelligent to a much greater degree than one would expect from their surroundings. The older ones are sent away to be educated; the young fellow who drove our team being home on a vacation.

Our tents, supplies of all kinds and boats were speedily loaded up and we were off for the lake. The road was so rough and the boats swayed about so much, notwithstanding we had tied them down as securely as possible, that we all had to walk, letting the wagon bump and lurch along with only our freight on board. The woods were full of sweet fern and ripe blueberries. The latter were so plentiful that anyone so disposed could step to the side of the road anywhere and pick a handful of the luscious fruit at one clutch without losing an instant's time, and many were the agreeable mouthfuls gathered as we followed behind the lumbering wagon. About 6 o'clock we came in sight of the big log house of the Thompsons, and a quarter of a mile beyond, on a grassy spot near the shore of the lake, we unloaded the wagon and set about pitching our tent for the first time on our '97 trip.

After having made up our beds on a foundation of hazel brush under the rubber floor cloth, we securely trenched the tent to provide against rain, a precaution it is well to take in all cases, no matter how favorable the sky may appear, and we went up to the big log house for supper, as there was not time to unpack the large box containing our provisions and cooking utensils that night. We had heard that venison was always to be had here, but perhaps something in our appearance indicated that we would not be apt to look with entire indifference upon violations of the game laws. At any rate, we were not asked if we would have any mountain mutton, as I had half expected, but our supper consisted of something which is in season 365 days in the year, and good on every one of them: fried ham, baked potatoes and coffee, with baking powder biscuits and good butter; for all of which we were only charged the small sum of twenty-five cents each.

We went to bed in our snug little tent at an early hour that evening, and were asleep sooner than might have been expected, considering that for all of us it was the first night under a tent for nearly or quite a year.

There is a strangeness about one's first night in camp which sometimes keeps the drowsy god away an unconscionably long time. Tired nature conquered after a time, and we had all been wrapped in sleep for two or three hours when we were awakened by the cries of a drunken Indian, half yelling, half singing in the most dismal accents it has ever been my lot to hear. Talk about the wailing of a lost spirit; it must be exhilarating compared to what we heard that night. The author of these hideous noises followed the path within 20yds. of our tent, but did not stop, for which we were duly thankful. When his voice was lost in the distance we again went to sleep and this time slept undisturbed until morning.

The next forenoon was devoted to getting out the contents of a couple of big dry goods boxes, in which our supplies of all sorts had been packed for shipment by rail to State Line. This done, the Professor and I went out on the lake and cast the fly for a while along the shore, in the hopes of raising a bass, but without success.

Later in the day R. got a few minnows and went out with us, using a new Bethabara bait-casting rod, while I continued to use the fly. We skirted the shore and cast patiently in all the most favorable looking spots, but for a long time there was no response. At last, when it was nearly night, I quit casting, and R. was reeling up with the intention of doing the same; his minnow was close to the boat, with not more than half a dozen feet of line between it and the tip of the rod, when suddenly, splash! snap! the rod was broken near the middle, and only the head and shoulders of the minnow remained on the hook, the rest having been bitten clean off by a muskalonge, which had seized it as it was about to be lifted from the water. It was too late to do more fishing that night, so we reluctantly turned the boat toward our camp, a mile or more away. During all the time we had been out the lake was unrippled by any sign of fish; suddenly everything changed, and within a few moments the water was covered by dozens of winged insects, and fish were rising greedily, sometimes leaping half their length out of the water for their prey, and again quietly sucking them down so that they disappeared with hardly a ripple.

All this was most plainly visible on the illuminated surface of the water toward the western shore, where our tent was pitched, and when the fading light of the sun already set was reflected upon the water. In other directions it was too dark to see much of the peculiar spectacle. The insects seemed to be light colored, but I did not succeed in getting one. If I had been provided with any small, light-colored artificial fly I should have put it on and tried to catch one of the fish, but having only big, dark-colored bass flies, it was not worth while to try.

The scene reminded me of what I have heard of cisco when the cisco flies are rising on Lake Geneva. Perhaps the fish in Lac Vieux Desert are cisco.

I do not know much about insects, but these resembled as near as I could judge the kind which are found in such numbers on some summer mornings covering the pavement under an arc light or a large street lamp. They seemed to me to come from below to the surface, and after struggling for a few moments took wing and fluttered away, if not seized in the meantime by a fish.

The next morning was the time fixed upon for our start down the Wisconsin. There is a dam where the river issues from the lake; one of those constructions which are the bane of boat navigation in the lumbering districts. We encountered them everywhere, and invariably found them a nuisance in more ways than one. Give me a stream where I can depend upon the flow of water being reasonably uniform from day to day, and where no more substantial personage than the clerk of the weather can be held responsible for the increase or decrease of volume.

To embark in the morning with plenty of water under your boats, and by noon to find the river has fallen a foot or so, and you have to drag your loaded boat over the boulders half the time, because some lumber company a few miles up the stream has shut the gates of their dam and reduced the river to a rivulet, is exasperating in the extreme.

At the source of the Wisconsin River we had a chance for the first and last time to manage matters ourselves. The dam was not more than a couple of hundred yards by land from our tent, but to reach the chute with the boats we were obliged to make a long detour around and through extensive weed beds, where it was difficult to find the channel which led to the outlet.

In order to insure plenty of water for at least our first day upon the river, we raised the gate of the dam a couple of hours before we were ready to start, and consequently when the two boats, one after the other, shot through the narrow opening on Friday, Aug. 13 (inauspicious date), we found ourselves embarked on a stream from 10 to 15ft. wide and 2 or 3ft. deep, with a tolerably swift current.

There is one part of our equipment which I have forgotten to mention, but which added so much to our comfort that any one taking such a trip should not fail to be similarly provided. I refer to two large tin canteens covered with blanketing for carrying drinking water. Each one held something over a gallon, and we never missed a chance to fill when we came to a good spring. Provided with these we were enabled to choose our camp ground each night without taking into consideration the question of drinking water, which on other similar trips had made it at times very difficult to find a satisfactory location.

All we required was a high and airy spot, where we would be as free as possible from swampy exhalations and from that pest of summer camps, mosquitoes. The two canteens held water enough to last over one day, and on one occasion we made a Sunday camp and by using river water for coffee got along very well from Saturday until Monday morning.

The Wisconsin for the first thirty or forty miles of its course is the crookedest and most deadly uninteresting stream I have ever seen. Back and forth through marshy meadows it winds with wearysome repetition; an occasional tamarack swamp affords the only change. The marsh land is bordered by sandy ridges elevated only a few feet, once covered by pine timber, but now clothed only with scrubby oaks and brush of various sorts 10 or 12ft. in height, with numerous blackened trunks rising here and there, and giving an exceedingly forbidding aspect to the scene. The Professor and I went ahead in the Otter, while the two younger voyagers followed in the Osprey. Sometimes they would be a quarter of a mile behind us by the course of the river, when we could see them across some neck of land not a hundred yards away. There seemed to be no fish of any sort, big or little, no minnows in the shallows, or large ones darting away in the deeper water as we approached; no frogs were seen, and stranger still no turtles or snakes. I was partially struck by the scarcity of birds and animals. None of the heron or bittern family or of the smaller waders were seen, and no animals except muskrats. Even when we landed and explored a little way, no rabbits, woodchucks, squirrels or any of the small wild life which gives an interest to the settled country three or four hundred miles south was to be seen—nor were there small birds or any of the hawk kind. The only explanation which seemed satisfactory to us for the scarcity of life was that the ever recurring forest fires have exterminated it. It seemed an interminable length of time after our embarkation, not less than four hours, before we came to the first of the bridges on which the Chicago & Northwestern Railway crosses the river, near its head; the other is half a mile further on. We were here four or five miles from Lac Vieux Desert, but had come several times that distance by the windings of the river. Here we threw out our anchors and took lunch as we sat in the boats, there being no inducement either to land or to linger longer than was necessary to comfortably take our meal.

For miles beyond nothing more tempting for a camping place was found than bits of ground elevated only a foot or two above the level of the water or dreary tamarack swamps. About 5 o'clock in the afternoon, however, we noticed that the country back of the river bottom was becoming more hilly and was gradually drawing in on both sides toward the river. The upland was 10 or 20ft. above the stream, and ridges still higher were seen. The high banks encroached upon the stream at every turn; the current ran more swiftly, boulders obstructed the channel; little ripples gave a life and beauty to the stream which it had sorely lacked, and presently we swung around a bend of the river about a quarter of a mile long, and saw before us an old logging dam. It had been partly carried away by floods the preceding winter, but the gap filled in by tree trunks and drift stuff made the inevitable carry more difficult than it would otherwise have been, because we were compelled to make our landing further up. After making an examination of the place we determined to camp at the top of the dam or the approach thereto, for at one time there had been a road across the river at this point; the chute having been spanned by a bridge. By making our camp at the top of the dam we divided up the work of portaging, and four pairs of hands soon transferred our tents and supplies from the landing place 50yds. or so up the stream to the spot we had selected as the best which offered for our tent. It was so sandy that the malleable iron tent pegs would not hold very well, and had to be reinforced with green oak stakes a couple of feet long.

While the rest were busy with the various preparations for the night, R. took a pail and the spade and went on an exploring expedition down the river where the banks were highest, looking for drinking water. We hoped

he would find a spring, as we had not had an opportunity of replenishing our canteens during the day. His quest was unsuccessful so far as finding water was concerned, but he brought back some of the finest huckleberries I have ever seen. Throughout the greater part of our trip we had this fruit in abundance, and of the finest possible flavor.

The bushes were not more than 6 or 8in. high generally, but the berries were in such clusters as to give the effect in many places of bunches of blue flowers. The stunted character of the bushes is probably due to the frequent forest fires, which do not admit of their attaining much growth, but at the same time do not lessen their fruitfulness.

By sundown the tent was pitched and the ground within strewed a foot deep with twigs and sweet fern; the rubber floor cloth spread over this; blankets spread for the night, the mosquitoes brushed out of the tent through the open front with a bough, and the mosquito bar carefully fastened over the opening with safety pins. We have learned on former trips that too much pains cannot be expended in circumventing the mosquitoes. A floor cloth at least a foot longer each way than the inside of the tent, and a big double mosquito bar for the front with plenty of large safety pins to fasten it with, will enable one to get a good night's rest, while the mosquitoes vent their harmless rage outside.

Supper was served upon a heavy piece of canvas about 6ft. square, which was used for that purpose when in camp, and was wrapped around the tent when we broke camp, to save the latter from wear and rough handling. An account of one supper will do for all: A couple of quart cans of soup; a cold boiled potato salad, or a tomato salad when we could get the principal ingredient; fried eggs and bacon, and claret. Coffee we only used in the morning.

Below the dam was a very likely looking pool, 20 or 30yds. across, with a large section of framed timbers of the ruined structure stranded near the lower end. It seemed such a very favorable place for fish that we thought best to give it a trial before embarking the next morning, but not a sign of fish life could we discover, and after a quarter of an hour of fruitless whipping of the water we took the regular final look all over the camp grounds to see that everything had been picked up, and stepped into our boats and pushed off. For a mile or two there was considerable current, and a few boulders in the channel, with high land on one or both sides of the stream, but in a short time we were again in the marshes and tamarack swamps, with the river winding back and forth like a snake, duplicating precisely our experience of the previous day. With the exception of half a dozen ducks, and as many muskrats, which we surprised at various times during the day as we rounded sudden bends, we saw no more life than then. Clouds gathered early and threatened rain; by noon the wind had got around into the north and the air was damp and decidedly chilly. We anchored close together and from our plentiful stores had a comfortable lunch and a glass of wine, and resumed our journey without loss of time. As the next day was Sunday, we were desirous of getting a good camping place in order to avoid traveling on that day, but it was late in the evening before we reached a place where land high and dry enough for a camp came anywhere near the water's edge. The boys in the rear in the Osprey confessed themselves pretty well used up, and daylight would not have lasted much longer, when we were rejoiced to see a place where an elbow of the high land which reached out into the marsh formed the river bank for 50 or 75yds.—a steep bank or miniature bluff 7 or 8ft. high sloping down at the lower end to a convenient boat landing. The timber with which the land had once been covered had been cut away long before, as well as that from all the adjacent pine land, but a scattering scrubby growth took its place. Having landed and selected a place for the tent, some 40ft. from where we had beached the boats, we all set to work, and in a very short time things began to assume a homelike appearance. Everything having been unloaded, one of the party took the axe and set to work to lay in a good supply of fuel, another set up our camp range or stove, and unpacked the various cooking utensils and provisions needed, while the other two pitched the tent and got the blankets arranged for the night. The air was almost too cold for mosquitoes, but we always chose an airy place where the wind had full sweep, and wherever we could find such a one were not much troubled. Everything indicated rain, and our preparations were made with this contingency in view; the two flies with which our tent was provided were both spread and well secured, and the principal tent pegs reinforced with wooden ones. Before supper was ready it was quite dark, and the rain began to come down in a gentle drizzle, but moving the fire and our cooking range under the flies, which we propped up to a height of 4 or 5ft. with forked sticks, we were not inconvenienced. The flies together formed a porch to our canvas summer house, and in rainy weather we could build quite a fire under them without any danger of burning, and it was possible to prepare a meal on a rainy day without disturbing any of the arrangements of the tent.

A supper of hot clam chowder with fried eggs and bacon, and the best of coffee, put us all in good humor, and it was voted unanimously that we had selected a good Sunday camp.

Having a supply of wood under cover we were indifferent to the rain, and rather enjoyed its patter on the canvas until we got under the blankets and went to sleep.

Sunday morning was cold and windy, but no rain. A huge fire soon dispelled the dampness in the immediate vicinity of the tent, and while one of the party was putting out the blankets to air, and getting the interior of the tent in order for the day, the rest gathered a supply of splendid blueberries for breakfast, at which meal they were served with condensed cream, reduced with water to the proper consistency for the purpose. While gathering berries I noticed something white in a cleft in an old pine log, and on examination it proved to be a copy of the Youth's Companion, Nov. 5, 1895, which had apparently never been read. It was folded just as it came from the post-office, and I amused myself speculating about the probable owner of this copy of a paper which has been taken many years in my own family. There were many evidences about of another camp having been located on our chosen spot at some previous time.

Our canteens being nearly empty, we were desirous of finding a spring where we could get a fresh supply, as the river water, though cold enough, had a marshy flavor which was not agreeable. The Professor said he had heard the sound of falling water as he passed a point not very far back where there were a number of white birches, which would readily distinguish the place, and that it could only mean that there was a spring there.

R. said he had also heard it as he and T. came by in the Osprey, and that he could locate it without trouble, so taking both canteens, we started to row back up the stream, but here occurred a difficulty: there were several points at bends in the river where there were white birches, and the pattering rain drops made noise enough to drown the tinkling of the spring. We went quite a distance up stream without discovering the object of our search, and concluding we must have passed it, returned, keeping close along shore, listening and watching carefully as we went. We finally found a pretty rivulet of very cold spring water, with which we filled both canteens and a pail which we had also taken with us. On account of the unfavorable weather, most of the day was spent in the tent with our books, of which we had a goodly supply. I found Stephenson's "Inland Voyage" particularly pleasant reading for such a trip as ours, and any one who likes canoeing has a treat before him if he has not yet read this delightful but too short narrative.

Late in the afternoon R. got out his Stevens .22cal. rifle, and proposed a little target shooting. While thus employed we were almost as much astonished by the sight of two canoes containing three men, rounding a point just above the camp, as Robinson Crusoe was at the print of a human foot on the shore of his solitary domain. We had not seen a soul since leaving Lac Vieux Desert on Friday morning, and had begun to look upon the river as our private property, where we were lords of the fowl and the brute, both remarkably scarce. As the two boats came alongside our camp, I was startled by a hail and the greeting, "Good morning, Mr. M." The speaker was a young gentleman of Madison, Wisconsin, whom I had met for a few moments only in a Chicago parlor some weeks before. He knew I was on the river, and the number of our party, hence easily recognized me, while I had no idea he was in that part of the country. The other two of his party, as I learned when they pulled up at our boat landing, were his father and brother, who were in a separate canoe. They were like ourselves descending the Wisconsin from its source, but quite unlike us, who were in not the least hurry, they were doing it as rapidly as possible, and intended to push on until they reached the Mississippi.

They had started one day later than we, were traveling light, with small tent, an insufficient quantity of blankets for such weather, and few supplies of any kind, and were very anxious to reach Eagle River, which was supposed to be only a few miles ahead, so that they could have a comfortable sleep in a bed that night.

A bottle of claret, which we opened for them, as about the most comforting thing we had, was accepted with hearty good will, and soon brought something of a glow into their chilled veins, and they started on with renewed vigor.

We heard of them several times after that, always an increasing number of days in advance of us.

LEXDEN.

[TO BE CONCLUDED NEXT WEEK.]

A Letter from Antoine Bissette.

M'sieu' Fores' Strim:

Ah'll ant see you 'fore or after bose en' of de war wid dat Spaniels for talk wid you 'baout it, an' Ah'll ant know what you' 'pinion.

Ah s'pose prob'ly if you ant gat sem 'pinion of all dem feller in de city dat holler "hurrah, hurrah," for de war wen dat Maine sloop get blewed, dey was use you for sofa cushion, ant it?

Dat de way it was be here for de hol' folks dat seen some war an' ant want for see some more, de boy an' de gal was sit on it, pooty hard, Ah tol' you.

For all Ah'll gat so many experiment on de Papineau war, dey ant ax me for be offecy, dey ant want bought mah hol' hoss for de hossback sojer. Ah'll ant gat nephew can get place for be capitan, honly jes one mah hown boy in de mellyshy an' he jes private part of it, so you see Ah'll ant want some war, me, an' Ursule he ant want it too, on 'caount aour boy.

But de war he come, an' de boy he go an' we holler "hurrah" wi' aour mout' an' feel sorry in aour heart, me an' hees hol' mudder.

Den bombye w'en he gat on Chicken maugury, he ant gat clo's, he ant gat heat, he ant gat drink fit for dev' water, an' he roas' an' starve an' go dry inside hees belly of it t'ree, four mont', an' Ah'll ant see haow dat was help dat Cuba niggers for not be hongry, me.

Dey sen' some sojer feller down dere dey call hemune 'cause dey can' caught some yaller fever, but dey was plenty udder color fever 'sides yaller, an' aour sojer boys fetch 'em home wid it w'en dey come back leetly w'ile ago, an' dem fever fetch good many aour boy naow, an' more of it goin' for kep' dyin'.

Oh, bah gosh! Ah tol' you, jes' one aour boy, he wort' more as de hul bilin' of dem Cuba nigger.

Some of de hurrah for de war feller say, w'en we drive de Spaniel off dat islan' tobac' goin' for be more cheap; but, bah gosh, Clapham ax six cen' more paoun' for de blue paper as he was 'fore, an' he ant so good tobac'.

Fus t'ing you know nex' dat islan' goin' be some 'Nited States, an' dem nigger goin' vote on taown meetin's jes sem we Yankee. Ah'll wish for Ah'll be hable for shoved it all on de nocean, me.

Dat hol' Philip Hen Islan' jes de sem, an' jus' de sem Ah' wish, too, bah gosh.

'Course all us Varmont mans was felt pooty plump for had aour Capitan Commodore prob'ly, prob'ly Admaal Dewey, knock all dem Spaniel sloop to leetly piecen an' not gat hurt hees hown sloop, an' 'stonish all de worl' for show haow we can mek de sailor on de montaigne, an' prob'ly you'll hear de peop' said he was l'arn for be so good navy on some place dey call Ann Applis, but dat ant so.

Ah'll taught it hees fust lesson mahsef in mah cannew on de Onion River, me, some folk call it Ouinousqui. Yas, sir, she ant Ann Applis was taught it fus', but it was Antoine, dat's me, Bissette! 'F any body ant b'lieved it, Ah can show you de rivier if he ant dry up dis summer.

Me an' George was be good frien' w'en he leetly boy, an' me an' hees brudder Charles was very good frien' naow, 'cause he'll gat mortage on my eight nacre farm, an' dat show you he t'ink grea' deal for me.

M'sieu' Mum'son say Ah'll can' write some more 'cause he bus' hees pen.

Your respectably frien',

ANTOINE BISSETTE.

Scrippos.—Haow much you prob'ly give me for two bushel onion? He good one for heat or for bile, bose way.

Natural History.

A List of the Big Game of North America.

BY ERNEST SETON THOMPSON, GOVERNMENT NATURALIST TO THE PROVINCE OF MANITOBA.

IT is proposed to begin an investigation of the original and present range, etc., of the Big Game or Horned Ruminants of North America. For present purposes, the southern limit will be north latitude 25°, passing just southward of Florida. This excludes a number of tropical deer of doubtful standing, and practically excludes the whole tropical region. It includes a number of deer recently described from northern Mexico, but which will surely be found within the limits of the United States.

Two references for each species, including its type locality, are given.

In the preparation of this preliminary list very essential assistance has been received from Dr. C. Hart Merriam, of the Agricultural Department at Washington. By putting at my disposal the specimens and records of the Biological Survey, he has greatly reduced the labor of making the list as well as increased its accuracy.

To Gerrit S. Miller, Jr., Esq., Assistant Curator of Mammals, United States National Museum, also are due thanks for access to the specimens in his care; to Dr. J. A. Allen, of the American Museum, for aid in numerous problems of range and synonomy; and to Dr. T. S. Palmer, of the United States Agricultural Department.

1. Elk. Red Deer of Hudson Bay Co.'s men. **Wapiti** of English books; a wrong application of the name.
Cervus canadensis (Erxleben).
Cervus elaphus, var. *canadensis* Erxleben, Syst. Regni Animalis, Mamm. p. 305, 1777. Eastern North America.
Cervus canadensis Desm. Mamm. II., p. 433, 1822.

Specimens, skulls or records for the Eastern States or Canada are particularly desirable.

Baird records that the Elk of the Upper Saskatchewan is considered different by the hunters. They call it the Little Elk and distinguish it by its small size.

2. Roosevelt's Elk.
Cervus roosevelti Merriam.
Cervus roosevelti Merriam, Proc. Biol. Soc. Washington, XI., p. 272, Dec. 17, 1897. Olympic Mts., Washington.

This is the Elk of the West Coast. It is distinguished chiefly by its black head and legs.

The genus **Odocoileus** Rafinesque, may be divided in three groups: **Whitetails, Mule-deer,** and **Blacktails.**

WHITE-TAILED GROUP.

Deer with tail long, dark colored above and white beneath. The gland on the outside of the hindleg or metatarsus about an inch long.

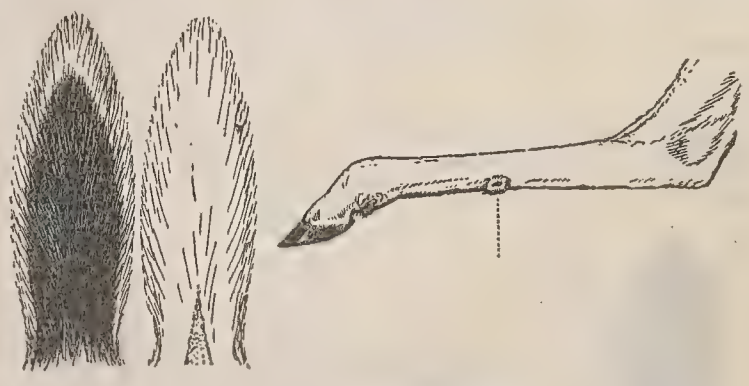


FIG. 1. WHITETAIL DEER.

Upper and lower surfaces of tail and metatarsal gland on left hindfoot.

3. Common Deer of the East. **Whitetail** of hunters. **Virginian Deer** of books.
Odocoileus virginianus (Boddaert).
Cervus virginianus Bodd. Elenchus Animalium, I., p. 136, 1785. Virginia.
Odocoileus virginianus Merriam, Proc. Biol. Soc. Washington, XII., p. 99, April 30, 1898.

Specimens are much needed from Virginia, Maine, Ottawa River, Louisiana, etc.

4. Whitetail, Banner-tail or **Long-tailed Deer** of hunters.
Odocoileus virginianus macrourus (Rafinesque).
Cervus macrourus Raf. Am. Monthly Mag., I., No. 6, p. 435, 1817. Plains of Kansas River, Upper Mississippi Valley.

The original description runs thus:

"P. 165, Chas. Le Raye's Journal; 'During our stay the Indians killed a deer which is called the Long-tailed Deer. It is longer than the Red Deer, of a darker color

and with a white belly. Its horns are short, small, and somewhat flat; its tail nearly eighteen inches long. They are said to be plenty on these plains.' The plains of the Kansas River.

"Note.—This concise description is sufficiently accurate to enable us to ascertain that it belongs to a new species of deer unknown east of the Mississippi, to which I shall give the name of Corvus [sic] macrourus, which means long-tailed deer; it may be characterized as follows: Horns somewhat depressed, shorter than the the head, body brownish above, white below, tail elongated."—C. S. R.

Specimens are desired from Kansas River, Manitoba, the Upper Missouri, etc.

5. Whitetail of the Pacific coast region.
Odocoileus leucurus (Douglas).
Cervus leucurus Doug. Zool. Journ. IV., p. 330, Oct., 1828–Jan., 1829. Lower Columbia River, Oregon.

6. Florida Deer.
Odocoileus virginianus osceola (Bangs).
Cariacus osceola Bangs, Proc. Biol. Soc. Washington, X., p. 26, Feb. 25, 1896. Citronelle, Citrus Co., Fla.

A small dark form of Whitetail.

7. Arizona Whitetail.
Odocoileus couesi (Allen, *ex* Rothrock MSS.).
Cariacus virginianus, var. ——— Coues and Yarrow, Wheeler Surv. Zool. V., p. 72, 1875.
Dorcelaphus couesi Allen, Bull. Am. Mus. Nat. Hist., N. Y., VII., p. 200, June 29, 1895. Camp Crittenden, Ariz.

A very small pale form of Whitetail from the arid Southwest.

8. Fan-tailed Deer of Texas.
Odocoileus texanus (Mearns).
Dorcelaphus texanus Mearns, Proc. Biol. Soc. Washington, XII., p. 23, Jan. 27, 1898. Fort Clark, Kinney Co., Tex.

This small, graceful species may prove the same as the Gazelle Deer of more northern hunters.

MULE DEER GROUP.

Large Deer, with short tails ending in a black tuft; the gland on the outside of the hindleg or metatarsus about 5in. long; ears large.

FIG. 2. MULE DEER.

Upper and lower surfaces of tail and metatarsal gland on left hindfoot.

9. Mule Deer. Missouri Blacktail. Manitoba Jumping Deer.
Odocoileus hemionus (Rafinesque).
Cervus hemionus Raf. Am. Monthly Mag., I., No. 6, p. 436, 1817. Sioux River, South Dakota.

Specimens are needed from Sioux River, Manitoba, etc.

10. California Mule Deer.
Odocoileus hemionus californicus (Caton).
Cervus macrotis, var. *californicus* Caton, Am. Naturalist, X., p. 464. Aug., 1876. Gaviota Pass, Santa Barbara County, California.

11. Burro Deer. Desert Mule Deer.
Odocoileus hemionus eremicus (Mearns).
Dorcephalus hemionus eremicus Mearns, Proc. U. S. Nat. Museum, XX., No. 1129, p. 470, 1897. Sierra Seri, near Gulf of California, Sonora, Mexico.

This is the very pale form of Mule Deer from the arid Southwestern region.

12. Cerros Mule Deer.
Odocoileus cerrosensis Merriam.
Odocoileus cerrosensis Merriam, Proc. Biol. Soc. Washington, XII., p. 101, April 30, 1898. Cerros Island, Mexico.

A small form of Mule Deer from Cerros Island, off the coast of Lower California.

BLACKTAIL GROUP.

Medium-sized Deer, with short tails that are wholly dark above and wholly light beneath; the gland on the outside of the hindleg or metatarsus about 2in. long; ears large.

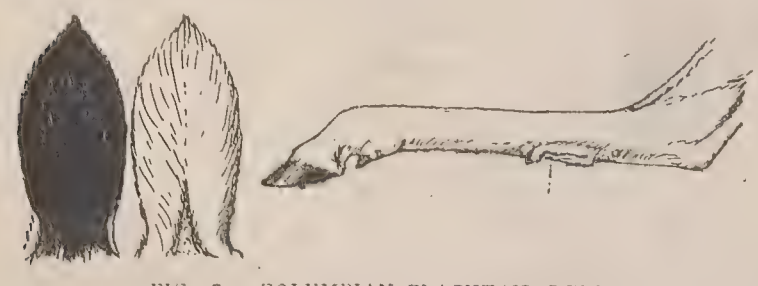

FIG. 3. COLUMBIAN BLACKTAIL DEER.

Upper and lower surfaces of tail and metatarsal gland on left hindfoot.

13. Columbia Blacktail. True Blacktail.
Odocoileus columbianus (Richardson).
Cervus macrotis, var. *B. columbiana* Richardson, Fauna Boreali-Americana, I., p. 257, 1829. Mouth of Columbia River.
Odocoileus columbianus Merriam, Proc. Biol. Soc. Washington, XII., p. 100, April 30, 1898.

14. Sitka Blacktail.
Odocoileus columbianus sitkensis Merriam.
Odocoileus columbianus sitkensis Merriam, Proc. Biol. Soc. Washington, XII., p. 100, April 30, 1898. Sitka, Alaska.

A small form from Sitka Island; it shows the basal half of the tail above brown instead of black.

15. Californian Blacktail.
Odocoileus columbianus scaphiotus Merriam.
Odocoileus columbianus scaphiotus Merriam, Proc. Biol. Soc. Washington, p. 101, April 30, 1898. Laguna Ranch, Gabilan Range, California.

A large-eared, pale-colored form of *columbianus* from the mountains of California.

16. Crook's Blacktail.
Odocoileus crooki (Mearns).
Dorcelaphus crooki Mearns, Proc. U. S. Nat. Museum, XX., No. 1129, p. 468, 1897. Dog Mts., Grant Co., New Mexico.

17. Moose.
Alces americanus Jardine.
Alces americanus Jardine, Nat. Library, III., p. 125, 1835. French Canada (?)

The giant Moose of Alaska is probably distinct. Specimens are needed to determine its rank. Idaho specimens also are of interest.

18. Woodland Caribou.
Rangifer caribou (Gmelin).
Cervus tarandus, var. *caribou* Gmelin, Syst. Nat., I., p. 177, 1788.
Rangifer caribou Aud. and Bach. N. Am. Quad., III., p. 111, 1853, pl. cxxvi.

Supposed to be the large Caribou from the southern part of the Hudson Bay watershed. Specimens from Idaho and Maine are very desirable.

19. Barren Ground Caribou.
Rangifer arcticus (Richardson).
Cervus tarandus, var. *arctica* Richardson, Fauna Boreali-Americana, I., p. 241, 1829. Barren Grounds of North America.
Rangifer arcticus Allen, Bull. Am. Museum, VIII., 234, 1896.

This is the small Caribou, found only in the Barren Grounds.

20. Greenland Caribou or **Reindeer.**
Rangifer grœnlandicus (Gmelin).
Cervus tarandus, var. *grœnlandicus* Gmelin Syst. Nat., I., p. 177, 1788.
Rangifer grœnlandicus Allen, Bull. Am. Mus., VIII., 234, 1896.

21. Newfoundland Caribou.
Rangifer terrænovæ Bangs.
Rangifer terrænovæ Bangs. Preliminary Description of the Newfoundland Caribou, 2 pp., Nov. 11, 1896. Newfoundland.

The largest of the Caribou.

22. Antelope or **Common Pronghorn.**
Antilocapra americana (Ord).
Antilope americanus Ord, Guthrie's Geography, 2d Am. ed., II., pp. 292, 308, 1815. Plains of the Missouri.
Antilocapra americana Ord, Bull. Soc. Philom. 1818, p. 146.

Specimens from Saskatchewan River and from Mexico are of especial interest.

23. White Goat or **Mountain Goat.**
Oreamnos montanus (Ord).
Ovis montana Ord, Guthrie's Geography, 2d Am. ed., II., pp. 292, 309, 1815. Rocky Mts., Montana or Idaho.
Oreamnos montanus Merriam, Science U. S. I., p. 19, Jan. 4, 1895.

Specimens from its southern range on the West Coast and from Alaska are desirable.

24. Mountain Sheep or **Bighorn** of the Rockies.
Ovis cervina Desmarest.
Ovis cervina Desmarest, Nouv. Dict. d'Hist. Nat., XXIV., p. 5, 1804. Interior of Canada.

Specimens from the Bad Lands and from the Pacific Coast are desirable.

25. Dall's Sheep. The **White Sheep** of Alaska.
Ovis dalli (Nelson).
Ovis montana dalli Nelson, Proc U. S. Nat. Museum, VII., p. 13, 1884. Old Fort Reliance, Yukon River.
Ovis dalli Allen, Bull. Am. Mus. Nat. Hist. New York, IX., p. 112, April 8, 1897.

The white form of the extreme north.

26. Nelson's Sheep. California Bighorn.
Ovis nelsoni Merriam.
Ovis nelsoni Merriam, Proc. Biol. Soc. Washington, XI., p. 218, July, 1897. Grapevine Mts., boundary between California and Nevada.

A pale Southern species.

27. Stone's Sheep.
Ovis stonei Allen.
Ovis stonei Allen, Bull. Am. Mus Nat. Hist., New York, IX., pp. 111–114, pl. ii., iii, fig. 1, April 8, 1897. Headwaters Stickeen River, British Columbia.

A small species with slender horns and very dark colors.

28. Muskox.
Ovibos moschatus (Zimmermann).
Bos moschatus Zimmermann, Geog. Geschichte Menschen u. d. vierfüss. Thiere, II., pp. 86–88, 1780. Region between Seal and Churchill Rivers, Hudson Bay.

29. American Buffalo.
Bison bison (Linnæus).
Bos bison Linn. Syst. Nat., ed. 10, I., p. 72, 1758. North America.
Bison bison Jordan. Man. Vert., 5th ed., p. 337, 1888.

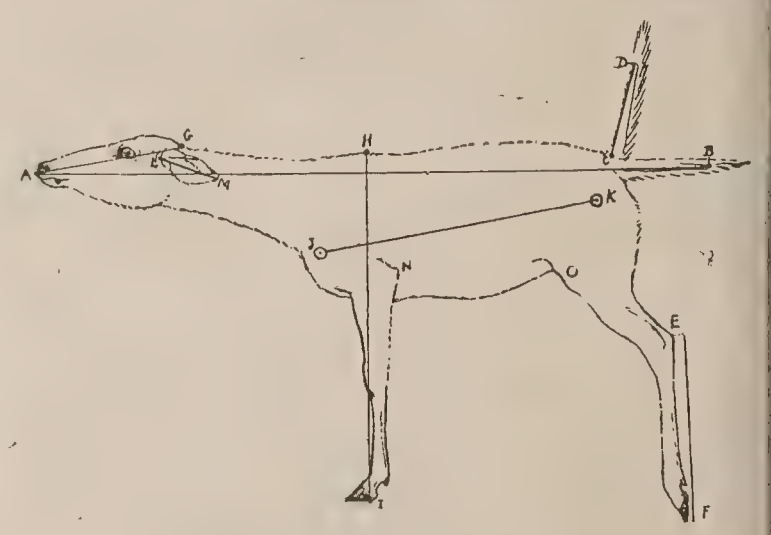
30. Wood Buffalo.
Bison bison athabascæ Rhoads.
Bison bison athabascæ Rhoads, Proc. Acad. Nat. Sci. Phila., pl. III., pp. 498–500, Jan. 18, 1898. Near Fort Resolution, Great Slave Lake.

On Preserving Specimens of Deer, etc.

First measure the animal. All measurements should be in a straight line. Calipers and a metric rule are best; but a 2ft. rule and a tape line are more likely to be at hand and can be made to answer.

Fill in the following schedule:

Name of animal.....
Sex .....
Age .....
Condition .....
Where killed .....
Date .....
Who measured it .....
Weight (on reliable scales, or not at all). State whether live or dressed weight, the former preferred .....



1. Length.—Lay the animal flat, stick in a straight, sharp peg, at right angles to the ground, at the point of the nose, A. Then pull the nose, the back and the tail out, as nearly as possible in a straight line, and put another peg where the bone of the tail ends, B. Measure in a straight line between these points. This is the length of the animal. AB, Fig. 4.

2. Tail.—Turn the tail straight, at right angles to the back, along a rule or stick held firmly down on the upper side, and mark where the bone ends. Note that as "length of tail," CD.

3. Hind Foot.—Measured in a straight line from the top of the hock, or heel, E, to the point of the longest hoof, F. This is the length of the hind foot.

4. Length of the Head.—This is best measured with calipers, but it can be done with the pegs. Peg A is still in place. Put another, G, at the back point of the skull; that is, on a line with the back of the ears. This point is called the hind-head point or occipital tuberosity.

5. Height at Shoulders.—Put in a peg, H, tight against the withers. Put the foreleg at right angles to the axis of the body and push it up toward the spine, so

as to get it as nearly as possible in the ordinary position of standing in life. Put a peg, I, at the heel—i. e., the ground line. The distance between the pegs is the height.

6. Length from Shoulder Head to Thigh Head.—Measure as nearly as possible from the middle of the head of the shoulder bone, J, to the middle of the head of the thigh bone, K, where it joins to the hip bone. Make sure, by working it, that you get the thigh bone.

7. Length of Ear from Base in Front to Tip.—The ear being at right angles to the side of the head. LM.

Horns need not be measured if forwarded. If measured, take length of each beam, following the curves, girth at base, greatest horizontal expanse of the pair, number of points and weight. But these items are of less importance than is generally supposed.

Skinning.—After measuring and labeling, the animal should be skinned, and the sooner this is done after killing the better.

Lay it on its back and split the skin from the base of the tail round one side of the anus, and thence following the middle line of the belly to the point of the breastbone.

Then split each leg open on the back side, following the middle of the hair ridge from the secondary hoofs to the split along the body. Let the split on each leg meet that on the opposite leg if possible.

Skin each leg, but leave the bones attached by the foot. Cut off the forelegs at the elbow (N, Fig. 4) and the hindlegs at the knee (O, Fig. 4).

Split open the neck along the nape from the shoulder to the back of the skull. If the animal has horns, the split must now fork, sending a branch to each horn.

Skin the tail out around the base until it may be pulled out the rest of its length.

Skin the body. Turn the skin over the head to complete the skinning of the head and neck through the split along the nape.

Cut the ears off close to the skull and skin out the lips fully, wholly detaching the skull from the body by disjointing it at the top neck joint.

Skin the ears out behind for at least one-third of their length.

Remove all fat and meat from the skin and the leg bones; rub all with salt or salt and alum. Put a stick in the tail long enough and big enough to keep it in its natural size and shape.

Then hang the skin in a shady place in the wind to dry.

Remove the bulk of the meat from the skull, taking great care to break no bones. Take the brains out by the spine hole. Put a number on it to correspond with that on the skin and hang it up to dry in a shady place.

Do not stretch the skin to dry it, and do not split the throat.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Linnaean Society of New York.

REGULAR meetings of the Society will be held in the American Museum of Natural History, on Tuesday evenings, Oct. 11 and 25, at 8 o'clock.

Oct. 11.—L. S. Foster, "A Black-capped Petrel from Cayuga county, New York." William Dutcher, "Exhibition of a Series of Red Phalaropes, Illustrating Changes in Plumage." Postponed from the meeting of May 24, 1898. Preliminary reports on the past summer's work by members.

Oct. 25.—Frank M. Chapman, "The Bird Rocks of the Gulf of St. Lawrence." Illustrated by specimens and lantern slides. WALTER W. GRANGER, Sec'y.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Adirondack Deer and the Laws.

Editor Forest and Stream:

The letter of Mr. J. B. Burnham in FOREST AND STREAM of Sept. 24, concerning Adirondack deer hunting conditions, invites a response; and as I have had some opportunities for observing these conditions and the effects of the laws which have been put in operation during the past few years, I am impelled to speak of what I have seen and heard.

It is true, as Mr. Burnham says, that the natives have never had a deer law to suit them, for, although there have been all sorts of laws, no one of them could, in the nature of things, be satisfactory to all.

"No man e'er felt the halter draw,
With good opinion of the law."

The best protective law ever passed in this State was the one which prohibited the shipment of carcasses unaccompanied by the owners, thereby making it unprofitable to kill deer for the market; but throughout the length and breadth of the Adirondack wilderness a howl of protest went up from a class of men who complained that a legitimate source of revenue had been closed to them. We hear very little about this law now, because even the ignorant and prejudiced realize that it was wisely enacted. When hounding was shortened to two weeks there was a wail from the guides and hotel men, and when it was altogether done away with and jacking was made illegal they gloomily prophesied that there was an end to prosperity for them. What have been the results so far, and what are the indications for the future in this respect?

Last year, at a place where I have frequently made my headquarters, over sixty deer were killed by still-hunting—a considerably larger number than had been killed there the year previous, when both hounding and jacking were allowed. The guides made as much and the hotel proprietors more than during the season of '96. This doesn't seem to indicate that ruin is staring them in the face. I can see nothing but ultimate good for both hotel-keeper and guide under the existing law. Formerly most hunters waited for the hounding season before going to the woods, and while this short period was a busy and prosperous one, it was preceded and followed by a dearth of patronage. Now the hunting season, beginning Aug. 15 and ending Nov. 15, gives one a wide choice as to the time of visiting the woods. He may go in August for his summer vacation and get some fishing, as well as hunting; he may go in September and October and enjoy the delights of the forest in autumn; or he may go in November and track deer on the snow. Thus the season is prolonged and equalized for all. Unwillingly, at first, perhaps, both natives and visiting sportsmen turn from hounding and jacking to still-hunting, only to find that the latter is the most satisfactory and sportsmanlike method of getting their deer. Moreover, as the deer are increasing under the present laws—I mean where these laws are lived up to—the chances of success are continually growing better.

I admit that for cripples and lazy men sitting on a runway may be preferable to the more active work of still-hunting, but I have yet to find the real sportsman, who, having tried all methods, does not declare in favor of still-hunting, with its ever-changing scenes, its robust exercise, its wide opportunities for observation, its lessons in woodcraft and its manly requirements of patience, tenacity and skill. Furthermore, those who have either a disinclination or incapacity for much physical exertion should remember that by no means the least successful way to secure a shot is to sit quietly on a log or rock and allow the deer to do the hunting. I find an ever-increasing proportion of hunters who hold these same opinions, and I am inclined to question the statement of Mr. Burnham that "the non-hounding law is contrary to the sentiment of the great majority of men living in the Adirondacks who hunt." Most of the intelligent guides whom I have men during the past two years are reconciled to the situation, and I doubt not that they will all be so when the men who hire them take up still-hunting in earnest, as they inevitably will.

I think the author of the letter I refer to takes too narrow a view when he assumes that game laws have been framed in the interest of the "city guests, business and professional men, college students and the like." The good effects of this legislation are ample vindication of it, and if an increased supply of game is good for the visitor it is equally good for the permanent resident. "The profit in killing deer" is not to be measured by the value of the meat for home consumption, or the price it brings in the markets. Throwing aside all sentiment, and viewing the subject from a purely commercial standpoint, the prosperity of the Adirondacks as a hunting resort depends very largely on these very "guests, professional and business men, college students and the like," who would never go to the North Woods if the deer had been killed off to furnish a profit to a few native butchers.

Suppose that this army of sportsmen, who spend hundreds of thousands of dollars annually, should decide to stay away from the Adirondacks. Could any change of the game law be a compensation for this loss in hard cash to the native population? I think not, even though the price of hounds has depreciated from $15 or $20 to $4, and Winchester rifles are a drug on the market in Mr. Burnham's locality.

In spite of salt licks, shooting out of season, and evasions of the law as regards jacking—all of which are more in vogue than is generally known—I believe there are more deer in the Adirondacks to-day than there were five years ago. They are there, for the native hunter as well as for the city guest, and if these men do not know how to get them it is the fault of neither the law nor the deer. By the way, while pitying the poor hounds that are kept in chains, why not shed a tear of joy for the deer that are no longer run to death?

I spent some time this summer traveling about Franklin county, which includes some of the best deer country in the Adirondacks, and wherever I went I found evidence that deer were plenty, and that the efforts of the still-hunter were being crowned with success. At Madewaska, where Joe Alfred's resort is located, many deer were brought in, and they were big ones too. On the Bog River a large party, some of whom I am acquainted with, had all the luck the law allows. At Tupper Lake and on the Racquette River no one was going hungry for lack of meat. At Ampersand Pond friends of mine, who had the right to hunt there, took as much venison as they needed, and at McCollom's, seven miles from Paul Smith's, I myself saw eight deer in four days, and secured shots at two. The latter place was formerly famous for its hounding advantages and will soon be equally well known as a still-hunter's paradise. A friend whom I advised to go there has just written me that he has met with good success there, and could kill more deer if he wanted to. (Perhaps McCollom's is the only place in the woods where a man may see deer tracks on a gold ground!)

In all these localities success was had without the aid of jack or hound, and this too at the poorest season for still-hunting.

Does it not seem, therefore, that the present laws are all right, that the season is neither too long nor too short, and that conditions are rapidly shaping themselves to the advantage of all concerned?

I sometimes hear or read that the deer are rapidly disappearing from the Adirondacks and that the hunting there is no longer worth the trouble and expense it involves. It is probably true—as it always has been—that one cannot shoot deer from the porches of the big hotels, or successfully hunt them with a brass band; but it is equally true that there are deer enough in the woods, and that the man who knows how to still-hunt or is willing to learn can find plenty of use for his Winchester and should not dispose of it at a sacrifice.

ARTHUR F. RICE.

A Prairie Chicken "Hot Corner."

DURING a visit to friends in southern Illinois a few years ago, I was seated on the porch smoking an after-dinner cigar, when my attention was attracted by a man approaching the front gate carrying a gun.

The combination of a gun and man operating through the optic nerve on that corner of my intellect that directs and controls my sporting proclivities always causes a sensation of greater or less proportions to pervade it. I want to know where and what after, if he is going hunting; and where he has been, and what his bag is, if he is returning.

I want to know the make, weight, gauge, length of barrel, drop of stock and general shooting qualities of his gun; and what weight loads and brand of powder he prefers. An old maid is not more interested in her next-door neighbors, that have moved from a place she never heard of, than am I in every gun and gunner that crosses my path.

The soporific effect of a good dinner and cigar, combined with the heat of a late August sun, made my interest in the approaching man with a gun almost passive.

It is

"When the frost is on the pumpkin,
And the corn is in the shock"

that my enthusiasm rises to the highest pitch.

Then I cannot meet a country boy with an old delapidated musket without stopping to hear his story of how he "Crippled a rabbit, but he got in a hole; and killed two pa'tridges, but lost them both in the thick weeds an' briers"—the same old story that we told a few years ago, and that we do not improve on now with our scientific modern lie. And then I like to take the old gun, look it all over, put it to my shoulder and sight it, wondering if it kicks as viciously as some old fellows that I knew and swore by when a boy, while its owner beams with pride at my interest in his treasure, and tells me of the marvelous shots it has made.

If the man with the gun had passed on by, he would hardly have stirred me from my perfect ease of body and mind that warm day, but as he entered the gate and came right up to me, and proved to be a young man that I had hunted with on several occasions during former visits, I shook off my lethargy and proceeded to welcome him.

He explained that he had heard of my arrival, and had intended calling at once to arrange for a chicken hunt, the season being open and a few birds near by, but had been prevented until that afternoon, when he was told by a farmer friend, who had just driven to town, of a small flock of prairie chickens that he had seen light in a field of grass choked corn, not more than a half-mile from town, so was compelled to drop everything and go after them, and wanted my company. He said he knew I would have my gun, but perhaps no shells, and had provided enough for both, so there was nothing to do but get into my togs and come on. As little as I had thought of the possibility of going hunting ten minutes before my friend's arrival, I was now as full of eager enthusiasm as though I had been planning the trip for a month.

I was soon ready and we started at once, fearing that some one might happen to walk through the field before our arrival and drive the birds out.

He had come direct from his place of business, so we went by his house, which was on our way, to get his dogs. He had three as good common stock dogs as I ever shot over, though not one had even a rumor of a pedigree. The steadiest and best of the lot was a dropper bitch called Nellie, partaking most strongly of the setter ancestor, both in appearance and characteristics.

We reached the cornfield where the birds were said to have lighted, and as my friend's informant was thoroughly reliable, and we could see no signs of any one near who might have flushed them, we felt pretty certain of getting a shot. Sending the dogs over the fence, we seated ourselves on the top rail to watch for the first signs of striking scent.

The field had been planted in corn which had not been worked properly, and the grass and weeds had caught it and so choked it out that it was but little higher than the weeds. It nowhere in the field grew high enough to interfere in the least with shooting, which was rare good luck, as most of the shooting done at chickens at that season was in the high green corn, which made the results very uncertain. The field was on a gentle slope, and the high grass soon made it so difficult to see the dogs that we dropped down from the fence and followed them. I was on the upper side of the slope, while my friend was abreast of me some 30 or 40yds. down the hill. When we approached the dogs, we found them all three on scent and working beautifully. They had evidently found where the birds had been running about feeding, and were now trying to unravel the maze of tracks and get their direction. The dropper Nellie was up near me, a large red Irish setter, called Burt, about half-way between my companion and myself, and the other dog down in front of him. I had not shot chickens for two seasons, and had never shot them much, or where big bags were made. They were big game to me, and I was not a little excited as I saw the dogs working close and cautiously on a warm trail. Back and forth they swung, each dog trailing carefully, stopping every moment or two, to see if any other dog had come to a stand. With guns at ready we slowly followed in the rear, expecting every moment that the dogs would come to a stand, or that the birds would flush without lying close, as they sometimes did when they had been recently shot at or were pressed by the dogs.

My dog had gone down the slope a short distance on a trail, and I walked forward a little faster for a few steps to get abreast of my companion, who had drawn a little ahead of me, when I literally kicked out of the grass a full-grown, strong-flying chicken. He was by no means unexpected, but was none the less startling, as he burst out of the grass. The suspense of continued expectation had wrought me up until my nerves were anything but steady. Before the bird was much past the muzzle of my gun, I fired the first barrel wildly in the general direction of his flight. This amateur performance brought me to my senses, and I got down to business with the second barrel, stopping the chicken nicely. Not pausing for an instant to enjoy the pleasure of my first bird, and hoping to get ready for another shot at the covey, I crowded in fresh shells, and was ready just as another single chicken flushed about half-way between us, a few feet from the Irish setter Burt, who had—with the other dogs—dropped to my shot. Not entirely steady, I fired too quickly at this bird, which was by rights my companion's shot, and missed. He proceeded to "wipe my eye," as I deserved, killing the bird with his first shot.

At the crack of his gun another bird flushed near him, which gave me immediate revenge, as the performance on the bird just killed was exactly reversed, he missing and I killing. Crowding in shells, I was barely in time for another bird that shot out of the grass near me, feathering him with the right and throwing him safe and quiet with the left; while my companion made a pretty double right and left on a pair that flushed near him.

The next bird rose near me, and flattered me by flying straight at my friend, so low as to prevent my shooting without danger of raking him.

He let the bird pass him, turned on his heel and killed it decently and in order.

Then we both killed one that flushed between us, and was anybody's bird, the two shots sounding as one, and the bird drifting down in a cloud of feathers. Up to this time we had not moved out of our tracks since the first bird flushed, and there had been a bird in the air all the time, and a steady serving of the guns.

Now we both got loaded, there was a short pause, and then another bird, the last one left of the little covey, flushed at my friend's very boot leg. I dropped my gun over my shoulder to watch his graceful work on the easiest shot yet. Deliberately he drew on the steady straight-away shot, fired, and missed entirely; drawing carefully down with the close choked, hard-shooting left barrel, he again made a beautiful miss, and then stood looking in the most surprised manner after the vanishing bird, too much astonished at the lack of result on the easiest shot of the whole hot corner's shooting to reload his gun; but as the cover was shot out, he had nothing more to lose by not being loaded. Moving around for a few moments, and finding no more live birds, we put out the dogs with a general order to "seek dead," and they quickly piled up at our feet eight chickens, which made us a pretty bag. The covey had consisted of but nine birds, and only one had escaped. My companion was an experienced chicken hunter, but frankly confessed that he had never known, in all his experience, such a pretty bit of shooting or such a considerate lot of birds.

"They flushed just as we needed them," said he, "and

were all prompt to accept our invitation to stop, except that old chap that queered me at the last. How he did manage to slide through those two loads of shot that I sent exactly where he was, to the best of my eyesight, is more than I can tell."

That was rather a hard thing to explain, but as it was not my miss, I felt rather glad that we had not cleared up the entire covey in our five minutes' shooting, even though it was a small one. LEWIS HOPKINS.

A Queer Deer Find.

HUDSON, Columbia County, N. Y., Sept. 24.—*Editor Forest and Stream:* For years I have hunted this county, and when tramping over the hills have thought many times of when the last wild deer was shot. Since the State established a preserve over in the Catskills for deer, several have been seen swimming the river between here and Catskill, and two winters ago one was run across the river by hounds on the ice, and was seen after that in the town of Livingston, but I have never been able to find out what became of it; I think it was shot.

Last Thursday Mr. M. O'Day and John Kittle, who are farmers living about five miles northeast from here, were walking through a piece of woods on the highway, when they saw something jump across the road. They looked at each other in astonishment; it was not a horse, cow, calf, goat, dog; what was it? They walked carefully up and there it stood, a deer sure. At first they could not believe their own eyes; but O'Day ran to the house for a gun, while the other watched, and when he returned fired one shot, striking the deer in the side and breaking the right foreleg close up to the shoulder. They cut its throat and sat down to talk the matter over. Up to this time neither had thought of the legality of the killing; it was only to kill. "I say, John, do you know I think we are in it?" "In what?" "Violated the game law." "The deuce we have. What are we going to do about it?" After quietly thinking it over, John said: "We will put this in a wagon, cover it up with a blanket and drive to Stottville and see Fred Stott. He has one of those little books, 'Game Laws in Brief,' and he will tell us what to do." They drove over to the village, called on Fred and told him they thought they were in a scrape, for they had shot a deer. "Shot a deer! Well, I guess not," he said. Then he questioned them about the shooting, went out to the wagon and saw the deer and bought it of them. He went in the office, took down the "Game Laws in Brief" and told them it was all right, there was no law forbidding the shooting of deer in Columbia county. Now that they were not liable to arrest they were happy, and were mighty hunters, but they had sold the venison and they declare they will send for a copy of the game laws at once. Now their names can go on record as killing the last deer in Columbia county.

Here was a two-year-old doe five miles back from the river, and many miles away from the Catskill preserve. How did she get here? It appears hardly possible that she could travel through a thickly-settled country and swim the river without being seen. Or could she have come from Mr. Whitney's game park over near Lenox? She was in good condition, and the coat was fine. Some weeks ago I wrote you of the "Bass Pocket." This doe was shot within two miles of the same place; some of you readers may begin to think that in Columbia county wonders will never end.

Oct. 2.—Since writing you of the shooting of the doe in Stockport, I hear from a gentleman living near Linlithgo that he saw a buck swim across the river about the same time the doe was shot. I have seen the man myself to get particulars. H.

CHICAGO AND THE WEST.

The Saturday Night Train.

CHICAGO, Ill., Sept. 30.—I believe that I had occasion to mention some years ago an odd bit of sporting life that came under my notice at the City of New Orleans. I was taking the Saturday night train that runs south along the Mississippi River from that city, a train whose passengers make one of the oddest collections of sporting travelers apt to be found in America. Most of these men were Creoles or Frenchmen, and the like of their equipment it would be difficult to find anywhere else on earth. Their guns were muzzle-loaders, 6ft. in length, and they carried net game bags, such as we see in pictures made fifty years ago. In these game bags were stuffed loaves of bread and bottles of wine and such other supplies as seemed necessary. A noisier or a merrier crowd one never saw, or one with greater bonhommie. All these men were bound for a Sunday holiday out of doors. They dropped off here and there in the darkness, and I presume lay out in the open air until daybreak of the following day. By midnight the train was nearly deserted.

At the time I wrote of this unique New Orleans sporting train, it did not occur to me that I should ever see its light again. Yet right here in Chicago I have found its counterpart, if not in oddity, at least in foreign flavor. My work sometimes keeps me down town very late on Saturday night, and on last Saturday it was past midnight when I took the Illinois Central for home. There was a wait of half an hour or so at the depot, and I had ample time to see others of the belated company gathered at the depot. I presume there were two or three dozen men and boys waiting for the train, each of whom was prepared for a shooting trip, after a fashion of his own. Such a weird lot of guns I never saw in my life, unless it was on my New Orleans hunting train. The way in which these guns were carried made a study in itself. Some dragged the gun along by the muzzle, others carried it by the trigger guard, and yet again others let it project at right angles from some inconceivable position under the arm. It was easy to see that these were embryonic American citizens, just over from a country where they were not allowed to carry arms and exulting in their new-found rights. Such grotesque unfamiliarity with firearms one never would notice in an American-born, even a boy of tenderest years.

These folk were of all sorts and conditions, some short, some tall, some dark and some fair. I think they were mostly Poles and Bohemians. They wore for the most part dark clothes, and those little round, black hats which foreigners buy in some unknown market. There was but one pair of rubber boots among the lot of them, and I saw but two hunting coats. One man, evidently longer in this country, and looked up to as an oracle in sportsmanship by his admiring brethren, posed before the multitude in a new canvas coat. His friends came up to him, walked about him, looked at him, and besought him for a word of recognition, but he stood in the dignity of conscious greatness, calmly smoking a large, black pipe. He was proud, and no wonder he was proud, for quite beside the new coat, under his arm there was a brand new gun, with hammers, it is true, but none the less a breech-loader—the only one in the entire aggregation. I presume this gun would have cost $6 or $8 at the least calculation. This Beau Brummel of sport I pictured to myself as one of the successful nimrods among the mud hens and black birds of the lakes and marshes south of Chicago. I could imagine him speaking with authority, when it should please him to open his lips, upon the subjects of loads, or even the dread theme of nitro powder. I could see him coming home, and casting upon the floor of his abode, not one, but more than one, cottontail rabbit, from which he turned with a scorn of the mighty hunter who thinks nothing of coming in with game.

I examined closely the outfit of these Saturday night sportsmen, and found it to consist much after the fashion of that owned by my New Orleans Sunday hunters. A short, black bottle was circulating freely among the crowd, and the pockets of all bulged with bundles or bottles of miscellaneous sort. One man had a dazzling shell belt, which he ostentatiously displayed, with a dozen shells stuck into the loops. This was the hero with the breech-loader. I imagine the others had their ammunition in their pockets, here and there.

At last the train pulled in, and the car in which I sat rapidly filled up with its motly passengers. There was hardly a man who did not carry a gun. One huge, swarthy fellow came in bearing a 12lb. ten gauge in a canvas sack. This he slammed down carelessly against the iron steam pipes, serene in the consciousness that the gun could take care of itself. He also had a large and heavy jag, and immediately upon his leaning back began to snore in a voice of authority. Nearly everybody was more or less drunk, excepting myself, and they all seemed very sleepy. They poked and shoved each other around and quarreled noisily over the seats, and stumbled over the many baskets and bundles. I could not understand their language. I tried one big fellow in English, French and German, but the best I could get out of him was a reply which sounded like an active buzz saw into which one has pushed a large and coarse steel file. From a chance word here and there I inferred that these men were going down to the country along the marshes in northern Indiana. They would probably drop off at Blue Island and such points along the southern edge of the city, sleep under haystacks until morning, and then work off across country, shooting robins, blackbirds, larks or anything else to which their marksmanship would prove equal. Barring this license of habit in selecting their game, one would find it difficult to make any restrictions upon these people. They were about to break the Sabbath, it is true, but perhaps to their minds this meant no wrong. The main thing to them, and one could see the joy of it in their countenances, rough and stolid as they were, was the prospect of a day out of doors, a day spent in what to them meant freedom. They were, let us say, sportsmen as much as any of us, for I do not doubt that they enjoyed their outing as much as we do ours, perhaps more so, and that they spent on it proportionately as much money, in accordance with their revenues, as any of us do in our sporting trips. It needed no second glance to assure one that they were going to have a good time. Indeed, they had already had a good time. In front of me sat a large and aggressive German lady who had been imbibing rather too freely for her own welfare. This lady had evidently taken a grudge against another lady who sat opposite her, a slender damsel who, with another, was monopolizing the attentions of a very blonde, very drunk and very silly young man who had a gun against his knee, and who wore his bravest sporting regalia. "You are such a eenocent young gearl!" said the large lady, sarcastically, "you, Mary!" "Is dot your leedle lamb, Mary?" she added, pointing to the young man.

"Oh! you shut your mout', mamma," said Mary, with rising indignation.

"Don't you tare call me mamma, you!" said the large lady.

"Vell, what should I call you den—grandma?"

"You hush up now, or I slap your nose," said "grandma," much incensed by this thrust.

War seemed imminent, but was averted by the young man, who ceased his maudlin singing long enough to interpose between the two excited ladies. The peace commission was still in session when I got off the car.

This odd phase of Chicago life has never before come to my attention. The Illinois Central trains do not run into the most frequented localities in the marsh country south of the city, but are chiefly devoted to carrying business people between the city and points six or eight miles south. Where this midnight train got its midnight cargo of odd sporting folk is one of the mysteries of city life.

Western Forest Fires.

As may have been observed in the daily despatches of the week, there are raging in Colorado the most disastrous and widespread forest fires which have been seen in a series of years. The fires extend over a country of many hundreds of miles from edge to edge, and at this writing they are stated to be increasing rather than diminishing in violence. The magnificent game country in Routt county, Colo., has in part been burned over, and the effect on the big game shooting in that section may be disastrous. These extensive fires are certain to unsettle the habits of the game, which must find other ranges. While this may ruin the shooting in certain districts, it is apt to largely increase the game supply in others.

In northwestern Wisconsin, also, there are widespread forest fires this week, though not yet so disastrous in loss of life as those which burned up Hinckley and other Minnesota towns not long ago. These fires, coming as they do just before the deer shooting season, may create a disturbance in the game supply. Five counties are reported burned over. It is one of the sad things of yearly history in the pine country that these fires mysteriously spring up and get beyond control. It is said that the Colorado fires were caused by sheep ranchers, who were trying to free their pastures of a certain obnoxious weed; but this story is advanced by the cow men, and what a cow man says about a sheep man is sometimes to be taken with a grain of salt.

Deer.

There is every reason to think that the deer season in our Northern pine country will prove a good one. At Spencer, Fifield and Conover, in Wisconsin, deer have been seen all through the summer and fall in such numbers that a good season seems a certainty. Already some of the residents are taking out their deer hunting licenses.

It is still too early to learn where the great crowd of non-resident deer hunters will go this fall, but I think that Minnesota will get most of this traffic, as that States does not ask a license.

His Vacation.

I know in this city a business man, a partner in a wholesale grocery firm, who has been at work for twenty-three years. He may have slept a little in course of that time, but not very much. He is not up exactly with the lark each morning, because he would beat the lark in the first quarter of the track if there were any larks here to beat. He takes the first train down town every morning and people who get up early enough set their clocks by him. I think he has never cared to catch a fish or kill a bird, because he has been too busy to think of it. He is what is called a business success, which is to say, he has some property and more dyspepsia. This week this man, for some unknown reason, concluded to take a vacation, the first one in twenty-three years. The firm told him to go away and stay a month, if he wanted to, and he went. As luck would have it, he got in with a party of the right sort of men and went to the right sort of place. I understand that they went in at Tower, Minn., and thence took wagons for the interior, a trip very tempting even to an experienced vacationer. What a surprise there is waiting for that Chicago business man, on this, his one vacation out of his whole business life! Methinks if he does not fall dead of sheer happiness, he will come back a wiser man, and I doubt very much if there shall elapse another twenty-three years before he sees again the wide woods and the pleasant waters of Minnesota.

Ducks.

The Northern ducks are beginning to come down, and have appeared in some numbers on the Poygan, Koshkonong and Puckaway marshes. The season at Horicon Marsh has not been a good one, but may improve with the Northern flight. No ducks have yet appeared on the Kankakee marshes, and it is not thought there will be any shooting of consequence on that stream this fall.

A party of New York gentlemen, including Messrs. J. von Lengerke, Theodore Schultz, Thomas Klingman and Fred Schoverling, passed through Minneapolis this week on their way to Crary, N. D., where they expect to have fine goose shooting.

Messrs. Albert Nicholson, John Nicholson and Charles Reed have gone to Minnesota this week, and will hunt ducks near Conway, on the Great Northern. At Brown's Valley, Minn., there will, from all accounts, be good duck shooting within the next couple of weeks.

Partridge.

This will be a good season for ruffed grouse in upper Wisconsin. Near Conover, Twin Lakes and adjoining points these birds are reported as numerous. Near Houghton, Mich., there is good partridge country also, and I note that one bag of twenty-eight was made by a party one day this week.

Big Game.

The station of Opal, Wyo., is the disembarking point of large numbers of big game hunters, who go into the Gros Ventre country. This week a party of Foresty City, Mo., sportsmen left for that point, whence they go to Fontanelle, Wyo. These gentlemen are Messrs. F. W. Harmon, F. E. Bullock, L. P. Sentney, J. W. Hill and J. W. Morris. Yet another party starting for the mountains goes from Troy, Kan. There will be six in this party, headed by Dr. J. S. Dinsmore, and they will leave the railroad at Laramie, whence they go into northwest Colorado for their trip.

I have not heard lately from Mr. Wm. Wells, of Uinta county, Wyo., who wrote me a while ago and spoke of the sport to be had in his Gros Ventre country. Mr. Wells has a good pack of dogs, and he can get a lion about whenever he wants it, to say nothing of elk and other game. I wanted very much to go out and have a look at these dogs this fall, but fear it is one of the many impossibilities of life.

Chickens in Lower Illinois.

Dr. J. M. Nixon, of Columbia, Ill., offers some information about the state of affairs in regard to quail in the lower part of Illinois, he having seen the FOREST AND STREAM statements in regard to the workings of the St. Louis market. I hope this new light on the bad state of affairs in the lower part of Illinois may lead to some practical suggestions for the stopping of this leak in Illinois game. Dr. Nixon remarks:

"Not having Warden Loveday's address, and noting your article in this issue of FOREST AND STREAM, I take the liberty of writing you, hoping the state of affairs in this section will thereby come to the notice of the warden. We have no market hunters, nor are our

residents illegal shooters, but being situated fourteen miles south of East St. Louis, and directly opposite a ferry landing, as soon as the quail season opens (and before) hundreds of St. Louis sportsmen flock to the Illinois side, and carry to St. Louis hundreds of quail daily, and as the quail at the opening of the season are so small as to be almost helpless, they "pot" them in such numbers as to amount to a slaughter. The M. & O. Railroad carries train loads of these hunters out every Saturday and Sunday, and back Sunday night loaded with everything falling in range of their guns. If the warden at East St. Louis will walk through a M. & O. train at East St. Louis before crossing the bridge, any Sunday night during the season, he will see the reason one of the best shooting sections in southern Illinois is becoming rapidly depopulated.

"A great good could be done by changing the opening of the quail season to Nov. 1."

Personal.

Readers of FOREST AND STREAM may recall that some time ago I spoke of a successful mountain sheep hunt made by my former hunting partner, Mr. Calvin S. McChesney, of Troy, N. Y., who was with me in the Blackfoot country. I promised the readers of the paper a good sheep story by Mr. McChesney. Later I learned that Mr. McChesney had gone with his regiment to the war. Then he seemed to have dropped into a large, dark vacancy, and I did not know what had become of him. To-day I am very much pleased to have a letter from Lieutenant McChesney, and to learn that though he has been sick, he is back home at Troy, and is now better, and will some day soon, I hope, be able to fulfill his promise about the sheep story. He writes in a very wabbly, shaky hand, and this is what he says: (A soldier's letter belongs to his country.)

"From time to time I have seen my name in FOREST AND STREAM the past summer, and have intended writing you, but it was hard work to write from camp, and I never got at it. Well, the regiment came back North and went into camp a few miles from here, and the next day, four weeks ago to-day, to be accurate, they put me to bed with typhoid fever, and I am in bed yet. Have not been very sick and am now beginning to eat and hope to be out soon. Will write you when I can."

You can't kill McChesney, he's too tough, as I know from following him in the mountains.

Sergt. Robert Ansley, of the 161st Regiment of Indiana, is another returned soldier boy who came into the FOREST AND STREAM office this week. He is home on a furlough from Jacksonville, Fla., is yellow with malarial fever, and weighs just 47lbs. less than he did when I saw him last. Sergt. Ansley is one of my fishing companions at Westville, Ind., and as I look at his loose clothes now, it seems very likely that this war-business was no joke.

Mr. H. R. Wills, of Alton, Ill., one of the best sportsmen of the lower part of the State, made this office a pleasant call this week, and we talked over shooting matters in general. Mr. Wills sells gold bricks and type metal as a profession, and his success in these matters lately induced a trade paper to print a descriptive article of him, accompanied with a map. In one respect, however, I think the description erred. It states, "Mr. Wills has traveled widely in America and Europe, leaving pleasant impressions and big orders behind him." I am persuaded that Mr. Wills takes very many large orders with him, and does not leave them behind.

The Daily Reporter.

My friend, the daily reporter, is very active in these days, and every once in a while prints a long story about field sports. Here is what the daily reporter says about jack rabbit hunting this week in a Chicago daily. I give it because I think it will be news:

The jack rabbit hunt has its lovers among women. It requires unusual skill in handling a gun, and a remarkably sure eye, and even long practice will kill only three out of five even when the dogs are hot on the track and uncovering the game rapidly. Most rabbit hunts are conducted with a pack of dogs that are permitted to run down the cunning quarry, to bring back the trophies of the chase in their teeth to the group of panting riders galloping in at the finish. But the true hunter wants to bring down the leaping rabbit with a swift, certain death shot that is, after all, the real dignified form of the hunt.

Minnesota Chickens.

Last fall when I was out in Minnesota I had a pleasant little shoot with Deputy Warden Jones, near Campbell, Minn., as I believe I mentioned at the time. There is a good strip of chicken country in there which Mr. Jones not only tries to protect, but does protect. This fall Attorney-General Edgerton, Mr. Roberts and Mr. Jones, with another gentleman, had a little shoot over this same country, and they had great sport, bagging over 100 birds the first four days of the season. At a second trip, it is stated, Mr. Fullerton and Mr. W. S. Timberlake, president of the State Commission, got forty-eight birds in the course of their shooting. It is gratifying to state that there were really more prairie chickens in Minnesota this year than for several years previous, and both they and ruffed grouse seem to be increasing, thanks to the law prohibiting the sale of ruffed grouse. The deer law is also in very satisfactory shape in Minnesota. A man cannot ship a deer by express in that State, and many believe that this feature of the law will knock out the marketing of venison eventually.

Squirrel Year.

This is a squirrel year for central Illinois, more especially in the neighborhood of Bloomington squirrel shooting is reported as fine.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Southern Sportsmen's Association.

THE Louisiana Sportsmen's Game and Fish Protective Association is discussing plans looking toward organization permanently, the incorporation of the Association, the appointment of game wardens, and the amalgamation of the game protective interests throughout the State. It is proposed to call the Association legally the Southern Sportsmen's Association for the Protection of Fish and Game, but colloquially it will be known as the S. S. A. It is the intention of the president to have the Association organized and working effectively this season. There are now about 175 members, and thirty-five gentlemen submitted their applications last night to be passed upon at the meeting on Oct. 4. Those sportsmen who are in accord with this movement are heartily invited to help push the good cause along.

New Hampshire Fish and Game.

HUDSON CENTER, N. H., Sept. 29.—*Editor Forest and Stream:* The open season on trout and salmon (ending Sept. 15, 1898) has been one of the most profitable ones to the angler we have had in New Hampshire for years. Dr. George Fowler, of Bristol, tells me the fishing at Newfound Lake, Bristol, has been excellent from the opening to the close of the season. It is only within the last two or three years that deep-water trolling has been tried with any degree of success there. The Doctor going three times in August caught twelve fish —seven lake trout and five salmon, a total weight of 107lbs. Many others have had good luck.

At Lake Winnepesaukee excellent lake trout fishing was had for some time after the ice went out. Fine strings of large bass were caught during the open season. The landlocked salmon are also commencing to show up in this lake. There is no question in the mind of your correspondent that this body of water in the near future will be the best landlocked salmon lake of New Hampshire, if not of New England. The Belknap County Fish and Game League, many of whose members are located near this magnificent body of water, are enthusiastic in the protection of fish and game, and are doing all in their power to assist the commission to stock this lake and protect the fish in the close season.

At Sunapee Lake the landlocked salmon fishing has been excellent. Isaac Rawson—one of Sunapee's best guides—tells me there has been caught from his boat thirty odd salmon and three Loch Leven trout. The brook trout and aureolus he kept no record of. The black bass fishing has been more than good here, two of my acquaintances catching 65lbs. in one day. In fact good fishing has been had in nearly all the lakes in our State.

The stream brook trout fishing, especially in the southern part of the State, where we have had plenty of rain, has not been so good for years.

The open season for deer commenced Sept. 15 in Carroll, Coos and a part of Grafton county. The rest of the State is closed until 1901. We have heard of quite a number of deer being killed up to date, but the foliage is so thick that it will be impossible to hunt with any degree of success until the frost comes. Deer are increasing wonderfully all over the State.

It is impossible to tell at the present time much about the ruffed grouse shooting. I have heard of but few being killed. All hunters that I have talked with prophecy a good woodcock season.

I agree with my friend Stark, of Dunbarton (who is one of the best all-round sportsmen New Hampshire ever produced), that the State of New Hampshire should pass a law endorsing the FOREST AND STREAM Plank and stop the sale of game at all seasons of the year. This would surely put a check upon the market hunter and snarer. I think the close season should commence Dec. 15, instead of Jan. 1. For thousands of grouse are killed all over the State while budding in December.

While talking with one of the trustees of the Corbin Park the other day, I learned they are contemplating in the near future—this fall, I think—forming a club with a limited number of members—say from fifty to seventy-five—giving each the privilege of killing two elk, two deer, a wild boar, or whatever they may decide upon. This method, as I understand, is taken to get rid of the increase of game in the park, which is wonderful. It is estimated there are in the park at the present time 2,000 elk, 2,000 deer, 100 moose, and the largest known herd of buffalo in existence. The red fox and Northern hare are very plentiful. The park also contains hundreds of acres of the best woodcock and ruffed grouse covers New England can produce. Some of the best brook trout streams and ponds in this section are inside the park limit. With its beautiful mountains, forests and streams, it is an ideal hunting ground. The Corbin family have done much for New Hampshire. This last season they have given to the State, to be liberated, a number of pairs of deer.

N. WENTWORTH.

Vermont Game Notes.

MILTON, Vt., Sept. 26.—Game in this section of the State is a scarcity. As has been the case during the last few years, partridges are few and far between. Squirrels are far from numerous, and ducks are thus far coming in lesser numbers than for years, although the late flights may perhaps be more encouraging. Plover and grass birds are fairly plenty, and are furnishing good shooting at the marshes. The outlook for ducks is most encouraging, many having been seen, particularly in the southern and eastern portion of the State. If the Vermont shooters desire to have partridge shooting in years to come, why not make a sacrifice and demand a law that will protect them the year round for say five years? Of the success of such a measure there can be no doubt. A case to point here in this State is that of the English pheasant. Introduced some years ago and protected by legislation, they have rapidly increased until now they cover a territory of large extent, and promise at no distant day to be Vermont's leading game bird. Owing to the fact of their building their nests on the ground, the grouse has great difficulty in rearing her family. Foxes, coons, skunks and mink I have found prey upon the eggs and even at times capture the mother bird. Crows also have a hand in its persecution, and make short work of the eggs. Nesting as they do, it is indeed a wonder that so many partridges reach maturity. If the sportsmen of Vermont would take the matter in hand and see to it that such a statute was made that would save these noble birds from total extermination, the result in a few years would thrice repay them for their sacrifice.

KENEWAH.

Quail in the Santiago Campaign.

FORT MYER, Va., Sept. 26.—*Editor Forest and Stream:* It may interest some of your readers to know that on the Santiago campaign, just finished, we heard the calls of hundreds of Bob Whites everywhere, from Daiquiri to Santiago, and the answering notes of the female. The quail appeared quite tame, but there was always the impenetrable jungle in which to fly when flushed—and, by the way, there was very little land that was not jungle. There was absolutely no cultivated land whatever, if I except a few small gardens on the outskirts of Santiago. It is questionable whether, under the circumstances, a hunter would have much sport in such a country.

We also ran across what appeared to be our ordinary guinea fowl, which had become wild. It appeared in the most unexpected parts of the jungle, and when flushed would sail away through the brush with a flapping of wings very much like that of our Western sage chicken.

With the depleted condition of our larder, it was a constant temptation to our soldiers to beat the brush and knock over a few of these birds with their rifles—a proceeding which met with condign punishment. There was enough shooting in the brush by the murderous Spanish sharpshooters, without assistance from our own rifles; and "guerrilla stalking" became much more necessary than wildfowl shooting.

CHARLES D. RHODES,
U. S. Army.

New York League.

SENECA FALLS, N. Y., Sept. 24.—To the Officers, Trustees and Directors of the New York State Fish, Game and Forest League: You are hereby notified that there will be a meeting of the said officers, directors and trustees of the said Association at 12 o'clock M. on Oct. 26, 1898, at the Yates Hotel, at the city of Syracuse, N. Y., which you are expected and requested to attend.

All clubs, associations and organizations within the State of New York organized for the purpose of protection of fish, game and forests, should become members of this League (successor to the New York State Association for Protection of Fish and Game), in order to secure united effort in attainment of these objects. All applications for membership should be in the hands of the secretary (who will furnish blanks and information upon request) on this date.

This meeting is called for the consideration of introductory and preliminary work of the annual meeting of the League, to be held at the place aforesaid, on the eighth day of December, 1898, for the consideration of applications for membership and for such other business as may properly come before it. By order of

W. S. GAVITT, President.

ERNEST G. GOULD, Secretary.

Shooting Casualties.

ELMIRA, N. Y., Sept. 26.—*Editor Forest and Stream:* I see that another of those fearful accidents, where the shooters lost their heads and killed a boy in place of a deer, has happened in the Adirondacks. Is does seem as though people would never learn to be sure that they are shooting at game, not human beings, before they pull the trigger. And the guides—what "guides" are they who would allow such a thing?

I used to be a frequent visitor to the Adirondack Mountains, but have given up my visits entirely, especially since the law has forced people to still hunt. While I fully agree with the law as being a good thing, I am afraid of getting shot by some careless hunter who shoots at everything that moves; and as there are about five gunners to every deer, I have not been in the big woods after deer for years. In hunting birds and rabbits one uses dogs and makes lots of noise, and even at that it will be soon so one will have to hunt with a brass band. I also limit my party to two, one being my son, and I keep him to the front under my eyes all the time, and try hard to keep my gun out of the danger line.

E. H. K.

A Florida Game Preserve.

A CORRESPONDENT of the Jacksonville Times-Union and Citizen writes from Myers: Irvin S. Singletary has just returned from a business trip down the coast as far as Marco, in company with J. M. Brady, of Bartow. Their object was the selection of a site for a game preserve of gigantic proportions for New York capitalists and sportsmen. The probabilities are good, and there is hardly any doubt of the matter developing into a certainty in the near future. Of course, the thing will be of untold benefit to this county, and will be the means of leaving many thousands of dollars among the citizens, besides giving permanent employment to a goodly number. If there is any place in the world suitable for such an enterprise, this county is the place. No doubt other gentlemen will follow suit.

New Publications.

"The Book of the Hills."—New Poems and Ballads. By O. C. Auringer. Subscription address, Troy: Henry Stowell & Son.

"Nature Study in Elementary Schools."—A Manual for Teachers. By Mrs. Lucy Langdon Williams Wilson, Ph.D. New York: Macmillan Co. Price 90 cents.

"On Seats and Saddles, Bits and Bitting, and the Prevention and Cure of Restiveness in Horses."—By Francis Dyer. New York: Lovell, Coryell & Co. Price $1.50.

"Handbook of Nature Study for Teachers and Pupils in Elementary Schools." By D. Lange. New York: Macmillan Co. Price $1.

"Klondike."—A Manual for Goldseekers. By Charles A. Bramble, D.L.S. New York: R. F. Fenno & Co.

"Over the Alps on a Bicycle." By Elizabeth Robins Pennell. Illustrated by Joseph Pennell. New York: The Century Co. Price 50 cents.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in Forest and Stream.

Where to go.

One important, useful and considerable part of the Forest and Stream's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

In the Louisiana Lowlands.—III.

BY FRED MATHER.

[*Continued from last week.*]

It was well along in the morning when Col. B. arrived at Alexandria in an old-fashioned carryall, driven by a darky boy. He greeted me cordially, and the boy took my satchel and gun in front with him, and off we started. The road was in fair condition, for there had been no recent rains, but the jolting of the antiquated carryall made conversation difficult, and we journeyed in silence past fields of corn and sugar-cane, interspersed with stretches of forest land where enormous trees almost shut out the daylight; but from the winding of the road an occasional glimpse of a stream was seen, and we were going up a small tributary of Red River, which joined it at Alexandria. Soon we came to a large white house with great pillars in front, in the Colonial style, and stopped. A brace of fine setters and several cur dogs welcomed the Colonel, and a superannuated hound limped from the stable to take part in the greeting. With a rub on the head and a kind word to them all, we entered the house, but not before the younger dogs had sniffed at the stranger's legs in order that they should know him again.

A Hospitable Southern Home.

The boy had surrendered the team to two other boys, and had brought my luggage into the great hall, and the Colonel directed him to show me to the guests' room in the northwest corner, "for," he said, "the sun will not trouble you there if you wish to sleep some morning." I followed the boy up stairs, wondering why I had been the recipient of all this courtesy from a stranger, and especially from one who, as Sam had told me, had lost two sons in a war which had also wrecked him financially, and from the troubles which followed it he had only just recovered his ancestral estate. Pondering on these things, I gave a few finishing touches to my toilet and joined my host in the large drawing room.

As he shook my hand and again welcomed me, I had a chance to see him fairly for the first time. That night on the steamer, when he first repulsed my advances toward conversation and then invited me to his room after I had dived overboard to save a little girl, there was little chance to note his personality, or if there was a chance it was neglected; as we neglect to size up men whom we never expect to meet again. Here was a man of sixty-five, of large but fine mould, erect, with white hair worn long, and a white beard not neglected by the shears. His kindly face was careworn and seamed with lines of suffering, but his dark eye was undimmed and pleasant to meet.

"Pardon me," said the Colonel, "I have your card containing your name and address, but you intimated that you had some official position which I have forgotten, will you—?"

"Certainly; I am collecting fishes and reptiles for the U. S. Fish Commission, and fortunately I had for guide one of your old-time servants, Sam, who spent a week with me on Catahoula Lake, and the old man took good care of me."

The dinner bell rang. In the long dining room a curtain cut off a large portion, for the family was smaller than in former days. The hostess was his niece, Mrs. H., evidently a widow, and her two boys, George, sixteen, and Jack, fourteen, comprised the family. I felt out of place. Here was a widower who had lost his two sons, and a widow with two fatherless boys who might have been made fatherless in a fratricidal war in which I was on the other side. I felt out of place until the soup came on, when Mrs. H. began discoursing on turtles and hoped that I would enjoy one of my own catch; for old Sam had sent them the largest of the soft-shelled turtles that we had caught. This, and her exquisite tact in leading the conversation in the direction of Sam and our trip on the lake, banished all embarrassment, and as the dinner proceeded the conversation became general, and after the lady had retired the boys wanted to know if there was to be a shooting trip on the morrow, and if they would be included.

In the Colonel's Room.

The ride over the plantation and supper passed into history. An hour or two in the drawing room was spent with the family, and when they retired for the night the Colonel asked me to his room. A glance showed the tastes and character of my host; here was a well-filled library, in which books on shooting, fishing and natural history were prominent. There was a gun rack containing fowling pieces and rifles of various patterns, and surmounted with a splendid pair of antlers, while rugs of deer, bear and coon skins lay about the floor. There was a grateful odor of lemon and other things, a silver kettle swung over an alcohol lamp, and all those little things which in the aggregate proclaim the gentleman sportsman, who is always a man of taste, were in evidence. His cigars accorded with the character.

I have said that there were "fowling pieces" in the rack, and I love to repeat that title, which is nearly, if not quite, obsolete. There is poetry in the name, and I love it as much as I dislike that abominable name of shotgun, which has displaced it. Confound the shotgun! I will never use one, but when I go forth for woodcock I will take down my fowling piece. So much for poetry, harmony, euphony and all other things that lend a charm to field sports. Call my fowling piece a shotgun? As well call my rifle a bullet gun, my dainty trout rod a pole, or say that the silver-tongued hound on yonder hill is barking when he is baying on track of fox or deer! There is much in a name, Juliet to the contrary notwithstanding, for a delicate ear is offended to hear the arbutus termed a May pink, a peony dubbed a piney, or a pond-lily called a spatterdock. Such names are degrading, and with apologies to Juliet I will assert that "a rose by any other name" might smell as sweet, but call it skunk cabbage and it loses something which is not tangible, but has lost much with its good name. A shotgun seems to be a coarse tool for a market-shooter, and may be made of gas pipe, but when we speak of a fowling piece the elderly sportsman pricks up his ears and recalls the famous handmade marvels of bygone years. But I think I have somehow slipped my trolley.

After we had smoked and the Colonel had put hot water on a lemon he said: "That bear story you told me on the steamer, after some men had killed a bear that was swimming in the river, was very funny, and I want to hear it again. I had asked you to my room on the steamer after you had changed your wet clothing, for I admired the promptitude in which you went to the rescue of the girl."

The story was one in Irish dialect, too old to repeat now, but the Colonel enjoyed it more than at the first telling, and finding that he had a keen sense of humor and only needed some one to rouse him from brooding over the past I told him other stories while he brewed the lemon, and when the time to retire came he asked: "Will you kill a deer to-morrow, chase a bear or shoot woodcock?"

"Of the three propositions the last seems most attractive, and if you agree we will try the woodcock."

"Very good, but the season is early and the birds may not be plenty, yet we will try for them. Good night."

On Woodcock Ground.

Early October in the far South differs from the "brown October days" of the North in several ways: The leaves of the deciduous trees have not begun to take on autumn tints, and will not do so for a full month. At the North there is a popular belief that frost has a hand in tingeing the maples and other trees with faint yellows, which deepen and change to bright reds, and then in a blaze of glory die into a faded brown, and expire, to be trodden under foot. The frost has nothing whatever to do with this leaf-painting, for it goes on in the South, where frost, if it comes at all, comes after the leaves have ripened and dropped. Leaves ripen and assume the colors of ripeness just as our fruits do before falling to earth, and as a halo of white hair encircles the head of man when he nears the three-score-and-ten mark and is also nearing the day when he shall also drop—but the dogs were awaiting our movements and were impatient.

I had been out on the porch, "armed and equipped as the law directs," and the setters had discovered me. They reasoned that I was a friend of their master; I had a gun and was waiting for him to join me, therefore there would be a hunt. They pranced around, licked my hands and showed their anxiety and impatience in many ways, and I talked to them as well as I could without knowing their names. But when the Colonel came out in his hunting suit and with his fowling piece they assaulted him in force. The boy drove up the carryall, and off we went just as the sun rose.

It is usual that every respectable white man who is nearing middle age in the South is given a title, either judiciary or military. I at first attributed the one the Colonel gave me to that fact, when he said: "Major, we are going to work some ground that is sometimes good woodcock ground as early as this, and sometimes it is several weeks later; I will not promise you a single shot at your favorite bird, because the weather at the North regulates its migration, but we may pick up a few snipe,* and they are not in the least inferior to the woodcock, except that they are a trifle smaller. What do you think?"

"I think that they are the only bird that should be called 'snipe,' but what I think will not affect the men who shoot sandpeeps and call them snipe. That looks like a good bit of woodcock ground in the early season."

My guess was right, and when we stopped and the boy hitched the horses I was surprised to see him gather bunches of either mint, spearmint, peppermint or some plant of that family, and rub the horses from ears to hoofs. Never before nor since have I seen a horse so protected from flies, even when tied beside a bed of mint. Such thoughtful care I could not credit to an ignorant darky boy; it must have been taught him by a master who truly loved his dumb servants, and little by little I was becoming aware that my new friend was an exceptionally thoughtful and kind-hearted man. The perfuming of the horses with an odor hateful to insects was proof enough of that.

All gunners know that as a migrator the woodcock is the most uncertain of all quantities. Where you made a good bag yesterday, there is not one to-day. Therefore our setters, Bob and Dan, started into the bog with more confidence than we had. The Colonel was fully 20yds. to my left, and shot three times before Dan made a point in my front, and I started a multi-colored flash which dodged about in a puzzling way for a second or two in front of my gun, and somehow it dropped dead as the trigger was pulled without anything like an aim or even a glance along the barrel, and Dan brought me the most beautiful bird that exists. I say this advisedly: I have bred golden pheasants and other gaudy birds, wood ducks and pea fowls, and while willing to admit that the form of the woodcock is not a model of symmetry, and that its head, with its great eyes in the back of it, is not beautiful, yet where in all bird life are such dark reds, browns and faint yellows to be found combined as they are in the plumage of a woodcock?

Early as the season was we mustered six brace between us when we turned the horses' heads home.

Cooking Woodcock.

There are men who love to shoot, but do not care how their game is served at table; they would permit a canvasback duck to be stuffed with the same "dressing" which is supposed to be proper to inject into a barnyard fowl. And there are men who never shoot, but who know how game should be cooked to bring out its distinctive flavor. Beefsteak is good and ham is good, but no man wants his steak fried in ham fat, nor does he wish his chops to have a flavor of fish. The cooking of game has never been written; there is no work on the subject. The consequence is that much game is ruined in cooking; the housewife does her best, but she fails in bringing out the distinctive flavors of the different kinds of game. A white-meated ruffed grouse, or a quail, should be as well done as a domestic chicken, but any dark-meated bird, prairie chicken, woodcock, wild duck, etc., should be served as rare as a beefsteak in order to get the distinctive flavor; else one might as well turn to the barnyard fowl and be content with that.

Next morning my host asked: "How do you prefer to have the birds served?"

"Since you have asked for my preference, I will say that in the home of a sportsman I prefer to have woodcock served in the manner in which his trained servants have been accustomed to prepare them for him."

"It is kind to say that, but for my own information I will ask how the birds are served in the North? I have never been north of St. Louis, and have never eaten woodcock in the cafés there, but I have eaten them in New Orleans, but there is only one place where they serve them to please me. I am asking for information, please do not put me off with a compliment."

"Then," I replied, "I will say that in the North, and I don't doubt but the same can be said of the South and West, there are more good woodcock spoiled in cooking than are properly prepared, in the proportion of ten to one. The worst of all places to order woodcock in New York city are the celebrated restaurants where a French chef presides. He is perfection on all foods except game, and a 'salmi of woodcock à la chasseur' is his masterpiece in that line."

"I remember to have seen the name in New Orleans cafés, but have no idea what it is like, for I tired of experimenting in that direction," said the Colonel. "You seem to speak from experience; what is the dish like?"

"Like a desecration. You know, Colonel, that the Deity is said to send us food, while an entirely different person sends the cooks, and the man who invented a 'salmi of woodcock' was certainly sent from inferno and should be ordered to return to his station at once. It is a stew of woodcock with onions or garlic, mushrooms and other things, in which the bird is smothered so that it might as well be a salmi of sparrows or bats, as far as one can discover. The mess may be good to some people, but to a man who has the sense of taste developed to the point that he wants his woodcock to differ from a kidney stew, it is disappointing. To a man who thinks a clam chowder the perfection of the culinary art, this 'woodcock chowder' would be a grand dish."

"You are right," said the Colonel, "but I have not yet learned how you prefer to have your woodcock served. You have told how they should not be prepared for the table, but have dodged the main question, if you will permit me to put it in that shape."

Cornered in this way, there was no alternative; at the risk of running counter to the predilections of my host, I said: "There are epicures who hold that a woodcock should not be drawn, but cooked with the 'trail' in; they carry this idea into the cooking of terrapin and cite the fact that we eat oysters, clams and whitebait without opening their stomachs, and ask why we should be averse to eating other animal life in the same way, especially such forms as those named, where they claim there is nothing objectionable. There can be no answer except: *De gustibus non est disputandum*, which is merely a latinization of the old Irish saying of: 'It's no use av disputin' taste, as the ould wooman said when she kissed her cow.' I am free to say that I prefer that the birds be drawn, although I have eaten them undrawn, and I do not insist on the drawing."

"Will you permit me to call attention to the fact that you have been very diplomatic and have parried my questions? You have told of the methods which you do not like, and it is evident that you have positive ideas on serving woodcock, but hesitate to give them words."

"At home I have the birds drawn, saving the hearts and livers, truss up the feet, using the bill as a skewer after the skin and eyes are removed from the head; a thin slice of salt pork is laid over the breast, the hearts and livers are chopped, seasoned and buttered. Then a thick slice of stale bread is hollowed out to receive the bird. The bread is buttered and browned in the oven; the birds are roasted about eight minutes. While they are roasting fry the bread, drain it and cover with the hearts and livers, then place the birds in the cavities and serve hot."

"Our own recipe exactly," said the Colonel, "except that you forgot to mention the Burgundy, served at the temperature of the room."

"It was not forgotten, but was left for you to add. I have spitted them on a twig and broiled them over a camp-fire," I added, "but it is best in that case to split them down the back, broil not more than five minutes, butter liberally, and eat with closed eyes."

"Excellent!" the Colonel exclaimed, "our old cook will, I think, serve them to your taste, and the Burgundy has been on the sideboard for twenty-four hours. Just step into my room a minute before we prepare for dinner."

The Colonel's Bear Story.

Such a dinner stands prominent among hundreds of good dinners; soft-shelled turtle soup, boiled bass, fillet of beef done to the Queen's taste, fried hominy and then

* There is no more misused name than that of snipe. All the little sandpeeps, teeters, sandpipers and many shore birds are dubbed snipe. Of course the whole family *Scolopacidæ* are included in the term "snipe," and the woodcock is in the family; but as the Mahomedan says: "There is but one God and Mahomed is His prophet," so the sportsman says, "There is but one snipe and that is Wilson's, the snipe par excellence.

the king of all game birds for the table, the royal woodcock; all the vegetables of the season and those other accompaniments which a refined taste suggests. Blessed be he who gave us that excellent motto, now used by the Hoboken Turtle Club, of New York City: "As we journey through life let us live by the way." It's a motto well worthy of thought, for it's about all a fellow gets in this vale of tears, bustle, rheumatism, turtle, woodcock and Burgundy; and the latter brings on gout and there you are.

In the Colonel's room the work of the setters was reviewed in detail. "Did you notice how grandly young Bob backed old Dan's point before you killed your second bird? He'll make a splendid dog in another year if he's hunted enough; there's no better stock in the South, sir; no better stock anywhere. You have had a wider experience than I, Major, but I challenge you to produce a finer brace of setters than Bob and Dan."

"I can't do it, but I challenge you to show reason for giving me a military title."

"Challenge accepted. I got it from a batch of letters awaiting you at Alexandria, and which my boy brought me for you." As he said this a shade passed over his face, and he toyed with his cigar awhile. What the old darky Sam had told me about one son being killed before Atlanta and another getting his death wound at Port Hudson came up to me, and again I felt out of place, but smoked on until after a while the Colonel added: "Were you with Sherman or Banks?"

I saw the drift of his question: Was I with either of the armies that made him almost childless? His tone expressed more than words can, and I hastily answered: "Oh, no, my service was entirely in Virginia, with the Army of the Potomac."

The old man's face changed, but he made no further remark about the war, and surely I would not.

"When we drove up to the house on Monday," said the Colonel, "you may have noticed a poor old blind hound that came out to greet me; old, lame and blind!"

"Yes, I saw the poor old dog and patted his head, knowing that he had grown old in your service, as many of your servants have, but, like them, he is not to be turned adrift because he is no longer useful."

"There is more than that," said he, "I once had two sons, as brave boys as ever trod this earth. Like their father and his ancestors, they were fond of the chase, and as they grew older they longed to hunt more dangerous game than deer and turkeys, and they collected a lot of mongrel dogs for bear hunting, and descendants of these curs were among our welcomers. You noticed them?"

"Surely, couldn't help it, for they were all eager for my acquaintance as one of your friends, and I mentally put them down as bear dogs."

"Yes, that's what they are, they will bark around and harass a bear until the hunter comes up, when braver dogs would be killed."

The old man again toyed with his cigar, and there was silence. He looked up as one from a dream and said: "You see that bearskin rug on the floor, the one with half the skull in, I mean?"

"Certainly; it is a prominent object because of having only half the skull in. I noticed it the first time I came in the room."

"About a dozen years ago my two brave boys organized a bear hunt. Old Bugle, the poor old blind hound, was then two or three years old and would not be left behind. They started a bear in a cane field, and the dogs ran him into the tall timber and brought him to bay. The cur dogs were nipping at his heels when the boys came up, and emptied their rifles into the bear—you know that we had only muzzle-loaders then—but the dogs were encouraged by the presence of the boys, even if the boys knew better than to urge the dogs on. A cur came too near the bear and was being squeezed to death when my youngest boy, Terrill, rushed in to club the bear with his rifle. He was knocked down and a great strip torn across his breast while his brother was loading his rifle. While my boy, Terrill, lay under the bear, only saved from death by his brother and his canine friends, old Bugle dashed in to rescue his master, and received a stroke which blinded him for life. The bear was so assailed on all sides that he could not attend to and finish his human prey, which was under him, and my eldest boy, George, put a bullet in his brain which took off half of the skull. The skin of that bear lies before you, and you have seen the poor old sightless hound who would, if asked, track a bear as eagerly as he did a dozen years ago, but the boys think it best to leave the old dog home when a bear is to be started. What do you say to having a bear hunt some day?"

"Nothing would please me better, for I have never hunted a bear, although I have met several under circumstances when either I was not prepared to kill one or it was in summer, when neither hide nor meat was good, and I passed them by."

The clock struck midnight; it was raining hard, and the wind beat it fiercely on the window; the Colonel wanted to hear that bear story in dialect again, and laughed as heartily at it as if he was listening to it for the first time. The kettle was steaming away merrily, and when we parted, an hour later, the famed governors of the Carolinas, had they been there, would have made no remark.

The Colonel, as he bade me good night, said: "I'm afraid that this storm may postpone our bear hunt for several days."

[TO BE CONTINUED.]

A naval officer well known to FOREST AND STREAM readers writes: "I have a great yearning once in a while to send you some 'copy,' but there are so many interruptions that connected work is nearly impossible. I see that some can shoot and fish, if I cannot, and the stories are as good as ever in the FOREST AND STREAM. I am delighted with the work of Fred Mather. It is grand. When one knows so much as he, and can tell it so well, it is a manifest duty to write."

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A Roberval Experience.

CHILLICOTHE, Ohio, Sept. 20.—*Editor Forest and Stream:* I hope you will publish the enclosed letter, which I have transcribed literally from the original letter I wrote to a friend, who is a brother lawyer and sportsman, of Columbus, Ohio, on the date named. When I got home the other day, we agreed that the letter might make an interesting one for your paper, and I think that it ought to be published for the benefit of sportsmen generally. It is a true and literal account of my own experience, and may be of value to brother sportsmen, whose interests your paper doubtless intends to foster.

LAKE KENOGAMI, Chicoutimi, Quebec, Aug. 18.—My dear Charles: And now I will keep my promise to tell you of my trip to Lake St. John and the Roberval, and my first experience with the famed ouananiche. Before I came I obtained of the Roberval management their printed matter giving full information about the fishing; how that the lake and all the rivers running into it were free to the guests of the Roberval. Imagine then my surprise and disgust over the denouement. I had heard that the best fishing by far was in the River Metabetchouan; that the largest salmon were there, and, of course, the mere chance of killing a big one is more to a genuine devotee of the rod than the assurance of dozens of small fish.

"But, to our tale," as our Bobby Burns introduces Tam's wondrous "ride." We came up on Monday from Quebec, reaching the Roberval Hotel about five in the evening. The hotel is situated on the southwestern shore of Lake St. John, about a mile north of the straggling French-Canadian village of Roberval. Just why, with all the country to choose from, it was put where it is I cannot imagine, as the site is quite unattractive, and far away from any of the salmon fishing, of which it professes to be the center. The inquiries I made Monday evening at the village confirmed my previous information: that the Metabetchouan, which empties into Lake St. John from the south about twenty miles east of the hotel, was the best fishing water within reach at this season. The outlet of the lake, called the Grand Discharge, is some twenty-five miles from the hotel, across the lake, only to be reached by a steamer, which does not leave the hotel until 10 o'clock. It is fished by a dozen rods every day. The fishing is quite expensive; including boat, guides and incidentals, about $8 a day, and the salmon taken average less than 2½lbs.

So I used the telephone (just think of it, on Lake St. John!) to make my arrangements; and Tuesday morning I went over to Roberval village and from there, fourteen miles, on a freight train to Chambord Junction. There my buckboard awaited me, and I was driven some six miles further around the lake to the mouth of the Metabetchouan, where I had been promised that I should find my guide, but when my French driver (with whom I had vainly struggled for the six miles to converse) and I reached the primitive ferry, just above the railroad bridge, I was dismayed to learn that Boivin was gone up the river. When we got to his home I found that he had gone up the river to guide a Mr. Follett, who has, or is to have, charge of an attempt to propagate the ouananiche for the benefit of the proprietor of the Roberval. They were expected back by noon, but when I waited until nearly 2 o'clock another employee of the hatchery, who was waiting too, offered to guide me up the river to meet them. Having secured some provisions from Madam Boivin, we rowed in a punt about a mile up the river, and then took to the trail.

You and I have done some pretty rough work together under the name of "sport," but that three-mile climb was "a corker" and no mistake. My rain coat and little Leonard weighed a ton before we reached the almost perpendicular descent of about 400ft., over the rocks to the first pool. There, to my joy, I found Maurice Boivin; and the more I saw of him the better I liked him. Men are artificially classified as English, French, "Americans," etc., but Boivin belongs to the noble genus sportsman, which knows no race nor color.

Mr. Follett had gone back from above on a wagon with their tent, etc. Boivin was just ready to take the trail, and was far from well, but when I told him that I had heard of him in Ohio, and had come 1,000 miles to fish the Metabetchouan under his guidance, he laughingly agreed in his broken English: "All rit! I show you plenty waniche," even with scanty fare, and a prospect of a night in the open. So, with a satisfactory tip, my quondam guide started again for the mouth of the river, and I got into the boat with Boivin.

The river here runs through a savage gorge in the mountains, and a short paddle took us to the foot of a wild rapid, quite impracticable for a boat. Then, for a quarter of a mile, we clambered over broken masses of rock along the stream, until we reached the second pool, where Boivin had another rough boat. While I sat panting on a rock, rubbing a bruised knee and mopping my face, Boivin put together the rod, fixed the reel, tied the well-soaked leader, selected a cast of flies from my book—a silver doctor and a queen of the waters—and we were ready for "business." Quietly along the rocky edge of the dark eddying pool he paddled the boat, turned it into mid-stream, dropped the heavy stone anchor; and my time had come. My undue exertion had made my arm a bit tremulous; and the wonderful accounts I had heard and read of "the leaping ouananiche" made me a bit anxious, as I dropped the flies to right and left with lengthening casts. At last comes a great swirl at the surface, a broad tail shows a moment, the line straightens, I "snap" the rod, and my first salmon is hooked. Boivin whispers, "He is a big wan," and I mentally admit it as the fish leaps quite 2ft. into the air, turning three back-somersaults, and makes the reel scream with the rush that follows. After ten minutes of boring, running and jumping the splendid fellow lies quivering on the bottom of the punt. Then I hand the rod to Boivin, telling him to cast, while I light my briar and admire my captive. I had no scale with me, unfortunately, as I had left everything but my road and fly-book at Boivin's house, but Boivin said it would weigh 5lbs., and it weighed 4¾ twenty-four hours afterward.

The ouananiche is truly a splendid fish; shaped like all the salmon, it is dark along the back, with a suggestion of steel blue in the color; a rather black bass yellow over the sides, but very thickly studded with jet black markings somewhat in the shape (as I have read somewhere) of a St. Andrew's cross; fading to a yellow white under the belly. But the finest feature is the tremendous tail, finely fashioned, and broader, I feel sure, in proportion than even that of his big brother, the sea-going salmon. Without venturing to compare the strength and grit of the ouananiche, pound for pound, with the black bass, any one must admit, I think, that he is a bit finer "bred" than our sturdy favorite.

After quite a while I had another strike, but this fellow in a mad rush in the current near the boat broke the hook (No. 4 sproat) at the barb. Then Boivin said that it was getting too late in the day, and that we had better climb out to an empty house he knew of, where we could spend the night. This we did, after another wearisome scramble; found a fairly comfortable place, and after some supper and a pipe slept the sleep of the utterly tired.

Before we had prepared our breakfast next morning the pleasant old Frenchman who owned the house and meadows about appeared and made us welcome; and with him I arranged to drive us out to the railroad whenever I wanted to go.

Boivin had promised a good morning of sport at the upper pool, below the principal fall, and right well did he keep his word. This pool is an ideal spot. Some way above it the Metabetchouan, which is a large stream carrying more water than the Scioto, falls sheer down some 40 or 50ft., so that this is as far as the salmon can ascend. After the fall the water leaps down several sloping ledges until it foams into an oval pool about 300ft. long by 150 wide, with the splendid wooded mountains rising from the rocky shores. But, best of all, right in the middle of the pool lies an oval gravelly island, covered with blueberries, and from the sloping edges of which every part of the eddying river on either side can be fished. Here in three memorable hours I killed twelve fish, which weighed that evening at the hotel 47lbs., none over 5 and none under 3½lbs. And this without a net, so that I had literally to "kill them on the rod" before Boivin could dare tap them on the head and draw them gently over the pebbles. But he is an artist. Though half-sick, he took as keen an interest in every rise as Zack Nott could take in an approaching black duck. Never once, no matter how tempted, did he touch the leader, and not a fish did he lose. To give you some idea of the fighting qualities of this fish, I will say that altogether I hooked eighteen ouananiche and saved fourteen (one a little one that I put back). I doubt whether one could do so well with black bass of the same weight, though you must remember that I had a perfect fly-rod, which is more deadly than the stiffer rod we use for bass. Mr. Follett afterward told me that the fish were now coming up to spawn, and were not so difficult to manage as in June. But Boivin said there was nothing in this, that he never saw the fish struggle more actively; and we know that the sea-going salmon are fished for under exactly the same circumstances. One, that I hooked some 60ft. away, gave seven great leaps before he consented to come within speaking distance.

And now for the denouement: About 11 o'clock, as I was casting from the upper end of the island, and Boivin was sitting behind me, we heard a call, and saw some one standing on the rocks at the lower end of the pool. Boivin said that it was Mr. Follett, and started for the punt to ferry him over. As they talked together for some time, I walked along the shore toward them, casting as I went, and in a moment hung a fine fish. Before I could divert my attention from the salmon Mr. Follett was by my side, and when I turned to him for the congratulations I expected I was met by the rather astonishing inquiry: "Mr. Douglas, have you any authority from Mr. Beemer (the proprietor of the Roberval) to fish here?" I told him that I was a guest, with my family, of the Roberval, and had relied upon the assurance, given in its letters and advertisements, that these waters were free to the guests during the open season. But Mr. Beemer wanted this stream preserved in order that he could take the fish for the hatchery, and had sent Mr. Follett to request me not to fish! I urged that he himself, as Boivin had told me, had taken eleven fine fish the day before, male and female, and put back none. This he admitted was true, but, said he, in effect, "I hadn't orter done it." I asked him why the Metabetchouan was not excluded in the fishing advertised in the hotel printed matter, which expressly included it among the list of salmon streams, with pictures of its pools? This he could not answer. Nor could he deny that it was the best river, for size of fish, on the lake, and the most accessible.

What was I to do? Follett himself was gentlemanly enough, and urged his orders from Beemer. I was strongly inclined to tell him to "gang ta the deevil"; but there was Boivin; I could do nothing without him; he told me that he was employed by Beemer during the close season to patrol the stream, and it would hardly be fair to induce him, even if I could, to fish on with me for two or three hours more, and risk the displeasure of the man who could give him employment half the year. Then, too, I had had "sport enough for one day," though we all enjoy playing our luck while it lasts, and having "a run for our money." So I complied with Mr. Follett's request; detached my flies and casting line, took down the slim rod, ate blueberries in peace with Mr. F.; climbed back to our night's quarters with the disgusted Boivin, and took Mr. Rovall's buckboard for the mouth of the river. Imagine my feelings on arriving there to learn that Mr. Beemer had gone up the river to fish.

I took the train back to the Roberval, where my catch seemed to create something of a sensation. When I related my experiences to the managing clerk, he simply told me that he "was sorry, but could not say anything." I declined his invitation to try the commonplace $8 per day fishing at the Discharge, gathered my "kin folk," who had spent two uninteresting days at the hotel, and took the evening train for Chicoutimi, and now write you from the lovely shores of Lake Kenogami, fifteen miles from Chicoutimi. Such is the story of my Lake St. John experiences. "Sic volvere Parcas," as Virgil has it; but I have made the acquaintance of that high-bred fellow, Sir Ouananiche, at any rate.

It surely is a pity if all the angling for this noble fish has fallen into the hands of people who keep the best

of it for themselves, and work the rest of it like a coal bank for "all there is in it," and it seems strange too if such a state of things is permitted by the Quebec Government.

Until I see you, I am, as ever, yours, A. D.

Ouananiche Stocking.

Editor Forest and Stream:

In view of the conflicting statements concerning the ouananiche in Lake St. John waters, the following notes may be of interest, having just returned from a fishing trip in that country:

The waters of the Grande Descharge have been, for the past few years, so closely and constantly fished by visiting sportsmen that the size and number of the ouananiche show a very marked falling off. As is well known, the fish come down from the waters of the lake in great quantities in the spring, and stay there during the early part of the summer. In August, when I was there, there were still a few to be had, but they did not take the fly readily, and were for the most part fish running about three to a pound.

The western side of the Descharge, where the chief pools are situated, in fact where four-fifths of the best ouananiche fishing in the Descharge is located, belonged until this spring to William Alexander Griffith, of Quebec, one of the best known sportsmen in Canada. It was sold by him this spring to B. A. Scott, Mayor of Roberval, and has been fished during the summer by the guests of the Hotel Roberval.

In August the fish begin to move up the great rivers emptying into Lake St. John, to reach their spawning beds, and the best opportunities for river fishing are found in the large pools below the chutes. The fishing rights of these rivers, and of many of the adjoining lakes, belong to Mr. H. J. Beemer, and are used in connection with his hotel at Roberval. Mr. Beemer has very wisely determined to withdraw from free fishing one of these rivers, the Metabetchouan, and retain it as a reserve, where the ouananiche can spawn freely, and keep up the supply in the lake.

A fish hatchery has also been established not far from Roberval on the Ouiatchouan River, and a fishculturist, Mr. R. E. Follett, placed in charge. Several attempts having been made by netting in the mouth of the Metabetchouan to secure a sufficient number of spawning fish for the hatchery, with only partial success, Mr. Follett determined to obtain the necessary fish by sending them down the river alive in crates from the upper pools.

On the 28th day of August, 1898, Mr. Follett and the writer went for this purpose to the third pool in the Metabetchouan, and camped there on a small island. The location was an ideal one, as the banks of the river rise to a height of over 100ft., forming above and below a narrow and almost impassable gorge, through which the river runs in a series of rapids. We had with us three crates, about 3ft. square and 1½ft. in thickness, to hold the fish. This pool had only been fished twice before during the season, and there seemed to be practically no end to ouananiche of a large size in it. Fishing from a little after noon until dark, the following was our catch:

M. G.—Sixteen fish weighing in pounds, 4, 3½, 4½, 4, 4, 4, 5¼, 3, 4, 3, 3½, 4, 4, 4, 3½, 4. R. E. F.—Twelve fish weighing in pounds, 4, 4, 5, 4, 6, 4, 4, 3½, 4, 4½, 3, 3; and six unweighed fish of about the same size.

In addition to this, the guide took one of 3½lbs., and several fish were hooked and lost in landing, one of them being apparently rather larger than any of the above. In fact, a fish taken from the same place some two weeks previous by an English sportsman, Col. Andrew Haggard, weighed, I understand, over 7½lbs.

Any doubt that may have lingered in my mind as to the propriety of referring to the ouananiche as a salmon was dispelled by the way these large fish acted. They took the fly under water, bored, ran and leaped precisely like the Atlantic salmon. The leaping, of course, was far freer, more frequent and relatively higher than the leaping of salmon. Some of them in fact came out of the water to a height of 3 or 4ft. six, eight, nine and even ten times. Some of the fish, possibly a third of them, did not leap at all.

I had never had fishing to compare with this afternoon's sport, and when dusk came I laid aside my rod for the first time in my life with a feeling of sufficiency.

These fish were handled in every instance with the utmost care, and transferred alive to the crates, and were so far uninjured that the next morning only one fish out of the thirty odd in the crates was found dead, the others being in exceedingly good condition. The next morning, at daylight, we started the crates down the rapids with the assistance of ropes and fending poles. The work of getting them clear of the rocks below the main pool was terrific. No wooden structure, however, could stand the pounding against the rocks that these crates received in the swift water, and when they emerged from the rapids in the quieter waters of the second pool one of them was found hopelessly knocked out of shape, although the fish were still in it. The fish were beginning to show signs of exhaustion from the shaking up they received, but we fixed up the crate as well as we could and started them down the next rapid. At the last pool the broken crate was found to be entirely destroyed, only one end of it remaining, and the fish, of course, had escaped in the river. The two remaining crates showed signs of weakness, but we again repaired them, and with their living contents started them down the long rapid, some miles in length, to the mouth of the river. Mr. Follett and I hurried down the portage, and on arriving at the foot of the rapids found one crate with its end broken off, and the fish gone.

The third and remaining crate was found later in the afternoon half a mile higher up the river lodged between some rocks in midstream. The fish were in such an exhausted condition that only immediate release could save their lives, so the expedition ended with three broken crates and no fish.

The impracticability of obtaining live fish in this manner having been thoroughly demonstrated, an artificial retaining pool was decided as the best substitute. It will be built close to where the fish were taken, and the spawning fish will be placed there until they are ready to be stripped. The eggs can then be transferred overland to the hatchery on the Ouiatchouan River.

Mr. Beemer is entitled to the support of all sportsmen in his effort to preserve this finest of fighting fish from its threatened extinction. He is using every effort to do away with the nets, which in the past have been freely used in St. John waters, and is trying to limit the destructiveness of sawmills, which are to-day the greatest menace to the inland fishing interests of Canada, and, owing to the character of the Government in Quebec, it seems to be impossible to enforce the laws against throwing sawdust into the fish-bearing waters, where it spreads over and utterly destroys the spawning beds.

I understand it is the intention of Mr. Beemer to establish a great game park in the neighborhood of Lake St. John. This would be a great boon to hunting interests, as the land is of no value for any other purpose. Mr. Beemer is talking, however, of introducing various European game animals, so-called, such as the boar and Scottish stag. Leaving aside the probability of failure and the certainty of great expense in an attempt of this sort, it is, in my opinion, a great mistake to attempt to introduce animals foreign to the Canadian woods. The American game animals native to these wilds are in every way superior to their European congeners of to-day, as the latter have deteriorated in size and stamina through long years of close inbreeding.

Why anyone should wish to supplant our native moose with the European elk, our woodland caribou with the Lapland reindeer, or why anyone should want an European wild boar as a game animal under any circumstances, I never have been able to understand. I trust, however, that the proposed enterprise will not be marred by any such mistaken ideas. The project of fencing, stocking and protecting many hundred square miles of wild land in the Province of Quebec is sufficiently vast without complicating it by introducing animals unsuited to the country. Madison Grant.

The Origin of the American Fisheries Society.

[A paper read by Livingston Stone before the American Fisheries Society at Omaha.]

On the first day of November, 1870, the following call was sent to various persons who were known to be interested in the culture of trout:

"The undersigned, desirous of promoting the interests of fishculture, call a convention of pisciculturists, at the Skating Rink, City of New York, Dec. 20, 1870, at 11 o'clock A. M.

"The design of the convention is consultation for the protection of our interests, and, if thought best, to organize a permanent association.

(Signed) "W. Clift,
"A. S. Collins,
"J. H. Slack,
"F. Mather,
"L. Stone.

"Mystic Bridge, Conn., Nov. 1, 1870."

This was the very first step taken toward the forming of the American Fish Culturists' Association, now known as the American Fisheries Society.

The prime mover in the issuing of this call was Rev. Mr. W. M. Clift, of Connecticut, who was carrying on at that time a large fish and stock farm at Mystic Bridge. It is undoubtedly true that the chief motive for issuing the call was, as the call plainly states, a desire to do something for the protection of the interests of fishculturists. It is also true that from the very first moment of the assembling of the meeting, as will be seen later on, the mere pecuniary interests of fishculturists became a secondary consideration. It should be stated here, by way of explanation, that the term "fishculturist" at that time meant trout breeder, for there were then no practical fishculturists in this country except the trout breeders, and it may also be added that trout breeding meant the raising of the brook trout, or speckled trout, of New England and New York, now, I think, generally known all over the world by its Latin cognomen, *fontinalis*. The call was accordingly addressed particularly to those engaged in the raising of trout.

It is true that the State of New Hampshire had created a fish commission six years before, and the example had been followed by several other States. The Fish Commission of Massachusetts had already contributed to the world, through its reports, some of the most valuable information ever published on the subject of fishculture. Seth Green had already done successful work in hatching shad, the writer had built and operated a large salmon hatchery in New Brunswick, various States had experimented successfully on narrow lines in propagating other fish than trout, but the extensive and varied work of the United States Fish Commission, created a year later, had not then begun, and hatching work in this country on all other fish than brook trout (*S. fontinalis*) had, up to that time, been experimental rather than practical, so that fishculture not only meant trout culture, but trout culture meant the breeding of the *fontinalis*, or brook trout.

It was to brook trout breeders, therefore, that the above-mentioned call was issued, and the object of the call was to form an association for the protection of their commercial interests. But upon the assembling of the meeting, it became apparent at once that something altogether broader and less personal was in the minds of those present, and I think I can truly say that that which I may perhaps term the selfish feature of the call scarcely ever showed itself at all in the meeting. From the very beginning of the meeting the little group of men assembled appeared to be actuated more by an earnest and generous interest in the cause of fishculture than by a desire to promote private ends. The spirit that prevailed seems to me to have been that which has characterized the meetings of the association ever since. It was comprehensive rather than narrow, devoted rather than self-seeking, and good will to all prevailed over sordid feelings of competition with each other. If I remember rightly, hardly a word was said about regulating the prices of fishculturists' products or increasing the pecuniary profits of the business. Not a resolution bearing upon the pecuniary side of the subject was passed. It seems as if this handful of pioneers had a foresight of greater and better things. At all events, if the pecuniary considerations had anything to do with prompting the call for the meeting, they had no place in the meeting itself. The meeting having come to order, and a temporary chairman and secretary having been chosen, it was voted at once and unanimously to form a permanent organization, and Dr. Edmonds and the writer were appointed a committee to draft a constitution. Each member of the committee presented a separate form for a constitution, the one offered by the writer being the one finally adopted.

As the records of the early meetings of the society have been lost, it may not be out of place to present here the original constitution, as it was adopted at the time of the organization of the society. It is as follows:

CONSTITUTION.

ARTICLE I.

Name and Objects.

The name of this Society shall be "The American Fish Culturists' Association." Its objects shall be to promote the cause of fishculture; to gather and diffuse information bearing upon its practical success; the interchange of friendly feeling and intercourse among the members of the Association; the uniting and encouraging of the individual interests of fishculturists.

ARTICLE. II.

Members.

All fishculturists shall, upon a two-thirds vote of the Society and a payment of three dollars, be considered members of the Association, after signing the Constitution.

The Commissioners of the various States shall be honorary members of the Association, ex-officio.

ARTICLE III.

Officers.

The officers of the Association shall be a president, a secretary and a treasurer, and shall be elected annually by a majority vote.

Vacancies occurring during the year may be filled by the president.

ARTICLE IV.

Meetings.

The regular meetings of the Association shall be held once a year, the time and place being decided upon at the previous meeting.

ARTICLE V.

Changing the Constitution.

The Constitution of the Society may be amended, altered or repealed by a two-thirds vote of the members present at any regular meeting.

It is rather interesting to note how few changes have been introduced into the original constitution during the twenty-eight years of the Society's existence.

It is also sad to note how few of those who took part in the organization of the Association have lived to see its growth. There is no one now living, I think, except Dr. Edmonds, then Fish Commissioner of Vermont, and the writer who were present at this first meeting, or who took an active part in the organization of the Society.

A report of the meeting of organization that appeared in the New York Citizen—which, by the way, was the paper of Hon. Robt. B. Roosevelt, who afterward became such an ardent and influential supporter of the Association—reads as follows:

"The constitution having been adopted, the following officers were chosen for the ensuing year: W. Clift, Mystic Bridge, Conn., President; Livingston Stone, Charlestown, N. H., Secretary; B. F. Bowles, Springfield, Mass., Treasurer.

"It was then moved that an effort be made to secure an exhibition of live fish at the next meeting, and that the following gentlemen be requested to prepare papers, to be read at the next meeting, on the subjects annexed to their names: A. S. Collins, on 'Spawning Races and the Impregnation of Eggs'; J. H. Slack, on 'The Culture of Black Bass'; W. Clift, on 'The Culture of Shad'; Dr. Edmonds, on 'The Introduction of Salmon into American Rivers'; B. F. Bowles, on 'Landlocked Salmon'; 'Dr. Huntington, on 'Fish in the North Woods of New York'; Livingston Stone, on 'The Culture of Trout.'

"It was decided to hold the next meeting and exhibition in connection with the New York Poultry Show, next year. It was voted to send a report of the meeting for publication to the New York Citizen and Round Table, the New York Tribune, the Springfield Republican, the New York Poultry Bulletin, and other papers at discretion; and the secretary was instructed to mail the published reports to fishculturists generally."

Following is an account of the first annual meeting of the Association, taken from a New York paper, of Feb. 8, 1872:

"At the afternoon session yesterday the following officers were elected for the ensuing year: President, Wm. Clift; Treasurer, B. F. Bowles; Secretary, Livingston Stone; Executive Committee, Seth Green, J. D. Bridgman and A. C. Rupe.

"A paper was read by A. S. Collins, on spawning races and the impregnation of eggs; a paper by W. Clift, on the culture of shad, and a paper by Dr. Edmonds, on the introduction of salmon into American rivers.

"A box of a hundred trout eggs that Mr. Stone had taken by the Russian or dry method were examined, and 97 per cent. were found to be impregnated. The interest of the meeting was very much increased by remarks interspersed during the intervals by Seth Green.

"At the evening session B. F. Bowles read a paper on 'Trout in the North Woods,' and L. Stone read a paper on 'Trout Culture.' Discussion ensued on the dry method of impregnation, and the expression of those who had used the method was in its favor. G. S. Page moved that a memorial be presented to Congress for a more general distribution of ova throughout the country, and the motion was carried.

"Interesting remarks were made by Hon. Horatio Seymour on fishculture. * * * He suggested that an effort be made to learn more in regard to fishculture in China and Japan, and also to obtain desirable varieties of the fish of those countries, and introduce them into the United States. In pursuance of the suggestions, Mr. G. S. Page and the president, Mr. Clift, were appointed a committee to communicate with various foreign countries and take measures for an interchange of fish with those countries.

"Gov. Seymour and Livingston Stone were appointed

a committee to take charge of the publication of the proceedings of the Association.

"To-day's Proceedings.—The Association met at 10 o'clock this morning (Feb. 8, 1872), President Clift in the chair. Some routine business was transacted, when the following resolutions were offered:

"1. To petition the Government to establish two or more fish hatching establishments—on Puget's Sound and the Atlantic Coast.

"2. To seek foreign exchanges.

"3. For a permanent fish exhibition in Central Park.

"4. That the headquarters of the Association be at No. 10 Warren street, New York, where the next meeting, in February, 1873, will be held.

"5. Recommendations to all States to encourage fish-culture.

"Messrs. Dr. Streeter, of New York; S. Wilmont, of Canada, and S. F. Band, of Washington, were made honorary members.

"After miscellaneous business, the Association adjourned."

Permit me to close this somewhat lengthy paper with some extracts from the report of my own work as secretary, during the first year of the existence of the Association:

"Circulation of Last Year's Report.—In order that the meeting of practical fishculturists in New York, Dec. 20, 1870, the first in the way of organization in this country, might be generally known, a copy of the report of the meeting was sent to all the leading newspapers in New England and New York, and to some further West and South, and also to nearly 200 practical fishculturists in various parts of the country.

"I am happy to say that the newspapers in almost every instance printed the report in full, or noticed it in some way.

"The Agassiz Circulars.—For some time previous to the meeting on organization, I held a correspondence with Professor Agassiz on topics relating to fishculture, in the course of which the Professor mentioned a labor in which he is now engaged, of preparing an illustrated work of all the salmonidæ of this continent, showing the variations of age, sex, locality, and the like; and after the formation of the Association he suggested that the Association should use its influence in furnishing material for this work. * * *

"I consequently take the liberty here to remind you that this is a most valuable work which Professor Agassiz is undertaking, and one which will be unsurpassed by anything of its kind in the world, and I warmly commend it to the attention and interest of the members of the Association.

"Mr. Agassiz cannot finish his work unless the requisite material is furnished him, and the members of this Society and all interested cannot do the distinguished naturalist a greater kindness, nor the cause of fishculture a better service, than by sending him, as opportunity permits, specimens of the various individuals of the salmo family. * * *

"The St. Lawrence River Correspondence.—During the session of the High Joint Commission at Washington last spring, I received a letter from Hon. Stephen H. Ainsworth, asking me, as secretary of the Association, to request our State Congressional delegation to use their influence with the commissioners to adopt some measure toward removing the obstructions in the River St. Lawrence which prevent the salmon from ascending its tributaries. I accordingly wrote to our New Hampshire Senators and Representatives on the subject." Of the correspondence which resulted, I will merely offer here one letter, and this chiefly because the name of the distinguished writer has been recently brought to the country's attention by the death of his son and namesake in the famous charge of the heroic Rough Riders in Cuba:

"Department of State, Washington, April 20, 1871.—Hon. E. A. Hibbard, House of Representatives—Sir: In answer to your note referring to a communication from Mr. Stone, on the subject of salmon fisheries in the tributaries to the St. Lawrence, I have the honor to say that Mr. Stone's letter was one of many interesting communications on the same subject.

"As the obstacles to the free access of the salmon to these rivers are matters within the control of local or provincial legislatures of the British colonies, I have brought the subject and laid several of the letters informally before Sir John Macdonald, from whom I understand that the obstructions complained of are prohibited by the Canadian laws, and that the authorities are constant in their efforts to prevent them from being placed in the river, and patrol the river for that purpose, but find it very difficult to prevent the violation of the laws on the subject. He has taken the letters, and assures me that no efforts will be wanting to prevent or punish future violations. Very respectfully yours,

"Hamilton Fish."

"New Members.—In the course of the year I took occasion to write to most of the practical fishculturists of this country, whose acquaintance I had made by correspondence or otherwise, to the number of about 200, extending to them an invitation to join the Association. These letters met with various replies, some few were not answered at all, but they were, on the whole, well received, and the replies in most cases contained expressions of interest in the prosperity of the Association. * * *

"The notification circular of the present meeting was sent to all professional and amateur fishculturists whose names were in my possession, and to the fisheries commissioners of the various States, and was generally noticed in the newspapers and agricultural periodicals.

"In conclusion I will merely add that in the course of the year I have mailed 500 letters on business of the Association, and nearly 1,000 circulars and papers.

Livingston Stone,

"Albany, Feb. 7, 1872." "Secretary A. F. C. A."

The next annual meeting of the Association was held about a year later, but the Association was no longer in its infancy. It was now on a firm foundation, and has since continued to grow in strength and favor.

Livingston Stone.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

Illinois Fish Commission.

Chicago, Ill., Sept. 30.—The work of the Illinois Fish Commission in seining out young fish from the shallow waters of the Illinois River bottoms has received frequent comment as being one of the most practical forms of fishculture which can possibly be employed. All through the late summer the commission has been at this work in Lake Barlow and similar waters, near Meredosia, and by this time the black bass taken have attained a size which insures their life after transportation to their new homes. These great breeding grounds along the Illinois bottoms have no equal in the West. It is stated that a black bass will in one year attain a size in the Illinois River waters which it takes it four years to acquire in the Minnesota lakes. This is based on the experiment of a Minnesota angler, who tagged 1,200 bass, which he put in Lake Miltona, Minn. At the end of five years they had not attained anything like the size of the Illinois fish, which were known to have had only one season's growth. The work of the Illinois commission is elaborately described in one of the Quincy newspapers, which is sent to this office. I observe that Dr. Bartlett still asserts that the introduction of the German carp has not proved harmful to the bass, but that both bass and carp have largely increased in numbers, the bass taking very kindly to the carp when in the young and tender stage.

Indiana Fish Commission.

The State Fish Commissioner of Indiana is known as Elder Sweeney. He is a pastor of the Christian Church at Columbus, Ind., and formerly represented the United States as consul-general at Constantinople. He has served as fish commissioner for two years, and deserves credit for what he has done. The State of Indiana allows its commission but a few hundred dollars each year with which to pay all its bills. Even with hands thus tied, Mr. Sweeney has effected a great deal during his term of office. He considers that dynamiting is the most destructive form of illegal fishing. He favors a three-year law, which shall, during that term, abolish the buying or selling, or transporting for sale, any game fish taken within the limits of Indiana.

Fishing.

The fall fishing season is now in full swing, and the big-mouths are biting finely in the lake region of upper Illinois and lower Wisconsin, as well as in the streams below this city in Illinois and Indiana. September has been a very successful month in this part of the West this year, and enjoyed by no one more than the anglers. The muscallonge season of Wisconsin has been good, especially in the fall. I note that John P. Murphy landed a 32lb. 'lunge at the Fifield lakes last week. The season at Lakota has been a good one, and at Mercer and Manitowish, Fay Buck's country, the fish are now biting well. At the Kabekona Camp country the muscallonge are "just beginning to wake up," as Manager Eber Smith writes. On Sept. 23 the following fish were brought in at that point: E. A. Charles, four fish, 21, 25, 28 and 34lbs.; W. C. Gillespie and A. E. Walter, of Chicago, six fish, 20, 18, 23, 21, 22 and 24lbs. W. H. Gambool, Cedar Rapids, Ia., three muscallonge. Mr. Clarence I. Peck and family, of Chicago, were at this point last week, and they caught several nice fish, 10¾, 12¾, 20 and 27lbs. Mr. Peck's nine-year-old son caught two fish, of 20 and 21lbs. He writes very enthusiastically of the sport. Mr. George F. Jennings, at the same point, last week caught two 'lunge of 18 and 22lbs. The above weighs run into a very heavy average, and it would indeed seem as though the 'lunge were "waking up" in Minnesota.

About Mosquito Dope.

Last week I mentioned a mosquito dope, the formula of which was given by a gentleman of Kalamazoo, Mich. To-day he writes me to add the following caution:

"In writing you the other day about mosquito dope, I omitted to say that the tar and pennyroyal mixture should not be carried in the creel, as it is liable to give the trout a lasting and disagreeable flavor, as I know by experience. White vaseline 2oz., oil cedar ¾oz., oil pennyroyal ¾oz., makes a nice looking, clean repellant for mosquitoes, etc., quite similar to a preparation sold by a well-known New York firm. This preparation is not as efficient as the tar mixture."

Minnesota Bass.

Deputy Warden Stephens and four friends fished last Tuesday in Lake Lydia, one of the Detroit chain of lakes in Minnesota. They took sixty bass in a forenoon, or about a dozen bass apiece, and then quit, on the basis that they had had fun enough for one day. The fish were all small-mouths and averaged 2¼lbs. each.

In Indiana.

This is the way the Ledger, of Noblesville, gets after Rev. Dr. Sweeney, State Fish Commissioner of the State of Indiana:

"State Fish Commissioner Sweeney has been over at Anderson smelling around the strawboard works and 'smelt a mouse.' He will probably institute suit against the works over there for polluting White River, much to the inconvenience and discomfort of the festive chubs and shiners that claim that stream as their home. If Rev. Sweeney would pay more attention to the divine mission to which he seems to be called, and less attention to the interests of the sporting fraternity, the world would probably get along just as well."

It seems to me that is a pretty poor way of treating a man who is trying to do his duty in the work which he has undertaken, no matter whether that be preaching the gospel or arresting law breakers. The world will get along just as well with a little more fair-mindedness than the writer of that paragraph seems to have. It is a thankless task enough that Mr. Sweeney has with the appropriation at his disposal, and the decent folk of his State ought to help him and not hurt him.

By the way, speaking of Anderson, Ind., does it not seem to be a sort of dark and bloody ground around there? In the News, of that city, I observe a distinct squirm of some unknown citizen who signs himself Fair Play. (Is it not a singular thing that the biggest liar will usually sign himself Truth, and the most lonesome citizen call himself Vox Populi, and the most unfair man designate himself Justice or Fair Play, in these anonymous contributions of the spleen?). Well, Fair Play thinks it is all wrong about stopping the netting in Fall Creek, which is one of the streams where illegal work of that nature has been detected. He goes on to say:

"We desire to give notice through your paper to those whom it may concern that the people of Adams township are now determined not to be imposed upon any longer by fine-haired fellows that desire to put a construction on the fish and game laws of the State of Indiana. They seem to think that they are privileged characters. They will find out different. They will try to keep men from fishing and hunting on their own land, which they pay taxes on, and those very same fellows, including lawyers, doctors, judges and county officers, will come to Fall Creek with their fishing outfit and their guns and dogs, and try to make a clean sweep of the game, regardless of horses, cattle, sheep, hogs, women or children, fences, men's rights or anything else. If a farmer attempts to catch a mess of fish or kill a bird, then, oh! what a howl from some of those goody-goody fellows. The time has come that these things will not be tolerated any longer. * * * If the business men of Anderson will permit things to go on thus, without objections, men who are expecting our patronage, should we not turn our trade in another direction? Now a word to those trespassers: If neither law nor kind words will prevail we will try what virtue there is in stones, and if that will not do some M. D. will have a job of extracting something that has still more weight."

There is a certain fine American ring about the foregoing declaration of independence which rather pleases me. It reminds me of a conversation I once heard between a neighbor in our town and another neighbor, a grocer by the name of Work, who had a dog which liked spring chickens—a predilection which I am sure any just and accurate taste must ratify. The first neighbor was a German originally, and he couldn't talk very well in United States, though he made his meaning clear. "Billverk," he said, "you Billverk, of you dondt geep dot dog by your own hause, by chracious I dondt buy any schucker mit you, und I got some pizen und shood um." Yet my recollection is that both "Billverk" and his dog lived to a ripe old age. E. Hough.

1200 Boyce Building, Chicago, Ill.

Newfoundland Salmon.

St. John's, Newfoundland, Aug. 20.—*Editor Forest and Stream:* Just a line from an old contributor. This is the first day of the snipe shooting in the colony, and it has been raining hard since early morning. I have been out after the long bills, and a most ridiculous accident has sent me home. I had shot five snipe, and was getting my hand in quite satisfactorily, when an ominous crack, I found that my suspender had burst and all, to use a sailor's expressive phrase, was coming down by the run, stockings as well as pantaloons. I tried all sorts of absurd expedients to manufacture garters out of rushes and twigs, but all failed, and to shoot with your garments all falling about you in pouring rain, the situation at last became simply impossible, so I was fain to take the wagon and come home. The downpour destroyed all the pleasure of shooting, and now, after this little episode, let me say a word about the salmon fishing. All your readers know about the caribou shooting in Newfoundland. The interior of this country is a vast deer park, where the lordly stags wander at their own sweet will, unmolested by man.

Hitherto our salmon fishing has not been held of much account; we have hundreds of salmon rivers, their reputation, I am bound to admit, was vastly inferior to the grand streams of New Brunswick and Quebec. This season an extraordinary change has taken place; up to last month, with the exception of one 25lb. salmon caught by a naval officer in one of our northern rivers, no big fish had ever been captured with the rod. Last month, in Harry's Brook, flowing into St. George Bay, Mr. Ernest Whiteway, son of Sir W. V. Whiteway, killed one splendid fish weighing over 35lbs., and several more have been taken in the same stream from 17lbs. down to grilse, 3 to 5lbs. An American tobacco merchant from the Southern States, A. W. Howell, did very well on the grand River Codroy; his take was 750lbs., ranging from 17 to 7 or 8lbs., with plenty of grilse and sea trout. Another American, Dr. Robt. T. Morris, of your city, has had splendid sport on the upper waters of the Humber, the beautiful river that flows into the far-famed Bay of Islands, in the words of the art critic of the Century Magazine, the most picturesque coast scenery in America.

All these beautiful salmon streams are now accessible from the railway, the line runs by them. Camp and canoe can be carried right to their banks, and supplies and letters forwarded to sportsmen thrice each way every week. Our party had excellent grilse fishing on Codroy, grand river, one of the most picturesque streams in America. Mr. Howell is building a house here for next season's sport. In a word, the new playground of America, now brought within the railway system of America, will soon become as celebrated for its fishing as it is now for its shooting. Pullman and palace cars are now complete, even to the familiar dusky conductor.

I have not mentioned that the season for fishing varies. In the northern rivers sport begins in July; in the southern rivers it commences in June. To the salmon fisher trout of all kinds are only "small deer." Brown are everywhere, and are simply innumerable. Sea trout come up the rivers in great shoals, and generally remain for some time in deep pools. Loch Leven and rainbow trout imported from Scotland and California have done exceedingly well, and around St. John's specimens have been caught up to 7lbs.

D. W. Prowse.

Boston and Maine.

BOSTON, Oct. 3.—The Maine trout and salmon season has closed. Oct. 1 is expected to find all the rods packed away, and this condition is generally cheerfully complied with. The last days of the season brought some remarkable catches, however, especially at the Rangeleys, where the big trout of the world abide. Among the big catches at Rangeley Lake may be mentioned that of W. W. King, with a salmon of 3⅛lbs. and trout of 5½, 4½lbs., and two of 3½lbs.; H. T. Stancliff, a salmon of 8½lbs. and trout of 4½ and 3¼lbs.; H. A. Blakiston, a salmon of 5lbs.; A. G. Frost, a trout of 6lbs.; John Lilly, a salmon of 4lbs.; M. M. Keith, a salmon of 5lbs.; Miss Fitton, a salmon of 8½lbs.; Mrs. W. F. Sturtevant, a salmon of 7lbs. Mr. John W. Rogers has broken the salmon record at the Rangeleys, landing one the other day of 12½lbs. He has also taken other fish, among which are salmon of 9½ and 6½lbs., and trout of 6, 5 and 4½lbs.

At the Upper Dam the record of the last days has been good, though with none of the great fish of 10 and even 12lbs. of former seasons. R. N. Parish has taken trout there of 6¼, 4½, 4, 5¾, 5 and many over 3lbs. T. L. Barber has caught a trout of 6½lbs. T. B. Stewart has taken one of 6¼lbs. But to L. O. Crane belongs the credit of one of the biggest strings of the largest trout ever seen in Boston. With Mrs. Crane he has been spending the close of the season at the Upper Dam. He came home on Sept. 30, and Saturday morning he showed his friends a tier of trout in the store of the firm, on Oliver street, thirteen in number, with one landlocked salmon of over 3lbs. His score, just as he made it, will best convey the amount of success he had. Sept. 17 he took two trout, one of 3lbs. 12oz. and one of 5lbs. 4oz.; Sept. 22, one of 4lbs. 5oz.; Sept. 23, one of 3lbs. 6oz., and one of 4lbs. 2oz.; Sept. 27, one of 3lbs. 11oz. and one of 3lbs. 7oz.; Sept. 28, one of 3lbs. 5oz.; Sept. 29, a trout of 3lbs. 3oz. and a salmon of 3lbs. 2oz. Mr. Crane is much pleased with fishing at the Upper Dam; remarks that persistent fishing is sure to bring success, if coupled with a fair amount of skill, and sure to include some big trout. He says that his trout were taken squarely on the fly, principally with a brown hackle, parmachenee belle and silver doctor or professor, in his cast. He was approached by a New Yorker, however, who had lately arrived, but taken no fish, with the promise of a handsome present if he would "Tell us how you get them."

The Maine big game season has opened with a bang. Most of the Sunday papers have special shooting editions, more or less serious and truthful in character. A great many deer hunters are at the camps or going; some putting off their departure so as to be on the ground on the opening of the moose season, Oct. 15. Three deer came into Bangor on the opening day; doubtless shot in the night (?). But Boston can beat that "all hollow." I saw three deer in the Boston markets one day last week and two on the following day. The Maine season had not opened then; neither New Hampshire nor Vermont. I am perfectly well satisfied that the deer were from Maine, and that the underground route by which so many reached Boston from that State after the close of the legal season last winter is still open. It seems to me that it is the duty of the Maine commission to close it, no matter what it costs.

L. W. de Pass and C. W. Hodkins are back from their Plum Island shooting trip of a week. They had good success, bagging more than 100 birds, including golden plover, beetle heads and many smaller birds. Mr. De Pass had the good fortune to shoot one Wilson snipe, which he is having mounted. They will soon spend another week at the same point, where they own a shooting camp. At that time they expect a good flight of coot and other ducks. SPECIAL.

The Kennel.

Fixtures.

BENCH SHOWS.

Oct. 14-15.—Braintree, Mass.—N. E. K. C. open air show. Address Secretary Open Air Show, Braintree, Mass.

FIELD TRIALS.

Nov. 3.—Connecticut Field Trials, East Hampton, Conn. Entries close Oct. 29. John E. Bassett, Sec'y, P.-O. Box 603, New Haven.

Nov. 7.—Indiana Field Trials Club's trials, Bicknell, Ind. S. H. Socwell, Sec'y.

Nov. 11.—Eastern Field Trials Club's trials, Newton, N. C. S. C. Bradley, Sec'y.

Nov. 15.—International Field Trial Club's trials, Chatham, Ont. W. B. Wells, Sec'y.

Nov. 15-17.—Central Beagle Club's annual trials. L. O. Seidel, Sec'y.

Nov. 22.—Fourth annual field trials of the Monongahela Valley Game and Fish Protective Association, Greene county, Pa. A. C. Peterson, Sec'y, Homesdale, Pa.

Dec. 5.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

The Open Air Show.

THE third open air show of the New England Kennel Club will open at 10 A. M. Friday, Oct. 14, and close at 5 P. M. Saturday, Oct. 15. Judging will begin promptly, and everything will be done to make the show a success, both for the exhibitor and the public.

Special trains will be run by the club from Kneeland street station to (Braintree) club grounds, leaving Boston at 9:30 A. M., Oct. 14, returning same day 5:30 P. M. from same place. Oct. 15 the special will leave at 1 P. M. and return 5:30 P. M. Fare 20c. each way for passengers. Dogs carried free. Dogs not carried on special trains can be sent by N. Y. and B. Despatch Express Company.

Trains run out and return on main line between Boston and Braintree—about fifteen minutes each way—all day.

There will be trap shooting events, and on Saturday there will be whippet racing.

The admission to the dog show, whippet racing, trap shooting and grounds of the club will be 25c. Badges will be sold at this price and will be good both days of the show. Persons purchasing badges the first day will be allowed to use them the second day without further cost. Ample refreshments can be had on the grounds. Exhibitors will have their dogs placed in good quarters in the kennels at night, and properly fed and watered without extra charge. The club house, such as is usually set apart for members' use, will be open to members and their invited guests. Rooms in the club house will also be set aside for the ladies who attend the show and the Ladies' Kennel Association of Massachusetts. Committee on trap shooting, Morton E. Cobb, Hobart Ames; committee on whippet handicap races, J. Duncan Edmands, Harry W. Lacy; judges, Mr. James Mortimer, Mr. J. F. Holt, Mr. George W. Lovell. JAMES L. LITTLE, Sec'y.

Connecticut Field Trials.

THE Connecticut Field Trial Club's field trial of 1898 will be run at East Hampton, Conn., Thursday, Nov. 3. Open to Connecticut dogs only, pointers and setters, all-age and Derby stakes. Purse divided 50, 30 and 20 per cent; $5 forfeit and $5 additional to start. Entries close Oct. 29. President, E. Knight Sperry; judge, N. Wallace; treasurer, J. B. Robertson. For entry blanks address John E. Bassett, secretary, P. O. Box 603, New Haven, Conn.

Points and Flushes.

Entries to the Continental Field Trial Club's all-age stake close on Oct. 15, positively. This stake is open to all setters and pointers which have not won first in any all-age stake at any recognized field trial. Forfeit $10; $20 additional to start. Purse, $500. First, $250; second, $150; third, $100. Forfeit money and breeder's certificate must accompany each entry. W. B. Meares, Sec'y, Hillsboro, N. C.

Entries to the third annual field trial of the Central Beagle Club, to be held at Latrobe, Westmoreland county, Pa., Nov. 15, close on Oct. 20. The secretary, Mr. L. O. Seidel, 404 Smithfield street, Pittsburg, will be pleased to give all further information.

Mr. James L. Little, the secretary, writes us that the classes for bloodhounds at the Braintree show will be as follows: 0, novice dogs and bitches; 1d, open dogs; 1b, open bitches; 1c, limit dogs and bitches; winners' dogs, ribbon; winners' bitches, ribbon.

In the Philippines.

APROPOS of the situation in Manila, there is every reason to believe that as soon as the present state of things is quieted down the Philippine Islands will be visited by the ubiquitous British sportsman. In his way, he has had a great deal to do with the developing of distant countries; and in the Philippines he may find something to assuage his desire for novelty. The forests will afford him plenty of sport, both in fur and feather, large and small. The wild buffalo will surely prove a temptation, for he is a terrible fellow, and enjoys a reputation among native hunters for ferocity, and an antipathy to the human species, white or black. There are several kinds of deer; monkeys and foxes exist in large numbers. The flying-fox or vampire bat is a curiosity in itself, and has to be seen to be believed in. Some of them are of great size, and savage too. As big as a good-sized black and tan terrier, with a fox-like head, these animals create a gruesome sort of feeling when they are first viewed flitting through the air on wings that have a spread of from 5 to 6ft. from tip to tip. They are nocturnal in habit. The fruit and vegetable gardens of the natives suffer much from their depredations. On the other hand, the natives return the compliment by taking a hand in the game known as the "chain of destruction," and eat the little "beasties."

Even the white residents express an appreciation for the flesh of the flying-fox, declaring its delicacy to be equal to that of quail. There is a great variety of gallinaceous fowl to be found on these islands. Pigeons abound, also the francolin. Many of the forest birds are of surpassingly brilliant plumage. At Laguna de Bai, which is situated at the head of the Pasig River, is to be witnessed what may be considered the earliest effort at incubation of eggs outside of nature's workshop. At this place are many hot springs, in which the natives place the eggs of the wild duck, after having made a big collection at the more distant breeding grounds. The mode is as follows: nests are built in frames of bamboo-work lined with paddy leaves. After covering the eggs with some light material they are set floating on the warm water, where they are left till the heat of the water collected in the pools has hatched them. Each set of eggs has its owner, and a watch is kept so that the newly-hatched birds may be transferred to water more in keeping with their natural requirements. The method is effective, though primitive, and doubtless is the earliest system of incubation at man's hands ever recorded.—Illustrated Sporting and Dramatic News.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Yachting.

AT last a positive and definite step toward a solution of the measurement question has been taken in the adoption by the Yacht Racing Union of the Y. R. A. linear rating rule, with girth as an important factor. The choice was made only at the last moment, when the necessity for action became evident, and the Council was practically without other alternatives. It may be said in favor of the rule that it is the best rule now in actual use; that it was devised by experienced and practical men to accomplish much the same end as is aimed at in this country, that it is, at the least, a marked improvement on the rule now in existence, and that it will tend strongly to unite the yachting interests of the two great nations. This latter point is the strongest recommendation of the rule, as in the attempts to improve it which are inevitable the two nations will be almost certain to act in harmony and to come closer together.

In the prolonged discussion of the measurement question since the Union was first in process of organization nearly two years ago, a great many general propositions and vague suggestions have been made, but there have been few complete and matured plans suggested.

It has been our aim to promote during the summer a thorough discussion of such plans, with a view to deliberate action at this time, but in this we have failed to secure that aid which might reasonably be expected under the circumstances. The only ones who have come forward to discuss the question are the two of our correspondents who are equally opposed to the Y. R. A. and Hyslop rules, and who advocate a radically different system.

We have shown during the summer the weak points of the Y. R. A. rule, notably lack of adaptability to the centerboard model, and the fact that a girth measurement is not an inducement to a larger section; and on the other hand we have pointed out the principle involved in the Hyslop formula, a formula specially designed for the American fleet at the present time, to place the keel and centerboard types upon as even a footing as possible. In such criticisms as have been made on these points, as in the recent letter of Mr. Froude, there has been no attempt to dispute our statements as to girth, and none to prove the errors of the Hyslop rule.

Had the discussion been taken up by yachtsmen on the lines we have laid down and carried on through the summer, a great deal might have been settled, and the Council would have been far better prepared for the most serious step that the Union has yet taken. As far as the work of the Council is concerned, the members have, for one reason or other, given no attention to the Hyslop proposal, a fact plainly brought out by the allusions to it at the meeting, which one and all showed a complete ignorance of its underlying principles, its practical application or its possible influence on design. Had it been discussed fairly and intelligently, and discarded on its merits, there would have been no cause of complaint; but it is disappointing to feel that a great deal of time and labor, freely given for the good of yachting, has been entirely wasted through the neglect of those who might have turned it to some practical account.

What the result of the present action may be, it is impossible to foretell; it does not affect the smaller classes, in which the racing is the most active, and the rule will not be adopted by the Y. R. A. of Massachusetts, for instance, with its large fleet of racing yachts in the smaller classes. It would be an excellent thing for yachting if half a dozen men about New York would take up a class, say the 42ft., and build to it so as to test the possibilities of the rule as shown in a mixed fleet of finkeels, keels and centerboards; an experiment like this, not a specially costly one, and giving a certainty of good sport for at least a couple of seasons, would go far to test the practical advantages and disadvantages of the rule. It might be made possible by early action on the part of the various New York and Sound clubs in offering substantial money prizes for a regular series of races for the class next season; thus making an early certainty of sport that would induce men to build this winter. Such a scheme would attract those who object to the one-design plan, and would be of more use to yachting at the present time.

THE sixth general meeting of the Society of Naval Architects and Marine Engineers will take place in New York on Nov. 10 and 11. The sessions will be held in the Auditorium, at No. 12 West Thirty-first street, beginning at 10 A. M. The work of the Society is becoming more interesting and valuable each year, and of greater interest to the general public, as well as to those directly connected with naval architecture. The coming meeting should be very interesting in view of the experiences of the late war.

Dominion.

(*Continued from page 276, Oct. 1.*)

BRIEF as it is, covering a period of but three years, from the summer of 1895 to that of 1898, the history of the Seawanhaka international challenge cup covers the most rapid and extreme course of development known in yachting. The changes of former days came gradually by slow steps; it took nearly a generation in England to complete the change from inside ballast to the heavy outside lead keel, and the modern American yacht is the result of fifteen years of hard fighting and gradual modifications. In the Seawanhaka cup classes, however, the 15ft. and 20ft., an entirely new principle of designing was discovered and almost perfected in the course of a single season.

From the very beginning of navigation in sailing vessels down to the end of the year 1895, the builders, naval architects and designers of all ages have acted upon one single and simple theory of design. It was assumed in the first place that the vessel, whether a merchant ship,

man-of-war, yacht or fishing smack, was to be sailed as nearly upright as possible. While employing various means, such as beam, live or dead ballast, or cargo, to this end, the designer, even in the most remote days, fully understood that no possible power could retain a vessel when floating freely and under way with sails set in the same upright position which she would assume when at anchor, or in which she would naturally be represented in a design. The advantages of the upright position are plainly apparent, the lateral plane is made effective in the highest degree, as its actual area is at the maximum in the upright position, and the flat portions of this area, the keel, centerboard and side, are opposed to the water at the most effective angle; in the same way the effective area of the sails is at its maximum in the upright position, and the effect of the wind is greater as the angle at which it strikes the sail is increased. The comfort of passengers and crew, the facility for working about the decks, and especially the efficiency of guns, are all at their maximum in the upright position with decks level.

With a full realization both of the desirability and impossibility of holding his vessel in an upright position, the designer has accepted as one of the inevitable

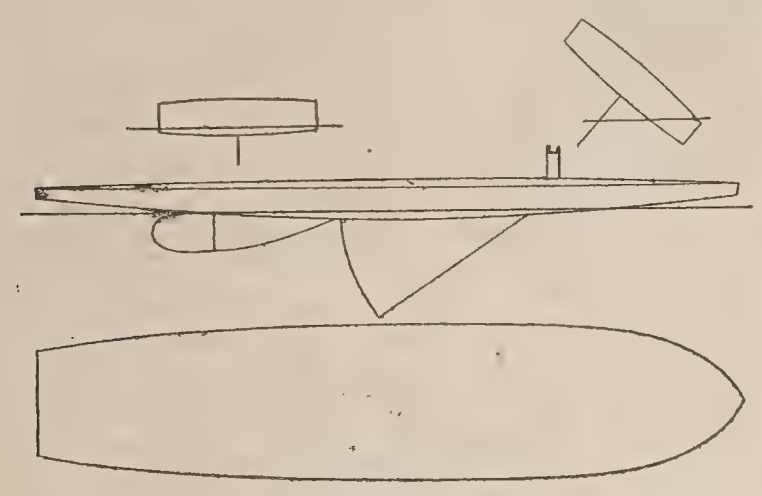


FIG. 2. QUESTION, 15-FOOTER, 1895.

and unalterable limitations of his work that the angle of heel when under way can never be less than a certain minimum, and should never exceed a certain maximum. The actual limits for most sailing vessels may be placed at a minimum angle of about 5 degrees and a maximum of about 20 degrees. There are exceptions, the old narrow cutters for instance greatly exceeded both limits, heeling heavily even in a light breeze, and lying almost flat in a hard blow. Both the old-time builder and the modern yacht designer assumed as a practical working basis that his vessel would or should do her best work, attaining her highest speed under full sail, at an angle of about 15 degrees; and the latter at least relied for success largely upon his careful adjustment of the volumes and centers of his "in-and-out wedges," the portions of the hull about the L.W.L. alternately immersed or emersed, as the vessel tacked or jibed.

The first contestants for the Seawanhaka cup, the challenger Spruce IIII. and most of the defending fleet, Trilby, Trust Me, Olita and Ethelwynn, were designed on this principle, of sailing as nearly upright as possible, the first two carrying heavy lead bulbs at a great depth, and the latter two relying on beam and the weight of crew. In this they simply followed all the larger and more famous yachts, America, Puritan, Volunteer, Vigilant, Gloriana and Defender. Ethelwynn in particular, like all of the Sorceress type to which she belongs, was intended to be kept as nearly upright as possible by a crew of two men, her topsides being carried out to

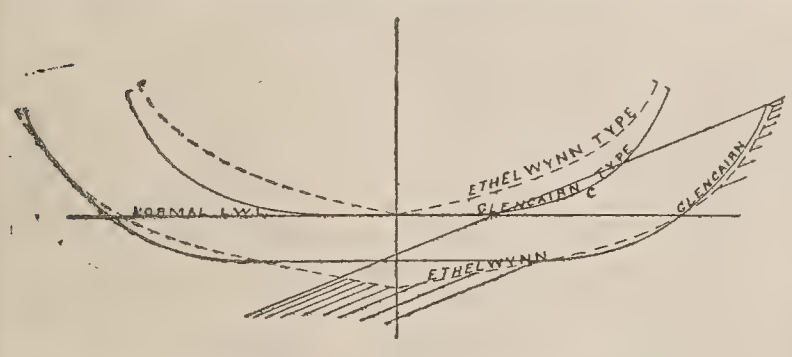

FIG 3. COMPARISON OF ETHELWYNN WITH GLENCAIRN TYPE.

an extreme beam at deck of 6ft., to give a seat for the crew to windward. She was expected to do her best work within a limit of heel of 15 degrees, or even less; and her topsides were carefully shaped in order to give her what was then considered a good form when heeled to this angle.

The great majority of yachts, as represented by such typical ones as America, Puritan, Minerva, Gloriana and Defender, whether keel or centerboard, may be classed together as of the V type of section, with a material amount of deadrise and a rounded bilge. This type is marked by a peculiar feature which is little known or appreciated by even expert yachtsmen. When the vessel rests at anchor, of course, in the upright position, the longest line of her plane of flotation is that measured by the rules, from the fore side of the stem at the waterline to the after side of the sternpost; all other fore and aft lines in this plane are shorter according to their distance from this central axis. The idea is almost universal that as the vessel heels, the plane of flotation assuming new forms, it lengthens very much owing to the immersion of the overhangs, forward and aft. This, however, is not necessarily, nor even usually, the case; on the contrary, the longest element of the new plane of flotation may and in all probability will be shorter than the measured L.W.L.

Assuming the vessel in smooth water and at rest, it is evident that her displacement must remain the same at all angles of heel, and we will further assume that the form is such that there is no material alteration of fore and aft trim due to heeling. If the vessel be heeled by some outside force until one bilge is well immersed, say at an angle of 15 degrees, the bulk of the immersed bilge will in all probability be so great as to actually lift the axis of the normal plane of flotation (the measured L. W. L.) several inches out of the water. If the yacht is well cut away below water at the stem and stern, as in all modern craft, the new waterline on stem and stern will be materially shorter than the old. The new plane of flotation will be very unsymmetrical about the axis, it will, in spite of the overhang of the bow, shorten very rapidly there, and though it will lengthen considerably aft, it is quite probable that its longest element (the longest fore and aft line that can be measured on it) will be much shorter than the original measured L.W.L.

This is shown in the accompanying design of Ethelwynn, with the list line at an angle of 15 degrees plotted in the three plans. The designed L.W.L., between Stations 0 and 12, is 15ft., the displacement to this line being 1,022lbs. When heeled to an angle of 15 degrees the axis lifts out about 1½in. for the same displacement. The immersed and emersed lines are shown in both sheer and half-breadth plans, in the latter forming the new plane of flotation, which is very unsymmetrical, the breadth of the lee side being 3ft. 1in., and that of the weather side but 1ft. 2½in. The length of the axis has been reduced from 15ft. to but 13ft. 7½in.; and this line is also the longest element of the new plane of flotation. Thus the greatest length of the yacht when heeled to the effective limit is shorter by nearly a foot and a half than when she is upright in measuring trim. Such modern yachts as Gloriana, Wasp, Vigilant, Britannia and Defender, all with long overhangs at each end, would show a similar plane of flotation when heeled; and it is probable that in none of them would the longest element of this plane equal the measured L.W.L.

The conditions assumed in a theoretical investigation of this kind are not quite true to practice; the value of the overhangs in rough water is plain enough, though even in this case the effective limit is probably much more restricted than is commonly supposed, but even in ordinary smooth water the theoretic conditions are not quite realized. There is a vertical and downward component of the driving force which actually tends to increase the displacement (to an appreciable extent in a 15 or a 20-footer, with a big sail plan and a heavy crew to windward), and the inevitable disturbance of the water, resulting in a bow and a quarter wave with a hollow amidships, tends to settle the vessel deeper in the water, and to make the actual inclined plane of flotation a curved surface following up and along the fore and aft overhangs, instead of a perfect plane. Thus in practice both overhangs, but especially the aft one, are utilized to a greater degree than the geometrical intersections and projections of the design would indicate.

The subject of long overhangs, which has been before the yachting world since the advent of Gloriana in 1891, is probably more thoroughly misunderstood and overestimated than any other known to yachting. This is especially true as applied to the fore overhang.

The small yachts of 1895 were all of the conventional V type, with one exception, the Huntington boat Question. This craft was a decided novelty, more or less of the sharpie type in a way, but still with features peculiar to herself for which due credit must be given to her designer. She was launched very early in the season, and showed great speed in the strong spring winds, and she was sailed through until the last races of the fall. With about the same designed length as the rest of the class, 15ft., she had a small sail plan, and her strong point was in a heavy breeze and sea, she making a excellent record under these conditions alongside of very much larger yachts. She was not successful in the trial races for the cup, sailed in light weather, but when the conditions of wind and sea were to her liking she was far and away the fastest of the class. These performances of Question were widely commented on in the papers, and attracted general attention to her and to the "scow" type, as it was termed at the time. Her general form is shown in the accompanying cut, the over all length being 24ft., l.w.l. 14ft. 5in., beam 5ft., draft about 3in., and freeboard about 9in. The sides were vertical, the sections showed a round of about 2in. across the bottom, and about the same amount of crown, the floor had a long easy sweep fore and aft, which was almost duplicated in the deck, the sheer line being nearly straight. The sides were nearly parallel in the middle body, narrowing a little at the transom, while the bow rounded in very bluntly.

Question did her fast sailing when heeled to an excessive angle, the lee deck awash or even under water and the keel and centerboard slot well clear of the water. In this position she became practically a narrow canoe of V section, one side and half of the bottom forming the V, while the square chine or corner of the bilge was immersed to a length materially exceeding that of the measured L.W.L. We have never understood the principle on which she and her immediate successors were designed, as we have Mr. Huntington's authority, within a few weeks past, for the fact that she and others, even including Skate of last year, were not designed upon this principle, of sailing on one bilge only; and that Akabo, of this year, is the first boat in which he has tried it. Whatever the real ideas of her designer were, however, those who have studied her have attributed her speed to this evident reduction of midship section and beam and increase of length when heeled from the upright position to an excessive angle.

This idea, more or less fully developed, was in the minds of many during the winter of 1895-6, and the "scow" type was well represented in the second series of the Seawanhaka trial races, in 1896. The most successful of the type, the winner of the trials, was El Heirie, designed by C. H. Crane, whose lines were published in the FOREST AND STREAM of Aug. 22 and Sept. 26, 1896. In this boat Mr. Crane followed the proportions of length and sail area then common in the 15ft. class, the waterline being between 14 and 15ft. and the sail area from 240 to 250sq.ft., but the beam was reduced, the freeboard cut down, especially at the ends, and the boat was specially designed to sail at an excessive angle. The bilge was rounded, instead of being square as in Question, and when the boat was heeled

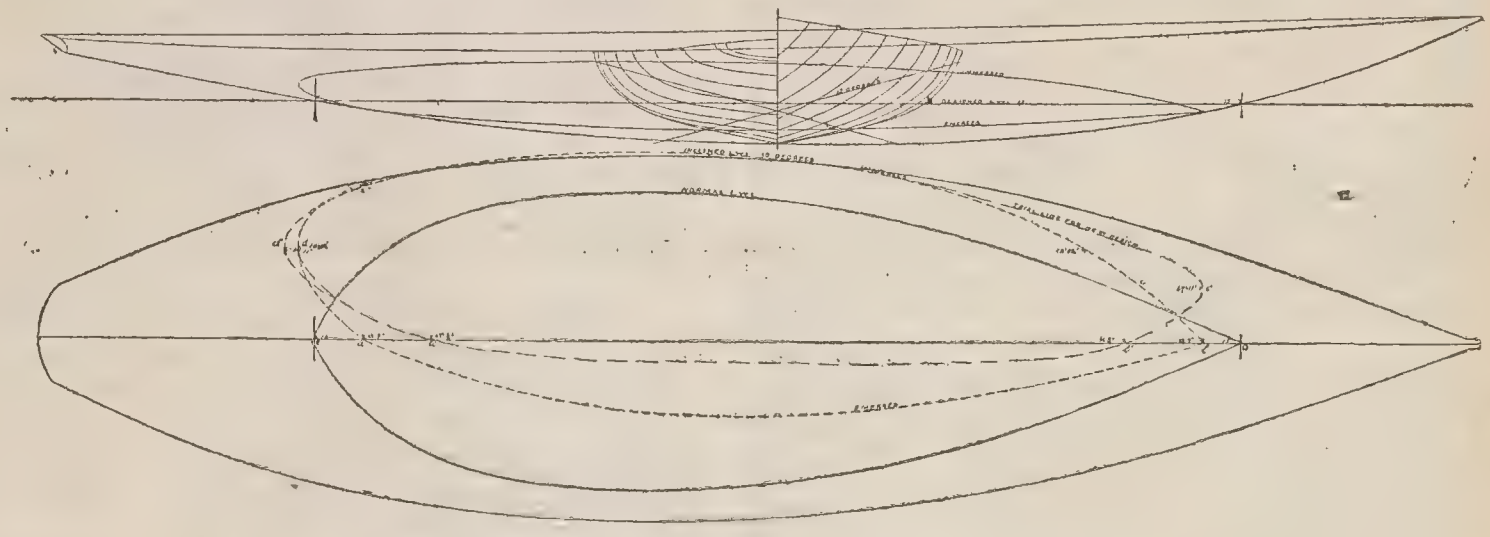

FIG. 1. ETHELWYNN, WITH INCLINED WATERLINES.

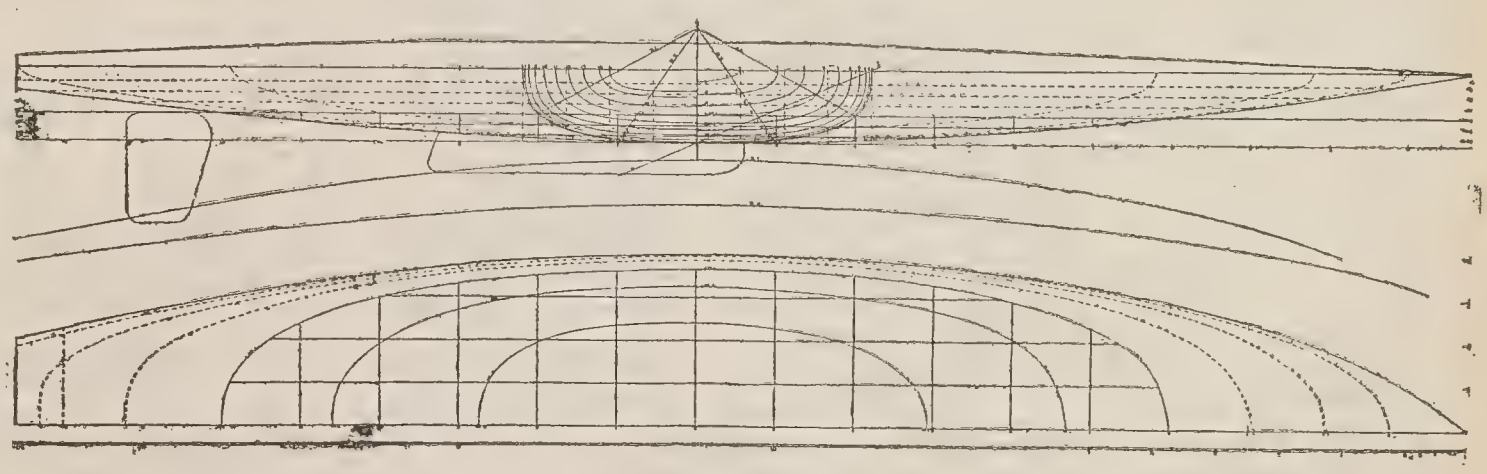

FIG. 4. EL HEIRIE, 15-FOOTER, 1896.

to about 20 degrees, or with the deck just awash to leeward, and the keel at the surface of the water to windward, this immersed bilge assumed the form of a canoe, with an effective length of 16 to 17ft., and a beam of but 3ft., instead of the length of 15ft. and the l.w.l. beam of 5ft., which she showed when upright.

In issuing a challenge to the Seawanhaka Corinthian Y. C. after the first races in 1895, the Royal St. Lawrence Y. C. placed its main reliance in the skill, both as a designer and boat handler, of Mr. G. H. Duggan, one of the founders of the club, and the designer of a number of small yachts well known in Canadian waters. Of the fleet of sixteen yachts built for the challenger's trial races of 1896, seven were designed by Mr. Duggan, the others being designed by other amateurs or by professional builders of skiffs and canoes. In beginning the work of designing a trial fleet, Mr. Duggan naturally started with Sorceress and the Ethelwynn type, working out several preliminary designs. The general discussion of Question and her peculiarities had already gone far enough to attract attention to the gain in effective length by excessive heeling, and Mr. Duggan from the first devoted much attention to the inclined lines. When the problem of designing is taken up from this new point of view, the inclined lines being the primary instead of the secondary consideration, the way is clear to an extensive range of experiment and development, as shown this year in the production of Dominion. When studied in this way, the lines of any of the yachts of the old type, those of Ethelwynn for instance, Fig. 2, show at the outset a most unsymmetrical outline to the inclined plane of flotation, and, what is of much more importance, a decided shortening of the length as the upright position is departed from. In going over this part of the design with his associate, Mr. Shearwood, who has assisted in the designing as well as the sailing of all the Duggan boats, both became convinced of the material gain both by a reduction of nominal measurement and an increase of effective sailing length, which must follow from an alteration of the form of the inclined plane, cutting away at the points a and b, and adding at c and d, especially at c. A new plane of flotation was roughly sketched in, as shown in the broken lines, embodying the three ideas of a symmetrical form, a reduction of length about the point of measurement (the longitudinal axis), and an increase of length at some other point.

With this much as a beginning, the investigation was continued in an inverse order to the sections necessary to obtain such a form of list lines. It was found that the cutting away of the ends of the L.W.L. involved a flat floor carried well out into each overhang, in place of the usual V; and that the lengthening of the lines at some special point involved a carrying out of the bilge into the extreme ends by means of a hard shoulder. In Fig. 3 is shown one of Mr. Duggan's preliminary studies on this point. The approximate sections of Ethelwynn at the fore end of the L.W.L. and amidships were plotted for the inclined position, and new sections were sketched in to comply with these new requirements. The V bottom was cut away amidships to make a more symmetrical form of midship section in the inclined position and also to improve in the same way the plane of flotation. The same change from the V to a flat floor forward cut off a long triangular pyramid, of small volume, but counting heavily in length. At the same time the section was made hard and round at c, so as to immerse it and carry out the length. The same changes were made in the after sections, though necessarily to a lesser degree, these sections being already flatter and with a harder turn.

When these experimental sketches were embodied in a completed design, the result, viewed from the normal standpoint of the yacht in an upright position or slightly heeled, or the design projected in the usual manner, was anything but satisfactory. The normal L.W.L. was square across at both ends, the level lines and lower waterlines showed the same blunt form, the beam was excessive for the length, there was a maximum of wetted surface, and a form that apparently was incapable of even moderate speed. All this, however, disappeared as soon as the yacht was heeled or the inclined lines were projected in the design. There then became visible a fair and beautiful form, practically a long, narrow canoe, with a well-shaped and symmetrical midship section of reduced area, a symmetrical plane of flotation, an extreme beam at the new inclined waterline of but 4ft. 5in., as compared with the beam of 6ft. 2in. when upright, and an effective immersed length of 21ft. 7in. in place of the 17ft. 6in. which showed under the measurer's tape. The performance of these boats fully justified the expectations based on theory; when heeled to a rank angle, about 22 degrees, they were wonderfully fast compared with the best boats of the old type; in light airs it was found necessary to heel them by sending the crew to leeward. When nearly upright, before the wind, they were relatively slow; their short waterlines, great beam, blunt form and excessive wetted surface, all combining to stop them. This, however, was a small matter compared with their speed in reaching and to windward. In rough water they were fast and easy, and though capsizeable, they had practically a safe range of stability for racing craft. They suffered a certain loss as compared with the old type in that the great angle of heel reduced both the effective area and the value of the surface of sails and centerboard, but the former was compensated by the extra amount of sail allowed by the great shortening of the official L.W.L., and as to the latter, the area of board was practically unlimited, and the limit of drop, when adopted in 1897, was very liberal.

From many conversations with Mr. Duggan at intervals since 1896, we can say that, apart from the first suggestions derived from the discussions of Question, his work for three years in the 15 and 20ft. classes has been thoroughly original. The successive boats, from the first 15-footers, through Glencairn I., Glencairn II., Strathcona and Speculator, to Dominion, show a definite and consecutive development of those peculiar and novel features which he, more than anyone else, has elaborated into a distinct method of designing. As now practiced, the basis of this method is the inclined waterline or plane of flotation at an angle of about 22 degrees, including but one-half of the hull, between keel and gunwale; the immersed and emersed list lines, bounding this plane, are first plotted, of a form to give the greatest possible effective length when heeled for the least possible measurement of the nominal L.W.L. when upright. The midship section, the outline of the bilge from keel to deck, as in Fig. 3, is then drawn, as nearly symmetrical as possible, and the form of this immersed bilge (but one-half of the entire hull) is filled in and faired by means of diagonals so located as to be almost equivalent to the sheer line and the ordinary bow-buttock lines of an upright hull. These lines and the sections are then carried out fair above water, meeting the sheer and deck lines to leeward and the keel line on the windward side, and completing the half hull, this is duplicated to make the other half, and the bow and transom are drawn in to harmonize with the rest of the design. The form of the hull in the upright position is hardly considered, the lines at an angle of 22 degrees being paramount to all other details.

W. P. S.

[TO BE CONCLUDED NEXT WEEK.]

The Yacht Racing Union of North America.

THE second annual meeting of the Yacht Racing Union of North America was held at the Windsor Hotel, New York, on Saturday, Oct. 1, the session beginning about 2 o'clock, and ending shortly after 5 o'clock. A meeting of the Council was held on Friday night, at which were present President L. M. Clark, of Boston; Secretary F. B. Jones, New York; Treasurer N. D. Lawton, New York; Æmilius Jarvis, Toronto; A. D. F. Bancroft, Philadelphia; J. M. Macdonough, San Francisco, and A. J. Prime, New York. The special topic of discussion during the evening was the measurement rule, as it was realized by all that some positive step must be taken at once; the matter not being left for another year, or even deferred until the building season had begun. The only proposals considered were the British Y. R. A. rule, now in force (the linear rating rule, with girth as a factor), and the different suggestions made at times by Mr. N. G. Herreshoff. None of the members of the Council had given any attention to Mr. Hyslop's proposed formula, and no attempt was made to discuss it. An examination of the different Herreshoff formulas showed that none were in shape for actual adoption, and it was finally decided to recommend the adoption of the British Y. R. A. rule for all classes of 30ft. and over. During the evening the Council dined at the New York Club, as the guests of Treasurer Lawton.

At the meeting on Saturday the following representatives were present:

Yacht Racing Association of Massachusetts, 33 clubs, Louis M. Clark; Yacht Racing Association of Long Island Sound, 22 clubs, Chas. P. Tower, E. Burton Hart, Jr., W. P. Stephens, F. Bowne Jones, Charles T. Pierce, Walter C. Kerr and Oscar E. Chellborg; Pacific Interclub Yacht Racing Association, 5 clubs, Joseph M. Macdonough; Lake Yacht Racing Association, 8 clubs, Interlake Yachting Association, 9 clubs, and Lake Michigan Yachting Association, 7 clubs, Æmilius Jarvis; Inland Lake Yacht Racing Association, 5 clubs, F. B. Jones; New York Yacht Racing Association, 17 clubs, A. J. Prime; Atlantic Yacht Club, Newbury D. Lawton; Philadelphia Corinthian Yacht Club, A. F. Bancroft; Penataquit Corinthian Yacht Club, H. S. Jewell; Rhode Island Yacht Club, Dr. A. M. Potter. The Larchmont and Marine and Field clubs sent no representatives.

The reading of the minutes of the previous meeting was dispensed with; the treasurer read his report, recommending that the dues be increased or an assessment ordered, as the very small dues did not give sufficient income. The secretary reported a membership of eight associations and seven separate clubs.

The report of the Council was then read, as follows:

The Council of the North American Yacht Racing Union, in compliance with the duties imposed upon them by subdivision 7 of the articles of association, respectfully make the following report:

That they have held numerous meetings with a view to framing such racing rules for submission to the Union as relate to subjects not already provided for by the racing rules heretofore adopted. That upon a careful consideration of all the rules now in force the conclusion was arrived at that the only additional rules needed by the Union would be those relating to measurement, classification, time allowance and crews.

Of these the most important by far seemed to be the one relating to measurement. With respect to what has been done by the Council in arriving at the determination to recommend the adoption of the rule submitted herewith we would state that there has been submitted to us for our consideration almost every known formula. We have carefully investigated the merits of all the different systems of measurement in use, as well as all those submitted for our consideration or that have been brought to our notice.

The subcommittee of our Council has visited England and thoroughly investigated the effects on design of the rule now in force there. Without entering into an extended argument in support of the conclusions we have arrived at, we will state that we have found objections to the adoption of every one of the formulas considered.

Many of the rules suggested have good points, but also objectionable features which would preclude favorable recommendation. After prolonged discussion and careful study of the whole subject, the determination has been arrived at that the length and sail area rule now in force must without further delay be abrogated and something else substituted in its place. Of all the formulas considered the only one that has had a fair trial with satisfactory results is the girth rule, which, after very great deliberation and careful study on the part of some of the ablest yachting experts in England, has been tried with the most satisfactory results. The influence that the use of this rule has had on the design of such boats as have been built under it would seem to be all the argument that is needed in favor of its adoption here. The uniform sentiment in its favor wherever it has been tried would seem to be a perfect answer to all objections to its use. The designers who build boats under it, the racing men, as well as all who have had practical experience with it in operation, commend it and speak favorably of the conditions induced by its adoption.

It has proved to be a just measure of speed; it penalizes no boat; it taxes size, power, propelling force only to the extent of equalizing the chances of winning of boats of different types properly brought together in their legitimate classes. Of all the rules submitted, it presents fewer objections than any that have been considered. The adoption of this rule would promote international uniformity, the benefits of which to this Union would be incalculable. It would be quite unlikely that any change would be made in the rule anywhere without an international conference, in which our Union would then have a prominent part. The strong position that this would give to our association would make its influence felt everywhere. Even were the rule suggested no better than others, these considerations should influence us to select it in preference to others equally good. The classification under the formula follows closely the one in use under our present rule, and the slight changes recommended will not affect existing boats. The rule relating to crews has been made to conform as far as practicable to existing regulations.

The report then gives in full the Y. R. A. rule, $\frac{L.+B.+0.75\ G.+0.5\ \sqrt{S.A.}}{2}$, with the details of method of measuring, in which two changes were proposed, the present American method of measuring sail being retained and the centerboard, which is practically barred in the English rule by being measured twice, being measured as follows:

"To the girth of centerboard yachts must be added twice the distance between the lower side of the keel to the center of the area of the centerboard when lowered to its fullest extent. Centerboards, when ballasted, except to overcome flotation, or fitted with bulbs or otherwise, to be measured as fixed keels."

The following classes were proposed:

Schooners.—First class, all over 100ft.; 100ft. class, not over 100ft. and over 80ft.; 80ft. class, not over 80ft. and over 65ft.; 65ft. class, not over 65ft.

Sloops, Cutters and Yawls.—First class, all over 65ft.; 65ft. class, not over 65ft. and over 52ft.; 52ft. class, not over 52ft. and over 42ft.; 42ft. class, not over 42ft. and over 36ft.; 36ft. class, not over 36ft. and over 30ft.; 30ft. class, not over 30ft.

The report was accepted without discussion. Mr. Kerr asked for information as to other proposed formulas investigated by the Council. Mr. Pierce moved that the rule, as embodied in the report, be adopted at once. Mr. Jewell asked for information as to the origin of the factors and the coefficients in the rule. A general discussion ensued, in which Messrs. Lawton, Jarvis and Jones spoke in favor of the rule. Mr. Stephens opposed the rule on the grounds that it had not given thorough satisfaction in England, that it would not prove as well adapted to the conditions on this side as in British waters, that from its form, apart from the actual measurement of all or a portion of the centerboard, it discriminated against the centerboard type, and that it was wrong in theory, as girth does not, of necessity, place a premium on the area of section in all cases. President Clark spoke briefly, saying that he had come from Boston without the expectation of any rule being adopted at the meeting, but that since his arrival in New York he had been convinced of the necessity for the immediate adoption of a rule, and he favored the Y. R. A. rule on the evidence as to its successful operation in England. Mr. Pierce moved the adoption of the rule, which was carried with no negative votes.

A motion was next made by Secretary Jones to change the name of the organization to the Y. R. U. of North America, the original form being cumbrous and unusual, generally being reversed in use. An amendment was offered to make it the Y. R. U. of North America, Porto Rico and the Philippines, but it was not seconded and the first motion was carried. Mr. Jones also offered an amendment changing the date of the annual meeting to the latter part of October, but Mr. Jarvis objected on the ground that it would involve a change of date of annual meeting on the part of all the associations, whose meetings must be held after that of the Union. After general discussion the amendment was dropped.

Mr. Tower brought up the matter of Rule 7, Section 2, relating to alterations of ballast and water, no time being specified, and asked for an amendment specifying a definite hour. It was explained that the rule had been purposely worded in this way to allow clubs in different localities to follow their established custom.

The following recommendation of the Council in regard to proportion of ballast to displacement was then taken up and adopted, having been omitted in its proper place in connection with the rule: "The ballast must not exceed more than 60 per cent. of the displacement of the yacht."

The following gentlemen were elected as Council for the coming year:

Louis M. Clark, Frank Bowne Jones, Newbury D. Lawton, E. W. Radder, Æmilius Jarvis, J. M. Macdonough, A. J. Prime, A. T. Bliss, G. H. Duggan, Oswald Sanderson, E. H. Ambrose, A. F. Bancroft, Oliver E. Cromwell, Ralph N. Ellis and Benjamin Carpenter.

The meeting then adjourned, a meeting of the new Coucil being held later, at which the present officers were re-elected.

Canoeing.

The Columbia River.

BOSTON, Sept. 29.—*Editor Forest and Stream:* To satisfy a request for information expressed in your edition of Sept. 24, I would give the following recollections of a trip on the Columbia River, from Golden, B. C., on the Canadian Pacific Railway, to the source of the river, at Lake Windermere. I rowed from Golden in a clumsy four-oared boat. I had to pull all the way or for four days of thirteen hours each, and yet I enjoyed the trip very well, because of the extraordinary beauty of the scenery. On the right we had the snow-capped Selkirks, on the left the ice peaks of the main range of the Rockies. The mother lakes are full of trout; the water is as clear as that of Lake Superior. Mine was a trip of exploration, and I took only a very little time for sport, but that little time made the down trip one to be remembered. If it was enjoyable going up, it was unceasingly delightful, a magnificent trip, going down. It is the big game country of America par excellence, is that 100 miles or more from Windermere to Golden. There are many channels and islands in the river, and all are full of wildfowl. I never saw wild geese in quantity before that trip, although I thought I had. I had a photographic outfit, and by climbing onto the foothills glorious panoramic views of river, lake, islands, foothills and mountains clad in eternal snows may be taken even with an ordinary camera. I brought home some views that I still consider my best.

Any time between May 1 and November is the right season, although, of course, the sportsman will be guided by the game laws. The population is kindly and honest. Many young English gentlemen, keen sportsmen, are ranching on the banks of the river. A small steamer now runs from Golden to Windermere. I would advise taking the steamer up and canoeing and shooting down. Grizzlies, elk, panthers, etc., can be had by using one's ankles. Outfits and guides can be had at Golden. I have never ceased to wish to go back, and I shall.

L. O. ARMSTRONG.

The Annual A. C. A. Meeting.

THE following notice has just been sent out to members of the A. C. A. executive committee:

BUFFALO, Oct. 1.—Dear sir: Commodore Thorn has instructed me to notify you that the annual meeting of the executive committee of the American Canoe Association will be held in Buffalo on Oct. 17, Monday morning at 9 o'clock, at the Iroquois Hotel. It is hoped that you will exert every effort to attend. Yours very truly,

CHAS. P. FORBUSH, Sec'y-Treas.

Invitations have been sent out by the Buffalo C. C. for a dinner on Saturday evening, Oct. 15.

Rifle Range and Gallery.

Fixtures.

Oct. 21-23.—Los Angeles, Cal.—First fall tournament of the Los Angeles Sharpshooters. Open to all riflemen. F. S. Hicks, Sec'y.

Los Angeles Sharpshooters.

THE tournament of the Los Angeles Sharpshooters will be held on the new range at Glassell Station, on the Terminal Railway, five miles from the center of the city and reached in fifteen minutes; special railroad fare to riflemen.

The range is open and level, with no obstructions or barriers between the shooter and the target, and in this respect is superior to most ranges in this country. There will be eight or more targets, all connected by electric signal system with the firing points, and all appliances necessary to convenience and safety will be provided. Shooting begins at 9 A. M. and closes at 5 P. M. each day.

The programme of the tournament is designed to encourage rifle practice in various phases, and is as follows:

Sharpshooters' team match, Oct. 21, 1 P. M., 200 and 500yds., military target, military rifles and semi-military or sporting rifles taking Government ammunition or .30cal. smokeless cartridges, no telescope sights; minimum trigger pull, 3lbs.; off-hand at 200yds.; any position, head toward the target, at 500yds.; no artificial rest. Open to teams of five men. Entrance fee, $10 per team. Any company, club, or town may enter more than one team, but no person shall shoot on more than one team. Scores—Creedmoor count, 10 shots at each range per man; no re-entry. Prizes: Highest team, $50; second, $30; third, $20; fourth, $15; fifth, $10. For highest aggregate individual score, gold medal.

Ring target re-entry, 200yds., German 25-ring target, off-hand, any rifle, any trigger, no telescopes, no palm rest. Three-shot tickets, 50 cents; three tickets to count; ties decided by next best tickets. Prizes: First, $40; second, $30; third, $20; fourth, $10; fifth, $5. Five prizes of $3 each; five prizes of $2 each.

Expert pool, German ring target, 200yds., off-hand, any rifle, any trigger, palm rest allowed; no telescope, no rest. Four-shot tickets, $2; no re-entry. Three prizes of 35, 25 and 20 per cent. of total entrance money. Special premium of $50 for 100 point ticket.

Merchandise shoot, 200yds., off-hand, military target, any rifle not less than 3lbs. pull; no telescope, no palm rest. Three-shot tickets, 50 cents; re-entry; three best tickets to count; ties decided by next best. Attractive list of prizes will be given.

Midrange bullseye pool, 500yds., military target; bullseyes only to count; any rifle, not less than 3lbs. pull; no telescope; any position without artificial rest. Three-shot tickets, 50 cents; re-entry; 80 per cent. entrance money to be divided each day pro rata for bullseyes scored.

Bullseye pool, 200yds., off-hand; military target; any rifle, any trigger. Three-shot tickets, 50 cents; re-entry; 80 per cent. entrance money divided daily.

Members' pool, 200yds., off-hand, L. A. S. rules; open only to members not qualified on range book as sharpshooters. Three-shot tickets, 50 cents. Re-entry; three tickets to count. Five prizes, paid daily, of 30, 20, 15, 10 and 5 per cent. of entrance money.

Long range match, 1,000yds., military target; any position without artificial rest, no telescope; ten-shot tickets, 50 cents; re-entry, Creedmoor count. Prize for best score, single ticket, Winchester single-shot .30-40 rifle. Special gold medal for "possible."

Los Angeles Times Special Prize Match, Saturday, Oct. 22.—The Los Angeles Times offers a list of very valuable prizes for a match under these conditions: At 500yds., new "skirmish" target, designed by Capt. Kelly, of the Los Angeles Sharpshooters; any rifle not less than 3lbs. pull; no telescope or magnifying sights; L. A. S. rules; 10 shots only, no re-entry. Entries by Times coupons only; contestants limited to fifty.

Riflemen and sharpshooters' teams intending to compete will confer a favor by informing the committee at an early date, in order that adequate arrangements may be made for them. Teams especially are requested to send word. For further information, address F. S. Hicks, secretary, 127 West Second street, Los Angeles, Cal.

Cincinnati Rifle Association.

THE following scores were made by members of the Cincinnati Rifle Association, Oct. 2, at Four-Mile House, Reading Road. Conditions, 200yds., off-hand, at the German ring target. Gindele was declared king with a score of 211. Nestler was high with 65 for the Dietrich medal. Drube was high for the Uckotter trophy with a score of 209. Weather warm and gusty, 11 to 2 o'clock wind:

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

"Twenty Years of Trap-Shooting in Missouri" is the title of a work just from the press, compiled by J. E. Guinotte, first secretary of the State Association, and published by the Federation of Kansas City Gun Clubs. It gives a most minute history of the Missouri State Game and Fish Protective Association from its organization to the present time, including a complete record of all proceeding, a list of all its officers, and other noted sportsmen, and a vast amount of information of general interest to sportsmen of the State. It contains 418 pages, and is neat and artistic in all its mechanical details. Price $4. E. A. Hickman, secretary, Kansas City, Mo.

The new catalogue of the Hunter Arms Company, Fulton, N. Y., is a gem of typographical neatness. The illustrations are exceptionally fine. In it they call special attention to some changes in their guns, notably the putting of their Damascus barrels on No. 0 and No. 1 grade, and the making of a $60 list ejector with Damascus barrels, that they are now putting the crown steel barrels on the No. 2 grade, and their new nitro steel barrels on the No. 3 grade. The company was never so busy as at the present moment.

Mr. Henry Hawkins, who holds an important official position with the American E. C. & Schultze Powder Co., in the manufacturing department, at Oakland, sailed for England last week on a visit of a few weeks' duration. Although Mr. Hawkins has been in America but a few months, he has learned dearly to like America and Americans, and his praises would bring a modest blush to the native American were they not so hearty and sincere. We wish Mr. Hawkins a happy voyage.

On the grounds of the Lyndhurst Shooting Association, Lyndhurst, N. J., Oct. 19, there will be a 25-bird handicap, $10 entrance, birds extra, 25c. Also a 10-bird event, $5. Shooting commences at 11 o'clock. Grounds can be reached in thirty minutes from New York via Erie to Rutherford, or D. L. & W. to Lyndhurst. Telephone 36a Rutherford. Telegrams to Rutherford. T. W. Morfey, secretary.

Mr. Justus von Lengerke, of Von Lengerke & Detmold, has been taking some outings where the fish are to be found in Sullivan county, and he has caught some most enviable strings of fish, his last catch of small-mouth bass being of just the right size for beauty combined with good fighting abilities.

Under date of Sept. 30, Mr. E. D. Fulford writes us as follows: "Some one broke into my house while I was away last week and stole my Remington hammerless pistol grip; no safety. No. 104,955; barrels of gun No. 109,486; ordinance steel; stock of gun No. 109,491, straight grip, no safety."

The winners of the 25-bird handicap, at Singac, N. J., Sept. 28, were Capt. A. W. Money, who killed 25 straight; Messrs. W. Fred Quimby and T. W. Morfey divided second on 23, and Mr. Jas. Timmons, of Morristown, N. J., killed 22. The entrance was $10, birds extra.

Mr. E. D. Fulford and Mr. B. Leroy Woodard, who are both noted for their skill in handling the Remington gun, the manufacturers of which they represent, were in New York on Tuesday of this week, stopping over en route to the Newburgh tournament.

There will be trap-shooting in conjunction with the third open-air show of the New England Kennel Club, at Braintree, Mass., Oct. 14 and 15. Full information concerning this can be secured of the secretary, Mr. James L. Little, Braintree, Mass.

The three days' tournament of the Kentucky Gun Club will be held at Louisville, Ky., on Oct. 27, 28 and 29. The championship of Kentucky contest at 25 pigeons will take place on the last day. Emile Pragoff, secretary.

The Brooklyn Gun Club holds its regular monthly shoot this week on Saturday, at its grounds, Liberty street and Enfield avenue. Merchandise events and sweeps will be a feature in addition to the cup shoot.

Mr. J. A. Belden was the only contestant to kill 10 live birds straight in the Hell Gate Gun Club's club contest in Brooklyn, Sept. 27, in a field of thirty-two contestants.

On Sept. 29, Mr. Silas Palmer defeated Mr. J. B. Barto for the Chicago challenge trophy, at Watson's Park, full particulars of which will be found in Western traps.

The final match between the Harrisburg and Lebanon clubs, fixed to take place on Sept. 28, was declared won by Harrisburg by the default of Lebanon.

In the club shoot of the Hudson Gun Club last week Mr. Charles Shields captured the trophy with a score of 20 targets out of 25.

This week, at Woodlawn, the New Utrecht Gun Club and the Endeavors have a team race.

BERNARD WATERS.

Brockton Gun Club.

BROCKTON, Sept. 29.—Inclosed find scores of to-day's shoot. Leroy was high for the day. Griffith shot very nicely, but high scores were impossible. Each trap was set at a different height, and one threw the birds into a pond of water 75yds. distant.

High guns for the day were as follows: Leroy .900 per cent., Allison .870, Griffith .810, Barrett .800, Root .710, Worthing .700, Leonard .680, Reiner .660.

No. 3, 50-target handicap:

	Score.	Allowance.	Broke.	Total.
Griffith	41	8	6	47
Root	34	10	6	40
Reiner	27	10	8	35

NEW UTRECHT GUN CLUB.

Woodlawn, Oct. 1.—The feature of the live-bird shoot at Woodlawn to-day was the surprise not only to those present, but to Frost himself, who, after shooting in such poor shape in the club shoot, in No. 2 won the shoot for the shells. All club events are off for next Saturday, as we shoot the Endeavor Club a friendly match:

	No. 1, club shoot.	No. 2.	No. 3, sweep.
A A Hegeman, B, 28	2122211111—10	**1—1	01021—3
W H Thompson, A, 28	2111111112—10	201—2	.....

No. 5, 7-bird race:			
A Hegeman, 29	2121212—7	F Thompson, 29	1021211—6

The South End Gun Club, of Reading, Pa., will give an all-day tournament on Oct. 12.

WESTERN TRAPS.

CHICAGO CHALLENGE TROPHY.

Chicago, Ill., Sept. 29.—Mr. J. B. Barto, former holder of the Chicago hoodoo trophy, lost it to-day to Mr. Silas Palmer, of the Garfield Gun Club, of Chicago, after a close race and a doubtful issue. The trophy itself had not turned up anything of history for quite a while, and was due to do so. It paused in its career down the grooves of time long enough to add another bit to its story. This time it was over the handicapping. The local paper this week published the handicap as Barto scratch, Palmer 29yds. and 2 birds. Before the shoot began there was some question as to the handicap. Mr. Watson, the referee, stated that he had not had the handicap announced to him, and no one could tell more than the published statement above referred to. It was supposed that the mother of the trophy would know her own, and the shoot began with the supposition of the correctness of the published handicap. The race ran along to the eighth bird, Barto being then one bird in the lead. At that time the passengers from one of the suburban trains came to the grounds, among these Mr. T. P. Hicks, of the handicapping committee. Some one asked Mr. Hicks about the handicap, and he said it was 29yds. and 3 birds for Palmer. This created talk at once, and the shooting stopped. Mr. Barto said he thought a letter from Mr. Mussey, chairman of the trustees, stated the handicap as 2 birds, but he was not sure.

Mr. Barto expressed regret that he had gone on with the race, as the rules were clearly in violation. The rules state that the handicap must be announced to the contestant at least three days before the contest. Of course, all this was unfortunate.

The shooting was good. The day was warm, with a stiffish wind blowing toward the score in the direction of a left-quartering incomer. The birds were lively, and as the flight of most of the fastest ones was a high jump and a twist to the left with the wind, the shooting was difficult. Both men were in good shape, and they cut out a keen gait. This high left-quartering bird was Mr. Palmer's hoodoo, both in his practice before the race and during its progress, four of his lost birds taking that flight, and all of Mr. Barto's lost birds having the same direction. At times one of these birds would make so strong and high a spring into the air and get away on the curve so quickly, climbing all the while, that it seemed impossible to get ahead and high enough. Yet both men caught a good per cent. of these hot ones, and an impartial applause rewarded their efforts. Mr. Barto got a stinger in his fifth, but cut it down inside the wire. His seventh was cut to pieces, but crossed the wire to fall dead. His eleventh was a fine quick kill, and his seventeenth fairly a grand stand kill on a high fast one, which came down whirling, stone dead. His twenty-fourth was a keen white bird, which got away not hit very much with either barrel. Mr. Barto showed rapid but careful first-barrel work, and shot a good race. Indeed both scores are high ones considering conditions.

Mr. Palmer lost his second bird, which towered away unhit. His eighth went away in similar fashion, but on his tenth he caught just as nasty a one, and stopped it in great shape. His twelfth bird also showed quick work, and his ominous thirteenth he smothered with both barrels. His fourteenth, a slow white, needed the second badly. His fifteenth called out a bit of quick and accurate work. His eighteenth was his hoodoo again, and his nineteenth, a twister straight out, was also lost, though hit hard with both barrels. After Mr. Palmer had shot twenty-seven birds, he was told to shoot the debated third handicap bird also. He lost this last bird, a twisting left quarterer. The result showed that in either case, with a two-bird or a three-bird handicap, he would have defeated Mr. Barto by one bird. Mr. Palmer shot a good score, and kept up the good impression he has been making at the live birds. He used a Greener gun, with 3½drs. Du Pont, Leader shells. Mr. Barto shot a Colt gun, 3½drs. Du Pont, in U. M. C. smokeless cases. Score:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

	2	3	1	1	3	4	5	5	1	3	5	3	3	4	2	4	2	5	2	2	2	4	4	2	3
J B Barto, 30..	2	2	2	2	2	2	*	1	0	2	2	2	1	2	2	1	2	1	1	1	1	1	1	0	1	—22
	4	2	1	4	4	1	4	3	2	2	4	1	3	1	4	5	3	2	3	5	2	3	2	4	5	1	5	5
S Palmer, 29..	1	0	1	1	1	2	1	0	2	2	2	2	2	2	2	2	2	0	0	2	1	1	1	2	1	1	1	0—28

Mr. W. P. Mussey, chairman of the trustees who fix the handicap, was seen and stated that he had finally concluded to sever his connection with the board of trustees governing this trophy. His resignation goes in to-day. I am not in a position to quote Mr. Mussey, but I am disposed to guess that he has had about enough, and knows when he has had enough, of this celebrated emblem with the string to it.

Dr. S. Shaw, of the Garfield Gun Club, and Geo. Roll, of Blue Island, both filed challenges for the next contest with Mr. Palmer. Dr. Shaw's challenge will be the one which will be accepted. What the handicaps will be remains a matter properly to be shrouded in a large and gloomy cloud of uncertainty.

WATSON'S.

John Watson tells me that his big live bird shoot, which will begin Dec. 13 and will last three days, will be a handicap shoot. There will be a $100 medal offered, and the main event will take the form of a twenty-five-bird race, $25 entrance, birds included. There will be two sets of live bird traps, and a sweep of the above dimensions ought to attract a goodly number of the best live bird shots, of whom we have abundance in this section of the world.

In the shooting previous to the challenge trophy race on Thursday, a few of the gentlemen present went in for practice. Dr. Shaw killed fifteen straight in slashing style, and Mr. Palmer eight out of ten with equal good time. Mr. Barto scored seven out of ten in practice. Then Dr. Shaw and Mr. Palmer shot five birds, Dr. Shaw missing three, Mr. Palmer one. Dr. Shaw then missed another bird, making four straight that he missed after a grand run of fifteen straight. The pigeon game is surely a strange one.

DU PONT, OF OMAHA.

The Du Pont Gun Club tournament at Omaha, last week, was a hummer, and the equitable system gets another endorsement. One good squad score turned out. Messrs. Worthington, Townsend, Lindsay, Bray and Moore broke 74 out of 75 targets shot at in one event, Lindsay missing his second bird. A live bird sweep closed the shoot, 15 birds, $10. Score:

Lindsay 12, Mortenson 14, Bee 14, Hungate 14, Hollister 13, Hallowell 15, Schroeder 14, Dickenson 12, T. Kimball 14, R. Kimball 15, Higgins 12, Brucker 15, Riechart 13, Den 11, Trotter 14, Hardin 13, Smith 13, Burk 15, Hafer 11, Nicolai 13.

WINCHESTER, OF DETROIT.

Winchester Gun Club, of Detroit, Mich., held its last shoot last Saturday. "Bluerock" won the club medal, 23 out of 25. The club will now devote itself to executive work, and do its shooting in the field. The season has been a successful one.

KENTUCKY GUN CLUB.

Kentucky Gun Club, of Louisville, Ky., pulled off the first live-bird match of its winter series on Sept. 28. Dr. Fallis went out with a straight score in the medal race, and Col. Thompson only lost one in the same event. Mr. Harry Lyons shot in hard luck in the medal race, losing two birds. The following are the scores in the medal event:

Lyons, 30	2	2	*	2	0	1	2	1	2	0—7
Fallis, 30	2	1	1	2	2	2	1	1	1	2—10
Miller, 29	*	1	1	1	2	1	1	2	0	2—8
B P Grigsby, 27	2	1	2	1	0	*	*	1	1	1—7
Fawcett, 30	2	2	2	2	2	2	*	0	2	2—8
G Grigsby, 26	2	2	*	2	2	2	0	1	0	0—6
Thompson, 29	1	2	1	1	1	0	1	1	2	1—9

EDGERTON LIVE-BIRD SHOOT.

A very promising live-bird shoot is that scheduled by the Edgerton Gun Club, of Edgerton, Wis., for Oct. 4-5. There are 1,000 live birds on hand, which will be trapped at 12½c., certainly a liberal price, and one which ought to bring out a good attendance. There will be five races on the first day and four on the second, concluding with the contest for the Carlton gold medal, at fifteen live birds.

E. Hough.

1200 Boyce Building, Chicago, Ill.

EUREKA VS. GARFIELD.

Chicago, Oct. 1.—The contest between the Eureka and Garfield Gun Clubs took place to-day on the grounds of the latter. About 125 spectators were present. There was an overcast sky and a continuous fall of drizzling rain. The race was for the Shooting and Fishing trophy. There was much interest on account of the rivalry between the two clubs, in target and live-bird shooting. The clubs have had several contests, and while the honors are fairly even, the Eurekas have enjoyed a little the best of it. During last winter these two clubs participated in six team contests, the Garfields winning two target and one live-bird event, the Eurekas winning two live-bird and one target event, resulting in a tie, which has not as yet been shot off. To-day's race has a tendency to show the supremacy of the Eureka's over the Garfield, they having twice won the trophy and twice successfully defended the same since it was first contested for, the Garfields winning but once.

Following are the detailed scores of the event, which was at thirty single targets, five unknown traps, one man up, and ten pairs:

Eureka.

W D Stannard	29	111101111110101011 10—15—44
A C Paterson	22	111110111110101101 10—15—37
T P Stannard	24	101011101110111010 10—13—37
A W Adams	22	110011110101111111 11—16—38
E Bingham	24	101100001101111011 11—13—37—193

Garfield.

A W Fehrman	18	101011110110101111 11—15—33
Dr Shaw	22	111011111110101111 11—17—39
J R Graham	15	000010101010101010 10— 8—23
R Kuss	21	110110101010111110 10—13—34
T P Hicks	23	001110101110111011 11—14—37—166

Mr. Chas. Stickles acted as referee. E. S. Rice was judge, representing Garfield Gun Club, and Jno. L. Jones for Eureka. No hitch occurred to mar the pleasantness of the occasion.

GARFIELD GUN CLUB.

The Garfield Gun Club's weekly target contest followed immediately after. The Eureka members attending also took part and shot their trophy scores on these grounds. The race was at twenty-five targets, known traps, unknown angles. Classified:

Class A was tied for by Dr. Shaw and T. P. Hicks, and was not shot off.

Class B was tied for by Dr. Meek and Samuel Young, and was not shot off. Class C was won by C. Workman.

The trophy event:

CHICAGO CHALLENGE TROPHY.

Challenges for the Chicago challenge trophy have been posted by Dr. Siremdo Shaw and Geo. Roll. It is too early at the present time to say which will be accepted, but Dr. Shaw seems to have the right of way.

NOTES.

V. L. and A. have just issued their new and complete catalogue, containing a line of all sportsmen's goods, of guns, ammunition, camping outfits, etc. They have also recently opened a gun repair department, under the supervision of Henry Nathan, the well-known gunsmith, and are making rapid strides in the right direction.

The season of the Garfield Gun Club closes to-day.

EUREKA GUN CLUB.

On account of the several members attending the contest between the Garfield and Eureka Gun Clubs, the attendance was very light. The day was very disagreeable, it raining most of the afternoon. In the trophy contest in Class A, E. M. Steck scored 20; Class B, C. W. Canon, 17; V. L. Cunnyngham, 22; R. B. Carson, 13.

The season of this club does not close until the last Saturday in October.

A. C. Paterson.

Trap around Reading.

Reading, Pa., Oct. 1.—At a meeting of the South End Gun Club, of this city, the tournament committee reported having engaged Arthur A. Fink, of this city, to manage their coming all-day target shoot, and also reported as having arranged a programme consisting of two events at 7 targets, 50 cents entrance; two at 10, 75 cents; two at 15, $1; two at 20, $1.50. The principal event of the day will be a team shoot for the South End Gun Club's sterling silver trophy in the shape of a shield 11 by 20in., valued at $50 by the maker. The teams are to consist of five men, each man shooting at 25 targets, with the entrance per team at $5.

The committee also decided to shoot extra events before 9 A. M., the time to commence the programme events, and after, the number of targets and entrance to be left to the shooters to decide. Targets will be thrown at 2 cents each. The magautrap will be used to throw the targets. Money will be divided, if less than twelve entries, 50, 30 and 20 per cent.; if twelve or more then four moneys, 40, 30, 20 and 10 per cent. The grounds of the South End Gun Club are considered to be one of the best shooting grounds in the State, and can easily be reached from Penn street, the center of the city, by three trolley roads. The grounds are located on Boyer's Island, at the Lancaster Bridge. Either the Reading & Southwestern from Third and Penn, or Third street line, or Bingaman street car from Fifth and Penn, will take the shooters to within one square of the grounds. Dinner can be had at the Packerack Hotel, just one square from the shooting grounds. All shells should be sent care Peter Texter, 427 Bingaman street, Reading, and any information or programmes wanted can be had by addressing Arthur A. Fink, manager, 426 Franklin street, Reading. Loaded shells can be secured on the grounds. Invitations have been sent to all the leading gun clubs and shooters in the State. This shoot will start promptly at 9 A. M., rain or shine, and is open to all.

Pottstown, Pa., Sept. 28.—An interesting live-bird tournament was held at Pleasant View, near here, which attracted shooters from Boyertown, Saratoga, Pottstown, Royersford and Reading. The birds were a very strong lot of flyers, five traps being used, American Association rules:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	*	5	5	7	7	*	Targets:	*	5	5	7	7	*
Trumbauer	6	5	4	6	6	3	Yerger	2	5	4	7	7	3
Shealer	6	4	5	6	6	3	Shaner	..	4	3	6	..	..
Hawkins	6	3	3	6	6	..							

* Miss-and-outs.

Pleasant Run, Sept. 28.—A target tournament was held here to-day, some excellent scores being made. Brey carried off the honors with 25 straight in one event. All events were at unknown angles. The scores were as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	10	15	25	Targets:	10	10	15	25
Miller	8	10	13	21	Brey	..	10	12	25
Irwin	7	9	11	19	Hiltebeitel	..	10	14	23
Hoffman	6	6	8	18	Weand	..	5	9	15
Small	5	7	8	15					

Reading, Pa., Sept. 30.—A shooting match at live birds took place on Rohrbach's field, near the city line, between Harry Katzenmayer, of Allentown, Pa., and Frank May, of this city. Each man shot at 13 birds, for $25 a side and loser to pay for birds and expenses. Samuel Pick was referee. The scores:

Frank May	1201112*11212—11
Harry Katzenmayer	1012*12022121—10

Phoenixville, Pa., Sept. 27.—The second of a series of three live-bird matches between John and Winfield Buckwalter on one side and Trumbauer and Hallman was shot on the Phoenix Gun Club's grounds to-day. Each man shot at 10 live birds. Buckwalter Bros. won by the score of 17 to 12.

Pottstown, Pa., Sept. 27.—Four members of the Shuler Shooting Club to-day shot at 25 targets in a practice shoot. The score: Grubb 21, Shaner 19, Johnson 15, Pennypacker 0.

Duster.

The next shoot of the New Jersey Central League will be at Bound Brook, N. J., Oct. 15.

Harrisburg Tournament.

Harrisburg, Pa., Sept. 28.—The annual fall tournament of the Harrisburg Shooting Association opened here to-day with a large attendance of out-of-town and local shooters. Among the former were J. A. Wilson, of Franklin, Pa.; W. H. Burnham, of York; E. D. Hobbs, of New Market, Frederick county, Md.; F. P. O'Leary (333), of Buffalo, N. Y., and also a delegation of twenty members of the Chambersburg Gun Club under the leadership of Capt. J. M. Runk, who came here to shoot the final match of the series of three matches with the Keystone Gun Club, of Lebanon. The following shooters composed the Chambersburg team: Capt. J. M. Runk, Irwin C. Elder, M. R. Rhoads, D. M. Minnick, J. B. Kennedy, Henry Disney, E. D. Hobbs, B. F. Henson, F. P. O'Leary, Wm. McGowan, J. Vanderau, Wm. Marshall. Mr. W. L. Boyer, of Chambersburg, also accompanied the team as scorer. Among the local shooters were Shoop (Brewster), Worder (Fuller), Harry Vanzandt (Moorhead), J. D. Kinzer, Disney, J. B. McCann, Sheriff Sellers, McKee, Geo. McGowan, Rheinhart and Dover, all members of the Harrisburg Shooting Association.

The shooting grounds are certainly model grounds for both target and live-bird shooting. A cozy club house is built so as to have views at both the target traps, which are erected on the front, toward the south, and the live birds are shot on the right side of the club house toward the west. A fine lawn on the front and two sides of the club house gives the grounds a fine appearance. The shooters of Harrisburg are very proud of their model grounds, so arranged at great expense. The background for target shooting is fine. The live birds used were all strong flyers, and were off like a streak when liberated from the traps.

FIRST DAY, SEPT. 28.

The principal event of the first day was to have been the third and final shoot of the Chambersburg-Lebanon series at live birds and targets, for teams of ten men each, but on the last minute Lebanon wired the Harrisburg Association that they would not come, which was a great disappointment, not only to the Chambersburg Club and its followers, but also to a large number of visiting sportsmen who came here just to see this match, which was expected to be a tight one. For the Chambersburg Club I can honestly say they have a very strong team, and as they are organized not quite a year, some never having a gun in their hands before that time, they are certainly shooting at a wonderful pace.

The Harrisburg shooters on Sept. 16, at Lebanon, distributed programmes of this shoot, which announced the final match between these two clubs.

At 2 P. M., the time set for the match, Capt. Runk had each man shoot at a target and one live bird, and claimed both matches and the series, which was awarded him by Referee Moorhead.

The management of the tournament was looked after by Arthur A. Fink, of Reading, Pa., who had everything moving all the time, from 9:30 A. M. to 5:30 P. M., there being not one delay during the day. Great credit is given Manager Fink by the Harrisburg Association for the easy manner in which he managed this shoot and looked after the affairs pertaining to the same.

The scores of to-day's events are as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	20	10	15	10	15	10	15
Fuller	5	8	8	13	7	13	10	14	6	14
M J Rhoads	6	10	6	9	6	..	..	8	..	..
Burnham	8	12	8	15	7	11	10	12	6	12
Brewster	6	11	6	11	6	10	6	..	..	..
Runk	7	10	8	17	8	10	6	13	10	15
McGowan	7	10	5	10	4	9	4	12	..	11
Vanderau	3	6	..	..	..	..	..	..	..	..
Wilson	7	12	7	11	8	11	9	12	7	11
Kennedy	6	..	..	..	7	..	..	10	8	..
Elder	8	12	9	15	7	10	8	12	7	10
Henry	6	8	..	..	..	..	..	..	..	..
Dover	5	10	7	12	6	8	7	..	..	..
Hobbs	..	11	9	16	8	8	9	11	7	12
Kinzer	..	9	6	14	3	..	8	9	7	9
333	..	..	..	13	3	10	6	11	7	10
Henson	..	..	..	..	3	..	..	..	..	..
Moorhead	..	..	..	..	..	..	4	5	..	..
Minnick	..	..	..	..	..	..	8	5	9	6 15
Sellers	..	..	..	..	..	..	..	4	..	..
McKee	..	..	..	..	..	..	6	8	5	..
George	..	..	..	..	..	..	..	7	..	..
Rheinhart	..	..	..	..	..	..	..	3	..	..

After the Chambersburg team had been awarded the series of the Chambersburg-Lebanon by forfeit, owing to non-appearance of the Lebanon team, Capts. Runk and Worden, of Chambersburg and Harrisburg respectively, agreed to shoot a team race, teams of ten men each, each man at 5 live birds. Chambersburg won by the score of 45 to 42. A miss-and-out at live birds, $2 entrance, which was divided by Rhoads, McCann, Runk, Burnham and Henson, closed the shooting for the day.

SECOND DAY, SEPT. 29.

The second day's shoot of the Harrisburg Association was fairly attended, although not a large attendance of shooters were present.

The fine weather was all that could be wanted for live-bird and target shooting. Among the shooters were Ross, of Philadelphia; Burnham, of York, Pa.; Hobbs, of New Market, Frederick county, Md.; Runk, of Chambersburg, and Brewster, Harlow, E. H., K., Moorhead and McCann, of Harrisburg.

The scores at the target events were as follows:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	15	10	20	10	10	Targets:	10	10	15	10	20	10	10
E H K	9	8	12	9	15	8	7	Runk	8	7	12	10	16	8	9
Harlow	8	8	13	8	16	7	9	Hobbs	8	9	12	4	16	6	8
Ross	7	8	13	7	10	8	6	Burnham	9	8	11	10	16	8	8
Brewster	7	5	..	..	..	..	..								

The live-bird events resulted as follows:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Nos. 1, 2 and 3 were miss-and-outs; Nos. 4, 5 and 6 were at 10 birds.

* Denotes re-entry.

In all, this tournament was a grand success, and will net the Harrisburg Shooting Association a neat sum for their trouble. Among the shooters whose familiar face was not seen was that of Brenslinger (Sullivan), of Harrisburg Association, who, with his jovial ways, always keeps a tournament in good humor; but this time, owing to sickness, was prevented from being present. Sullivan is confined to bed with sciatic rheumatism, which will also prevent his hunting this season.

Duster.

Baltimore Shooting Association.

The programme of the sixth annual tournament of the Baltimore Shooting Association, Baltimore, Md., Oct. 11 to 14, inclusive, has a most attractive list of events. Tuesday and Wednesday will be devoted to target events, which are alike for each day; that is, four events at 15 targets, $1.50 entrance; six at 20 targets, $2 entrance; $100 added each day.

On the third day there will be three events at live birds, the Baltimore Introductory, 7 birds, $5 entrance, birds included, 30yds. rise, three moneys, 50, 30 and 20 per cent., high guns, not class shooting. The Suburban sweepstakes, 10 birds, $10 entrance, birds included, 30yds. rise, three moneys, 50, 30 and 20 per cent., high guns. Pimlico handicap, 15 birds, $15 entrance, birds included, handicaps 25 to 33yds., three moneys, 50, 30 and 20 per cent., class shooting.

On the fourth day the Maryland Handicap is on the programme. It is at 25 live birds, $25 entrance, birds included, handicaps 25 to 32yds., three moneys, 50, 30 and 20 per cent., class shooting; $100 added to the purse.

The tournament will be held on the grounds of the Baltimore Shooting Association, on Pimlico Road, opposite Halstead's Hotel and about 25 minutes' ride from the center of the city. Take either the Druid Hill avenue, Carey or Gilmor line of cars, and transfer to Pikesville, or West Arlington cars at Fulton avenue. All shooters will be handicapped by distance—amateurs 14yds., semi-experts 16yds., experts 18yds. The management reserves the right to change the handicaps at any time during the tournament. Two sets of traps, Sergeant system, will be used. All target events will be at known traps, unknown angles. Moneys will be divided 40, 30, 20 and 10 per cent. The tournament will be under the management of Messrs. Charles Macalester, James R. Malone and J. C. Hicks. Ship shells to Alford Sporting Goods Company, No. 120 E. Baltimore street, who will attend to delivering them on the grounds. George L. Harrison is secretary.

Confabulations of the Cadi.—VII.

THE CADI'S BIRTHDAY.

There were life, activity and gayety around the hearthstone of the good Cadi. It was a day of great domestic rejoicing with him and his family, and he had invited many of his friends to assist in the function. There were outlying signs of the presence of a merry company. Two carriages, long since out of fashion and more or less lop-sided, weather-beaten and twisted from years of strains, ruptures and hard service, with a general air of degeneracy in their decline from boulevards and parkways to rough and muddy roads, denoted the presence of Moke and Ephraim, whose turnouts were the envy of the whole neighborhood, since for elegance they were peerless in that neck of the woods, inasmuch as there were therein no others within several immeasurable degrees of being their equal. A few cheap saddles were lying about here and there on the ground, while in a small lot close by a rare collection of knee-sprung, spavined and hide-bound horses were scraping up acquaintance with each other, each assuming an air of artificial sprightliness, vigor and suppleness which their stiff joints and faulty gaits belied—a trait not exclusively possessed by horses. Some light harnesses were cast in a negligee manner on the fence of the horse lot, and they too showed signs of starting high in life and ending humbly. Pieces of stout string were used to correct a number of the harnesses' structural infirmities, and there were frayed parts which did good service without mending.

Some gaunt foxhounds, setters and pointers were an integral part of the visiting contingent. They were ceaselessly trotting about, looking for any edible treasure trove which might be obtained honestly, much to the concern of the Cadi's one-eyed pointer, with gridiron ribs, which showed his resentment by many inhospitable growlings and fierce erections of the hair along his spinal column, trotting stiltily about from place to place to repel any possible attack on his own preserves, while beneath the brave front which he presented could be noted a firm purpose to run very fast and far if the danger became real—a trait not exclusively possessed by dogs.

The day was the loveliest of summer days, the heavens seeming to smile on so much wholesome happiness on the earth below, for it was the Cadi's birthday. He had invited many of his friends to assist in the rejoicings over that most fortunate event; fortunate in many ways, not the least of which was a holiday to the children and a good, square meal for them withal; and a happy day for Hopie Jane in the felicitation over an event which had brought to her an adorable husband.

There was some constraint among the visitors at first, as was natural on an occasion so great, coupled with a misgiving as to what constituted the right of procedure in assisting a man to rejoice over a circumstance concerning which he had been without authority either to promote or prevent; but this wore away after a few moments.

THE VISITORS.

Moke and his family seemed most at ease. Every time that Moke ventured a remark, his wife frowned on him fiercely, and told him how he could have better said it so and so, or how much better it would have been had he left the remark unsaid. His three children, goggle-eyed little beauties who stood stiffly about sucking their thumbs and looking on at every movement in dazed wonderment, never moved until such times as they could get handsomely in the way of some of the elders.

Ephraim sat close by his wife, who was a very large, fat, heavy and pudgy person, who wore her gown very close fitting, and trusted to a tightly strained and much overworked corset to bring about a general harmony of figure out of the impossible; nevertheless, under the belief that she was harnessed up into shapeliness, she beamed on the group with great complacency, though she was forced to laugh with great care and moderation, sighing after she did so, and rapping her waist smartly with her finger ends to allay the sharp discomfort of the tight corset and to stimulate the impeded circulation.

M. Le Loup and his wife were carrying on a low conversation between themselves, and the furtive manner in which they looked at their neighbors indicated that they were commenting on their good points. Mrs. Le Loup affected the æsthetic, and wore a large hat which was a tower of egret sprays, ostrich plumes, flowers and festoons of bright ribbons, massed in profusion, and all built on a base which had sufficient material for three or four hats of normal size. She also wore a Scotch plaid gown. She professed to be a painter, and indeed had taken a course of lessons in drawing and painting, her masterpiece being one painting in particular, which her teacher had spent a day or two in touching up and recoloring after she had declared it finished. It was the chief of the family treasures, and was shown only to favored visitors who could appreciate true art. Her dearest friends had assured her that it was a shame that she should fritter her life away and squander her talents concocting fried bacon and corn pone; on the other hand, when among themselves these friends sympathized in a thousand keys with poor, poor Le Loup for his misfortune in having a wife who daubed canvas, and left the dear man without the cookery and home life to which he was entitled.

However, the good company was there to help the Cadi rejoice that he was born, and that he, by regular transitional stages, from being the humblest member of a family, the youngest son, had attained the dignity and honors of the head of a family, the father of eleven bright, white-haired children, and the husband and the pride of Hopie Jane.

HOPIE JANE.

There were savory smells of roast turkey in the air, and fragrant other smells of baking corn-bread and strong coffee. The long table was set its full length with a mixed array of odds and ends of tin plates and earthenware, and knives and forks for the elders. Hopie Jane was greatly excited, for she was impatient for the moment when the transformation scene should arrive; that is to say, when she could pull off her old gown and reveal the bright red new gown underneath which the old gown guarded. Then—what happiness to her heart!—she would witness the dismay of all the females present, their confusion and conscious looks of defeat, and would note the innocent admiration of the gentlemen, for

> "Where none admire, 'tis useless to excel.
> Where none are beaux, 'tis vain to be a belle."

When at length the happy transformation moment arrived, Hopie Jane stood a vision of womanly loveliness. She had powdered and painted her face till it was a work of rare kalsomining art, with a heavy splotch of pink spread on each cheek to represent a hectic state of intense youth, while her new gown trailed the ground behind and hiked up in front, revealing two well matured feet with which she now and then took a hop, skip and jump, or cut an awkward pigeon wing or pas seul in her joyous exultation, thereby showing her No. 7 copper-toed shoes to great advantage,

> "Her feet beneath her petticoat
> Like little mice stole in and out,
> As if they feared the light;
> But, oh, she dances such a way!
> No sun upon an Easter day
> Is half so fine a sight."

THE TURKEY DINNER.

There was much trouble in placing the guests, parents and children, at the table and keeping them placed afterward. The home children looked upon the visiting children as interlopers for the moment, and there were a few snarlings and earnest hair-pullings and face-scratchings in consequence, although but a few moments before they had been in a swirl of friendship. It was therefore no small task for the captains and their commands, the mothers and their offspring, to secure uncontested seats and to establish silence. After many sharp orders, threats and cuffs, a kind of mutinous truce was established, all eyes being fixed on the head of the table as a group watches the camera when the photographer releases the shutter.

A nicely roasted turkey was the piece de resistance. It was placed squarely before the Cadi, who sat at the head of the table with the most benevolent poise and dignity. Alternating down the full length of the table were heaping plates of eggs and corn pone, with other heaps of sweet potatoes wherever there was room between dishes.

All being set and quiet, the good Cadi said: "My good friends, you cannot imagine how happy I am to see you gathered here to do honor to my birthday and to grace my table by your presence, helping and joining me and my family in our rejoicings. To me the day is as you see it; but it is the anniversary of a very proud day for my mother, although, on the other hand, after the first influx of joy at being my sire, my father had certain qualms as to whether he should feel proud or otherwise, as is the way of fathers who have doubts as to their sons being so smart as they are themselves. Nevertheless, on this day, fifty-five years ago, I consented to be born the good fellow who has lived among you all his life, and whom you now behold.

"My mother, whom I revere as all mothers should be revered, was always a firm believer that I was the very best fellow that could have been born on that day or any other, and that I had the qualities which make the great and famous men of the earth. In my early youth I said many bright, witty and profound things, which she rehearsed in mixed companies, always to the great delectation of those present. My father never appreciated me at my true worth; my mother always did so. However, I am lucky that I am not some other fellow, and you are lucky that I am the Cadi—to the extent of this fine turkey at least.

"We will dine on this noble bird as an interesting incident of the event, yet no mean incident withal, for the turkey, my good friends, is the noblest table bird of all the game birds when one's friends dine together with one. The ruffed grouse and a cold flagon are a bird and a cold flagon for two friends and no more; the woodcock can be eaten successfully even when one dines by one's self; the prairie chicken is good for men or dogs, and the quail is not to be sneezed at at any time.

"But the turkey, yum! yum!—that is your true bird for a man and all his friends; for any man who has more genuine friends than can sit around a turkey is a man to be found only in a day's journey. Other birds may be kings or princes, but this, the turkey, is the emperor of birds.

"He should be carved as delicately as if you loved him, after the manner in which the gentle Izaak Walton commends putting a frog on a hook." And here the good Cadi took the carving knife and fork in hand and gave them a graceful flourish right and left, placing a hand on each side of the dish with the carving implements pointing upward, continuing, "The slices should be cut clean and smooth and even as to thickness, though a little inclined to thinness if your company is large; thicker if the number of plates will warrant it. The legs and wings should be taken off smartly with a couple of quick, accurate strokes to each, with a knife sharp as a razor, as you perceive this knife to be. Keep in mind that you do not give all light or all dark meat to one person, and if any one is such a barbarian that he has no preference for any particular part of the noble bird, to such you always serve the drumstick, after which he generally has a preference. The carving should always be done with ease—no sweating, no unseemly struggle with the dead; no slipping of the bird off the dish on to the table or floor; all should be done with ease, grace, quickly, without hurry, and with the utmost delicacy, decency and neatness.

"You will all watch the Cadi, good friends, and observe how he carves a turkey on this happy day, his own good birthday, made thrice happy by your good company." Saying which he firmly drove the fork into the turkey's well-browned breast, and nearly slashed off a leg at one stroke of the knife, excepting a small piece of fibrous tissue below the joint, which held the leg; turning his sharp knife upward, he gave a firm upward stroke, and being somewhat overwrought by his oration on the turkey, he used too much force—the knife flashed upward and split the good Cadi's thumb from tip to base.

Then there was a peal of laughter around the table, as if the finest possible joke had been presented. The ladies, bless their hearts, laughed with the men, and tittered even after the men had ceased. There was blood galore at the head of the table. Hopie Jane tore up an old shirt and dressed the wound of her idol, promptly showing her bright red dress off to perfection while walking about and posing as she bandaged up the cut. When repairs were completed, the Cadi subdivided the turkey after the manner of an ordinary person; that is to say, the turkey looked much as if it were carved with an axe in the dark.

All had commenced eating, the children glaring each at the plate of his fellow to see that one did not finish to the prejudice or loss of another by securing a second helping too soon, when Moke said: "The slices should be cut clean and smooth and even, and the drumsticks should be taken off with a couple of quick strokes of the knife—."

Haw! haw! he! he! laughed the men, and the ladies chimed merrily in with as much vim as if the chagrin of the host was the happiest feature of the day.

THE AMATEUR.

The Cadi was imperturbable so far as exteriors indicated, the only sign being a lessening of his enthusiasm and blithesomeness, yet not to a degree noticeable to his guests. At recurrent periods during the dinner, one or other of the party would refer to the best manner of carving a turkey, with the usual outbreak of merriment, displaying thereby how much native good humor and kindliness excel cultured tact and sympathy.

"I think that there are amateurs in all things, and judging from the manner in which you carve your fingers, friend Cadi, I fancy that you are an amateur carver," said Ephraim.

"Hardly such," replied the Cadi, kindly. "There is one important amateur quality lacking."

"Name it," retorted Ephraim.

"I have not howled a protest, nor made the neighborhood echo with my ululations, nor asked for a million advantages. I recognize the hurt as my own, and I have not blamed any one for it, nor have I asked any one to bear it for me, all of which is not amateurish, as you know it in the trap world," said the Cadi.

Then he made a sign to Hopie Jane, who rose and went into the adjoining room, returning quickly with a demijohn of hard, native red wine, sweet and palatable to the taste, but with a wonderful hydraulic skull-lifting power if one ventured to take more than two wee sips of it. The Cadi poured out a glass of the dark red fluid for each of the elders, remarking, "My friends, I have been on earth now a great many years, and a next birthday is an uncertainty for all; for in celebrating one's natal day one may be celebrating one's last; therefore I wish you to drink my good health in real juice of the grape and tell me that I am a jolly good fellow if you do not need to borrow something immediately afterward, for I am not so big a fool as I look."

"We never thought that," said Moke, in all seriousness.

"Cadi, good friend, we have known you these many years," said Ephraim, "and you have been our advisor, our referee, our peacemakes, our leader; you have filled the office of friend and wise man so well that you have won our esteem, our confidence, our affection. We toast your health, happiness and prosperity; also the health, happiness and prosperity of your wife and children and all your other cattle, and hope that you will all live a thousand years." This was received with vociferous approval, and the red lightning was duly swallowed.

"We were a moment ago speaking of amateurs, friend Cadi," said Moke. "Will you be so good as to give us your ideas of amateurs in the trap-shooting world?"

A light shadow of annoyance passed over the Cadi's face. He deliberated a few moments, then said, "My good friends, I had hoped that on this day we would have talked more about myself than we have and less about other matters." Here Mrs. Le Loup nudged Le Loup, and said in a stage whisper, "I'll bet he means carving turkeys." "But since it seems to be your pleasure to talk only about trap matters for any length of time, I do not mind giving you my ideas on the subject which you mention.

"First of all, there are very few in the trap-shooting world to-day who are not professionals. In all other sports of any importance there is a central governing body, which keeps a close eye on the amateurs and the professionals, and even then it is a matter of no small care to keep the professionals out of the amateur ranks; for when left to himself the professional, according to his own claim, is always an amateur. There has been no such governing body in the trap-shooting world, it being considered that as some shooters ate hog and hominy, others baked beans and slapjacks, others again ate possum and sweet 'taters, or still others saw the sun rise earlier or set later, there were therefore differences which were irreconcilable.

"The whole trap-shooting world has been run without any central governing body, and each club which gave a tournament adopted such policy as seemed best for its own immediate success, without any consideration whatever as to amateur and professional; or if it did so consider, it was for the expediency of the moment in the success of its own affairs and not from any consideration of the general good. It it said that the principles, governing amateur and professional competitions respectively, are not applicable to trap-shooting, the conditions being so different. What makes the different conditions? Sport is sport everywhere if it is sport. The principles of sport are alike in all sports. The trouble lies, however, in the fact that there never has been any real general classification as between amateur and professional in trap-shooting. Under any recognized ruling as to what constitutes a professional, nearly every trap-shooter in the United States is a professional. Nearly every one has shot in an open public competition for money; nearly every one has competed in public contests for money with professionals, and not a few have shot on public grounds where gate money is charged."

"I think that you are going too fast and too sweeping in your remarks," said Le Loup. "How about a gentleman who has an income and shoots merely for the sport?"

"A gentleman who shoots merely for sport can shoot for sport within the gates of his own club grounds. He can at other times and in other places shoot for targets only if he really desires sport. When you go to a baseball game, horse race, athletic games or a circus, you buy your ticket and witness the sport from your seat. You need not actually participate in the game to have your sport. When you put your money up in a public competition, you are then doing precisely what the professional is doing. The difference between you and a manufacturer's agent is one of degree and not of kind; you simply do part of the time what he does all the time. It matters not if a shooter have a million dollars income, more or less; when he enters a public competition for money and shoots for money against all comers, he is to all intents and purposes a professional the same as a man who has a smaller income or none at all, and this under any ruling of sport wherein the amateur is really distinguished from the professional. Let us apply your line of reasoning to other sports as to amateur and professional, and all then are amateurs in like manner to your trap-shooters. The wealthy trap-shooter who shoots for sport when he can shoot for money generally looks very closely after the money features of the shoot, same as do other shooters. He usually keeps a score card, recording thereon what he shot at, what he broke, what he paid in, and what he won, but never the amount of sport which he has had. He adds his winnings to his revenues as an integral part of them, and when he pays his bills the aforesaid winnings go just as far, dollar for dollar, in making his livelihood as do the dollars which he has earned or made otherwise. A man can be a professional in many things at the same time; a butcher, a baker, a candlestick maker—"

At this juncture, Moke, who had been stuffing himself with eggs on top of good turkey, arose and threw an egg violently out of the window, spattering it on a side saddle which was lying on the ground outside, and sputtering furiously the while.

"Why, what's the matter, Moke," queried the Cadi, in alarm.

"Nothing much, Cadi. Zounds! Eheu! Eheu! By my halidom! Phew! I just came across an egg which had a birthday some fifty-five years ago, and I hastened to bar it, for

> "'It is the month of June,
> The month of leaves and roses,
> When pleasant sights salute the eyes,
> And pleasant scents the noses.'"

BERNARD WATERS.

UTICA, N. Y.—I have read every word of the Cadi's wise advice, and I approve every word of it. I have taken the ground that the expert in anything should be admired; and, what is more, as you well said, and as I am in a position to know, there would be over 100 manufacturers' agents, but for the semi-amateurs, that are putting up the squeal, trying to undermine the honest man by offering to take care of a certain county or travel for ammunition only or a gun. I claim that the boom in trap-shooting is due to the interest created by the men that are able to show where the sport of trap-shooting lies.

It is the excitement, the exhilaration, or what you may call it, that starts a man's pulse beating at 140 per minute.

E. D. FULFORD.

Michigan Trap-Shooters' League.

THE first grand annual tournament of the Michigan State Trap-Shooters' League, held at the Rusch House grounds, Detroit, Sept. 20-23, proved to be a success in every way, under the management of "the only Jack Parker," not only in attendance, but good scores as well. Holding the shoot so late in the season made it impossible for many to attend.

The evening of the first day, Tuesday, was devoted to the regular league meeting, which was held in the parlors of the Wayne Hotel. After disposing of routine business it was moved, supported and carried that the secretary be authorized to draw up a set of resolutions to be handed to the Michigan Fish and Game Protective Association at their annual meeting at Lansing, to this effect: First—That the open season for woodcock be changed to begin Aug. 1 instead of Oct. 1, and second, open season of snipe and plover begin Sept. 1 instead of Oct. 1; and also that a set of resolutions be drawn up and forwarded to the State Legislature that it be made legal to shoot live birds from the trap, after which the meeting adjourned, harmony and good feeling prevailing on all sides.

FIRST DAY, TUESDAY, SEPT. 20.

The principal event the opening day was the race for the expert, semi-expert and amateur State championship medals. Mr. Wood won the expert medal by breaking 21 out of 25. Blue Rock, the well-known local shooter, won the semi-expert with the score of 22; and the old reliable Bartle, the veteran of many tournaments, landed the amateur medal. The King Smokeless trophy was won by Mr. Thompson, of Jackson, for the third time, thereby making it his property. The high average for the day was made by Mr. Thompson, who broke 96 out of 115—.830 per cent.

SECOND DAY, WEDNESDAY, SEPT. 21.

The principal event the second day was the three-men team race for the State championship diamond medals, which were won by the River Rouge Gun Club team with a total score of 63 out of 75.

In the handicap merchandise prize event, 25 to 30 targets, Marks, a scratch man, made the only 25 straight of the tournament. The generosity of the local merchants made it possible to increase to twelve the number of prizes in this event, which were taken by the twelve high guns.

High average for the day was made by Wood, 94 out of 105—.890 per cent. Northmore was second, 71 out of 80—.880 per cent.

THIRD DAY, THURSDAY, SEPT. 22.

On the third day the Marvin Preston cup, emblematic of the individual handicap championship of the United States and Canada, was hotly contested for. Marks, a scratch man, and Gay, Bartle, Kline and Chamberlin, with handicaps, all tied with 23. In the shoot-off Gay, with a handicap of 2, won out with 25 out of 27. There were six merchandise prizes awarded to next six highest scores.

The Tom Swan cup, emblematic of the two-men team championship of the United States and Canada, was won by Marks and Bartle with 46 out of 50, each breaking 23, which, as McMurchy said, is "good shooting."

High averages for the day were: First, Marks, 82 out of 95—.860 per cent. Second, Gay, 61 out of 80—.760 per cent.

FOURTH DAY, FRIDAY, SEPT. 23.

On the fourth and last day the historic Gillman and Barnes trophy, which has for so many years represented the only international expert championship, was hotly contested for. During the years that this medal or trophy has been in existence it has been contested for and held by most of the experts, including Duryea, Dick Merrill, W. S. King and others as well known. It was originally a live-bird race, but the action of the State Legislature caused it to be changed to a target event, 21yds. rise, one man up, unknown traps and angles, expert rules. On this day the wind blew a gale directly toward the score, making the flight of the targets extremely erratic, and the winner, Mr. Klein, the popular proprietor of the Rusch House, deserves great credit for his good score of 21. May he long successfully defend it against all comers.

The international three-men team championship race was won by Marks, Mercier and Bartle, with 56 out of 75; Scott, Schroeder and Osmun second, with 54 out of 75.

High averages for the day were. First, Marks, 144 out of 175—.820 per cent. Second, Mercier, 140 out of 175—.800 per cent.

The scores:

Events:	1	2	3	4	5	6	7	Special.	
Targets:	10	15	15	20	25	15	25	50	Av.
Miller	4	8	11	12	11	7	14	..	.530
Schroeder	4	10	7	12	9	..	12	..	.500
Osoback	7	8	13	13	14	8	15	..	.620
Bryan	6	7	11	19	..	..	..	..	.700
Scott	7	12	14	..	14	11	21	44	.800
Marks	9	12	14	18	19	14	18	..	.820
Fleischer	9	10	14	17	16	14	13	..	.740
Bartle	9	10	10	18	12	12	21	34	.700
Mercier	9	14	12	15	20	11	17	42	.800
Wood	8	11	13	18	19	12	18	32	.740
Eilbert	6	13	11	15	..	11	17	..	.750
Foster	8	12	13	14	11	10	17	..	.680
Stott	..	..	10	12	9	7	10	23	.470
Lamerand	..	..	..	15	16	5	..	..	....
Scotten	..	..	..	17	19	14	14	..	.750
Parker	..	..	..	18	15	14	17	..	.750
Osmun	..	..	..	..	18	..	21	39	....
Klein	..	..	..	..	21	..	..	33	....
Dick	..	..	..	..	12	..	..	34	....
Boyd	..	..	..	..	15	..	..	..	....
Brady	..	..	..	..	19	..	..	38	....
Cabinaw	..	..	..	..	13	..	..	28	....
Hall	..	..	..	..	11	..	..	29	....
McIntosh	..	..	..	..	14	..	..	..	....
Wier	..	..	..	..	18	..	..	..	....

High averages for the first two days or State tournament dates were: First, Wood, 189 out of 230—.859 per cent. Second, Thompson, 188 out of 230—.854 per cent.

As Marks did not qualify with a sufficient number of entries on the third day, he would not be entitled to prize for high average for entire shoot, which was won by Mr. Wood.

High averages for entire four days were: First, Marks, 314 out of 385—.815 per cent. Second, Wood, 392 out of 490—.800 per cent. Third, Scott, 374 out of 470—.795 per cent. Fourth, Parker, 238 out of 305—.780 per cent.

Jeannette Gun Club.

THE Jeannette Gun Club, of New York, held their monthly shoot on Friday, Sept. 23, at the Guttenberg race track at Guttenberg, N. J. The day was an ideal one for sport at the traps. The weather was partly cloudy, and a strong wind blew across the traps from right to left. Our old friend, the veteran Capt. Disch, arranged the 50yd. boundary and pulled the traps with his accustomed impartiality. No other club shoots on these grounds, and the captain must be up betimes to stretch the boundary string that he has around his patent-applied-for windlass, and to put up the cute little flags that surmount each and every boundary stake. In the team races Schorty, Steffens, Vagts, Bohling and Heilshorn got it twice in the "œsophagus" and had the unrequited pleasure of paying for the "other fellers'" fun.

Mr. Hainhorst, who has just returned from a trip "across the crick," shot a yard of some new-fangled nitro. Though doing poorly in the club shoot, he killed 8 out of his 10 in the two team contests. It is lucky nitro anyway, as he was on the winning side twice.

Foerenbach shot in excellent form from the 25yd. mark, killing 19 out of 20. Claus Bohling, the winner of the Class B trophy, also killed 19 out of 20. Schorty landed the Class A trophy from the 32yd. mark. This being the third win it becomes his personal property. He has won three of these in succession the past fifteen months, one at 28, one at 30 and to-day at 32yds. He will shoot hereafter from the 33yd. mark. He shot his usual load of Schultze in U. M. C. trap shells, special machine-loaded by the U. M. C. Company. Alderman Rinckoff did some excellent shooting in the team races, scoring all of his birds. The next shoot takes place on Friday, Oct. 21.

First team shoot for price of birds and a nominal stake:

Brunie's team.		Schorty's team.	
Brunie, 28	12010—3	Schorty, 32	11102—4
Otten, 28	00110—2	Steffens, 32	11011—4
Hainhorst, 28	11112—5	Vagts, 28	01001—2
Pape, 28	12211—5	Bohling, 25	10111—4
Rottmann, 25	21102—4	Foerenbach, 25	11221—5
Bigelow, 25	12011—4	Rohlfs, 28	21020—3
Rinckoff, 28	22111—5—28	Heilshorn, 25	21001—3—25

Second team race, same consideration as the former:

Otten's team.		Steffens' team.	
Otten, 28	12101—4	Steffens, 32	02112—4
Brunie, 28	20101—3	Schorty, 32	12112—5
Hainhorst, 28	22200—3	Pape, 28	12011—4
Rinckoff, 28	12221—5	Bohling, 25	11222—5
Foerenbach, 25	21111—5	Vagts, 28	02022—3
Bigelow, 25	21021—4	Rottman, 25	01121—4
Rohlfs, 28	11121—5—29	Heilshorn, 25	00210—2—27

Class B.

F Ehlen, 25	2001211210— 7	J F Rottman, 25	0010011022— 5
A Foerenbach, 25	1121111021— 9	Pop Bigelow, 25	1211011000— 6
J Heilshorn, 25	1100200011— 5	C Bohling, 25	2212122112—10

Claus Bohling wins the Class B trophy.

Class A.

N Brunie, 28	1201222122—9	J Hainhorst, 28	1100101200—5
H Otten, 28	0211121111—9	J Rohlfs, 28	1202221220—8
N Crusius, 28	1120100002—4	W Rinckoff, 28	1222101100—7
H Pape, 28	2201101011—7	C Steffens, 32	1212101112—9
J Vagts, 28	0120022222—7	L Schortemeier, 32	2120111122—9

Shoot-off for Class A trophy, miss-and-out:

N Brunie, 28	111111212020	C Steffens, 32	0
H Otten, 28	2121220	L Schortemeier, 32	212222122012

The last named wins Class A trophy. JOHNNIE JONES.

Florists Gun Club, of Philadelphia.

WISSINOMING, Sept. 27.—The contest for the president's cup in the monthly club shoot took place here to-day. The shooters making the greatest improvement over their previous scores take the medal and highest points. Points were allowed as follows: Cartledge, 5½, Westcott 5½, Smith 4, Park 2½, Bell 2½. There was a clear sky and a strong northwest wind. The contest was at 50 targets, 25 magautrap, 25 from five expert traps. The letters U and K after the names of the contestants stand for unknown and known angles:

Harris	U	11101111000011101011001111—16

St. Louis Doings.

LITTLE ROCK, Ark., Sept. 30.—A 25-bird handicap was the attraction that drew the shooters of St. Louis to Dupont Park on Sept. 25. The entries in this event were not near so large as that which showed up a week ago on the occasion of the Clover Leaf handicap. This to a certain extent must be attributed to the fact that the entrance in to-day's event was twice that of the week previous. The conditions here were 25 live birds, handicap rise, entrance $10, four moneys, class shooting.

There were eleven entries, and but four of these shot out of the money. Sumpter and P. Kling scored 24 and divided first money; Hirchey and W. S. Thompson with 23 did likewise with second money; Nold and Dennig cut up third on 22. Ed Pendergast took fourth on 21. The weather was ideal and the birds fair.

After the conclusion of the main event there was a 15-bird sweep. Ed Pendergast won first money on 14, which proved to be the only good place, as the other moneys were pretty well cut up.

Sumpter did the best shooting of the day, as he scored 37 out of 40.

The prospects for the approaching tournament, which is to be held on these grounds Oct. 25 to 27, are very gratifying to Manager Corray. He expects quite an attendance on this occasion, that is, if a good liberal programme will be any factor in drawing the shooters to this point. I understand that a number of those who will take in the Belle Meade shoot will stop over at this tournament on their return North.

Sumpter, 31	2222222222222222222*222—24
P Kling, 30	2222222222222222220222212—24

BELLE MEADE SHOOT.

The programme of this important shooting event is now being mailed to the sportsmen of the country, and must be classed among the liberal ones of the season. There are to be two days' target and two days' live-bird shooting.

Under date of Sept. 27 Mr. W. R. Elliston, the secretary, and promoter of the tournament, writes me that he has succeeded in having all the railroads running into Nashville grant a rate of one and one-third fare for the round trip. Thus it will be seen that everything possible has been done to make the tournament a success, and I look for something like the old-time gathering of shooters—say seventy-five or thereabout. Nothing will be barred except 10-gauge guns and black powder.

PAUL R. LITZKE.

West Chester Gun Club.

WEST CHESTER, Pa., Oct. 1.—The sixth annual all-day target shoot of the West Chester Gun Club proved to be one of the most successful shoots the club ever had. The magautrap worked without a hitch, throwing about 4,000 targets. The day was all that could be asked for. There were visitors from Phoenixville, Pottstown, Radnor, Springfield, Rising Sun, Philadelphia, Reading, and the surrounding country.

The main interest centered on event No. 11, in which the club gave as first prize a Winchester take-down gun. W. J. Torpy took first with 23, while Henry, Devoe and Schaaber divided second. The other two purses were considerably cut up. Appended are the scores:

PUBLISHERS' DEPARTMENT.

The Rod and Gun.

THE hunting grounds and fishing streams of the two Virginias are among the most attractive to the true sportsman in the United States, not alone for the quality of game they offer, but also for their accessibility to the great cities of the East and West, the light tax they impose upon the purse, and the pleasure given an outing among Virginia mountains by their great scenic beauty and interesting historic associations. The circuit of fifty miles around Clifton Forge, which embraces Bath, Highland and Alleghany counties, and the great Virginia Springs Basin, is unquestionably the best mountain deer region between the Rocky Mountains and the Adirondacks. Speckled trout abound in all the streams of both Highland and Alleghany counties, while bass are abundant in Cow Pasture, in the James between Clifton Forge and Natural Bridge, and in the Greenbrier River, in the vicinity of Fort Spring and Alderson. For further information address H. W. Fuller, General Passenger Agent Chesapeake & Ohio Railway, Washington, D. C.—*Adv.*

Mallinckrodt's Patent.

THE Harvey & Watts Co., of Philadelphia and New York, manufacture the Mallinckrodt patent pipes, which by means of an efficient nicotine absorbent in the stem and a ventilating device, effectually prevent overheating and the passage of nicotine from bowl through the stem, thus removing the usual unpleasant effects of the pipe. The invention is a boon to smokers and non-smokers alike.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 15, 1898.

VOL. LI.—No. 16. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

I agree with my friend Stark, of Dunbarton (who is one of the best all-round sportsmen New Hampshire ever produced), that the State of New Hampshire should pass a law indorsing the Forest and Stream Plank and stop the sale of game at all seasons of the year. This would surely put a check upon the market-hunter and snarer.
Commissioner N. Wentworth.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photography will be found on another page.

SUNDAY SHOOTING.

THE New Jersey game law forbids shooting on Sunday; and the monthly reports sent out by Game Warden Shriner show that the law is enforced. The heavy fine imposed upon two New Jersey gunners for shooting on a recent Sunday prompts a correspondent to urge that it is a hardship that men who must work six days in the week should not be at liberty to gratify their bent on the only day of freedom open to them; and that men should be punished for Sunday shooting he thinks "a Puritanical outrage." We are not disposed to discuss the religious aspect which may or may not attach to the Sunday shooting law. If the law exists it should be obeyed. The presumption is that it embodies the will of the community, to which that of the individual must defer.

Many game laws work hardship in a like manner. Not a summer goes by that we do not have applications from school teachers or students for shooting resorts in districts which are closed by law during the period of the summer vacation. These people are compelled to forego their sport because the game seasons and the school vacation seasons do not come together. This unquestionably is a hardship, but no reasonable person would dream of insisting upon a special privilege to hunt in July because he could not hunt in October. Would-be shooters who are in school in the shooting months, and other would-be shooters who are at work on the week shooting days, both alike must perforce forego their pleasures. In other words, the individual must adapt himself to society and the social machine.

As has been intimated, the character of Sunday shooting laws in whatever religious aspect they may have is not under consideration. Accepted modes of Sabbath observance vary with localities and communities. For the most part in the East, especially in rural sections, the community demands quiet and repose, and the laws are designed to assure it. Shooting is a noisy pursuit, and as such is naturally resented. In New England particularly the Sunday shooter, who shoots near towns or farm dwellings, is looked upon as a noisy nuisance, to be suppressed. It is the experience of farmers whose fields are overrun by them that Sunday shooters are as a rule lawless, unmindful of the rights of others, and given to the wanton and heedless destruction of fences and farm property. The result growing out of this is that the enmity engendered by Sunday shooting is entertained toward shooters in general; and the whole guild suffers by reason of the misconduct of the Sunday shooting contingent.

New England game wardens have testified repeatedly to the Sunday shooter's disregard of the game laws; in Massachusetts it was found by experience to be so impracticable under the old law to suppress illegal shooting on Sunday that the statute was strengthened by making the possession of firearms in the open on that day prima facie evidence to convict.

For two reasons then, that Sunday shooting promotes prejudice against all shooting, and that the Sunday shooter is given to a disregard of the game laws, the interests of sportsmanship at large call for enforcement of the statute which forbids Sunday shooting.

A BUSINESS TRANSACTION.

THE engagement of a guide for a hunting trip is a business transaction. Very commonly the engagement is made far ahead; and the guide is expected to make all arrangements on the spot for the expedition, providing canoes or pack horses, canoemen, packers, and the necessary camp contingent; and all this not infrequently involves the assuming of pecuniary obligations and responsibilities for the men engaged. Moreover, the guide who has contracted to go with one party must reject opportunities to go with others; the outfit he has signed with is the only one with which he may connect himself for the season, or a particular period of the season. In a financial way then the guide's engagement with a hunting party is to him a very important matter. It means quite as much relatively as do promises of employment or position in other fields of honest work.

On his part the sportsman who enters into an advance contract with his guide assumes obligations which he may not decently evade. He is held in honor to fulfill his part of the agreement; or failing that, to make such other arrangement as may be equitable and fair. He may not in simple inconstancy of purpose or idle whim revoke his woods plans, and "throw his guide overboard," unless he be willing to make good the guide's loss involved. A high-minded person will always recognize and bind himself by his just obligations, whether these be with respect to his business or social fellows at home, or to the woodsman in the depths of the wilderness on the other side of a continent.

The complication of a sportsman who unexpectedly finds himself debarred from a projected hunt and a guide who as suddenly is thrown out of employment is one which not infrequently occurs, and it is a satisfaction to record that most of the instances of this which come to the notice of FOREST AND STREAM are brought to its attention by sportsmen who are intent upon making good their obligations to the guide, either by a reasonable settlement or by providing another party to take their place. Such men are known far and wide and honored among the men of the wilderness. Not less certainly does the ill repute of the man who flippantly evades his obligations penetrate to the depths of the woods and the remote recesses of mountain ranges.

THEY MAY BE AVOIDED.

COMMENTING upon what was said in these columns the other day of shooting casualties, a correspondent remarks that "it would be as useless to attempt to legislate against such a class of accidents as against the dropping of a lamp, the running away of a horse, the tipping over of a boat or any other of a thousand mishaps, which will always occur because some are careless and some are blunderers." That is well said and truly. But the casualties to which specific reference was had are not accidents; they belong in quite another category; and that the distinction may be made clear we recur to the subject.

The incidents of the wounding and killing of human beings by firearms in the hands of hunters belong to two well-defined classes: those which are purely accidental and those which are criminally careless. When a hunting dog collides with a shooter and causes the man to stumble and fall, and his gun to be discharged by the fall, the casualty which may follow is an accident pure and simple. When a hunter discharges his rifle at a rustle in the bush, not seeing nor having identified the object shot at, the death of the human being which may follow is not an accident, but the result of criminal carelessness. The first happening was something beyond all possible exercise of care and foresight; the other was caused directly by deliberate neglect of simple, practicable and due precaution. For the accident which one may not avoid he may be held blameless; for the casualty one might have averted he must be held to account. However futile it might be to declaim against the real accidents, or to legislate for them, we should not weary of denouncing in their true character and making odious those other acts which are not accidents, but crimes. If every hunter who goes into the woods could have impressed upon him the criminal character of the killing or wounding by those who shoot at human beings in mistake for game, such an injunction would go far to promote the common exercise of caution. The Maine Commissioners are doing a public service by putting into print the letter written by Nathan B. Moore, relating so instructively his own personal experience with the man target.

SNAP SHOTS.

We print the text of the decision of the Vermont Supreme Court upholding the authority of the Commissioners to close stocked streams, and incidentally expounding certain basic principles upon which the game and fish laws are founded. The closed brook law itself is not of great importance, say the Commissioners in their report just issued, because experience has shown that the system of shutting up a stream for three years amounts to no lasting advantage, for immediately upon the expiration of the close time such a host of fishermen gather for the fishing that the waters straightway are reduced to their old condition. Instead of pursuing further the plan of closing streams for short terms, it is proposed that small brooks known to serve as spawning grounds for trout shall be set apart permanently and protected as natural hatching stations. This is now done with certain waters in Maine, and the results of the system fully justify its wider adoption.

The Asbury Park sea lion case has just been decided by the Appellate Term of the Supreme Court of New York. It will be recalled that the dispute was as to the ownership of the lion, which had escaped from Glen Island in Long Island Sound, gone to sea and been recaptured off the New Jersey coast, and purchased by Mr. James A. Bradley, of Asbury Park, for exhibition on the fishing pier. The original owner, Mr. James R. Mullett, recognized it, and brought suit for recovery. Mr. Bradley's defense was that the creature was feræ naturæ, and having escaped from captivity was then the property of no one but in accordance with the accepted principles of law, would belong to any one who might reduce it to possession. The lower courts sustained this view, and the Appellate Term has now affirmed the decision. The most notable feature of the case is that Mr. Mullett's counsel should have advised him to take it into court.

The Ontario Game Commission tells us that the law forbidding the sale of game is bearing good fruit. It is well enforced, and is actually accomplishing its purpose. The notable result is a restoration of the quail. The supply had been diminished by the traffic—Chatham alone having received 36,000 brace annually—until the depletion threatened extinction. With the market cut off the stock has come up again, and Ontario now has quail shooting once more.

A curious instance of misinformation on the part of one who should be well informed comes from Maine. One of the game wardens of that State, who also conducts a sportsmen's camp, wrote of grouse to a prospective patron in Pennsylvania, "The law allows you to carry fifteen birds out of the State at one time." The Maine law, on the contrary, implicitly prescribes that grouse may be taken only for consumption within the State. That game warden should post up on the game laws.

It is announced that the forthcoming report of Commissioner Binger Hermann, of the General Land Office, will recommend an extension of the Yellowstone National Park on the south and west. The recommendation is the outgrowth of a recent visit by Mr. Hermann to the territory concerned.

The hunter is required to distinguish between a moose and a deer, and between cow and bull, or buck and doe, before firing his shot. Is it too much to demand that he shall also distinguish between moose or deer and a human being before he shoots?

The photographs from which were made the illustrations of Blackfoot Mountain, in our last issue, should have been credited to Mr. E. W. Deming.

The Sportsman Tourist.

Down the Wisconsin.

In Two Parts—Part II.

(*Concluded from page* 285.)

On Monday about 1 o'clock we found ourselves at the mouth of Eagle River, and turned our bows up that stream. There had been higher land along the banks, farmhouses were seen, and there was a bridge over the Wisconsin before we came to the mouth of Eagle. We had made some inquiries about the prospects for fishing, and had learned that there was a big logging dam on Eagle River about a mile and a half above its mouth, and that there was fine fishing in the pool below the dam.

We had now been three days on the river without having seen a fish, not so much even as a minnow in the shallows, and all hands were agreed if the place looked favorable for a camp we would stop here for two or three days and have some sport.

The indications as we approached the dam were all favorable for good fishing. The river was some 60 or 70ft. wide, clear, with a moderately swift current flowing through channels, among the long water grasses and weeds.

At the dam was a small farmhouse on the north side of the stream, with a few acres of cleared ground near it; on the south side was an empty ice-house, but the town of Eagle River was a mile or two away and completely out of sight. The pool below the dam was a couple of hundred feet across, and surrounded by high banks of gravel, fringed with pines at the top, giving a very pretty effect.

A grassy spot on the south side just above the pool was chosen as the site for our tent, and the boats having been unloaded, the Professor, accompanied by Ann Arbor, set off for town to inquire for mail matter and purchase supplies. While they were gone the writer and Yale pitched the tent, and put everything in shape for a protracted stay in camp. A beautiful spring was found not more than 15ft. from where we had pitched the tent, and in this we placed our butter and condensed cream.

Only those who have camped in the summer without the advantages of a cool spring can appreciate what it is to have one within a few feet of one's temporary home.

While busy with our camp duties a huge column of smoke was seen rising in the air in the direction of the town of Eagle River, and from its density and great volume we guessed what proved to be the case, that it was piled lumber on fire in the immense mill yards, but did not go up to see. Having got the camp in order, R. rigged up his Bethabara rod, and putting on a frog which he had caught on the way up the river and corralled in a rubber boot, commenced to investigate the fishing possibilities of the pool. In a few moments I was hailed in excited tones, and asked to bring a landing net quick, coupled with the announcement, "I've got a big one."

The collapsible landing net with which we were supplied had not been out of its special sack since our journey began, and was in the general rod case unopened. I soon had it out and put together, and was at the water's edge, where a 3½lb. small-mouth bass was waiting to join the butter and cream at the spring in readiness to assist at supper.

We caught many more bass on the trip, but this first fish was the largest, and I do not believe there is any more sport to be had in catching bass of from 4 to 6lbs., nor as much, as where they run from 2 to 3½lbs.

We remained at this camp for three days, from Monday to Thursday, and no reasonable person could ask for better fishing. The Professor and I fished almost exclusively with the artificial fly, while R. and T. used frogs. Once only I was tempted into putting a small frog upon the hook of the fly I was using, and caught a wall-eyed pike weighing about 2lbs. With this single exception, I used only the artificial fly during the entire trip, lasting three weeks, and I caught as many fish of as large an average size as any one of the party. There was one peculiar thing about the size of our catch: from first to last not a bass was caught on the trip weighing less than ¾lb. We returned to the water at least two-thirds of our catch, and gave away some, as none of the party cared enough for fish to want them on the table more than once a day. The people in this part of the country call a pike-perch, or wall-eyed pike, a pike; and a pike they call a pickerel. I have never read of catching wall-eyed pike with an artificial fly, but here I did it until it became monotonous. It was no dry fly-fishing, however; quite the reverse. I put two or three small split shot on the snell of my fly, so as to sink it well, and then gave it time to get 2 or 3ft. below the surface before I began to draw. The bottom being of rounded boulders and gravel, without any obstructions, it did not make much difference how deep it went. When it was deep enough, as nearly as I could judge, I brought it in with a succession of little jerks, each bringing it through the water only a few inches, and giving it what I fancied might be a lifelike similitude to the motions of a water beetle. On feeling the least pluck at the fly, I struck, and in this way had remarkable success, catching fish even where frogs had been dragged through without result. It was only after trying surface fishing thoroughly, with rather unsatisfactory results, that I tried the plan of loading the flies so as to sink them to a considerable depth. Fishing this way I caught a muskalonge weighing about 1½lbs., which was returned to the water none the worse for his experience in the upper world. While in this camp I caught five varieties of fish with the artificial fly, namely, bass, muskalonge, pike, wall-eyed pike (or pike-perch) and ordinary perch; before the trip was over I added sunfish and trout to the list, making seven kinds.

There is one respect in which a fly-fisherman has a decided advantage over his friend who uses live bait: he does not have to put in any of his time in procuring the means of pursuing his sport, his lure is always ready. R. and T. spent nearly as much time roaming the marshy ground by the river banks looking for frogs as they did fishing when they got them. Generally, I admit, a bait-fisher will excel his brother of the fly in the number of sizable fish taken in a given time, but unless one enjoys the sport of catching frogs and minnows the fly-fisherman during the summer months has the best of it.

I regard the Johnson flies as the best style for every fish but trout and others of the salmon family. The principle on which they are constructed is that you do not want your fly to float, but to get under water as soon and as quietly as possible. This the Johnson pattern does to perfection, having no hackle and no body, just the shank of the hook wound with tinsel, and a head from which the wings project close together, it cuts easily through the air, so as to facilitate a long cast, and enters the water with hardly a ripple on the water to mark the spot. The Johnson fancy is my favorite for bass. I consider it even better than the buck-tail, which was for the time the Professor's pet; the changing luster of the peacock feathers, of which the former is constructed, seemed much more attractive than the unpretentious bunch of gray and brown deer's hair. During our stay in Eagle River camp we supplied the farmer, our neighbor, with all the fish he wanted, and also gave a quantity to a party of three loggers, who were getting up "dead-heads," as logs are called which have become water-soaked. Lumber is becoming scarcer and more valuable, and it is now worth while to go to the expense of raising all these sunken logs. The loggers made a live box by damming off a little pool with a wall of stones, which allowed the water to circulate freely between them, while keeping any fish we put in secure until wanted. The water was only 3 or 4in. deep, just sufficient to keep the fish well covered, and there were always more or less in the pool darting hither and thither in affright if any one approached.

One day Sancho distinguished himself by going to this pool and catching a 2lb. pike-perch, which he brought flopping in his mouth toward the tent with every appearance of pride in his achievement. Seeing everyone else fishing, he seemed to think he ought to do something in that line himself. This is the only time it will be necessary to mention the canine member of the party. Immediately after this he was taken sick with the measles, as we supposed, R. having just recovered from an attack when we started; and for the rest of the voyage Sancho passed his days on the river curled up in the boat and on land in the most comfortable quarters we could give him. He finally recovered, but for many days we thought we should have to dig his grave on the banks of the Wisconsin River. We left the camp at Eagle on Thursday, and in a quarter of an hour were again on the main river, which was to be our highway for nearly two weeks longer. It is not my intention to give a minute itinerary of each day, but if possible to give such an idea of the river from its head to where we finally left it that any future boating party may know what to expect.

Below the junction with Eagle River the banks are high—from 5 to 10 or 15ft. above the level of the water on both sides—and occasionally large boulders are to be seen. Three or four miles below begin a series of rapids, which make navigation difficult for heavily loaded boats, such as ours. We did not want to take any chance of losing part of our cargo, and in anticipation of encountering such obstacles had brought along 60ft. of ⅜in. diameter rope, with which to lower the boats down any awkward places. One of the party would stay in the boat, keeping it in the desired channel, while others walked along the shore or waded a little where necessary, holding back on the rope, so as to lessen the shock of a collision with some hidden rock, or helped to pull it off if the boat stuck fast upon one.

Most of the time we went through all without resorting to the rope, which was only used in two or three of the worst places. By 1 o'clock we were through the rapids, and for the remainder of the day our course lay through a rather low-lying timbered country, with a little fringe of marsh land along one or both banks, where hay had been recently cut and lay curing or piled in cocks.

Sometimes the strip of grass which was considered suitable for cutting was not more than half a dozen feet in width, in other places it extended back from one to two rods. Just before it was time to make camp we came upon the merry hay-makers, a couple of Canadian Frenchmen, with their hay-rack moored close to the bank, where they were loading it for transportation down stream to their farm. The hay-rack was made by fastening a couple of very long dugout canoes together by cross-pieces 5 or 6ft. long, and near enough together to furnish a good foundation for the hay. A mile or so beyond them we passed a small log house and still smaller barn on a rise of land close to the river, which we concluded, from a new hay-stack and the quantity of fresh hay littering the bank, was their home. A quarter of an hour later we went ashore, having found a high, airy spot, and carrying our tents and other needed supplies up a steep bank made camp among huckleberry bushes, scrub oaks and dead pines. We had no spring near us, but as our canteens had been filled during the day we were well supplied. Shortly after dark the two Frenchmen paid us a visit, having seen the light of the roaring fire we had built. They were brothers, one about twenty-five years of age, the other perhaps ten years older. Both were armed; one with an old bored-out musket, the other with an axe. These warlike preparations the elder of the two explained by saying he had been followed by three large wolves a few nights before, and since then they did not either of them like to go out without being armed.

The gun was the property of the younger man. I asked to look at it, and gratified its owner by pronouncing it a fine piece. He was immensely pleased at my commendation as soon as he was certain that I was in earnest. Indeed those old Springfield muskets are excellent shooting guns.

Our visitors told us how much land they had cleared and that they had two horses and two cows. A suggestion to the younger brother that a good-looking man like him ought to get married, and that those two cows should have a woman to look after them, met with the ready approval which a Frenchman accords when the fair sex is brought into the conversation.

They were out of salt, and when we gave them a liberal supply and would accept no compensation were profuse in their acknowledgments. In answer to inquiries about fishing, they told us the Little St. Germain River was an excellent stream. Fine fishing just below the logging dam, about a mile above the mouth of the river, where it empties into the Wisconsin.

They were so enthusiastic on the subject of the splendid fishing there that we decided when we reached the place the next morning at about 11 o'clock to go up the river as far as the dam and make another camp, so that we could enjoy a few hours of the sport. There was plenty of water in the Little St. Germain for the first quarter of a mile, but the current was so swift that we soon decided it was easier to get out and wade, and drag and push the boats, than to try to row.

There were innumerable fish in the stream, which we could see darting hither and thither as we splashed our way along, but we had no time to fish just then. The further we went the more difficult it became to make much progress, and the volume of water continually decreased, so that our boats were aground half of the time, and it took hard work to get them off the gravel bars, pulling at one end and pushing at the other, only to get fast again a rod or two further on. The Frenchmen had told us the dam was only a mile above the mouth of the river, and by the time we had gone as we estimated about three miles and spent as many hours in hard work we concluded it about time to find out where we were. For once one of the eternally recurring gravel bars served a good purpose, and while our boats were fast upon it we got out our lunch and found a trip up the Little St. Germain was an excellent appetizer. After our meal it was decided to send T. on up the stream in light marching order to see how much further it was to the dam, and what the prospect was of water enough to float the boats. In about half an hour he returned carrying a 2lb. pike, which he had killed with a stone as it lay basking near the surface, and reported that there was a dead muskrat on a sandbar a little further up, which he had killed in the same manner.

"How about the dam?" "Oh, yes, it's up here about half a mile. I went so I could see where it was."

Thus encouraged, we pushed on, literally, for the water became so shallow that our progress was mostly pushing and pulling. Finally we left the boats aground as usual, took our rods, and walked up to the pool below the dam to investigate; and here we found the explanation of the decrease in volume of water in the river while we were on our way up, which had caused us so much trouble. Three or four men from some lumber camp had arrived a few hours before to fish below the dam, and thinking they would be more successful if the water was shut off had closed the waste gates. They were very sorry when they found what trouble it had caused us. Had they caught anything? we asked. "Not yet; have only been fishing a little while." That did not sound very encouraging, but we jointed up for a trial. I made three or four casts from the shore with a Johnson fancy without success, and then fastened to something—nothing large, I knew, but a fish. It did not take long to bring him in. A common sunfish! I sadly dropped him back into the water, took off my leader and fly, reeled up, and began to unjoint my rod. "Come, boys, let's get these gates up, so that we will have water enough to float out boats, and get back to the Wisconsin again as soon as we can." No one objected except R., who had caught a pike weighing 2 or 3lbs., and always preferred the present joys of fishing to promised delights of any kind. With the help of the men who had closed the gates, we pried them open and were soon on our way down, with a swift current and plenty of water, where a few hours before we had been laboriously pushing and pulling at our stranded barks.

Our camp that night was not far below the mouth of the Little St. Germain, upon a grassy spot, close to the river and 6 or 8ft. above it. Behind us was a green stretch of country, from which the timber had been cut away, all but a few dead and fire-scarred trunks, which had not been worth the labor of cutting.

While we were sitting around the camp-fire after supper, night having closed in, making the little spot we occupied the only cheerful place in the wilderness which lay unseen around, Sancho created a little excitement by barking furiously at something in the bushes only a rod or two from the tent. As he was not given to such demonstrations without good cause, an examination was made with the aid of a lantern, but revealed nothing, and we were forced to the conclusion the dog's eyes or ears or both had deceived him. The next morning was Saturday. A couple of bass were caught in the river just in front of the camp, and we were satisfied this place just below the mouth of the Little St. Germain is a good fishing locality, but having practically lost a day, and being anxious to get a good Sunday camp, we packed up and started shortly after breakfast. About 6 o'clock that evening, at a bend in the river, where there was a pretty grove of pines, which had for some unaccountable reason been left when the lumbermen destroyed all their fellows, we decided to land and remain over Sunday. There had been an Indian camp here, and the frames of their "wickiups," as we used to call these temporary shelters in Nevada, were still standing. For good and sufficient reasons we located our tent a few rods away from the Indian camp, and here we remained until Monday morning. There was no spring near the place that we could locate, but our canteens had been filled during the afternoon of our arrival and furnished an ample supply of drinking water.

We could catch no fish, but had plenty of provisions in the boats, and delicious blueberries were to be had for the gathering.

The occasional puffing and snorting of a locomotive engine, which we heard during the nights, told us we were within two or three miles of some railway station or side track. Monday morning we got an early start and portaged the big dam at Rhinelander at about noon, getting a dray to haul our boats and baggage through the

town to a point a quarter of a mile down the river from the dam, and the wild rapids just below it. For several miles after leaving Rhinelander the scenery is very pretty. The seemingly endless stretches of tamarack swamp or uplands, from which the timber was cut years ago, and where fire has done its hideous work again and again, were here succeeded by the timber of Indiana. Elms and oaks and other deciduous trees drooped and nodded over the stream in charming contrast to what we had seen for the previous ten days.

The river bed was of gravel and boulders, the current rather swift and in places broken, but only once were the rapids bad enough to make us feel that it was not quite safe to run them without the rope and fending pole.

A one-night camp was made at a place where there was a farm on each side of the river, the only camp we had made since leaving Eagle Dam where we were in sight of any habitation or in hearing of any of the sounds of civilization, if I except the distant puffing and whistling of the switch engine at Indian Camp. On these boating trips we avoid wherever possible a camping place which may attract attention and bring visitors or tempt boys to hang around the place, but when we have to camp near a farm there are undoubted compensations, and a supply of delicious fresh milk and newly baked bread somewhat reconciled us to the sight and neighborhood of fences and cultivated fields. The river from this point widens out to such an extent that during the following day we often found it very difficult to locate a channel where there was sufficient water for our boats, though only 8in. was required. Time and again we were obliged to jump out and drag them over a shallow place, where there was not water enough to float them. The changes from deep to shallow water and vice versa were so frequent that our rubber hip boots were full a good part of the time. Whenever we could see a mile or so of clear water ahead we were cheered by the hope that there would be plenty to float us for the rest of the way, but in a short time it would spread out hundreds of feet wide and only a few inches deep again. During one of the intervals when we had deep water the boys in the Osprey got out their kodak, and running their boat alongside of ours at a convenient distance photographed me sitting cross-legged, like a Turk, upon the forward deck of the Otter, quite unconscious of what they were doing and minus my boots, stockings and knickerbockers, which were drying in the sun, while I was enjoying a soothing pipe.

Wherever the rapids seemed bad or where there was doubt as to the proper channel the Professor and I always went ahead, and the boys followed, taking advantage of our experience. During this day we came near having an upset in a rather disagreeable piece of rough water, where the channel zigzagged among huge boulders, and made a descent of 2 or 3ft. in a very short distance, ending in a pool 60ft. or so in length. We in the Otter found ourselves at the commencement of this descent before we realized it. The water was tumbling ahead of us, but we thought we saw a channel, and guiding the boat in that direction went through all right, having only grazed some of the rocks pretty hard. The Osprey was not so fortunate. The boys got through the worst part, but their boat struck a rock just above the pool, swung around broadside to the current, and would have gone over had they not with great coolness both perched themselves on the upper gunwale and managed to hold it down. Finding they could not get off without assistance, we rowed out into the stream, threw them our tow-rope, and finally pulled them off without any worse results than a very small leak in the bottom of their craft, which, the reader will remember, was one of Mullins' steel boats.

The varied and wearisome experiences of this day made us anxious for a good camping place, but none offered during the afternoon which was satisfactory, the shores on either side being both bushy and rocky. Finally, with many misgivings, we chose a bit of meadowland of about an acre in extent, where a stack of recently cut hay offered an opportunity to get material for a bed. There was no house or any sign of inhabitants in sight, and we conjectured the hay would probably be taken away in boats to some point down the river, as we had seen the two Frenchmen just above the Little St. Germain. The ground was some 3 or 4ft. above the bed at the front, but had a downward slope for two or three rods back to a heavily timbered swamp, which bid fair to harbor innumerable mosquitoes, but showed also a good supply of firewood, dry, and of a convenient size for the camp-fire.

Our boats could not be got anywhere near the camping spot, as the boulder-strewn bed of the river was nearly bare 40 or 50ft. back from the miniature bluff where the hay land began. We carried all our supplies which might be needed to the locality selected for our tent, and soon had our house in order, a good fire burning, and a soft bed of hay under our blankets. This we carefully put back in the morning.

A good supper of fried eggs and bacon, baked beans, Boston brown bread, claret and coffee soon made amends for the rough experiences of the day. We were not troubled by mosquitoes during the evening, but the location was such that we felt we could not possibly escape a general assault in force, and took especial pains to pin the mosquito bar securely in place before going to bed. Strange to say, there was hardly one of our camps on the entire trip so free from the insect pest as this one, within two rods of a densely timbered swamp.

When "the early rosy-fingered dawn," to use Homer's expression, appeared in the east, and we looked out we found the water in the river 18in. higher than when we went to bed. The stretch of nearly bare cobblestones and boulders, which had intervened the night before between our boats and the hay land where we pitched our tent, was now covered with running water, and the boats were tugging at their anchors. T. waded out and towed them in close to the camp, where after a hearty breakfast we loaded them once more much more conveniently than we had unloaded them the night before.

The gates of the dam at Rhinelander had evidently been opened during the night, hence the difference in the amount of water in the river. As nearly as we could judge from our map and information procured at Rhinelander, the once prosperous but now decaying lumbering town of Tomahawk was about eight miles as the crow flies below this camp, and we anticipated no trouble in passing the dam three or four miles below that place early in the afternoon, but miles seem to stretch out unaccountably on a boating trip, and the sun was getting low when we found ourselves in the channels between log booms, which are the unlovely approaches to a lumbering town. At Rhinelander there was among the booms a clear channel for boats all the way down to the dam, although we were at times uncertain which little streak of open water was the right one. Here, however, the mill men cared nothing about leaving an open way for boats, and we presently found our passage completely barred. We tried first one way, then another, only to discover we were in a cul-de-sac, from which the only way out was as we came, or to haul our boats over a barrier of logs fastened together, end to end, by a foot or two of chain, forming a fence to hold loose logs. Obstructing the channel of a stream like the Wisconsin in this manner is illegal, and we were furious. The sun was almost at the horizon, and we

HUMMINGBIRD'S NEST ATTACHED TO WIRE.

had at least an hour's rowing to pass through the town and reach the dam, where we expected to camp, even if we met no further obstacle. At this juncture we luckily discovered a place where the logs were fastened together with a rope instead of a chain. It seemed reasonable that a rope would yield more readily to the edge of our camp axe than a chain, and on trying the experiment soon made an opening, and passed on our way at the best speed we could get from our oars, with a troop of vagrant logs after us like sheep following the bell wether. A mile or so below town we again got among log booms in the dam, and darkness came down upon us while we were vainly searching for an opening or a place where we could make one. We had observed while there was still daylight a place in a bit of woods on what seemed an island, which we had thought might be a fairly good camping place. It was necessary to get out the lantern, but with its help we skirted the shore we had passed, trying vainly to discover some familiar feature. What a difference there is in the appearance of a shore line by day and the same by night. It was not very dark; the stars gave a little light, but everything looked as unlike its appearance as we remembered it an hour or so before as if the place was quite strange. Finally we found a place which answered our purpose, the tent was pitched by the light of the lantern, a fire started, a warm supper cooked and a bottle of wine opened. It was nearly 11 o'clock when we went inside the tent that night, after the only disagreeable experience on the whole trip.

The next morning we readily found our way down the river, the channel being on the opposite side of the pond, for such it really was at that place. At the dam we learned something about the river a few miles below which determined us to make a camp for a few days at the first good place after making the portage and stay there for the remainder of our time on this river. Some eight or ten miles below the Tomahawk dam are the celebrated Grandmother Falls, where a long portage by team is necessary, and it seemed better to end our trip near enough Tomahawk to enable us to ship our boats and camp equipage home from there. A mile below the dam we came to the ideal camping place, such a one as is remembered when others are forgotten, and as years pass comes to be in memory the one camp of the trip. A beautiful grassy spot, 4 or 5ft. above the water, in one corner of an old field, from which the stumps had long ago been cleared. A large and very well built log house, in fairly good condition, but untenanted, stood in the field 100yds. away. A piece of woods at our left furnished plenty of fuel, and following a path through this a few rods brought one to a cool spring. There was a farmhouse a quarter of a mile further on, but it was not in sight from our tent, nor was any other habitation or sign of civilization but the old log house, with a few fruit trees clustered around and remains of flowering bushes and plants, returned apparently to a state of primitive wildness. The view up and down the river and of the opposite shore was extremely pretty, and here we passed three or four days of pure enjoyment, with pleasant weather, pleasant books and good enough fishing for any reasonable person. An average of one fish for each half hour of actual fishing gives me plenty of sport if they are bass, and indeed if I am out on a pretty river in fine weather for three or four hours and get three bass I look upon them as clear gain, it being enjoyment enough to be out.

It was now near the end of August, and the days were perceptibly shorter, so that we usually went into the tent about 8 o'clock, lit three or four candles, which were coaxed by a little melted paraffin to stand erect on a tin tackle box in the middle of the tent, around which we all reclined and read, while those who used the pipe sent clouds of tobacco smoke curling upward. We had a lot of books with us, and everyone could find something to his taste, but all had to stop and listen whenever one of the party found anything particularly good. In this way Stephenson's "Inland Voyage" was dealt out in installments by one who was reading it, and I would advise everyone who enjoys outdoor life and trifling adventures to get that charming account of a canoeing trip.

Here I must close this account of ours. How we finally packed up for the last time, and hired a farmer to take our boats and other stuff to the station for shipment home; how we went by rail to Merrill, and from there in a three-seated wagon across the country to Prairie River, where we had first-class accommodations at Miller's farmhouse, and spent the last day of the trout season fishing the clear, cold waters of that beautiful stream; and all the incidents of a night trip over to the C. & N. W. Ry. from Miller's, would make an interesting story, but does not properly belong to a sketch of voyaging and fishing on the Wisconsin.

LEXDEN.

Natural History.

More About the Frog.

THINGS which a man is familiar with in his every-day life he seldom thinks worth mentioning; but let some one ask a question about it and he is surprised that everybody does not know the thing which he happens to know. A carpenter is surprised to see you try to rip a board lengthwise with a cross-cut saw; the difference in saws is one that he supposes is known to all men, but it isn't. He would never think to mention it if he was writing about building a pig-pen. This is said as a preface and an introduction to the subject now on hand.

In FOREST AND STREAM of Sept 10 I thought I had exhausted the frog question and told all that I knew about their habits. Surely I intended to do this, but a question from the editor of the Representative, Fox Lake, Wis., gives me a hint that I did not cover the subject as completely as I had thought. Mr. Hotchkiss encloses an item from an English paper, the St. James Gazette, as follows:

> A very singular incident was brought to my notice during a recent visit to Lake Vyrnwy, in North Wales. A year or two ago the breeding ponds were cleaned out, and when there was but little water remaining the man in charge—from whom I heard the story—observed a peculiar looking fish swimming about. It was captured with the aid of a landing net, and proved to be a trout of nearly ½lb. in weight. Clasped firmly around his back and shoulders was a live frog of ordinary size; the belly of the frog rested on the back of the trout, just behind the gills, and its legs were extended round and under the fish, gripping it closely. Considerable force had to be exerted in order to separate the pair, when the frog hopped away and the trout died a few seconds later. The scales of the trout were dark and discolored where this novel old man of the sea had rested, tracing out distinctly its shape; so it is probable that the fish had been troubled with this incumbrance for several days. The habits of frogs are peculiar in various respects, and students of natural history may find food for reflection in this incident. My informant is an exceedingly intelligent man, on whose word I place implicit reliance.

I have seen the frog in this position many times, usually on sunfish, small bass, or other fish, and always with its fingers in the eyes of the fish, which was either totally blinded or nearly so. Mr. Hotchkiss writes: "During your long career as a fisherman and an authority on fishing topics, did you ever hear of anything like the enclosed item? I have been wondering what the frog's object could have been."

In my lectures in the public schools of New York City, where the audience is mainly adult, I say: "The eggs of most fishes, and all those that the fishculturist propagates, are fertilized after extrusion, and in this respect resemble the fertilization of most of our flowering plants and vegetables, where the pollen of the male flower falls upon the pistil of the female flower, as it is carried by the wind, insects, or other agencies."

With this in mind you will perfectly understand when I say that the frog has its eggs impregnated after extrusion, just as the fish has. The male fish attends the female and is ready to impregnate the eggs as she lays them. The habit of the frog only differs in clasping her, often with a death grip, and then impregnating the eggs as they are laid. In hunting frogs for the table in early spring, I have found hundreds of females that had been killed by a male having drowned them, for when they came up to breathe the female could not reach the air. When I have seen a frog on a fish I have known that it was a male, and that the fish could live where a female frog could not; even if the fish was blinded in the event.

This is a subject that I never would have thought of writing about, because it was so familiar to me as a fishculturist; but I find that all men do not know these facts, which, like the saws to the carpenter, are every-day affairs with a man who gives his life to fishculture and the study of animal life. FRED MATHER.

Origin of Animal Instincts.

Editor Forest and Stream:

In my article of July 23 I had as little idea of arousing temper in reply as I had that my language could permit such utter misapprehension of my meaning as fills the letter of Hermit in your issue of Sept. 10. As to the personal portions my amiability rises superior to the shock. Some of the misapprehensions I will make an effort to correct in such irregular order as they come uppermost.

First, Hermit says that I denied to animals reason and the power of intercommunication. I did no such thing. I spoke of their possessing instinct, but I neither said nor implied that some degree of reason might not coexist. Indeed I would scarcely attempt to draw a line between them. I did ridicule the theory that monkeys had a spoken language, and that dogs had a wig-wag alphabet for tail use. If Hermit is Prof. Garner, or the author of the tail alphabet theory, his spleen is explained and excused. I only got what I deserved. But I never denied the existence of other methods of communication. Within certain limits it is a fact universally recognized, but it had nothing to do with my argument, and I never referred to it.

Again, Hermit objected to my use of the terms centripetal and centrifugal as applied to those forces or tendencies which result respectively in nature's unities and in her varieties. These terms seem to me to greatly promote analysis, and clear thought upon the subject. All must recognize in heredity a centripetal force—one which preserves unity. About the force which produces variety there may be different opinions, but it will facilitate the discussion to call it a or the centrifugal force. So I shall continue to use both terms. And there is also a phrase used in my first letter which I will continue to use for brevity. I spoke of the theory that wary fish derived their excessive caution by inheritance from ancestors who had been hooked, but escaped capture, as the "three crippled grandparent theory." I submit that no other short descriptive phrase so exactly conveys the essential features of that theory; but, for short, I will merely call it the grandparent theory.

Those who hold this theory not only use it to account for the new instincts we sometimes see animals acquire in a comparatively short time, but they use it to account for all instincts, old and new, instincts by the dozen and the score. And they further ascribe to similar causes all of nature's infinite variety of color, size, function, form and feature. In brief, they make the hodge-podge experiences of grandparents to be nature's centrifugal force.

I called this theory one of chance. Hermit retorts that as "there is no effect without a cause," there can be no such thing as chance in nature. In one sense that is entirely true, but the sense in which I used the word is at once very obvious and very different. It is illustrated by the following quotations from Webster's definition of chance. "Time and chance happen to all." "'By chance a priest came down that way.'—Luke x." "'If a bird's nest chance to be before thee.'—Deut. xxii." "'Ah, Casca! tell us what hath chanced to-day.'—Shaks." There is plenty of such chance as this in the world, and there are whole volumes of beautiful mathematics devoted to calculating its laws and probabilities. The immense business of insurance—life, fire, marine, accident and guarantee—are all built upon these laws and verify their soundness. So I called the "grandparent theory" a theory of chance. It is a fair and accurate statement of it. For it makes wariness in the trout depend on the previous happening of peculiar accidents to both parents, or to three grandparents. The original statement of it, which I criticised, was "an old trout often pricked learns caution and transmits that quality to its progeny. The heedless young trout takes the first lure and has no progeny. * * * The wounded that survived learned a lesson and transmitted it to their posterity." If that does not make chance decide the possession of an instinct, words have lost their every-day meanings. And when the same theory is advanced to account for every one of nature's infinite adjustments, great and small, down to the lightest shade of the obscurest feather, it makes chance nature's sole centrifugal force. There seem to me two insuperable objections. This theory violates the mathematical laws of probability and it is opposed by the best known facts about heredity. Every one recognizes that in results controlled by chance happenings there are what we may call for short harum-scarum features. If a pack of cards is found with the cards in regular order, we know that design not chance arranged them. If type are found arranged to spell connected sentences, we know that chance happenings cut no figure in their arrangement. Now, to my mind, every work of nature is what I may call also a work of art. There is beauty, symmetry, delicacy, fineness of touch and finish, and adjustment in such numberless details, that the only adequate comparison seems to me the adjustments of type in a printed chapter. One is as free from harum-scarum as the other. My mind can no more accept chance as producing one than the other.

But if there are those who do not see the art in nature as I do, to them I would commend the most patent facts that we know about heredity. There is very much that we do not know. There are occasional happenings whose causes are beyond our ken which produce strange anomalies, such as Siamese Twins, two-headed calves, and extra limbs and organs in great variety. We recognize such things as accidental happenings, and call them "freaks." But there is one fact about heredity in its normal operations which I think can be maintained against all comers. I will express it briefly by saying that it is not easy to tamper with heredity. It will not easily pick up and adopt new features to be transmitted to posterity in its endless stream. By a figure of speech we may say that heredity is very, very hard on trigger to all ordinary happenings. That fact is all I need maintain to make my argument good. For the grandparent theory assumes that every individual experience has a pull upon heredity, and that a concurrent pull by two parents or three grandparents will infallibly bring it into action or fire it off. If I show great artificial modifications of parents and grandparents for many generations without production of the slightest effect upon their offspring, I show that heredity is hard on trigger, that it is difficult to tamper with, that nature has not made it easy for accidental happenings to modify the forms, features and instincts which she has adopted as her own. In this fact, and also in the limited fertility imposed upon hybrids, nature seems to have actually erected obstacles to accidental interference with her creations. She has actually seemed to bar chance from any interference with heredity.

Hermit has paraded his misapprehension of this whole matter in telling of his double-toed cat, with its double-toed father. That is ordinary heredity of a feature already adopted in the ancestry. As well tell us that a white cat produced a white kitten. But let him show that the original double toe was an artificial one, transplanted and made to grow upon a normal cat and then transmitted to its posterity! Or let him show that a black cat artificially bleached afterward produced white kittens! No such examples can be produced. His robin incident is equally valueless. By cross-breeding and selection natural features can be modified, but to introduce new features is a different problem. As I instanced in my first paper, by selection we may breed dogs with short tails. But we can never accomplish it by trimming tails short.

I am not an extensive reader, and when I wrote that paper I had never so much as heard of Weismann, to whose class Hermit assigns me with a sneer. But I have since read of an experiment of Weismann's upon this point which seems to me the very proof of the pudding. He tried to breed tailless mice by amputating tails at birth for a number of generations. He utterly failed to produce even the slightest effect upon the tail of a single mouse. And I am told that Weismann asserts that neither compression of the feet practiced by Chinese, circumcision by the Hebrews, tatooing by savages, nor any other religious or tribal mutilation known in the world has ever produced any hereditary result upon descendants of those operated upon. These facts all seem to me to be the very eating of the pudding. Plainly heredity must be very, very hard on trigger indeed, when we cannot bring it into play even by mutilating the bodies of ancestors and keeping it up for a hundred generations.

Hermit is indignant that in a long article I did not use the word evolution. That word is one which is liable to be misunderstood if used without explanation. I believe in an evolution under the government of intelligence, not of chance. I will illustrate it by referring to the evolution of the locomotive, which exactly parallels nature's methods as I understand them. I will endeavor to show briefly the similarity of the methods by which certain locomotives developed the air brake attachment, and that by which certain serpents developed a venom fang attachment. First, needs existed; locomotives already had hand brakes, but often there was need for more brake power to make sudden stops. Serpents already had teeth and caught prey, but they swallowed it more or less alive, and that must have been often disagreeable and sometimes dangerous. And now comes in the absolute necessity for an intelligence in each case to recognize the need of improvement, or the room for it, and then to devise the improvement. We all know about the intelligence which supervised the locomotive, where it resided and how it acted. It planned and devised; it drew diagrams and made blue prints. It also learned by experience and made intelligent modifications from time to time until the machine of to-day was arrived at. Can we dispense with the supposition of some equivalent intelligence which recognized the room for an improvement upon the serpent and then devised it? What happened was this: The saliva of certain snakes began to acquire poisonous qualities, and the modification of salivary glands necessary was readily accepted and perpetuated by heredity. The effect of this poison was to paralyze the struggles of the snake's prey and to make the swallowing easier and safer. It was an intelligent device, and it was followed by others. First, the teeth in rear of the salivary glands were grooved to carry the venom more readily into the flesh of the victim. Next, these teeth were enlarged. Then they were moved forward from the rear of the jaw to the front, that the venom might be the sooner applied. Lastly, some of the ordinary teeth were omitted, the venom fangs growing larger and answering all purposes. Who can say that these are not the methods of intelligence? And is it not a fair description of them to speak of them for short as "blue-print" methods? Who can believe that the original production of venom and all the successive changes that followed, and stranger still to say, were adopted by heredity, were all freaks of chance like the Siamese Twins?

I will follow Hermit's misapprehensions but one step further. He does me too much credit in supposing the idea of what I called "sub-ego" to be original with me. It is as ancient as Socrates, who wrote of his Daimon; and as modern as the theories of sub-conscious cerebration. I merely suggested the name sub-ego as indicative of the intensely personal part played in every individual organization by something entirely apart from and beyond its consciousness. One thing which it does is to make the heart beat, and any one who chooses might call it the "heart-worker." A recommendation to that name would be that even the most captious could scarcely deny its existence. But that name hardly seems sufficient. For the beating of the heart, beginning in the embryo, long before conscious life begins, is but one of an infinite chain of phenomena, which shade into each other on the one hand, and into the conscious life of the ego on the other; so that it is difficult to draw the line between them. In the contemplation of this force, familiar though it be, we are face to face with one of nature's great mysteries—to us.

In nature's centrifugal force we are face to face with another. What is more obvious than to guess that the two mysteries are closely connected? What so natural as that the force which makes its heart beat should teach the bee to make honey, and the young bird to build a nest and choose its mate? In fact, so closely does the life of the ego depend upon the work of the sub-ego that it may almost be said to be secreted or produced by it. If the sub-ego stops its work the life of the ego terminates as suddenly as the noise made by machinery terminates when its motion ceases. And in this producing force it will not be strange to find the intelligence able to recognize the needs of an animal united with the power of modifying its organs and instincts to conform to its needs. That would be a natural working union of power and intelligence; such as has produced the evolution or development of the locomotive. A similar union is necessary to produce the orderly development of nature, or any other orderly development.

Returning then to the starting point of these letters, I think we may say confidently that the wary trout and the shy wild ducks do not derive their shyness from the experiences of crippled parents or grandparents. Of that we may be quite sure.

The only power in sight, which seems adequate, is that mysterious force manifest in the beating heart, and all the other phenomena of physical life and growth, which we have called here the sub-ego. It is a legitimate working theory that this force is able to and does supply all needed instincts, the new as well as the old.

E. P. ALEXANDER.

Ruffed Grouse in the City.

LOCKPORT, N. Y., Oct. 4.—Thursday evening, after 6 o'clock, a young neighbor came to me and said that there was a bird in their yard that looked like a partridge. While he was writing the above to me (FOREST AND STREAM knows that I am deaf), my daughter came to the door and said that there was a queer bird down at Mr. Chapman's (three houses below on opposite side of street), and they wanted me to come and see it. My young neighbor and myself went over, and on the roof of the veranda of the next house was a ruffed grouse. I walked underneath it and watched it for some time, and it never moved, although I was talking all the time. Finally I threw my canvas hat, and nearly hit it, when it flew down over the sidewalk to Genesee street, about twenty rods. As it flew low I expected it would fly against the houses on Genesee street, as the birds have a propensity for doing this when they get among buildings. I found it sitting on the edge of the roof of a two-story house, where it remained until the electric light commenced burning. The strange thing about this bird being in the city is that, with the exception of one place ten miles east, you might hunt for ten weeks and not find a ruffed grouse in Niagara county. I have lived here thirty-five years, and have known of half a dozen instances where grouse has flown into or against buildings in my immediate vicinity, while I have never seen more than twice that number in all my tramping in the county, and I have done not a little of it.

The same day of the above occurrence Messrs. Edward Moody, Earl Moody and Strathers Leonard secured forty-six snipe ten miles west of the city.

J. L. DAVISON.

Bull Bats.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* "Are bull bats game?" No, with a big N. They are the most valuable of all our insectivorous birds.

They come out to feed about sunset, and that is the time the mosquitoes also do business. It's a one-sided war, and the havoc the bull bats make on the mosquitoes is equal to Kitchener's slaughter of the Dervishes.

I once had the curiosity to investigate a night-hawk and found the crop packed full of flying ants, etc. I have often felt sorely tempted to indulge in the sport of shooting them, but knowing their value as insect destroyers I never could bring myself to do it; and now that I am older and more considerate I would as soon go gunning for my grandmother. Nearly every civilized State places them in the insectivorous class, and protects them by a penalty. Without night-hawks and swallows mosquitoes would attack us in such swarms that we might well ask whether life would be worth living.

Chimney swallows live on the same food as bull bats and must be equally good as game birds, but they are rather smaller, and that is probably all that saves them.

Now what right have we to find fault with ladies for encouraging the destruction of innocent birds to gratify their vanity, while "horrid men" indulge in the same cruel business to gratify their carnal appetites?

The bull bats always lay their eggs on the bare ground, but not necessarily on rocks. When I was a boy I often flushed them, and frequently found their eggs, and whenever I revisited the place I'd find the female sitting on the eggs, doing her own hatching, with no assistance from the sun, moon or stars.

DIDYMUS.

A Hummingbird's Nest on a Wire.

ARROYO GRANDE, Cal.—*Editor Forest and Stream:* I send you by mail a hummingbird's nest built on a piece of wire, which I know you will be glad to keep as a sample of a southern California hummingbird's enterprise. The nest was found by Master Lowel Lewis, of this place. It was hanging on a nail between two old buildings. There are plenty of trees here, and why the bird should have chosen to use the wire I don't know.

W. T. COOK.

Hybrid Ducks.

BREWER, Me.—Col. Mather speaks of hybrids. I have in my collection two hybrids between black duck and mallard. One shows its mallard points the strongest, the other those of the black duck. I also have a half-blue-winged teal and half-cinnamon teal, and a half-widgeon and half-gadwall. I saw in Dover a half-shoveller and half-blue-winged teal. I tried to buy it,

but could not. This, as well as the two last of mine, were all taken by a Mr. W. H. Smith, of Loveland, Colo., who wrote me that they were probably the offspring of wounded ducks in the small pounds, where he shot them, and where they could not get other mates.

M. HARDY.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Adirondack Deer, Guides and Woodsmen.

Editor Forest and Stream:

It is with considerable regret that I notice the efforts that are being made from time to time to convince people that, after all, the non-hounding deer law is a failure, and that the natives of the Adirondack region are for having it repealed. That sooner or later the law will be repealed there is little doubt in my mind. Pretty soon we will hear of whole gardens and countless acres of buckwheat devastated by the deer, of how the railroad trains have to run on half-time owing to the danger of being derailed by running into some fat and hemlocked-stub-horned buck; and if men are not attacked by half-starved deer some of these days it will be a wonder.

The idea of turning the hounds loose is not unattractive to poetical ears—mellow baying, and deer fleeing with graceful leaps, crashing brush and the splash of water, not to mention the privilege of sitting still and waiting for the game to come, cannot fail to arouse enthusiasm in many quarters, but especially in the opalescent-tinted prospectus of a three-story, elegantly furnished and fully equipped "camp" in the woods. Runways like cow paths, deer sure to come, all you have to do is sit and wait for them, experienced guides to put out the dogs—all these are potent arguments to the mind of many a "sportsman" whose home walls are adorned with big heads and floors covered with great skins of deer, whose brain is replete with tales of deer brought down, of wounded ones that were lost, of some few that gave scant glimpses of their sleek coats and "escaped."

I know of such a case. A man heard that deer were to be killed in the Adirondacks. He had visited a sportsman's show, or had read a story about deer shooting. He had seen a deer head, and he could afford to do as he pleased for a few days each year, so he learned to shoot deer. He got his gun and came to the woods of Moose River. He had the best guides in the country, and naturally the best dogs procurable—winter trained on bloody trails in deep snow (but he didn't know of that perhaps). For three years, or four, he came to Moose River. His first rifle practice, almost, was at a deer.

Such hunting as this man's was never before seen up there. For twelve or fifteen days the dogs ran the deer and the party killed deer every day. No one that will tell knows how many deer were killed by this one party. It makes no difference for that matter. But when the deer hounding law was passed the man ceased to go up there hunting.

He paid his four or five guides well. His chief guide was his teamster as well, and to each of these men the sum of $50 at least was coming at the end of the trip, not to mention high living for the time in the woods, and rewards for extra service, and presents. Although these guides were making good money because the hounds could be used, yet there was not one of them who did not advocate, as much as he could, a non-hounding law. They would rather have the deer preserved than to make money by their destruction.

I don't know much about the Fulton Chain and Saranac Lake guides and hotel keepers. I have steered pretty clear of the hotels there. I have always camped where the beds were balsam boughs, and the sheets thick blankets. Of course, I have met a few of the boys from that region, but mostly I have been with the men in the northern part of Herkimer county. I haven't been in closer touch than letters would fetch me for a year past, but every one that I saw who knew the woods last fall spoke about the way things were as regards deer. Herkimer county is almost solid for the maintenance of the non-hounding law, and the few who are against the law are directly connected with summer resorts.

It is probably so, that in the neighborhood of such summer resorts as may be found along the Fulton Chain of lakes and the Saranacs a great majority of the "natives" are in favor of the lawful hounding, but I doubt very much if the strict woodsmen, the ones who live in little shanties surrounded by woods, wish to have the dogs bellowing around them, and destroying the source of their chief pleasure.

It should not be forgotten that the guides are not the only ones who live in the woods, and are natives there. There is a pretty clearly marked distinction between the two kinds of inhabitants, and even among the guides there are kinds, as tourists have learned to their sorrow. The woodsmen that I know do not favor hounding. I mean by woodsmen the ones who need no trail to find their camp, and who handle axes a good deal better than they do knives and forks, and yet bear themselves at the table acceptably. They carry guns when they go guiding, or else don't go. They are the strong and picturesque men when seen going through the woods, but cut awkward figures waiting on tables in camp. They are the ones who speak but little save among their associates. Their voices are not heard in Albany, and their vote is the only thing that ever makes them felt beyond the borders of their township. They are mostly small farmers, blacksmiths, loggers and lumbermen, carpenters and tradesmen, and they form the body of every community where no great blank-sided hotel rears itself bluntly against the wooded ridge. Guides form but a small commonwealth, but they are powerful because they are all the average tourist has to do with, and by their words the tourist naturally has to judge of conditions which the guide puts in a one-sided light, of course, if it deals with his trade.

The woodsmen, as distinguished from the guides, I believe detest the practice of hounding, and the things that it involves, and more than ever now. The deer are seen more frequently in the Herkimer county clearings than two years ago, when they were scarce indeed. They have no fear of bellowing brutes which, in the old days, ran wild all summer that they might be "hard" when fall and legitimate "sport" came. Even the guides who do not openly avow the value of preventing the hounds following deer admit in private conversation that the deer hounding is a destructive practice, and tolerable only because it promises more money for the next half-dozen years. After that, "Why then I'll have something else to do." That is the literal argument I have met with when arguing the matter with a few professional guides.

It will do no good to argue with any one about how many deer escape the dogs. The field has been gone over a dozen times, but any one with practical experience knows, and if he hasn't the practical experience as to still-hunting, let him read Van Dyke's "Still-Hunter," that not one in twenty or even fifty deer, still-hunted, is more than seen. While every hounder can tell how, at some time or other, he has started after one deer, known to be hanging around some swamp or ridge, and got it.

One Saturday night four or five years ago a woodchopper came to the store at Northwood, N. Y., and said that there were an old doe and two "yearlings" up in the Dix Swamp on Little Black Creek. "All right!" said Bill Pardy, "I'll come up to-morrow with old Rover and some of the boys, and we'll get one." At 10 o'clock next morning two of the deer were swinging from poles on the way to Northwood. It is true that that was exceptional luck, but as Bill said to me one time: "If I've got to have meat, why I get it," and when the boys go out with dogs, they get game if there is any to be started. The difficulty of hounding is almost exclusively confined to having all the runways manned. Buckshot or a repeater does the little that remains to be done.

The Adirondack woods are not so large as the Maine woods, and yearly they are growing more open to traffic, but it seems to me that there ought to be some way of keeping the deer there. While Maine deer are on the increase, apparently, or at least holding their own against a multitude of hunters, the Adirondacks are being skinned to the backbone. What can the hotel keepers and guides be thinking of when they ask for the return to methods that demonstrably mean the sure destruction of one of the three attractions of the region? With the deer gone, the trout going, and the woods a mass of spruce and hemlock choppings, where do these men expect to make their livings and fortunes? Do they expect to have something else to do then?

RAYMOND S. SPEARS.

NEW YORK CITY.

Editor Forest and Stream:

In the Oct. 8 FOREST AND STREAM Mr. Arthur F. Rice makes my note on Adirondack deer hunting conditions the text for a discussion of a column and more in support of the law now in force in New York State.

Mr. Rice is perfectly welcome to use my note as a text, and I am glad it has resulted in his interesting letter, but one would infer from the tone of his article that he was arguing with a rabid advocate of hounding, whereas he has not the slightest ground for such an assumption, since in the note in question I have plainly stated my belief that the legislation against hounding is a good thing.

My note called attention to some results of the present law, and in it I made allusion to the popular sentiment of the natives of the Adirondack counties in favor of hounding. I recorded the fact as an honest observer, and your well-informed correspondent Juvenal agrees with me, as I think any fair-minded man acquainted with the conditions will agree. When I say that the law stopping hounding is opposed to the wishes of the native population (and I mean to include not only hotel keepers and guides, but also all the other classes, farmers, carpenters, storekeepers and the like), the statement does not bear on the merits of the law, and is not used as an argument against it. If is simply a statement of fact as I see it, interesting because a defeat of democratic ideals.

I think Mr. Rice will make a stronger argument in support of his case if he leaves this particular point alone, and confines himself to showing that the deer are increasing in numbers under the non-hounding law.

J. B BURNHAM.

P. S.—I also object to Mr. Rice's use of the cut and dried materialistic argument of dollars and cents where the native population is concerned. I have a sympathy for the natives, and know as good sportsmen among them as among city sportsmen (and a great deal better than the average city article). Mr. R. says: "Suppose that this army of sportsmen, who spend hundreds of thousands of dollars annually, should decide to stay away from the Adirondacks, could any law be a compensation for this loss in hard cash to the native population?"

I have seen this argument repeated in print so many times (probably I have used it myself) that it actually makes me sick to write the words. Thank goodness, there are other things besides salvation that haven't price in dollars. If Mr. Rice ever got close to the heart of a native Adirondack hunter I think he would find in nine cases out of ten that the native longs for his old wilderness and is heartsick of the army of city visitors, whether he profits by their money or not.

Zigzag Experiences.

III.—Shooting Ruffed Grouse with a Gun Wad.

THE dog-star is no longer doing business at the old stand, and the breath of Boreas has already painted hillside and dale in all the gorgeous colors of autumn. The crisp frosts have purified the air and made it more exhilarating than the choicest vintage of champagne—its stillness broken only by the tread of the sportsman and the tinkle of the bell on his well-trained setter or pointer, as they seek well-known coverts.

In addition to the good which comes from a day spent in wooded copse and alder runs, and the many fascinations and varied experiences which remain as prized remembrances, a thorough knowledge of the region and of the habits of the game birds of our country, together with a keen eye, quick hand and well-trained dog, will reward the effort with many a goodly bag. Even in this, the old Bay State, one of the oldest and most densely populated in the Union, the most optimistic would doubt, and even credulity itself would be taxed, if told the number of game birds annually killed within its borders.

But it is not my purpose now to tell of the benefit, pleasure or success that comes to him who goes afield, but to relate another of the many unexpected and peculiar experiences which befall the devotee of dog and gun.

We had spent the crisp, frosty night in the hospitable Holmes homestead, on Dresser Hill, in the old town of Charlton, and early in the morning a trio, consisting of the two sons, Erford and Charley, and the writer, accompanied by Shot and Doc—two as good setters as ever pointed or retrieved a bird—started southward toward the covers in Dudley—the land of the Nipmucks and the birthplace of Nessmuk—the land of grapevine and chestnut—the home of many a prized woodcock and lordly ruffed grouse.

We beat not the covers in vain, and the result, with smooth plumage and laid in a row, won encomiums from the farmer who kindly brought us a pitcher of new cider to add zest to our lunch at the nooning hour.

Swinging around to the westward to take in new ground on our return, we encountered a hill of considerable proportions, the sloping sides of which and adjacent territory were covered with a dense growth which made good cover, while the summit had been cleared and was now open pasture land.

My companions, who were entirely familiar with the locality, informed me that the cover was very dense around the base of the hill, and so thoroughly overgrown with grapevines and wild clematis that it was very difficult to get through it, and to make a successful shot therein was next to impossible; and they kindly advised me to take a position on the top, where I would get an open shot at every bird that they might start and not kill, as they were certain to dart up over the summit to the cover on the opposite side.

I am not boasting that I am as young or light on foot as once I was, nor am I denying that I was somewhat fatigued by the lengthened miles and unusual exercise of the day; but whether it was that my companions noticed this and desired to spare me, or because of that innate chivalry and sense of decency so characteristic of good breeding that prompted them to accord me the place of greatest advantage, I may never know. But all the same, I was only too glad to comply and soon I was in my place on the summit.

The tinkle, tinkle of the bells, and now and then a word of admonition or caution to the dogs, apprised me of their location, and an occasional bang, or bang—bang! proclaimed the death knell and that no bird would confront me on the summit.

Soon, however, a covey was flushed, when both guns did good execution, but a "Mark! Mark!" apprised me to be on the alert, and instantly an old cock bird broke cover and wheeled into an open cow-path, and came directly toward me, closely hugging the ground. I need not tell old sportsmen of the thunder of his pinions or his lightning speed.

Hastily throwing my gun to my shoulder, I pressed the trigger and received a fearful blow upon my feet. There, limp in death, lay my noble bird. I lost no time in replacing the empty shell with a fresh cartridge, when after the lapse of several minutes my dead bird began to show signs of life.

At this juncture I heard the single monosyllable "point!" and so placed one foot upon an extended wing as a precaution against any contingency and gave heed to the timely note of warning.

Soon another noble bird came my way, and discovering my presence he soared upward to pass over my head, when I scored a nice, clean kill. Meanwhile my first bird, in his endeavors to secure his liberty, fluttered and thrashed the ground with all the animation and vigor of a mature bird that had never been injured. My companions soon joined me, when we put him out of his misery by passing the small blade of a penknife through the spinal column at the base of the skull.

Subsequently, when the bird was dressed, the closest examination failed to reveal the presence of a single shot or shot mark.

Square on the breast, where the neck joined the body, was a circular black mark that was very black and about the size of a silver quarter of a dollar. The shot had been scattered to the winds, and a gun wad had brought the quarry to earth.

GEO. MCALEER.

WORCESTER, Mass.

The Destructive Side-Hunt.

OSKALOOSA, Iowa.—On a recent visit to Spirit Lake I found the country in the neighborhood overrun with chicken hunters. Some good bags were made, but nearly all of the hunters complained of the scarcity of birds. We are going to have another side-hunt here at our place in a short time. I will let you know about it later on. For my part I have taken FOREST AND STREAM for almost ten years, and have never engaged in a side-hunt; it has taught me better.

THE OLD MAN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Notes from New Brunswick.

THE moose is not always to the swift nor the caribou to the strong. On Sept. 20 Messrs. F. C. Peavey and Fred Stahrer, of Lawrence, Mass., went into the woods at Little River. They carried a grip-sack apiece, and had an abiding faith that they would bag at least one moose. Mr. Peavey, however, as a gentleman of very generous proportions, whose education as to firearms had been carefully neglected, was content to sit upon a log near the camp, while his more active friend scoured the country with the guide. It was while thus sitting upon the log contentedly fanning off the flies that Mr. Peavey heard the step of some foreign beast in the tote road. Mr. Peavey instinctively realized that destiny was dealing him a pat hand. When the smoke cleared away Mr. Peavey ascertained that he had acquired a bull moose. When Mr. Stahrer returned to camp that evening he expressed his surprise.

Among local sportsmen no small degree of interest is taken in the problem as to how long Henry Braithwaite is going to keep up his unbroken record of success as a guide. It seems to make no difference to Henry whether the sportsman goes in for a week or a month, whether he is armed with a cannon or a pop-gun, whether he is subject to acute attacks of buck fever or some more studiously acquired complaint—he always brings out the game. Henry is now about fifty-seven years of age. In all his long career as a guide not a single party has ever come out without a moose. His reputation has extended far and wide of recent years, and he can now command whatever wages he chooses to ask. The moose shot by Mr. Percy N. Graham, of Godalming, England, was perhaps the best specimen that has ever been secured in Henry's country. It had a spread of 54in., and was a remarkably graceful head. Mr. Graham's caribou was also ornamented with a very shapely head. Major Hallows and wife, of England, are still in the woods with Braithwaite. It is reported that they have secured a moose and a caribou.

Dr. Heber Bishop and Rev. Robert Codman, of Boston, came out on Monday after a stay of four weeks in the Indian Lake country. The Doctor secured a nice caribou, but had the hard luck to lose a monster moose after the animal had been called up within very close range by the guide. The party saw about twenty moose on the trip.

H. P. Walker and H. P. Fessenden, of New York, have returned from Salmon Brook Lake. Bill Carson was their guide, and gave every satisfaction. Mr. Fessenden shot a bull caribou and wounded a moose. They will return for a snow hunt in December.

Mr. W. Garrison Reed, of Boston, and friend returned some days ago from the Tobique lakes. They saw plenty of game, bagged one caribou and had the misfortune to lose a very large moose.

William Walker, of this city, who went up to Nictaux Lake on the invitation of Adam Moore, and remained there a few days, says that the Tobique region is swarming with sportsmen this fall. William brought out a bull caribou. He came very near getting a moose, for a Mr. Stevens, of Fort Fairfield, who was poling up the stream a short distance behind the genial William, sighted a bull moose and brought him down. William says he was so close to the scene of action that he had to dodge the bullets which Mr. Stevens was distributing.

Speaking of William reminds me that on Friday last the undersigned, in company with Harry Atherton, of this town, left for Cains River on a short hunting trip. On Saturday afternoon at 2:30 o'clock the undersigned aforesaid called up a bull moose on the Bantalorum barrens, which was subsequently induced, at the joint invitation of the party, to accompany us to camp. Harry is greatly pleased with the work of his Savage rifle, and the writer has no complaints to make as to the efficiency of the Lee-Enfield rifle with the dum-dum bullet. The internal economy of that moose, after the engagement, approximated to a junk-shop. Six shots were fired, five of which took effect, and the moose was really killed about five times. The horns had twenty points and a spread of 45in.

Mr. Jerome Bradley, of Dobbs Ferry, New York, who had such fine luck on the Nepisiguit last year, has more than maintained his reputation this season as one of the finest game shots ever seen in that section. Mr. Bradley and associate came into Bathurst the other day with a very fine moose, two caribou and four bears. Mr. Bradley is a very modest young gentleman too. He says it isn't a good year for bears on the Nepisiguit. Dr. J. C. Wilson and H. B. Smith have each bagged a caribou on the Nepisiguit. Jacob White, a local sportsman, secured a bull moose.

Mr. Sumner L. Crosby writes me that he has received up to date (Oct. 3) thirty-two moose and caribou heads from New Brunswick. As these were chiefly shot by American sportsmen, it may be interesting to your readers to learn the names of some of the fortunate hunters:

A. L. Sylvester, Boston, a moose and caribou, killed on the Restigouche. G. M. Whitin and brother, Whitinsville, Mass., two moose. George C. White, R. H. Boyd and George P. Camman, New York, two moose and two caribou, killed on the Tobique. Dr. V. F. Parker, Brooklyn, moose and caribou, killed on the Tobique. H. Radclyffe Roberts, Philadelphia, moose and caribou, killed on the Tobique. N. C. Downs, Stamford, Conn., moose, killed at McKiel Brook Lake. Edward W. Gren, Boston, moose of 60in. spread, killed on the Restigouche. D. S. Burley, Newburyport, Mass., moose of 56in. spread, killed on the Tobique. A. M. Brewster, Newburyport, Mass., moose of 52in. spread, killed on the Tobique. Edward R. Samson, Boston, moose of 50in. spread, twenty-six points, killed on Tobique. Dr. G. A. Suffa, Boston, moose, killed on Tobique. Dr. J. M. Bryant, caribou, killed on Tobique. P. M. Berry, Pasasic, N. J., very fine caribou, thirty-two points, killed on Tobique. H. L. Lugues, Passaic, N. J., caribou, killed on Tobique. B. J. Callahan, Lowell, Mass., caribou, killed on Nor'west Miramichi. J. Caswell, Boston, caribou. H. B. Smith, Norwich, Conn., very large caribou, killed on Nepisiguit. A. H. Jackson, New York, moose, caribou and four bears, killed on the Restigouche.

Mr. Crosby very truly remarks: "The headwaters of the Tobique seem to have been thus far the most productive, doubtless because more parties have been up there."

FRANK H. RISTEEN.

FREDERICTON, Oct. 5.

FREDERICTON, N. B., Oct. 10.—Probably the largest moose head ever secured in America, outside of Alaska, has just been brought down the Tobique River. The animal was shot by Mr. F. H. Cook, of Leominster, Mass. The horns, which are remarkably massive, spread 67in., and have twenty-four extremely long, sharp, heavy points. Mr. Cook also secured a bull caribou and two large bears. FRANK H. RISTEEN.

Don't Shoot Until You Know.

STATE OF MAINE.—Office of Commissioners of Inland Fisheries and Game.—Augusta, Sept. 15.—*Editor Forest and Stream:* Nathan B. Moore, of Bingham, Maine, the oldest and most experienced registered guide in Maine, writes a timely letter of advice to his brother hunters, warning them against hasty shooting, and telling them how they may avoid all accidents. I think it worthy of printing in FOREST AND STREAM.

L. T. CARLETON,
Chairman Commissioners Inland Fisheries and Game.

BINGHAM, Sept. 10.—Dear Brother Hunter: As I am a man that has had a long experience hunting in the Maine woods and on the St. Johns River, I wish to give you all a few words of caution, as there have been so many accidents happening every year. It has come to be a serious thing, and I cannot help giving my brother hunters a few words of caution, hoping it may teach you all that takes his rifle and starts out on a hunting trip to try their luck on big game. I have hunted the Maine woods for seventy-four years; I have killed 276 moose, that I have kept a true account of, and one-half as many caribou, and many deer, bears and small game, almost without number, so you must know that I understand well the rules of hunting, and hope that I am able to give all of my good brother hunters a few good words of advice. Not any good experienced hunter is going to shoot any one.

When I first started out, in the morning of life, as a young hunter, I made this solemn promise, that I never would fire my rifle at any kind of game until I could see enough of the object to tell whether it was a man or a beast that I was taking sight at, and if I had not made that promise and stood up to it, I should have shot a man dead. I was out hunting moose in January; the snow was very shoal and light, and no one but myself would have thought of running a moose down in such hard going, and after I had run him eight miles, as he came out of a thicket, I saw him go up a little rising ground, about twenty rods from me; I tried to pull the case off my rifle, but it was frozen on, and when I got the case off, he was just going over the knoll. I soon came to the top of the knoll, and it was descending ground for about thirty rods, and there was a spruce thicket about four rods through it, and I knew the moose was not one minute ahead of me; I did not think there was a man within ten miles of me, and there was a moose standing in a thicket just ahead of me. I came running very fiercely, knowing I must be in sight of the moose. As I came, there stood the moose, head to me, in the thicket. He was as black as a bear, not over three rods from me. I took my rifle to my face and took good aim. I would hit a quarter every time at that distance, but there was the vow I had made. I pulled on the trigger two-thirds hard enough to fire, and thinking of the promise that I would never shoot until I knew what I was shooting at, I stepped three steps to one side, and I saw a man in the place of the moose. Please tell me if there is one man in ten thousand but what would have shot in my chance?

He did not see me until I said: "How came you here?" He said he was "looking at some moose tracks," and there was a tote road within 15ft. of him. He just stepped out to look at the tracks. I kept right on upon the run, and shot the moose within 100yds. Now I never was scared in my life, but I trembled for three hours to see how near I came to killing a human being.

And now, dear brother, I will tell you how to keep clear of such terrible accidents. Always bear in mind when you are in the woods, hunting game, never to shoot at the glimpse of any creature. Be sure you see the nose or ear or side foot of the animal, so that you are certain that it is not a man. How many times I have been in the woods, miles, as I thought, from anybody, and heard something coming, tearing through the bushes, and would listen to the sound. Well, I would think to myself, it is a moose or a bear or a caribou coming, and stand with the hammer of my rifle drawn back, ready for a shot, and soon see the bushes move, as though they were all alive, and soon get a glimpse of something moving, then my heart would beat high for a shot; and now remember, my good fellow, this is the time where the danger comes in, and then all at once out comes a man, rushing through the forest, and I would halloo to him and say: "Friend, where are you bound for?" For a moment he would almost forget himself, he was so astonished, thinking he was at least ten miles from any human being. A man I knew had been following two deer all day until just at night. When the deer went into a hollow, and he knew he was close up with them, he thought he would run around onto the other side of the basin, so as to get in ahead of them, and take them when they came out. He had not been waiting long, when he heard the bushes crack, and standing with his rifle to his face, with a deadly aim, he soon saw a deer's head coming toward him, and just as his rifle was going to crack he saw it was a man's head he was aiming at. He gave a shout, dropped his rifle, and had all he could do to keep from fainting.

Many a time I have been hunting and have heard the stir of the bushes, and looking sharp could see the glimpse of something moving, but could not tell what it was, when all of a sudden away would go a deer, which had got the scent of me, and I would be glad he was gone, for I had better a thousand times lose him than to risk a shot and not know what I was shooting at.

Now in a very short time the Maine forests are going to be full of hunting parties, and the warning I give to you all is, when you take your rifle to your face, be absolutely sure what it is you are aiming at, and I hope this warning may save some poor fellow's life, and you a life of bitterness and regret.

NATHAN B. MOORE, Registered Guide.

Connecticut Grouse Snaring.

Editor Forest and Stream:

It lacks nearly two weeks before the opening of the shooting season, yet the reports of guns are heard in the woods every day, Sundays especially. Yellow-hammers are shot in great numbers despite the law which protects them the year around. Now and then some person falls into the meshes of justice and is fined; but such cases are exceedingly rare. Those who seem disposed to obey the game laws in general for some inexplicable reason draw the line on yellow-hammers, and they are slaughtered by the hundreds. Many take delight in boasting of their law-breaking exploits in this line.

Some of our farmers have the notion that they have a perfect right to kill game indiscriminately the year around, so long as they do it on their own lands. For one, I do not know whether their opinion is right or not. It is impossible to comprehend, however, why any sane person should wish to kill game during the breeding season, even should some flaw in the law grant them that privilege.

Whether erroneous or not, the opinion prevails among a large number of law-abiding sportsmen in this vicinity that the slack enforcement of the game laws is largely owing to the incompetence of the game wardens. "They don't appoint men with the proper amount of sand," said a well-known shooter the other day. "But then, even if such men should be appointed, they would have to be well up in law in order to steer clear of the network of provisions which seem to have been designed in direct opposition to some of the game laws. For instance: If a warden should meet a man with a lot of snared birds on his person, how is the warden to know whether the man snared the birds on his own land or not? And how is he to know that the snarer isn't on his own land if he should catch him in the act of taking a bird out of a snare? Then again, even game wardens like to receive pay for their work; but they don't get much out of the 'public crib' of this State."

Now my personal acquaintance with game wardens is so limited that I cannot say positively whether they as a rule are deficient of "sand" or not. There is one thing, however, of which everyone must be aware, and that is this: any man who is required to go alone into the woods and arrest single-handed an armed and defiant law-breaker has got to have "sand," and plenty of it. He must also thoroughly understand the law appertaining to his business. "I'd like to have any game warden try to take me in once," boasted a notorious snarer in the presence of a number of listeners in a prominent gun store in New Haven; "I'd blow his head off so quick he'd never know what struck him." This ferocious blatherskite had his chance, for he was arrested soon after and fined. I cite this instance simply to demonstrate the feeling entertained by many law-abiding shooters and snarers in this neighborhood.

As I mentioned before, breaking the game laws is not strictly confined to what is generally accepted as the "lawless element." It is nothing unusual to meet men afield with dogs and guns before the law is off. Many mornings, while driving to the city last fall, I met one of New Haven's city ex-officials on the way to the woods with dogs and gun, and long before the law was off. He was complained of, but nothing was done in the matter.

While writing of lawless shooters and snarers, the thought comes to me that it might not be amiss to mention the lawless act of a lawless warden whom I chanced once to meet. He put in an appearance at my house one Sunday morning a few years ago, and inquired as to the snaring operations in that neighborhood. I imparted what information I could and volunteered to conduct him to where I thought there might be snares. After half an hour's tramp we came upon one of those round, fence-like structures, with an opening on four sides. There were no birds in the snares, but the fresh bait of frost grapes plainly indicated that the snares had been recently set, and everything was ready for business.

Now that structure plainly indicated the law-breaker, and I had no sympathy for him. My surprise and disgust can be imagined, however, when the warden proved himself even more contemptible than the snarer. Said he: "I'll have that fellow inside of thirty-six hours. How will I do it? Well, I'll go down town to-morrow and get a partridge from some market; then I'll come straight back here, put the bird in one of the snares, lie in the brush and collar the cuss when he takes the bird out of the snare." The warden chuckled, but I expressed my opinion of his method in words which wouldn't do well in print.

It must be confessed that it is very easy to tell these evils. To suggest a remedy for their suppression, however, is a different matter. Could sportsmen amalgamate into a sportsmen's political machine and elect their own candidates at the polls, or could they even attain such strength as to command political recognition in the Legislature, then a remedy would be in sight. They could at least insist on regular annual appropriations with which to pay salaries to good game wardens, with plenty of "sand." As matters stand at the present time, however, all that sportsmen can do is to applaud the sportsmen's press in its gallant fight for the suppression of the sale of game.

W. H. AVIS.

HAMDEN, Conn., Oct. 4.

[The Connecticut law permits snaring by land-owners on their own lands; but forbids the traffic in such snared game by any other than the land-owner. To this extent then Connecticut already forbids the sale of game.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

CHICAGO AND THE WEST.

The Passing of the Kankakee.

CHICAGO, Ill., Oct. 7.—I rather like the above heading, for it seems to have a fine literary flavor, such as I try to sling into all of my writing. It is admittedly correct to write about the "passing" of some body or something. As a matter of fact, the Kankakee River has been passing for some time, and has not yet got past. But I want to write about it in a figurative and not a literal sense.

A great deal of mention has been made in these columns of this same famous Kankakee stream, whose vast marshes in Indiana and Illinois have afforded sport for a generation of Western shooters. I recollect at one time, many years ago, an uncle of mine, who resided in Chicago, was setting forth to me the glories of that city. I urged it as an objection to city life that one could not go shooting or fishing anywhere near the city. "There is where you are wrong," said he. "You live out West and think you can have great sport close to where you live, while as a matter of fact Chicago is ahead in this respect as in every other. You can just step on a train and run down to the Kankakee River in a couple of hours, and see more ducks than you can anywhere else in the world. Every time I cross that country on a railway train I can see great black clouds flying all over the marsh."

Something of the truth of these assertions I have since then had occasion to learn. When I first joined the FOREST AND STREAM family, ten years ago, the glories of the Kankakee were just beginning to lessen. From that time until now the shooting has steadily deteriorated, until for the past few years it has had little importance in the annals of sport for this region. This fact is partly due to change of the migratory flight of wildfowl, partly to the fact the supply of wildfowl in the United States has been reduced to one-fourth of its former volume, and perhaps to the fact that the Kankakee marshes have themselves been steadily changing, so that they no longer offer the same attractions as feeding grounds to the fowl.

In the earlier days the Kankakee marsh was really a morass, impassable and wide-reaching, full of quaking bogs whose depth was unknown, one of the wildest and most dangerous countries the hunter could easily discover in any portion of the West. I have earlier written of the peculiar class of inhabitants who have so long clung tenaciously to the edges of this great game country, a class peculiar in itself and not to be duplicated in the entire country. Really there was room for the class. Nowhere else in the United States does there exist so large a body of untilled land so close to any great center of population. The average distance of the great Indiana marsh is about fifty miles from the city of Chicago, and it is crossed by nearly a dozen of the great trunk lines of railroads running out of Chicago. It lies in the heart of a farming region where land is worth from $50 to $100 an acre. To say that this land, if fit for farming purposes, would be worth $25 an acre would be putting a very low value upon it.

In company with friends I have many times wandered over many different portion of the Kankakee marshes, and it never occurred to me that that ground would be worth more than fourteen cents an acre at the outside. Upon the other hand, I have no daughter married to the Viceroy of India. If I had had perspicacity and a daughter, the positions might have been reversed between Mr. Levi Z. Leiter and myself. This is the way the worthy get thrown down, all through life. We will let that pass. What I was going to say is, that Mr. Leiter and other great Chicago capitalists did see the value lying under this wide Kankakee realm of mud and water, and wild rice and cattails. They quietly went to work and bought up great tracts of this land at low prices. The Maksawba Club holdings practically passed into the hands of others through purchases of the stock, the 5,000 acres of that body of land being capitalized at about $5 an acre.

Then the great dredges began their work. For years we have seen them cutting their way toilsomely across the great marshes, but the old marsh still seemed to hold its own. At length shooters began to notice that there was more and more dry ground around the marshes, less and less feeding ground for the jacksnipe. The fall flight of snipe and ducks steadily decreased, so that it was only in the spring that many birds could be found on the marsh. Now it is doubtful if even in the spring there can be found much longer any shooting of consequence. The great ditches are nearly done. The river has been straightened until it now is shortened by one-fourth, or perhaps one-half in some places. Meek and subdued, shallow and muddy, it runs along through straight-cut banks constructed by the hand of man. The great mallard holes which the Kankakee once held in the hollow of its arms are now dry and dusty. This fall the shooters kicked up dust in walking over what was last spring the best of the jacksnipe ground. The porous bog has sunk and settled and changed into some of the richest black farming soil that ever lay out of doors. The meadows are running out into the marsh, and the cornfields are following the meadows. The Kankakee is whipped, beaten, defeated and subdued. A shallow, trivial stream, a mockery of its former self, it hurries on through the wide realm which was once its own as though glad to leave the scene of its departed greatness. The marshes are no more. In time the farms will spread still more widely over them. This is the passing of the Kankakee.

Colorado Buffalo.

From a gentleman who asks that his name be not given I get word that he lately talked with two Denver sportsmen who told him of a Colorado point where there is still to be seen a small band of buffalo, of which one has now and then been killed, but of which four or five are thought still to be alive. The informant thought they were wood bison. I take it that this is the little bunch of buffalo already reported from time to time in the FOREST AND STREAM, but am glad to have the news, which may also be of service to the game authorities of that State, if it should chance appear to be news to them.

A MINNESOTA RABBIT HUNTER'S CAMP.
Photo by Mr. James Dougall.

Quarantine and Quail.

The fever scare in the South has affected the fall shooting. New Orleans shooters complain that they cannot go out anywhere without meeting the quarantine restrictions. Memphis is under an air-tight quarantine, as well as other parts of Mississippi and Tennessee. The situation has interfered with sport in many branches, and it is hardly apt to be relieved until the first frosts, which, however, should soon be anticipated.

Ducks.

The northern flight of ducks is not yet down in this part of the world, if we are indeed to have any flight at all of that sort this fall. They tell me that it is usually along in November that the northern flight strikes the California marshes. It is a little earlier in this part of the world, and our duck season may be said to be well advanced in Minnesota and Dakota. In the neighborhood of Chicago I hardly think we may expect any very heavy shooting unless on such preserves as the Hennepin and Duck Island Club grounds, on the Illinois River.

Mr. John E. Willing, Jr., and Mr. Ed. E. Richardson, of La Crosse, Wis., returned last week from a shooting trip near Arlington, Minn. They brought back about 200 mallard ducks, besides many which they disposed of before coming home.

The duck season is well on in Kansas. Near Cairo, Kan., Messrs. O. B. Stocker and C. H. Smyth, of Wichita, bagged 125 ducks on a trip this week. They report quail and chickens scarce, but ducks in good numbers.

Reports from Sanborn, Minn., state that game is fairly abundant in that neighborhood, duck shooting being good, while the chicken crop was good during the brief season.

It seems that out in Salt Lake City the sportsmen do not devote themselves entirely to shooting grizzlies (although, by the way, I was talking with a gentleman this week who said that he recently obtained from Salt Lake City a grizzly bear skin over 9ft. long). The opening of the duck season at Salt Lake City brought out an enthusiastic showing of sportsmen, although a universal report of poor luck seems to have been the main result.

Many Northern and Southern sportsmen will be interested in the information that the famous Mitchell's Lake, near San Antonio, Texas, is this year full of water again and has some feed. The ducks are in now, and the San Antonio sportsmen are making pilgrimages with something of the old-time regularity.

Gokey, of Dawson.

Every time you see the above head in the FOREST AND STREAM you may depend that it is over some news, and some shooting news at that, not merely a pleasant saunter in the October sunshine. My friend Gokey writes me under date of Oct. 5 to the following effect:

"The Jerome Marble party of sixteen has been here for some time, and the whole sixteen had a good time and got all the birds they wanted. This party is not made up of game hogs, but on the contrary of gentlemen sportsmen. They did not care to kill all the game they had a chance to kill. During their stay here I went with them to the State Fair, at Mandan, N. D., with their two cars, and they have this to say, that Buffalo Bill's Wild West Show is not in it with what they saw there. They went back to Massachusetts on the evening of Oct. 4, with the promise that on their next annual shooting party they would come back to Dawson.

"Parties here who have had good shooting up to date are Messrs. P. M. Snyder, of New York City; H. Staples Potter, of Boston, Mass.; O. N. Young and C. H. Moss, of Chicago; W. H. Gray, J. W. Tape, George Tucker, Lorin Fishback and E. C. Cook, all of Chicago; D. A. Tyng and D. M. Cumings, of Chicago; A. A. Hart, C. M. Nelson and George R. Finch, of St. Paul; W. H. Tubbs, Messrs. Ginselman and Leffingwell, of Fargo, N. D.; G F. Thompson, of New York City; J. W. Strowbridge, of Cincinnati. All these gentlemen are having what shooting they want and a good time. We have had a snowstorm here, and it has brought down the birds, and for the next thirty or forty days the air will be full of powder and shot. The W. B. Mershon party of nine will be on from Michigan on the 10th of this month for a two-weeks' shoot."

The Saginaw Cowd.

Mr. Gokey's comment last above quoted received verification today, when a long, low, black, rakish and piratical looking craft on wheels was seen in the offing, and later came to anchor in the Wisconsin Central Depot to spend Saturday. The craft bore the name of "W. B. Mershon," and from observations made at a distance bears every appearance of being manned by a desperate crew, armed to the teeth and with full provisions for a long cruise. At this writing numbers of the crew are at large ashore, and one or two of the more daring ones are reported to have been seen in the neighborhood of the Auditorium Hotel, though no encounters are as yet reported. The representative of FOREST AND STREAM is upon their trail, and readers may be assured that no efforts will be spared to keep the public fully advised of the whereabouts of this craft and her crew.

Later.—The dispatch boat of the FOREST AND STREAM succeeded in landing a party on board the piratical craft this evening, and the worst suspicions are confirmed. Members of the expedition are Messrs. Geo. Dan Seib, of Bond Hill, Long Island; W. A. Avery, of Detroit, Mich.; J. E. Hinds, of Brooklyn, N. Y.; Samuel Stevens, of Columbus, Ohio; J. W. Meek, of Columbus, Ohio; R. D. Schultz, of Zanesville, Ohio, the whole party being under the lead of Mr. Wm. B. Mershon, of Saginaw, Mich., who goes as pilot into regions made familiar by many earlier trips. The first stop will be made at Dawson, N. D., then the party will proceed to the Bad Lands of Montana, returning to Dawson later for geese.

Tips.

Mr. Mershon is a man very fertile in sporting suggestions and improvements and ideas. Two new things that I saw about the car this time were a new case for a rifle and a new mess box for a wagon. The latter is a handy contrivance indeed, something like a cow cook's mess box, with a lid to let down for a kitchen table. This box, however, has about 400 pigeon holes in it for flour, sugar, spices, matches, salt, pepper and everything you can think of. It is made in the best way, its material being a triple crossed veneer so laid that it is impossible for the wood to warp or shrink. The top of the lower compartment is made with a neat watertight hinge, so that the contents cannot get wet. The

box goes nicely into a wagon bed, and the members of the Saginaw crowd this year may be sure they can have a good meal at any station of the road or any condition of the weather.

The other contrivance which Mr. Mershon has along this year is a wood case for a .30-40 Winchester rifle, the sort that has that two-story front sight. This case is cut out to fit the contour of the rifle, which is bedded perfectly in one side of the case, so that it can not possibly be injured. The opposite side folds over the matrix case and latches with a tidy catch. In the back of the case is a slot cut for cleaning rods and rags and oiler. This case cannot be used as a saddle case, but for any ordinary travel by rail or by wagon, or for sending a rifle by express, it is the finest thing I ever saw. The Winchester people may want to see this case of Mr. Mershon's some day, for it is perfection for the transportation of the .30-40. As to that arm, Mr. Mershon says he would think of no other. He killed a number of deer with it last year, and says that this fall he is going to get a grizzly, of which animals they always see tracks in plenty in the bad lands. That they will get deer this trip is a certainty, and I hope they get the bear.

Quail.

The quail season is now on for the most of our Western shooting regions. It is pleasant to report that these admirable game birds are more than holding their average numbers. From all I can learn, I should say that the quail season for Illinois, for Iowa, Kansas and lower Minnesota, as well as for Michigan south peninsula and upper Indiana, is better than the average of the past four years. As to the Southern quail fields I cannot say so much, as it is still too early for much quail shooting there.

Reports personally received from Michigan state that the birds are abundant enough, but many of them so very small that a good sportsman will not shoot at them. The weather has been rather warm. On the whole the quail shooting of that State will be better two or three weeks later than it is at present. The crop is a great one.

In the neighborhood of Bloomington, Ill., quail are reported in unusual numbers this fall. From the line of Bloomington southward, in Illinois, there will be good quail shooting from now on out of most any of the little towns. In all that part of the State, however, and more especially in the lower part, and in upper Missouri, the supply of quail will depend somewhat on the migration. It is not generally known, yet I consider it to be true and proved by the observations of many accurate sportsmen, that there is a regular migration of quail to the southward in the territory above mentioned, and that this occurs, if not every year, at least very often. This fact I have earlier mentioned in the columns of FOREST AND STREAM.

Around Lansing, Mich., quail are, according to reports, very numerous this fall, but local shooters say that the law ought to begin on Nov. 1, as the birds are too small to shoot at the beginning of October.

Several shooters of Grand Rapids, Mich., who went out on opening day, had good luck. A nice mixed bag was made by Gen. I. C. Smith, Dr. Wooster and Mr. P. O'Rilley, who got twenty-seven birds, woodcock, grouse and quail.

Sedgwick county, Kan., though boasting the largest city of the State, Wichita, boasts also that it has more quail this fall than any county in the State. This Kansas quail shooting is most enjoyable sport, as I can testify after many days spent in the low and open covers of that favored land. The hedge row shooting of Kansas is the easiest and most deadly form of quail shooting to be found in America.

By the way, at Abilene, Kan., another town which I once visited and found to be full of good sportsmen, and in a country full of game, I observe they are now forming a protective association to look after violators of the game laws. The local shooters offer $50 for conviction. It is said that market hunters are shipping a great many quail out of that part of the State.

Texas opens her quail season Oct. 1. The Dennison Herald states that a great many Dennison shooters are going out after the "festive flutterers." I presume the newspaper means quail. I could never see any real reason for calling a quail a "festive flutterer," or a trout a royal encarnadined beauty of the gurgling stream, or other words to that effect.

Messrs. Geo. Thorn and W. B. Leffingwell, both of Montgomery Ward & Co., this city, will start late this fall for an extended hunting trip in Texas. They go on the invitation of a friend at Dallas, and will shoot ducks on a club preserve, and quail in some of the best covers in the world. Their trip will include a visit to the famous Rockport waters, and before they return to Chicago they will have had the best time they ever knew, even in their extended sporting experiences.

A Side Hunt.

They have some game out in Minnesota, and I presume that under fair treatment they always would have game there. The town of Graceville, Minn., was once reputed to be in one of the best shooting countries in that State. I take it that the shooters of Graceville do not like their game and want to get rid of it, for it is announced that a big hunting contest has been planned by the sportsmen of Graceville for Oct. 17 and 18. Seventy-two men will participate, and will be divided into two sides.

Past and Present.

I have had occasion to mention above the fact that the Jerome Marble special car party was this fall in North Dakota. The trips of the Jerome Marble party have in a way been famous ones, and cover a number of years. At one time this party used to go down into the Indian Territory, which at that time was considered the best shooting country of the West. I do not know how long it has been since the last trip was made to the Indian Nations, but presume that the change was made on account of the failing game supply of that country. It is a fact that to-day the Indian Nations are cleaned out of their game, and that probably there never will be much shooting there again. The opening up of the country by the railroads, and the settlement of large bodies of land by the many homesteaders, have been causes in the extermination of the game. Deer and turkeys are now as scarce in the Nations as they are about anywhere else, and even the chickens and quail are now uncertain quantities.

The remote and wilder portions of every Western district offering any abundance of game are now sought out with wonderful exactness by non-resident sportsmen. One after another these good game countries are cleaned up. I know of only two regions in the United States open to wildfowl shooters which may be called really good game countries. These are North Dakota and the Gulf coast of Texas. The towns of Dawson in North Dakota, and Rockport or Galveston in Texas, are in their way centers of a great news interest to sportsmen. When they cease to hold this interest, where will the non-resident shooters be going then? To Alaska, in part, very likely, and to the far British Northwest. I name Dawson and Rockport as the extreme northern and southern shooting points of the traveling sportsmen (or let us call the Devil's Lake country of North Dakota as the northern edge of the shooting region). Between these points and the Gulf coast there were once thousands of shooting points where one could have all the sport he cared for. To be sure, there are many points where he can still have this sport, but to one who has really had any knowledge of this country for the last decade the changes in its shooting resources are far from pleasant to contemplate. The glories of the Platte River have departed. The Arkansas River is no longer a wonderland of wildfowl. The Indian Nations are shot out. The once apparently exhaustless covers of Texas are said to be failing. The New Madrid country of the Sunk Lands, once miraculous in its duck supply, was long ago shot out. One by one the famous localities have lost their fame. Is it mere calamity howling to note these facts and their significance, or is it merely a just and open-eyed view of the actual state of affairs in Western shooting? I have been working on FOREST AND STREAM for ten years, and in those ten years I have seen such changes in the game resources of the West as would break your heart to think about.

A Game Record.

I wonder if we stop to reflect how many thousands and millions of head of game, of one sort or another, are killed in the United States every year? The Tamalpais Sportsmen's Club, of San Francisco, in its annual report, says that 1,761 quail and 44 snipe were listed on its game books for 1897. The club records state that since Oct. 1, 1892, there have been killed 10,970 quail and 96 deer. A glance over the individual scores does not show any extraordinary amount of game killed by any one man, but the totals are extremely significant. The men who complain because they cannot kill 100 birds a day when they go shooting are the men who do not deserve any shooting at all. A club limit of fifty birds to the man per day is a liberal one in any part of the United States, and is one which ought not to be exceeded. The time will come when twenty-five birds a day will be princely sport. If the hundred-birds-a-day men will stop to figure how much game would be killed on that basis in a single day by himself and men of similar ambitions, and will then multiply that amount by the number of days in the total shooting season, and then multiply that by five or ten years, he will begin to ask himself where the game is all to come from. The Tamalpais Club is a moderate one, but the figures foot large for five years. How about the market totals and sportsmen totals for the entire country?

Personal.

Mr. W. H. Mullins, of Salem, Ohio, the well-known maker of metal hunting and fishing boats, was in the city this week on a brief visit.

The Minnesota Indian War.

CHICAGO, Ill., Oct. 6.—The daily papers this week are full of accounts of the so-called Indian uprising in Minnesota. As usual these stories are full of inaccuracies, partly due to the hurry of preparations, and partly to the inaccuracy of the sources of information. As this "outbreak" is occurring on the shores of Leech Lake, Minn., within six miles of one of the best patronized sporting resorts of the West, and adjacent to a country which in natural course of events would have been overrun with deer and moose hunters this fall, I take it that a brief resume of the facts may not be out of place in the FOREST AND STREAM. The history of this "Indian war" is much like that of many other Indian wars, or armed disturbances in which whites and Indians have taken part. It is a story in which ignorance, misunderstanding, dishonesty and bad faith play as usual their leading parts.

Some time during the past summer some individuals of the tribe of Chippewas, who live on Bear Island, in Leech Lake, were accused of selling whisky to the Indians. Some of these men were arrested and taken to Duluth for trial. Other Indians were taken as witnesses, necessary to the conviction of the accused parties. After these witnesses had testified, they were turned loose in the streets of Duluth, strangers, hundreds of miles from home, unprovided with mileage for their return, and without any knowledge of the new surroundings in which they found themselves. These acts the Indians did not understand, but thought it injustice on part of the Great Father. Added to this was the indignation of the whole tribe over the invasion of their reservation by the lumbermen, under the so-called "burnt timber act," to which reference was lately made in the columns of FOREST AND STREAM. Last winter these lumbermen stole 20,000,000ft. of lumber from the Indians of the Leech Lake reservation, under cover of this burnt timber act. The Indians had been told that the reservation belonged to them. They thought they owned it. When their timber was taken they thought the Great Father had been unjust. All of which was perfectly true.

At the time of the arrest of the whisky sellers there was one bad Indian, who escaped and refused to come in. He did, however, come in on annuity day to the agency near Walker, Minn. He was seized in the trader's store. Others of the Indians saw this, attacked the officers and took away the prisoner. He retreated to his home and defied the officers to take him.

The part of the tribe of Chippewas to which this man belonged lives, and for a long time has lived, on Bear Island, a body of land situated on the east side of Leech Lake. This island is about three miles long and perhaps three-quarters of a mile in width. It has long been held by the Chippewas as a sort of stronghold. Here was fought one of the bloodiest battles of the ancient wars between the Sioux and Chippewas. The Sioux attacked by night, coming out in their canoes to take the island, but were repulsed by the determined resistance of the Chippewas. Although the Sioux were located far to the west in the reservation days, the Chippewas have always held Bear Island by their ancient right. There are only about 150 persons who hold this island, and all of these are blanket Indians. The fugitive wanted by the authorities belong to this Bear Island band. He made his home on the main land, on a rocky point about a mile from the island. It was here that the deputy marshal and the troops this week attempted his arrest. Some of the newspaper stories say that the troops moved on Bear Island. This is not the case, because the Indians had left Bear Island in anticipation of a fight, and had taken to the main land, where they could not be penned in, but could scatter and escape. Some of the daily newspapers printed maps, showing Bear Island located on the west side of Leech Lake, and marked the spot where the fight took place as near Walker, Minn. This is altogether erroneous. The daily editors, no doubt, mistook for Bear Island that long headland near Walker on which the agency buildings are located. The truth of the matter is that the officers and troops sailed in launches, nearly twenty miles across Leech Lake, before they reached Bear Island. Then they disembarked on the headland above mentioned, where the fugitive had been joined by all the blanket Indians of Bear Island. Back of this point stretches a great point of hardwood timber, matted with the heavy underbrush common to all such timber. Along the beach at this point is a narrow strip of sand. Here, it seems, the soldiers gathered to make their coffee. The Indians were concealed in the brush back of the beach, and it was from such cover that they probably did the firing which resulted in the loss of life reported by the party of officers and troops. The country lying east of Leech Lake is rarely visited by white men. It has been little known by the sporting public until within the past year, since which time it has received considerable attention in these columns as a good shooting and fishing country. The Indians may scatter to the east and northeast into those districts most affected by the non-resident deer hunters in their fall hunting. If they are feeling very ugly they might pick up a deer hunter or two, though this is altogether improbable.

The above facts I gained largely from an interview with Mr. H. G. McCartney, the owner of Kabekona Camp, on Woman Lake, located near the edge of the Leech Lake reservation. Mr. McCartney last month made a trip over this identical region, some mention of which trip was made in the FOREST AND STREAM at that time. It may be gathered that this is a wild and lawless part of the pine woods country. Near Mr. McCartney's hotel lives old Bungo Buck, an outlawed Indian who has a certain following about him. The attitude of Bungo has been hostile to the others of his tribe, but should he now conclude to go on a little warpath of his own, he might make trouble for shooters or fishers in that neighborhood. This possibility has been considered by at least one party, who intended to make a hunting trip of some weeks in that region. Members of this party are Messrs. Clark, Pope and Reed, with the newspaper artists, W. L. Wells and William Schmedtgen, all of Chicago. These gentlemen will perhaps defer their trip. Mr. Schmedtgen was one of the ablest newspaper artists with the army in Cuba. Here he became ill and returned home to recover his health. He said that he did not relish the idea of going into another war for his health, so he thought he might wait until the clouds rolled by. Messrs. R. R. Donnelly and Alex. Lloyd, two well-known Chicago sportsmen, have been in camp weeks. They are now out of the woods and home again. Mr. and Mrs. Blin Smith, of Dixon, Ill., have also been in and Mrs. Blin Smith, of Dixon, Ill., have also been in camp on Little Boy Lake, in the same region. On Sept. 28 word came that Mr. Smith had caught two muscallonge, 28 and 30lbs. This camp has not been heard from since that time. It is altogether unlikely that the least danger attaches to a hunting or fishing trip anywhere in that region.

It is stated that the Bear Island Indians were further incensed by the report that the Government intended to remove them from their reservation and place them on the White Earth reservation, further west. They considered this removal from their ancient citadel on Bear Island as something more than their tribal pride could endure. No doubt these Indians are in the wrong, and no doubt they will be punished. Yet, if we look at it from their side, the side of ignorance and misunderstanding, we may perhaps realize that they hardly knew what all this was about, though they feel that they have been imposed upon until they would rather die than to endure it any longer. They may be wrong in this, from our standpoint, but this is perhaps the way it seems to them. Under the whole pitiful story lies the greed of commerce. The lumbermen want the pine lands of these Minnesota reservations.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Massachusetts Partridge Snaring.

DANVERS, Mass., Oct. 2.—*Editor Forest and Stream:* Two weeks of our shooting season has gone and not much game has been killed. I went out on the opening day and got one partridge and one woodcock; have been out twice since and got a partridge on the hills or high ground, the other times in swamps. Game seems to be scarce or else I can't find it. I hear of a man in Middleton who had twenty-nine partridges that had been strangled to death to ship to Boston markets, and he stated that he believed over 100 had been snared and sold in Boston the week before. I was unable to learn his name, and as there are so many in the business up

that way, it is hard work to pick out the guilty one. It seems a shame that such a thing should exist in this State. That is what makes it such dull sport hunting for partridges. They can't snare the woodcock, and quail they don't seem to bother, but just the partridges. I have heard of a few snipe being along.

Mr. E. H. Langdon killed the first fox of the season. A fox hunting party started out bright and early on Oct. 1 from Tapleyville. Mr. D. S. Brown was the lucky man this time. On the whole, I think quail, woodcock and gray squirrels are fairly plenty, with partridges scarce, owing principally to illegal snaring.

JOHN W. BABBITT.

We advised Mr. Babbitt to communicate with the Massachusetts Rod and Gun Club (Henry J. Thayer, Sec'y, State street Exchange Building, Boston), whose detectives have done capital work in suppressing the snares; and under date of Oct. 6 he writes:

"Yours received, mentioning the Massachusetts Rod and Gun Club as an association which would probably prosecute the game snarers of Middleton. I understand that such action has been taken, and one of the men was arrested last week and convicted, being caught with two partridges just taken from his snare."

A Florida Diana.

BROOKSVILLE, Fla., Sept. 25.—*Editor Forest and Stream:* Hernando county is now much exercised over a picture, another "Diana after the Chase," of which it is justly proud, and which it thinks is worthy a place in the art galleries of the Paris Exposition, the subject being Miss Virginia B. Tucker, the accomplished daughter of Capt. J. F. Tucker, of this place, a vivacious brunette, and a great favorite in society.

Late one afternoon Miss Tucker shouldered her gun, and followed by her pointer, strolled off into the hammock near by in quest of game. In a very short time she returned, bearing a squirrel and trailing from a stick thrown over her shoulder a rattlesnake 6ft. long, equipped with eight rattles and a button. The dog at her side had suddenly sprung back in terror, and glancing quickly around she beheld not 4ft. away the glittering folds of the monster partially concealed in a bunch of palmetto. So quickly did her shot follow the discovery that the honorable old fellow had not time to sound his tocsin before he had parted with the greater portion of his head.

With stately tread the victor led in the triumphant procession, and when she threw down before an awestruck crowd the still writhing snake there was not the least suggestion in step or voice of the slightest trepidation. The snake skin is being carefully tanned, to be fashioned into a belt, which the huntress will ornament with the rattles and wear as a trophy of that proud day.

A DEVOTEE.

Deer of Canachagala Lake.

MR. BYRON E. COOL, of North Lake, sends this note of deer killed in Canachagala Lake, in the Adirondacks: "Canachagala Lake is situated three miles from the head of North Lake and one mile from Bisbey Lake. The Adirondack League Club owns nearly all of the land surrounding the lake and has had men stationed at North Lake, also at Bisbey Club, to warn people from trespassing upon their lands and to keep poachers (as they call them) from hunting and fishing upon any waters within their preserve, so that few have dared to go that way this season. Last week men in the employ of the State were sent there to repair the State dam. They found two deer that had been shot, stones tied to their necks and sunk in the lake. They had been killed some time, perhaps before the season opened, for they had decomposed, so that they came to the surface and were easily found. The two deer found were does, and as no part of them had been taken away it looks as if they had been killed by floating, for in still-hunting one can generally tell if it is a buck or a doe before he shoots. No doubt whoever did this killing was some one who wanted a pair of antlers to take home, so that he could show his friends what a sportsman he was. He may have been in looks, but he certainly was far from it in principle. Deer are poor in flesh this year, the same being the reports from other parts of the woods. We have a record of twenty-three deer killed in the vicinity of North Lake so far this season. That does not include any that have been pickled."

A Virginia Game Center.

A CORRESPONDENT writes from Licking, in Goochland county, Va.: I am here about two miles from the James River, near Irwin Station, James River Division of the Chesapeake & Ohio Railway Company, and about thirty-five miles above Richmond. The country round about, within a radius of twelve miles, is a splendid game country. Quail are exceptionally numerous this season. Wild turkeys are fairly numerous. Besides these there are deer, ruffed grouse, geese, ducks, squirrels, hares and a few woodcock. The hunting season opens on Oct. 15, and lasts until Jan. 1. Readers of FOREST AND STREAM contemplating a Virginia hunting excursion would do well, I am sure, to correspond with Mrs. C. L. Leake, of Licking, respecting opportunities and accommodations.

Shifts and Expedients.

BREWER, Me.—It seems really curious how people far apart do the same things. Col. Mather tells of extracting a tooth with bullet moulds. I once had one extracted in the same way. I have had a boot mended with a waxed end made by putting a beaver's smeller on instead of a hog's bristle: the cut was close to the sole, where needles could not be used, and we had no bristles. I have seen Hiram L. Leonard, the rod-maker, make a hunting watch out of one which had a broken crystal by cutting a round piece out of an old tin dish, concaving it with a bullet mould and filing its edges till it was a perfect fit.

M. HARDY.

Grouse in Cen

ITHACA, N. Y., Oct. 8.—As the open game season advances it discloses a pretty fair supply of ruffed grouse. Some hard shooting was had on these birds at the beginning of the season, when they were fresh and guileless, and many a two-third grown grouse went limp into a capacious coat pocket during the early days of September. The birds are now furnishing magnificent sport, and the sportsman in quest of a day's shooting will find Geer's Gulf, just south of this city, the covers around Newfield, West Danby, Spencar Summit, Van Ettenville and the lake country east of Cayuga lake, fruitful grounds to hunt over.

Gray squirrels are numerous in all the suitable timber about Ithaca, Candor, West Danby, North Lansing, Etna, Genoa, Enfield and Mecklenburg. Herbert Wilson reports having shot a fox squirrel in the vicinity of Ithaca recently, the first one reported seen hereabouts in a number of years. Rabbits are plentiful enough to furnish a spirited measure of sport in the gray November days to come.

M. CHILL.

The Pump Gun.

PUMPTOWN, Va., Sept. 24.—*Editor Forest and Stream:* The only thing I have to say in comment on Mr. Hopkins' word for the pump gun is that he has overlooked or at least not noted the tendency of this facile arm to promote rapid shooting, which means shooting excess. The man with the pump shoots and shoots and keeps on shooting; when if he had an ordinary gun he'd have to stop. The pumper does not belong to the Shooters' Moderation Society.

SINGLE BARREL.

Wisconsin Deer.

MR. C. J. COON, of Woodruff, Trout Lake, Wis., a country which has not been much hunted, records that the deer, always plenty, are apparently now on the increase there. It is a section which may be recommended for its hunting opportunities.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Where to go.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

Down Among the Fishes.

In Two Parts—Part Two.

"BUT of all critters on this created airth, on the land or in the water, or in the air above 'em, them men's the wust," continued the patriarchal pike, with an involuntary quiver of the fins. "They al'ays was, when they hadn't nothin' but bone hooks an' stone spears, an' bark lines an' nets, an' they git wus an' wus. The more we l'arn the more they l'arn, a-contrivin' new contraptions faster'n we git the hang of ol' ones, an' the scarcer we git, the thicker them pesky two-legged, gabbin', walkin' frogs gits. Wherever the's water for a fish to swim in, they're arter us from the brooks that hain't deep enough to cover you fellers' backs to the sea that's salter'n a pork rind frog, an' as deep as from here to the sky.

"A salmon 'at come from it up here tol' me all about it. He was spawned 'way up here, an' when he got growed about as big as them little cusses that stan's back there a-gawpin,' him an' his brothers an' sisters put for the sea, where their father an' mother come from. They useter come back here every year, till them blasted men built so many dams acrost the rivers an' filled the water so full o' sawdust an' stuff a salmon couldn't stan' it, an' now they don't come no more.

"That ol' salmon he'd been everywhere, an' seen most everything, an' so he knowed somethin'; an' me an' him was thick as mud if he was a hey duc.

"Wal, he tol' me how them men up an' tackled whales. Yes, sir; an' killed 'em too, for all they're a hundred times bigger'n any man every you see. Why, he tol' me 'at he heard his gran'father tell how 'at he'd heard it from his'n, an' so on, 'way back, how a whale swallered a man oncte without chawin', an' that ere tarnal man lay 'round inside of him three whole days an' nights without startin' a hair, so the whale gin him up for a tough cud an' hove him ashore, an' you can scale me if he didn't walk right off an' go to preachin'.

"But there's sharks in the sea, some like us, only bigger, an' when they git a holt of a man they chaw him up till he can't kick, let alone gab. Them sharks make a reg'lar business of eatin' men, an' I wish they'd a lot on 'em come up here.

"Wal, as I was a-sayin', them men's al'ays arter us fish from the time we're just big enough for bait till we're knocked out some way or 'nother, an' that makes me think o' the first time one on 'em tackled me.

"It was along late in the fall, when all the weeds in the ma'sh was dead an' rusty, an' the wind had thrashed the last wild oats, so't the ducks had to dive to git 'em off'm the bottom, an' the wil' geese come a-sloshin' in to stay over night an' off again in the mornin' with the north wind a-chasin' 'em with both hands full o' snow squalls a-siftin' out betwixt the fingers. Then one night it quit a-yellin an' whistlin 'through the weeds, but the breath on't hung over 'em cold enough to nip the life out'n anything that didn't wear fur or feathers. The mushrats put the last wisp o' thatch out their housen an' took a good-by mouthful o' free air that night, an' next mornin' the whole crick lay quiet as moonshine, ma'sh an' channel under a sheet of ice an inch thick an' so clear you'd bump your nose ag'in it if you didn't look mighty sharp.

"Thinks, says I, them cussed men can't go in them boats no more, an' we sha'n't be bothered by 'em for a spell anyway, nor kingfishers, nor hawks, nor cranes nuther, for the' can't nothin' git at us from above. I hadn't more'n said it afore I hear'd the ice a-creakin' an' a-ringin' over my head, an' up I went to see what all the rumpus was. Fust thing I bumped my nose ag'in the ice, an' whilst I lay up ag'in it along come a shadder an' then one o' them men, a young one, a-straddlin' 'long on some iron runners, an' then down come suthin' ker-slam right over me an' knocked me insensible. I wa'n't so big as those little cusses out there, an' didn't know much more proberbly, but when I come to what little I did know, the little man had got a hole chopped in the ice an' was a-reachin' one of his hands, red as perch's fin, down arter me an' a-hollerin' to another one of his own sort, 'I've stunted a good one, Jim!'

"Just as he got a holt on me I got a wiggle on me an' slid out'n his fingers like an eel. The wiggle an' the squeeze shot me off furder'n he could reach, into deep water, an' pretty soon I got all right in my head and body. I tell ye, I laid low arter that 'til the ice got so thick you couldn't see the sun through it, nor scarcely daylight 'nough to ketch a minny.

"Then they cut holes through it an' let down hooks with live minnies on 'em, too big for me to swaller, but many is the good pickerel an' pike I seen go a-squirmin' an' a-strugglin' up through them holes, never to come back ag'in. I could hear 'em a-slappin' the ice a spell, but it didn't last long in the cold, dry air up there.

"One day one on 'em got shoved back some way arter he was froze stiff as a bill-fish's bill, an' I'll be speared if he didn't thaw out an' come to as lively as a water-bug. You bet your gills, he looked out for minnies wi' a hook in 'em arter that.

"It run along four, five year arter that winter afore I got into another scrape with a man, an' then it was one on 'em in a boat a-draggin' a piece of pork an' red cloth on the end of thirty foot o' string. I knowed the thing wa'n't no sort o' fish, but I was just fool enough to git a holt on 't to find out what it was; an' I found out more'n I wanted to, for I got a hook in the thin o' my jaw. The ol' bow-back quit a-paddlin' an' gin his pole a yank that tore a slit in my jaw an inch long, an' lucky for me he did, for when I buckled to an' swam faster'n he pulled, the hooked dropped out, an' I showed him my tail mighty sudden.

"A few years arter that some cussed man got up a shiny, yaller thing that looked some like a young perch, an' lots o' our relations got fooled with 'em, for there was two big hooks fastened to it that hung to your jaw like a blood-sucker to a mud turkle's leg. I seen some on 'em get yanked on the journey to the fryin'-pan, an' I didn't try titles wi' the brass clam shell, but by an' by some feller fixed up a cuter contrivance that went skivin' through the water slick as a shiner, an' looked so temptin' 'at I jest had to shet on to it same as our friend here did to-day, an' I got the same sass, a hook in my jaw an' two more just ready for the job.

"I tried to break the string, but it hel' like death, easin' up on me when I'd git the best pull on it an' haulin' on me every time I stopped to rest my fins. The hole in my jaw wore pretty big, an' just 'fore I got tuckered I happened to think o' my ol' trick o' runnin' up on the string, an' I tried it for a last chance. The' wa'n't none too much room, an' I didn't get a good slack till I was right alongside the boat, an' under the man's hand. Then I ducked my head an' dropped the hook, an' down I went, heavin' a finful o' water int' the feller's face 'at left him a-winkin' an' cussin' in a way 'at 'most spilte his luck for that day. I tell you that slack-line kink is the best one I know when a feller gits his jaw snagged; but the best way is to steer clear of all contraptions 'at has got a string hitched to 'em, an' thet's my rule, hungry or mad or on a tear."

A big lout of a German carp, who had remained unobserved while he was listening among the weeds, now pushed forward and remarked, with an air of superior wisdom:

"Vell, my vrents, I dells you vat vid you de madder vas, dat you eats oudt de flesh altogeder, de fish, de vorm ant de vrog. Now if you dakes only de fegetable you vas not be drouble, vor you vinds not in dat de hook effer. I vas lif here von year, ant I vas not be gatch alretty."

"Hello, ol' Sour Kraut! Is that you a-talkin'?" cried the old pike, turning himself slightly to roll a scornful eye upon the intruder. "Wal, now, I'll tell ye what's the matter wi' you. You're so dumb mis'able the' don't nobody want ye enough to try to ketch ye!"

"Vat vor de beobles pring us all de ozean agross if ve don't vorth somedings? Dey haf you blenty alretty!" said the carp, growing red in the gills.

"Yes," the pike grimly conceded, "an' the's Spaniards an' Dutchmen, an' the devil knows what, has fetched 'emselves over here when the' was enough better folks a-livin' here a'ready. Red as salmon they was, an' decenter behaved 'an folks is now. A fish could live then wi'out runnin' ag'in forty diffunt ways o' gittin' killed."

"Dey dont' know how to lif on de fegidaple like ve does. Dat de druple vas vid you!" the carp retorted.

"Why don't you go up int' the lots an' eat clover an' cabbages, an' leave the water to fish that wants it? You taste o' ma'sh weeds so't the devil couldn't eat ye, an' tough hain't no name for you. I chawed on one o' your young uns till I got tired, an' my mouth tasted wus'n if a family o' mushrats had slep' in it."

"You haf not de guldivadet balate, you vild Amerigans," the German remarked, with offensive superiority.

"Now you git out o' here wi' your Dutch airs afore I bite ye!" the old pike snapped out so angrily and with so threatening a movement that the carp scuttled away among the weeds, whose swaying tops marked his ponderous progress.

"Them furreign fellers makes me sick wi' the airs

they put on," said the patriarch, as he settled to his restful position again and the curling eddies untangled and straightened themselves into the liquid calm.

"They don't appear to think 'at anybody can be born here wi' any brains in 'em," said one of the larger members of his audience.

"Wal, suh, dat hol' Dutch was feel purty plump, prob'ly," an eel of Canadian birth remarked, as he squirmed up from the muddy bottom in a swelling cloud of sediment, "but Ah'm's tol' you 'f a feesh a'n't heat some feesh 'e a'n't good feesh heese'f. Dat's de way Ah'm's do, me, an' Ah'm's pooty good kin' o' fish, me. Ah tol' you!"

"You call yourself a fish?" the old pike demanded, glowering down at the intruder over the side of his jaw. "Your father was a water-snake an' your mother was a ling, you ill-begotten cuss, an' if you don't quit a-kickin' up that wet dust I'll come down there an' slap your jaw wi' my tail."

At this threat the eel doubled lithely up on himself and retreated under cover of the roily cloud, from behind which he fired a volley of mixed epithets against all the generations of pike and pickerel that had lived since the foundation of the world. The gills of the pike boiled with wrath, but he restrained an impulse to dash after the insulter, and shouted after him, "You nasty snake, you! You know well enough that the' wouldn't no decent fish dirty his scales with ye. But for all that the's men 'at eats em'," he added, disgustedly.

"An' that makes me think it was men we was talkin' about when that weed-chawer come pokin' his nose into our conversation. Well, as I was a-sayin', I kep' clear o' hooks, but I swam into a net oncte that snarled my gills an' would ha' been the death on me of a mushrat hadn't got tangled up in it clus to me an' cut himself lose an' me too. Then I kep' my eyes open for nets in my path, an' many a one I dodged 'round, an' many's the fish I've seen hung in 'em by their gills a-drowndin' or dead as smelts, an' others in a sort o' bag that you run into an' can't find no way out on onless by good luck a mushrat gets in the same trap and cuts his way out.

"But one time I was a-cruisin' 'round in the lake an' was a-chasin' a school o' minnies along wi' a lot of other pike an' pickerel an' wall-eyes an' some perch, an' havin' lots o' fun, when all to oncte one of the hind ones shouted, 'Look out! the's a seine a-comin.' An' when we looked back, sure enough, there was an army o' fish a-comin' an' rollin' an' bilin' an' a-jumpin' an' skivin' an' divin', above 'em a line o' floats a-bobbin' along in a great half-circle an' below 'em a line o' sinkers a-scrapin' the bottom so clust 'at they raked up the clams an' pitched 'em along by the bushel. On come the whole business, steady and sure, the floats an' lead an' clams a-walkin' towards the slopin' beach, calm an' serene, but all the fish in an awful flurry, a black swarm o' bullheads a-gougin' an' a-hornin one 'nother, an' everybody else, bass a-jumpin, perch an' wall-eyes with their backs up a-rakin' everything, bald-headed pike an' pickerel makin' things mighty onpleasant, suckers down in the mouth an' lookin' sorry they was there, clams wi' their jaws sot tumblin' an' chuckin' over one 'nother like a scowload o' stone upsot, a sturgeon as big as a man a-slashin' 'round an' kickin' everybody right an' left, an' three, four eels a-squirmin' back an' to an' slimin' the whole caboodle, an' all scairt out o' their scales.

"I was scairt enough, but me an' a walleye, with his eyes a-stickin' out so't you could ha' bit 'em off, we stood out o' the thick on 'em, seein' now an' then a bass jump the float line an' git clear, but we knowed we wa'n't spry enough to do that, an' the rest on' 'em come surgin' along nigher an nigher to the beach, where we see two men a-haulin' on the ropes, an' grinnin' like a catfish.

"Says the walleye to me, 'Gittin' 'round the end is our only chance.' An' wi' that he pulled fin, an' I arter him till we come to one end o' the seine, where the foot of the tommy stick was a-plowin' a groove in the sand straight for the shore in water so shaller 'at walleye' back fin was a-splittin' the top on 't an' the grave scratched our bellies. The man that was pullin' the rope there kep' a-floppin' it to scare the fish back, but me an' walleye didn't mind that. Up went the rope an' tossed him up end ways tail fust, an' down it come an' hit me a slap in the middle o' my back, but didn't hurt us none, only to scare us, an' then we was safe outside on't. We didn't pull up till we was rods away, an' then we stopped to git our breath.

" 'Pretty clust shave!' says walleye, a-workin' his gills for all they was wuth. 'Did ye hear that man cuss when he see us come out?' He was as big a walleye as ever I see, 'most as big as I was then, 9lbs. or so, an' no doubt them men felt bad to see us git away. We ventur'd up behind the seine an' see bushels o' fish a-bein' dragged ashore an' that ol' sturgeon makin' the whole shore shake. I'd seen enough, an' I laid a straight wake for the crik, where there wa'n't no seine."

There was a sympathetic shiver of the audience, followed by a silence, which was broken at last by a greedy listener, who asked, "I suppose you had some scrapes arter that?"

"Not by gittin' into nets, I hain't," said the veteran, looking at his questioner over the corner of his mouth. "But there's al'ays somethin' turnin' up if a feller moves 'round in the world, an' maybe if he don't. A clam even has scrapes; for along comes a mushrat an' carries him ashore to die, or the waves of a big storm knocks him high and dry, or he gits a gravel stun in his shell an' it makes a pearl 'at one o' them men tears him open to git."

"Or some ol' woman wants his shell to scrape her kettle, an' that's a pretty mean scrape!" one of the lighter-minded and lighter-weighted pickerel interrupted.

"You shet your head till I g... done," the elder said petulantly, and then regaining his composure in a moment of silence continued:

"Now that nigger bullhead a-pollywoggin' there a case in p'int, an' jest hear the critter sing."

The bullhead was swimming leisurely past near the bottom, with a devil-may-care smile on his broad countenance and in his twinkling little beady eyes, and jerking his head sidewise, with every movement of his tail keeping time to the words he was singing to himself and chirping a creaky refrain:

"Dar nebbe's nuffin' like der bottom, karee, karee, karee;
Come down to de bottom 'long wid me."

"Sarvent, boss, you seen any wums layin' 'roun' heah loose a-waitin' to be gathered?"

"We hain't a-huntin' worms for niggers," the old pike growled. "You go 'long about your bus'ness, will ye?"

"Dat's just what I'se doin', boss. Pity you wa'n't 'roun' when manners was passed!"

The bullpout wagged on his way, accelerating his speed but little when one of the younger pike made a feint of dashing after him.

"Don't you never touch him," the old pike called out, sharply. "Once when I was your age, an' thought I knew a good deal more'n I did, I thought I'd try a bullhead. He looked as though he'd go down easy tail fust, an' so he did, slick as a frog, till it came to his horns. They stuck in the corners of my mouth, an' for all I could do wouldn't go no furder, an' what was wus, when I got sick on't an' tried to heave him out they wouldn't le' go. His back horn pricked my upper jaw so I couldn't bite him, an' he choked me so I couldn't cuss, so there wa'n't no relief for my feelin's wi' him a-laughin' at me an' callin' of me all sorts o' fools. I tore 'round till I was pretty nigh tuckered, an' had about gin up 'at I was a gone sucker, when I come along where there was a man a-fishin' with a worm on his hook. He see me, an' dropped it just before my nose, an' I'll be scaled if that bullhead didn't open his mouth an' take in worm, hook an' all. The man gin a twitch an' snagged him, an' begin to pull, an' I had to hold back with every fin I had; but he pulled me half my length out o' water, an' I thought he had us both, when the bullhead come loose an' went a-flyin over the man's head, an' not havin' any use for either on 'em any more, I come away. It's a pity a bullhead's got them horns, for it's good sweet-tasted meat if you could only git it."

"Anyhow, Uncle, you can't say but what a man done you one good turn."

"Turned me pretty nigh wrong side out, if you call that a good turn," growled the old fellow. "They don't owe us no good will, but they hain't quite so rough on us as they used to be, wi' their nets an' seines sot for us, an' a-scoopin' of us all the year round. They've got laws ag'in' that an' ag'in' spearin' of us, for they don't want to destroy us off'n the face of the earth; but they're bad enough yet, an' al'ays will be.

"One of the meanest tricks they ever served me was in the spring, years an' years ago. We'd all been shet down under the ice for five months, an' I tell you it looked good to see the sun a-shinin' down ag'in bright an' clear through the wrinkled water, an' the white bellies of the ducks a-swimmin' above us, an' the mushrats cuttin' a clean wake from shore to shore. We could see the naked trees standin' up ag'in' the sky, wi' their buds a-swellin' an' the blackbirds strung along the branches a-singin' a song that sounded like the runnin' of a gravelly brook, an' there was stake-drivers standin' 'round in the coves a-thinkin' they was a-singin', when they made a noise like an ol' pump that won' draw without primin'.

"The sperit of the time o' year got into everything, us fish amongst the rest; an' I went up into the ma'sh to pick me out a half a dozen wives. I s'arched hither an' yon an' got up int' the woods, where the water stood clear an' brown three foot deeper'n last year's leaves that foxes an' 'coons an' mink had traveled dry-footed over in the fall. Finally I got away up in the edge o' pastures where cattle feed in summer, an' meaders where the stubble o' last year's mowin' bristled under a foot o' smooth water.

"There were hundreds o' frogs lazin' 'n under the shaller water, an' on the drift o' dead weeds, but they wa'n't nothin' to me then, for I found two as plump an' pretty she-pike as ever you see, an' was a-courtin' 'em up the best I knew how, an' keepin' off other fellers a-comin' 'round. So we was a-cruisin' along together in the clear water where the sun shone warm on us, an' me, an' no doubt them, calculated showin' off our spots to the best, when I see a man a-pokin' along half-way to his knees in it for all the world like an' ol' crane. When he see us, he up an' p'inted a long iron thing with a hole in the end on't right straight at us, but I never mistrusted he meant mischief till fust I knew there come a stream o' fire an' smoke a-pourin' out o' that holler iron with a noise like thunder, an' the water over us was tore an' shattered as if a whole hailstorm had been emptied there all in a heap.

"Next I knew, I didn't know nothin'; an' the next I was a-layin' belly up with my feelin's comin' shiverin' back into my body. A little ways off lay them two pretty creeturs with their shinin' scales all tore an' blood a-tricklin' out an' stainin' the water around 'em. Then that mis'able man came splashin' out to 'em, an' reached down an' hove 'em onto the land, an' I hadn't no more 'n heard 'em flop onto it afore he come to me, an' was a-shettin' one hand on my gills. I gathered all the strength I had for a stroke of my fins all to oncte, an' I slid through his fingers like an icicle an' scooted a yard away. He took a step for'a'd an' made a grab for me, but his foot ketched under a root an' down he come most a-top of me, ker slosh! like half an acre o' bank cavin' in.

"But I'd got right side up an' shot out from under him easy enough, an' he had all he wanted to do to tend to himself, for he was a-thrashin' 'round, arms an' legs, wus'n one o' them sidewheel steamboats out in the lake, an' spoutin' water an' cuss words as much one as t'other. The last I seen of him he was a-stan'in' on the shore a-drainin' an' a-drippin' from every p'int like a willer bough arter a summer shower."

There was a general gulp of satisfaction over this disaster of the enemy, while the old pike added, regretfully:

"I was turrible sorry to lose them two wives. I found enough others, but none sech as them was. Arter spawnin' time was over an' the young pickerel was hatched out, I was a-loafin' 'round on the ma'sh one night a-lookin' at the stars shinin' down through the still water, when I see a bigger light that I thought 'at fust was the moon a-risin', till I seen it a-flarin' an' the sparks a-flyin' up from it an' showerin' down like a rain o' fire. Then I seen it was in a boat, an' a man a-stan'in' up behind with a pole in his hand, an' a-lookin into the water. There was another man settin' in t'other end a-paddlin' slow an' still, an' I begin to 'spect they was up to some mischief. They was comin' straight toward me, an' so I started off out o' their course, afore I thought they'd got nigh enough to do me any hurt; but the man wi' the pole he seen me an' let it drive right at me, full tilt.

"There was a five-pronged iron thing on the end of it, an' one o' the prongs just grazed my back. If it had hit me fair it would ha' gone clean through me, for the prongs went full length into the bottom, so 't the pole stood slantin' in the water, a-tremblin' with the force of the blow. All this I seen with the back o' one eye, for I was scairt too bad an' hurt, I didn't know how much, to stay 'round there lookin' at things, but just scooted till the light was glimmerin' so fur behind me it looked like a drowndin' lightnin' bug.

"A lot o' my scales was raked off an' my flesh was tore so the blood run, but it got well arter a spell, an' I'd larnt another lesson about them cussed men. How many more I've got to l'arn afore I die, goodness knows, for there don't appear to be no end o' their wicked ways.

"Say, is that a punkin seed or a rock bass a-comin'? Don't ye never be fools enough to swaller any one o' the hump-backed, spike-finned little scamps. I do' know what's the good o' fish bein' built such shape anyway. Why, no, that hain't a punkin seed nor a rockie—it is one o' them 'ere big-mouth bass 'at puts on more airs now-a-days 'an a wood-drake in April, jest 'cause they're some related to the black bass 'at them men makes such a fuss over, what for is more'n I know.

"Big-mouth and small-mouth is just as comfortable to swaller when they're young as a punkin seed or rockie, an' when they git big you can't swaller 'em, yet the men goes wild over 'em, an' won't let one 'nother catch 'em only jest sech time o' year an' jest sech ways, whilst they go for us all times an' all ways. See that feller set up his back-fin, an' stick out his under jaw as if the same water 'at held us wa'n't quite good enough for him, an' him smellin' stronger 'n a mud-turkle, an' no more fit to swaller 'n a thorn apple bush! Glumph! I don't believe in no spike-backs puttin' on sech airs."

The disparaging remarks were not unheard by the big-mouth, but he only stuck out his under jaw a little more contemptuously, and set his dorsal fin more stiffly as he swam silently past the group of unfriendly observers.

"Hush your noise!" the old pike sharply commanded, though not one of the company was making the slightest sound. "Do ye hear that? Well, that's a boat a-comin', an' of course there's men in it, an' we'd better keep shady."

The cautious dip of oars, the crack of rowlocks and the recurrent ripple of water from the bow, in response to the slow, regular strokes, could now be distinctly heard, and now the boat's bottom could be seen, and its shadow gliding steadily along the silty bed of the creek. The patriarch sculled himself backward half his length with a stroke of his pectoral fins and all his companions, save one pert young fellow, discreetly followed his example, backing into the marsh, till the drooping heads of wild rice, the blue spikes of the pickerel weed and the angular burs of sedges jostled each other and rustled as if a stray cat'spaw of wind was snatching at them out of the breathless air.

"What be you afeared of? I'm going to stay where I can see," said young Malepert, boldly holding his place while an oar-blade flashed above him and launched from its tip a miniature whirlpool that bored so deep that the point of its hollow core tickled his back.

"Mebby you'll see more 'n you want to," the elder admonished him, but to no purpose.

The boat passed, and its wake spent its last slow pulse among the rushes before a glittering spoon appeared 30yds. off, drawn by a line so slender that it was invisible at a little distance. In spite of the sage advice they had so lately listened to, some of the older fish were attracted by the shining lure, and made a movement toward it, but their younger relative being nearest, forestalled them by a swift, sudden dash and seized it. His jaws closed upon it savagely, but were met by something as hard as his sharp teeth, and that slipped through them till three as sharp hooks were firmly planted in his mouth.

This strange thing, which was neither fish nor frog, yielded so readily to his first instinctive burst of flight that he thought for a moment he was to bear it away as a doubtful trophy, but then began a gradually tightening strain, that promptly stopped his retreat, and brought him so nearly to a standstill that he was fain to try another course. He dashed to the right, to the left, downward till he struck the bottom, upward till he broke the surface into an upbursting shower, yet in no direction could he find relief from the steady, wearying strain that never yielded enough to give an instant's rest, never resisted enough to make breakage possible.

It was no better when he made all speed in the direction of the pull, the incessant strain continued with but little abatement, while he came so near the boat that he saw a slender rod bending toward him like a bullrush in a gale, and he heard the swift clatter of a reel that was taking in the cobweb line faster than he could swim, and he saw the terrible man, gray-bearded and calm-faced, who was managing all the deadly, relentless machinery.

Setting every fin, he checked himself so suddenly that he was sure something must break, but the rod only bent a little more, and the retarded line spun out again still unbroken. He turned and ran straight away, then to right, to left, again sounded the bottom, and again broke the surface, but nothing availed to afford release nor even relief. Breath and strength were quite spent, and his comrades saw him hauled unresisting alongside the boat, then lifted into it and a moment later heard him thrashing the bottom in his final death struggle.

"That is the last of another fool," declared the old pike more savagely than sadly. "It's a lot o' use givin' you chaps advise, hain't it?" and then added more regretfully, "It is too bad to have a lusty young life wasted that way. I wish 't I'd swallered him two year ago."

So saying, he turned and swam majestically away.

ROWLAND E. ROBINSON.

In the Louisiana Lowlands.—IV.

BY FRED MATHER.

[*Continued from last week.*]

Contrary to the Colonel's expectation, the rain stopped about noon the next day, but the sky was overcast and threatening, so that the day was passed indoors. I now had a chance to make the acquaintance of the boys. George was a strong lad of sixteen, dark, erect, and manly, while his brother, Jack, of fourteen, was not dark, and was one of those boys who are weak from making rapid growth, but who promise to broaden out after they attain their longitude, and become strong men. Up to this time the daily greetings had been the extent of our intercourse. I was reading on the piazza, and the boys were in earnest conversation on some subject at a little distance; finally George said, loud enough for me to hear: "No, you do it," and walked away. Jack came toward the porch, and as he came up the steps I dropped the book and made some remark.

Without hesitation he stated the business on hand: "George and I have heard that there was to be a bear hunt and we want to go. We would have been pleased to have accompanied you on the woodcock expedition, but were not sufficiently urged, and we stood on our dignity, and would not ask for an invitation. George says that a word from you to grandfather would bring the invitation, that is if you do not object to our going."

Here was a manly speech from a manly boy, a straightforward statement of what he wanted, with no circumlocution. I mentally recalled the adventure his uncle had had with a bear when he was about Jack's age, and being in doubt about his mother's views on bear hunting by boys, I cautiously answered: "Well, Jack, I know just how you feel about joining the hunt, for I was a boy myself, in the auld lang syne, and when about your age was in a fearful state of excitement when a deer hunt was proposed and I did not know if I would be 'sufficiently urged,' as you put it, and, like you, I was too proud to ask.* Nothing would please me better than to have you join us, for the enthusiasm of boys is contagious with me, and I always like their company, but please remember that I am only a guest of your grandfather's, and in that capacity it might be indelicate for me to offer him suggestions concerning the composition of the party which shall compose the hunt to which he has so kindly invited me. Has that view of the situation occurred to you?"

"Yes, sir, it has; and George and I have talked it all over. Ho-o, George! Please wait until George comes up; he's only down there by the road, waiting for me to join him and report on what you say; please wait for him, he can tell you all about the case better than I can."

Jack sat down, and as George was rather dignified in approaching after his brother's call I had time to review the situation. I had in some way, not clearly understood, become the guest of a Louisiana planter who had lost his only sons in the Civil War. His widowed daughter and her two sons constituted his family. I thoroughly enjoyed the hospitality of Col. B., especially as a Union soldier was generally persona non grata in that locality. To-day I say "locality," then we called it a "section," but as this term means cut-off, it is dropping into disuse, as it should. I was not sure but Mrs. H., the mother of the boys, was a "war widow," but so far the Colonel and his family had not made reference to the war further than to give me a military title, obtained from letters, and certainly I would not refer to it.

As George came slowly up the steps, I said: "George, your brother has ably laid out your case, as you decided that he should do, but as a guest I am diffident about talking on this subject to your grandfather. What do you say?"

"Mother says that you have awakened grandfather out of dreams of the past. She says that he often breaks out into a laugh when alone, and is more cheerful than she ever knew him since her brothers were lost in the war. That being the case, it is only necessary for you to say the word and we boys go with you on the bear hunt."

"Will you get your mother's consent to go?"

The result was that Mrs. H. came and talked of the dangers, but in the end I got her consent. She only got to the point of "Veni, Vidi," while the boys could have added "Vici," but the whole scheme was subject to revision by Col. B.

That evening, after the lemons and cigars had been consumed, I told him that the boys wished to go with us, and after stipulating that George should remain close to him, while Jack should do the same to me, it was settled that the boys should go. When I retired, after midnight, I was waylaid by both boys to know the verdict. They had not gone to bed, and there is little probability that they slept after they did go. Oh, if the enthusiasm of youth could only abide with us!

The Bear Hunt.

As the previous day had been overcast and somewhat threatening, the Colonel had called up a venerable darky named Tom, one of his pensioners, who had been on the plantation before the Colonel's father came on earth, and whose age was as much a matter of conjecture as that of the Elgin marbles. With his snow white head uncovered, lame with "rheumatiz," and bent "wid de misery pains," Tom hobbled up the steps to the porch, where we were seated.

"Well, Tom, what kind of weather are we going to have for our hunt to-morrow? If it is going to rain we will wait for a better day," said the Colonel.

The old man fumbled with his hat, looked at me, turned his thoughts inward and replied: "I heerd de boys talk 'bout a hunt in mawnin' an' I jess kep' a notiss awn de wedda signs fo' to see w'at's a-comin'. I all'a's keep a' eye awn de wedda, 'cause o' de roomatiz in my laig an' de misery pains in de back, an' ole Aunt Mary, who claims to be de oldes'—"

"Never mind Aunt Mary, Tom; tell us what you think the weather is to be."

"Well, Cunnel, de ole cat didn' wash hees face dis ebenin', and dat means dat dah's no rain to-maw. De smoke goes up straight fum de chimly, and dat backs up w'at de ole cat says. De mawnin' 'll be bright, an' de day good, an' Ise on'y too sorry 'at I'm too ole to go an' 'joy de spo't. I wish yo' plenty ob it." And hat in hand the old man hobbled off.

George and Jack were too well bred to knock at my door before daylight, but as their room was next to mine it may be taken for granted that I did not oversleep. I might have said, with Bottom: "And I pray you let none of your people stir me; I have an exposition of sleep come upon me." But what availed such an old fogy desire to two boys who were going on their first bear hunt? Of course they talked, and not sotto voce; they were not at all interested in the somnolent tastes of their neighbors because their thoughts did not run in that direction. If some person had hinted to these enthusiastic boys that they were disturbing the rest of the stranger within their gates they would have quieted down; but what boy of sixteen, who is going on his first hunt for bear, deer, turkey, grouse or other game, ever had a corner in his brain for any other thought? If he had he would not be in my list of interesting and lovable boys. And so I rose early without regret, and I hate to be up before the sun.

After an early breakfast we assembled on the porch, and a vigorous young darky called Joe appeared and blew several long blasts upon a horn. Darky boys and dogs swarmed at the call. Jim was evidently the "whole thing" as far as darky boys and dogs were concerned, and he laid down his laws to the boys, and his law was like unto that of the Medes and Persians.

A few weeks ago in the Forest and Stream Col. Alexander attacked my notion of heredity in the matter of a trout, which had been pricked with a hook, transmitting its fear to its progeny. Several good friends, Hermit and Von W., took up the lance for me, and some day I may say a word on the subject. I refer to it here because of what happened on this morning of the bear hunt. When the horn sounded every dog on the plantation assembled. The poor old blind Bugle, who had been blinded by a bear years ago, came up and sniffed around among dogs and men, and then, with drooping tail, went off to the negro quarters before we started. The setters, Bob and Dan, were there, and after licking our hands went and lay down in a corner of the porch as the party started, knowing that their services as bird dogs were not needed. How they knew this cannot be attributed to instinct. There had been no bear hunt during the year. The actions of these dogs were the result of intelligent reasoning, not of a "sub-ego," but of a well developed canine brain.

We mounted our horses and were followed by some twenty negro men and boys, for a bear hunt was a holiday on the plantation, and there were nearly a score of mongrel dogs of varying sizes and colors, and no two alike. Old Tom's forecast of the weather proved correct; the sun rose clear, and the Colonel remarked that we would find it hot in the thickets at midday, and we did. The master of ceremonies was the before-mentioned Joe, a powerful man, whose "blacksnake" whip was held in great respect by both dogs and boys. Not a cur dared to stray from the road into the brush, nor a boy ventured to be unduly hilarious.

At a "likely bit of canebrake" near a stream Joe turned in and started the dogs, our party, the Colonel, George, Jack and I, keeping the road. A hound's voice broke into loud bay, and Jack, who was only fourteen years old, called out: "They've started him!" but Joe dispelled that notion by calling: "Bunce, come back! Yo' heah me? Come heah!" Shortly afterward a dog ki-yied, and Joe exclaimed: "You fool dog," another ki-yi, "go chasin' a' ol' rabbit w'en we's out fo' bah," and once more the blacksnake enforced the lesson.

It was slow work for men and dogs in the brakes and thickets, and we ate our midday lunch beside a spring, and had just mounted, when about a mile away the whole pack opened cry, and Jack and I, the two novices at this sport, wanted to dismount and enter the thicket to join in the chase.

The Colonel said: "There's no hurry; they've only struck a fresh track, and the bear may lead them a long chase yet. Keep in your saddles until the dogs bring him to bay, and we'll follow the roads; it's much easier."

The voices of the dogs were evidence of much hound blood in the pack; "Jess 'nuff," Joe said afterward, "to make 'em stick to de track, but all houn'," he explained, "ain't got de grit to get close 'nuff to a bah to make him stan' till de men get up, an' if dey's got too much grit dey gets killed. A good bah dog mus' hab a good nose an' not too much grit, jess 'nuff."

At Bay.

We rode leisurely along for about two hours, when the excited tonguing of the pack told us that they were near the game. Then the darky boys in the rear added their voices to the cry. It was quite musical, and recalled the remarks of Hippolyta:

> "I was with Hercules and Cadmus once
> When in a wood of Crete they bay'd the bear
> With hounds of Sparta: never did I hear
> Such gallant chiding; for, besides the groves,
> The skies, the fountains, every region near
> Seem'd all one mutual cry. I never heard
> So musical a discord, such sweet thunder."

A blast from Joe's horn announced that the bear was at bay, but the Colonel said: "Don't dismount yet; he'll break away and lead 'em another chase; that's only his first stand. Halt here at these corners until we hear which direction he takes."

The din was increasing in vigor; barks, yelps and howls all mixed, with the voice of Joe above all, as he encouraged a dog that needed it, or cautioned one that was too venturesome. Then the cry of pursuit took the place of that of battle, and we knew that our game had broken away and was again leading the dogs. "They are coming our way!" "Yes, sure," "No, he has turned," were the remarks as we sat in our saddles at the cross-roads. Again the bear stood at bay, and Joe blew his horn, while the same exciting sounds came to us. "Will he come our way?" "No," said the Colonel, "come on; he's tired of the brakes and thickets, and is making for the upland and the tall timber, where, if he can't outrun the dogs, he thinks he can climb a tree. Come on!" And our horses were speeded for the first time that day. Even the blasé Colonel was now excited, and we reached the next road just in time to see the bear enter the fringe of bushes below the tall timber, with Joe and the dogs close behind.

Once More at Bay.

Again Joe's horn sounded as the dogs brought the game to bay. "Here we will dismount and hitch our horses," the Colonel ordered, "and go into the woods. George, you stay by me, and do as I say; Jack, you will keep by the Major, and obey him in all things." This had been decided upon the evening before, and at my request, for I am very fond of boys who are under sixteen years, and of those who have passed twenty, but between those years the boy—I speak in general terms—has a conceit that he knows more than King Solomon, and entertains a patronizing sort of contempt for all who happen to be older than he. I speak from experience. When I was between those ages I knew positively that worldly knowledge had advanced since my father was a boy; "things are different now," is the motto of the boy of this particular age; so, George being sixteen and Jack fourteen, I chose the youngest, the one who had not yet thought of being a man. I like that sort of a boy.

The trees and underbrush tended to drift men apart as we forged along to that babel of sounds made by a score of dogs snapping at the heels of a bear, who turns upon one detachment, only to be assailed in the same place by another. Guided by the din, we pushed on, sweating at every pore in the dense woods on a warm day, the fight growing nearer every minute.

"Jack," said I, "be careful now, don't shoot without taking careful sight. Remember that Joe is there among the dogs, and you don't want to plug him nor kill a dog. Remember that you are not to use your rifle until I say the word. If you waste a shot on the bear I may have to shoot before it breaks away from the dogs, and I want you to kill this bear. Are you sure that you will do as I say?"

Jack was certain of it.

We were nearing the conflict, and while Jack and I were on an equality as far as never having killed a bear was concerned, I was older and had myself more under control. He was trembling with excitement, and my interest in the hunt now centered in Jack. The fight had drifted off our way, and we seemed likely to be first on the field, and we were.

There, not 200yds. away, in open timber, was what appeared to be a black, seething mass of growling, yelping, howling animal life, with Joe on its outskirts, yelling, coaxing and cursing, as we approached. I restrained Jack until we were within 100ft. A dog bit the bear in the hindleg, but did not get away quick enough, and had his throat cut by a sweep of the bear's forepaws. Another had his leg broken in the same manner. Jack cocked his rifle to shoot, but I restrained him.

"No, Jack, the bear is on all fours, and is surrounded by dogs. If you shoot now you may kill a dog and not touch the bear; wait until he rises on his hindlegs to cuff a dog and then let him have it."

The advice was theoretical, but good. Jack was also good, but young and enthusiastic, and he took a pot-shot at the bear and killed a dog. The shot encouraged the dogs, for they then knew that they had the backing of man, the most formidable animal that this world contains. The dogs knew it, Col. Alexander, because they had reasoning powers. Does any owner of a dog doubt this?

I brought up my rifle and lowered it. It would be more to Jack or his brother to kill a bear than it would to me. "Jack," said I, "you were shaky. Now that you have loaded your rifle, cool off a little, the dogs will hold the bear now, for he is tired and does not dare to put them all in his rear by running. You see, there is no—" Crack! went a rifle, and I turned and saw that George had fired and missed. All this time the fight continued; harassed in front and rear, with an occasional nip on the hindleg from a more venturesome dog, the bear would swing suddenly and send a dog flying several feet, yelping all the while and with several slits in his hide that would take time to heal. Joe stood near the fight, overseeing the dogs, but the other darkies were not there; it was safer in the brush.

"Now, Jack, when the bear rises on his hindlegs again take a careful sight back of his foreleg if his side is toward you; square in the breast if he faces you, or just below his shoulders if his back is turned to you. Now he's rising; take a good aim, but don't dwell on it."

The back of the bear was toward us as he rose, and the dogs in his rear nipped him. Jack's rifle was at his shoulder just as the bear whirled and faced us, and as he fired the bear tossed a dog and came down on all fours to renew the fighting. The dogs were not so eager now, the hard run, the fight and excitement had tired them as well as the bear, and the contest was not as fierce as it had been.

"Missed again," said Jack, and George called out: "I'll fetch him next time he rises," when the bear staggered among the dogs and fell. The dogs did not worry him much after this; they were glad to lie down and rest. Jack wanted to go up to the bear, but I forbade it, and it was well I did so; for a young dog, presuming that the bear was dead, went nosing around to lick the blood or to worry the animal, roused the enemy, who struck the dog a blow that he would remember, got up, made a charge on the dogs and fell dead.

We cautiously drew near. The Colonel was not there, and Joe and I had considerable regard for a bear that had made such a grand fight, and might have life enough left to rouse up and take a man with him, but several prods with a pole had no effect, and we officially pronounced the bear dead. Then the crowd of darkies appeared to spring from the earth, like Macbeth's

* "Men I Have Fished With," pp. 72-73

witches, and the Colonel came limping in. He had been hurrying on, had caught his foot under a root, and in falling had turned his ankle, and it was paining him. He wore boots, and could not bear to have the boot on the injured foot pulled off. "Cut it," said he, and I had it off in short order. His ankle was swollen, and as he could not walk through the miles of brush to the horses there was a question what was to be done. Joe offered to carry him out on his back, but I decided that Joe should see to getting the bear out of the woods and leave the Colonel to me.

I had seen wounded men carried off the field in a blanket slung between two muskets, and the Colonel must go in an easier manner than clinging to a man, "pick-a-pack." We had axes and rope. Two stout poles laid 2ft. apart were laced with rope; twigs were laid lengthwise on the litter and then a bed of Spanish moss was made on the twigs. I would have liked the bear skin to top it off with, but that was needed to keep the bear meat clean. Joe detailed two strong men and an axeman to clear the way, and we laid the Colonel on the improvised litter and started. Joe was left to dress the bear, wait for the return of the men with the litter and take the bear out on it to a wagon, which was in waiting.

We picked up the Colonel's rifle on the way out, and as soon as we came to water I wrapped up his ankle and soaked the bandages, which were handkerchiefs, neckties and his stockings. Our axeman cleared the way through the brush for two men abreast, and when we came to the horses a discussion arose.

"Riding home, Colonel," said I, "with your leg hanging down will increase the inflammation in your ankle. I am not a surgeon, but I know that; I don't know whether your trouble is a dislocation, a fracture or a strained tendon, but I fear that a ride, which I estimate as at least ten miles, in the saddle will not only add to your suffering, but may defer your ultimate recovery."

"Well," replied the Colonel, "if I go back in that lumber wagon with the bear, I will either sit on the seat and with my leg down get more jolting than I will on Caliph, one of the best saddle horses in the State. Or, if I have a bed made beside the bear I will not only have a dislocated ankle for Dr. Gordon to attend to, but there will be curvatures and dislocations of the spine to be corrected. I will ride."

I was overruled. When the Colonel was disabled I thought myself in command. Fortunately George came to the rescue and suggested: "Suppose you ride woman fashion, grandfather, and put your injured leg over the pommel?" That settled the question. And in that way we went home.

The sun had gone down before we reached the mansion, and supper was awaiting us. Dr. Gordon was there before us, having been sent for by a special messenger, and as there was no immediate danger he waited until after supper to examine his patient. In the meantime I examined the Doctor. He was stout, reserved, fifty at least, and had a glass eye. This defect was only apparent when he looked directly at you, but as he complimented me on the manner in which inflammation had been kept down in the woods and on the way home, I saw that he was willing to grant to a layman a little knowledge of "first aid to the injured."

Dr. Gordon.

Having put the Colonel to bed and ordered his supper sent him, the Doctor and I joined the family at the evening dinner. The talk was naturally upon the hunt, in which the boys occupied the center of the stage. I took a dislike to the Doctor because of his extreme punctiliousness, his deliberate speech and his general manner, all of which I mistook for affectation, a thing that is not excusable in a man who has reached the time of life when he debates whether he shall shave or let it grow. There is an indefinable something about a man which attracts or repels at the first contact, and as often reverses the verdict after further acquaintance.

Said George: "Jack missed his first shot, and so did I, but I didn't kill a dog."

"What does a cur amount to, anyway?" Jack hotly replied. If I'd 'a' killed Bob or Dan when shooting woodcock that would have been something to talk about; but a cur or two from the negro quarters are not worth mentioning."

George, who, as I have said, was at the "disagreeable age," answered: "You happened to kill the bear at your second shot, with a cooler head to coach you. If I had a second shot I might have done the same, without killing a dog."

As a guest I was uneasy, and I noticed that the Doctor was, but to our relief Mrs. H. quietly said: "Boys, remember that the table is no place to bring quarrels; there must be no more talk about the hunt until you leave the table. Doctor, will you be helped to more of the fowl? Will you, Major?"

"Blessed are the peacemakers!" We left the table without allowing the boys to mar the harmony, owing to their early training under a most excellent mother.

In the evening Dr. Gordon and I met in the room of Col. B. The Doctor still addressed me as "Sir," and I soon learned that that was a term which was common in the South, and thought no more of it. If a man in New York should begin a sentence with "Sir! I received your note," etc., I would think that there was trouble brewing. As my dislike of Dr. Gordon was merely a temporary one, not based on any reason, it soon passed, and after we had summoned Joe to look over the wounded dogs by lamplight and the Doctor had attended to them as carefully as if they were human, I knew more of him.

In addition to the one dog killed by Jack and one by the bear, the casualties included three broken legs, which were set; about a dozen cuts, which needed a stitch or two, and an assortment of cuts and bruises which time would heal. These things attended to, we took a look at the bear, as it hung in an outbuilding. It was a big fellow, fully 5ft. in length, and probably weighed close to 400lbs.

It was time that I took my leave, but both the Colonel and the Doctor so strongly urged me to stay a few days longer that I complied.

[TO BE CONTINUED.]

Closed Trout Brooks.

Opinion of the Supreme Court of Vermont Regarding the Constitutionality of Section 4,568, Chapter 189. (Opinion filed July 20, 1898.)

STATE V. THERIAULT. ROSS, C. J.

THE respondent excepted to the judgment of the city court of the City of Montpelier, holding, on demurrer, the complaint of the State's attorney sufficient. The complaint is in three counts. They all charge him with illegally fishing in a stream known as Hale's Brook, on land owned by George Hale in the county of Washington, which brook flows into the Winooski River, a boatable stream. Each count alleges that the brook had been stocked with trout by the Fish and Game Commissioners and duly posted and advertised agreeably to V. S., Sec. 4,568. The first count alleges that this was done with the consent of George Hale, the owner of the land over which the brook flows. The other two counts do not allege any such consent.

V. S., 4,568, reads: "When the Fish and Game Commissioners place fish in a pond or stream they may prohibit fishing therein, or in specified portions thereof, for a period not exceeding three years, by posting notices to that effect conspicuously upon the banks thereof, and publishing such notice three weeks successively in a newspaper published in the county where such waters are located; if a person fishes, or attempts to fish, in such waters within the time specified, he shall be fined $50, if prosecution is commenced within six months after the offense is committed."

V. S., 4,567, reads: "Waters stocked by the Fish and Game Commissioners shall thereafter be treated as public waters, but any person who might otherwise make the same a private preserve or posted waters may do so at the expiration of five years from the date of filing, with the Fish and Game Commissioners, a written notice of his intention so to do."

By V. S., 4,565, the Fish and Game Commissioners are authorized, at the expense of the State, among other things, to introduce trout, shad, salmon and other good varieties of fish into such streams, lakes and ponds within the State, not private preserves or posted waters, as they deem suitable to the successful cultivation of fish. V. S., 4,562, defines "private preserve," "posted waters" and "public waters" as follows: "Private preserve: a natural pond of not more than twenty acres belonging to a common owner, or any artificial pond made solely for the purpose of fishculture." "Posted waters: all waters on lands posted as provided in this chapter." "Public waters: all waters of which the State has jurisdiction, except private preserves and posted waters." Elsewhere in the same chapter it is provided that the owner or occupant of enclosed or cultivated land may, by posting notices as thereby required, prohibit shooting, trapping or fishing thereon, under a prescribed penalty. These are the main provisions of the statute bearing upon the section brought under consideration. There are provisions establishing a "close season" for hunting and fishing, or a time in the year when all persons are prohibited from hunting and fishing, and also regulating the manner and means by which hunting and fishing shall be prosecuted in the open season. These statutes express the Legislative will regulating the rights of riparian owners in regard to taking fish from a common stream, and make the Fish and Game Commissioners officers to carry that will into execution. This is shown by the decisions hereinafter cited, and by all authorities. The respondent does not contend otherwise.

The respondent contends that V. S., 4,568, is unconstitutional, in that it deprives the owner of the land over which the brook flows of his exclusive right to catch fish therein for the period of three years, and then makes them public waters for at least five years longer, without compensation. This is his only contention. Without considering whether the respondent, being a stranger to the right to fish in this brook, can raise this question, we will pass to the consideration of the broader question, which alone has been argued, whether the statute is unconstitutional as regards the owner of the soil, to whom the right to fish attaches. There can be no doubt that, if this deprivation of the owner of the soil over which the brook flows of the right to fish in it, for the time specified, is the taking of private property for public use, the law must, as to him, be held unconstitutional.

Article 2, Chapter 1, of the Constitution of Vermont, provides "That private property ought to be subservient to public uses when necessity requires it, nevertheless, when any person's property is taken for the use of the public, the owner ought to receive an equivalent in money." If the act infringes this constitutional provision, the Legislature had no authority to enact it, and it is without legal validity. But this provision of the constitution must be read in connection with its other provisions, and especially must be considered with Article 5, Chapter 1, of the Constitution of Vermont, which declares: "That the people of this State, by their legal representatives, have the sole, inherent and exclusive right of governing and regulating the internal police of the same"; and Section 40 of Chapter 2, of the Constitution of Vermont, reading: "The inhabitants of this State shall have liberty in seasonable times to hunt and fowl on the lands they hold, and on other lands not enclosed; and in like manner to fish in all boatable and other waters (not private property) under proper regulations to be hereafter made and provided by the General Assembly." Hence the question for consideration is whether the act of the Fish and Game Commissioners, definitely and specifically authorized and performed by and under V. S., Sec. 4,568, is a taking of a right belonging to the owner of the land over which the brook flows, for the use of the public; or whether it is a regulation of his use of that right under Section 40 of Chapter 2 of the Constitution of Vermont, and an exercise of the right of governing and regulating the internal police of the people of the State, reserved to their representatives by Article 5, Chapter 1, of the Constitution of Vermont.

In considering this question it is necessary to keep in mind the nature of the right and of the property out of which it arises. The right to take from flowing waters, not boatable, in this State, pertains solely to the owner of the land through which such waters flow. It pertains to such owner personally, and is his private right, but he does not own such flowing water and only has the right properly to use it while on its passage. He can use it in a reasonable manner for domestic purposes, for creating power and for taking fish therefrom. He must not divert it from its course, nor pollute it, but leave it so that the land owners on the stream above and below him can enjoy their full like use of the water, and among these the right to take fish from the stream. This right implies and carries with it the common right to have fish inhabit and spawn in the stream. For this purpose they must have a common passageway to and from their spawning and feeding grounds. Fish themselves are *feræ naturæ*, the common property of the public, or of the State, in this country. From this common property, the owner of the soil over which the non-boatable stream flows has the right to appropriate such as he may capture and retain; but this right of capture and appropriation is subject to regulation and control by the representatives of the people, so that there shall continue to be a common property.

The preservation of the common property and its increase by the introduction of new and better species of fish is not a taking away of the right of the owner of the land on the stream to appropriate therefrom, but a preservation or enlargement of such right. The State, the representative of the people, the common owner of all things *feræ naturæ*, not only has the right, but is under a duty to preserve and increase such common property. Such is declared to be the duty of the representatives of the people in the articles and sections of the Constitution of Vermont referred to. Such, also, was the common-law view of the nature of the rights of persons in streams and in animals *feræ naturæ*. Says Mr. Justice Blackstone in his Commentaries, book 2, page 14: "But, after all, there are some few things which, notwithstanding the general introduction and continuance of property, must still unavoidably remain common; being such wherein nothing but an usufructuary property is capable of being had, and, therefore, they still belong to the first occupant, during the time he holds possession of them, and no longer. Such (among others) are the elements of light, air and water, which a man may occupy by means of his windows, his gardens, his mills and other conveniences. Such also are the generality of those animals which are said to be *feræ naturæ*, or of a wild and untamable disposition, which any man may seize upon and keep for his own use or pleasure. All these things, so long as they remain in possession, every man has a right to enjoy without disturbance, but if once they escape from his custody, or he voluntarily abandons the use of them, they return to the common stock, and any man else has an equal right to seize and enjoy them afterward." The same writer treats more fully of this class of common property and of the rights of individuals therein in chapter 25 of the same book, and there lays down the principle that an individual may acquire, or have, a qualified property in such animals, among which fish are classed, either because of his industry in capturing and retaining them, or on account of their inability, for the time being, to escape from his premises or control, like young game birds while in the nest, or on account of his special right or privilege of capturing and killing them in exclusion of other persons. This latter right does not exist in this country, except as limited by ownership of the place from which they are taken, and the right to exclude others therefrom.

Not a decision in this country, State or national, has been brought to our attention by the respondent, nor by quite an extensive examination of such cases which holds that such acts of the State Legislature in regard to this class of property and in restraint of the right of the riparian owner to take and appropriate fish therefrom are unconstitutional. They have uniformly been held to be not a taking of private property or private rights for public use, for which compensation must be made, but an exercise of the police power of the State to preserve or increase a common property and to regulate the right to capture and appropriate therefrom so as to preserve and increase the common property, or, at least, to prevent its diminution or destruction. Many cases might be cited in support of what has thus far been said. I quote from but a few. In Peters v. State of Tenn., 33 L. R., the plaintiff in error owned a tract of land covered by water from which he alone had the right to take fish. The water was not a stream through which other riparian owners had the right to have fish pass to and from their feeding and spawning grounds. An act limiting his right to take fish therefrom only with rod and line was held constitutional, the court saying: "Fish in streams or bodies of water have always been classed by the common law as *feræ naturæ*, in which the riparian proprietor or owner of the soil covered by the water, even though he may have the sole and exclusive right of fishing in said waters, has, at best, but a qualified property which can be rendered absolute only by their actual capture, and which is wholly divested the moment the fish escape to other waters. 2 Bl. Com. 392; People v. Bridges, 142 Ill. 30; 16 L. R. A. 684.

"But, in addition, the power of the Legislature to enact laws for the protection and preservation of game in the forest and fish in the waters of the State has been so frequently exercised, and, when challenged on constitutional ground, has been so uniformly maintained, that the question has now passed beyond debate. Morrey v. State, 6 Lea. 218; Lawton v. Steele, 152 U. S. 133; 38, L. Ed. 385; Magner v. People, 97 Ill. 320; People v. Bridges, *supra*; Tiedman on Pol. Powers, ss. 125, 127." See, also, State v. Mrozinski, 27 L. R. A. 76; State v. Lewis, 20 L. R. A. 52; Ex parte Maier and note, 42 Am. St. Rep. 129; Fish and Fisheries, 7 Am. and Eng. Ency. of Law, 23; State v. Roberts, 59 N. H. 256; Trout and Salmon Club v. Mather, 68 Vt. 338; Drew v. Hilliker, 53 Vt. 631. Lawton v. Steele, *supra*, establishes the attitude of the Supreme Court of the United States in regard to the constitutionality of such laws and that they are but police regulations within the powers of the States to exercise. Townshend v. State, 37 L. R. A. 294, is an interesting case upon the right of a State to enact a law regulating the use of natural gas. It treats it as common property from which those who

strike a vein upon their own lands have a right to draw, but subject to such statutory regulations as the law-making power of the State might enact in the exercise of its police power.

The police power extends to almost all kinds of property and rights, and its exercise by the Legislative branch is almost unlimited except where taken away, or limited, by the State or National Constitution. Courts and law writers have not attempted to define it with precision. It is the general power of the Legislative branch to enact laws for the common good of all the people. All property and all rights are held in subjection to the exercise of this power because all individual property and individual rights in every organized community are connected with and related more or less intimately to the individual property and individual rights of others. In the exercise of this power, criminal laws are enacted, laws relating to the support of the poor, to the education of young people, to build and maintain highways, and, to accomplish these ends, the individual is often compelled to surrender a portion of his rights to property and sometimes his liberty. In Livermore v. Jamaica, 23 Vt. 361, this court held that the taking of one's land for a public highway was not such a taking as required money compensation to be made therefor under the Constitution, but that the benefit which he derived from the establishment of the highway might be offset to the damage he sustained from the taking. The court says: "The Constitution is the paramount law of the land, and every statute which is in contravention of the Constitution must be held inoperative and void.

"Whether the statute, or that section of it by which the commissioners were governed in making their appeal, is repugnant to the Constitution must, we think, depend upon whether the taking of land for a highway is such an appropriation of the property to public use as is contemplated by the Constitution. The taking of land for a highway does not divest the owner of his title in fee. The public only acquire an easement and the right of the owner to use, occupy and control the land in any manner which is not inconsistent with the public enjoyment of the easement still remains. Upon a discontinuance of the highway, the possession of the land reverts to the owner in as full and ample manner as he originally held it. In the opinion of the court this is not such a taking of property for public use, in the sense of the Constitution, as necessarily requires compensation for the same to made in money. To bring a case within this provision of the Constitution it should be such a taking as divests the owner of all title to or control over the property taken, and is an unqualified appropriation of it to the public." In Commonwealth v. Tewksbury, 11 Met. 55, the owner of the fee of a portion of the beach which helps form Boston harbor was prosecuted for taking sand and gravel therefrom under a statute which made such taking a penal offense. He defended, and one ground was that the statute was unconstitutional because it was a taking of his property for the public use without making compensation. The court, in an opinion by Shaw, Chief Justice, held that, although the statute prohibited such taking of sand and gravel with no limitation in regard to time, it was not such a taking of his property as required compensation under the Constitution, but a regulation of his use of his own property necessary in the interest of the State to protect the harbor of Boston, and therefore constitutional, and that the respondent was guilty.

The same power which may tax the people to establish and maintain good roads for the common benefit of the public may tax them and take measures to preserve and increase the common fund of game and fish, from which all can take, subject to regulations prescribed by the Legislature in the exercise of this power. In Thorpe v. R. R. Co., 27 Vt. 140, Am. Dec. 625, and note, this court held that a law passed subsequently to the granting of the charter of the defendant—which this court held to be a contract—compelling the defendant to maintain, for all time, at a considerable expense, suitable fences on the sides of its railroad track, was a proper exercise of this power. That decision has been generally approved and followed. This power has been exercised in regard to almost every species of property and of all kinds of rights. It is very elastic and adjustable to new circumstances and new situations—as flexible and adjustable as the maxim, *Sic utere tuo ut alienum non laedas*, in which it has its origin.

In addition to the case already cited, the following (which could be added to at pleasure) are good illustrations of the extent and application of this power: Champers v. City of Greencastle, 138 Ind. 339; 46 Am. St. Rep. 390 and note, in which it is said: "The police power of the State extends in the direction of so regulating the use of private property, or of so restraining personal action, as manifestly to secure, or tend to the comfort, prosperity or protection of the community." People v. Wagner, 86 Mich. 594; 24 Am. St. Rep. 141 and note; People v. Ewer, 141 N. Y. 129; 38 Am. St. Rep. 788 and note; Butler v. Chambers, 36 Minn. 69; 1 Am. St. Rep. 638 and note: State v. Heinemann; 80 Wis. 235; 27 Am. St. Rep. 34 and note, in which the police power is defined as the power of "the State vested in the Legislature to enact such wholesome and reasonable laws, not in conflict with the State or Federal Constitution, as may be conducive to the common good." Health Department v. Rector (145 N. Y. 32), 45 Am. St. Rep. 579 and note. The opinion in the last case is carefully prepared. Among other things, it says: "Laws and regulations of a police nature, though they may disturb the enjoyment of individual rights, are not unconstitutional, though no provision is made for a compensation for such disturbances. They do not appropriate private property for public use, but simply regulate its use and enjoyment by the owner. If he suffers injury, it is *damnum absque injuria* or, in the theory of the law, he is compensated for it by sharing the general benefits which the regulations are intended and calculated to secure. Dillon on Municipal Corporations, 4 ed., sec. 141 and note 2; Commonwealth v. Alger, 7 Cush. 83, 84, 86; Baker v. City of Boston, 12 Pick. 184, 193; 22 Am. Dec. 421; Clark v. Mayor of Syracuse, 13 Barb. 32, 36." This was said in upholding a law which compelled the owner of a tenement block erected and in use before the passage of the law to introduce water at quite an expense so it could be drawn from a faucet on every floor of the block. Com. v. Kimball, 24 Pick. 359; 35 Am. Dec. 326 and quite extensive note; People v. Arensberg, 103 N. Y. 388; 57 Am. Rep. 741 and note.

The framers of the State Constitution early began to regulate the right to kill deer and take fish and muskrats, for their protection and preservation for the common benefit of the people, and to destroy noxious wild animals, wolves and panthers, by the payment of bounties with money raised by enforced taxation. These were done by acts passed in March, 1797. 2 Tolman's Comp. Sts. 19 to 24. The Constitution in its present form was adopted in 1793. The act for the preservation of fish makes the erection of any dam, hedge, seine, fish garth, or other stoppage, in any watercourse whereby navigation or the passage of fish may be obstructed, a nuisance and punishes the person erecting the same with a fine. It also establishes a "close season" when trout cannot be taken.

The definition of public waters apparently excludes from the jurisdiction of the State private preserves and posted waters. This is not true. Both are subject to the police power of the State. Any man can be punished if he injures the rights of their owners. Posted waters obtain additional protection by an exercise of the police power. At common law, the owner could only recover for trespass upon his land, and the invasion of his right of fishery—generally a very ineffectual remedy. Hence the right of the riparian owner was rarely regarded, or enforced, before the Legislature, to protect his right, allowed him, if he complied with the law in regard to posting his premises, to recover of every violator substantial damages. Where the owner availed himself of this law, the Legislature evidently considered that the unreasonable destruction of the natural supply of fish in the trout brooks and streams would be stayed and that such streams would need no further protection. Hence such brooks are excluded from the jurisdiction of the Fish and Game Commissioners. But it reasonably judged that a non-boatable stream which the riparian owner would not be at the expense of posting was already depleted of the natural supply of this valuable kind of food and needed to be replenished. It, therefore, allowed the Fish and Game Commissioners to restock it at the expense of the people; and to make that expense profitable to such riparian owner and to the people of the State, the fish must be protected from destruction until they began to reproduce, and then the community should not be burdened to protect his right beyond what the common law furnished for five years longer. By providing that such waters should be waters over which the State has jurisdiction, it did not take away such riparian owner's right to maintain trespass against every one who should enter without his license upon his premises and catch fish from the non-boatable stream thereon. The action of the Fish and Game Commissioners in stocking the stream and posting it presumably would enure to the benefit of such riparian owner and all other riparian owners on that and other connected streams. Whether it would or not, the constitution clearly empowered the Legislature to pass such laws as, in its discretion, it might judge would be for the common benefit of the people of the State.

Some one has suggested that the State had no right to send the Fish and Game Commissioners upon Mr. Hale's land to stock the stream. The law is paramount to his property and rights within the inhibitions of the State and national constitutions. As well might he contend that the law could not send its officer upon his land to arrest him for a criminal act or to attach his property at the suit of a creditor. On any view, even if the owner of the land over which the stream flows had been the violator of the law and was under prosecution, this statute must be held constitutional and enforceable; and much more against this respondent, who clearly had no right upon Mr. Hale's premises nor the right to take fish from the stream of water flowing thereon.

Judgment affirmed and cause remanded to the city court.

Thompson, J., dissents.

CHICAGO AND THE WEST.

Michigan Hatchery Mishap.

CHICAGO, Ill., Oct. 8.—Michigan State fish hatchery at Sault Ste. Marie last week suffered a severe loss, and from a curious cause. In the breeding ponds, connected with the waters of the Sault, there were over 1,200 large mature trout used for breeding purposes. In the morning the water was noticed to be lowering in the breeding pond, through one of those mysterious changes of the Great Lakes water level which at times take place. Before any remedy could be devised the ponds were empty, and over 900 trout were dead, the best of the breeding stock.

This rising and falling of the water in the Great Lakes is an odd phenomenon. Sometimes the rise or fall will amount to 6ft. The velocity of the wind and the variation of barometric pressure are supposed to have much to do with this "seich," as it is technically known. Sometimes within two hours there will be a difference of a foot in the tide gauges on the east and west sides of Lake Michigan. It is stated that at one time in 1893 a heavy gale on Lake Erie raised the water at the eastern end 5ft. and lowered it 5ft. at the western part. Changes of less extent have been noticed in Lake Superior, but the above disastrous flux seems to have been about as serious as any recorded.

Saving the Little Ones.

At La Crosse, Wis., the work of seining young fish out of the landlocked sloughs adjoining the Mississippi River has been continued this fall, with the most gratifying results. About 55 citizens of La Crosse have joined in defraying the expenses of this work, which has been placed in charge of Deputy Warden Carl Palmer. It is estimated that over 100,000 young fish have been saved, most of them black bass. This is a record of which La Crosse may very well be proud. I have earlier stated that La Crosse is one of the very best places in the West for fly-fishing for black bass.

Lunge.

Mr. Robert Mitchell, of Appleton, Wis., last week was lucky enough to land a 20lb. muscallunge in the waters near Manitowish, Wis.

Mr. Caldwell and party, of this city, have returned from their trip to their old stamping grounds in Wisconsin, and they brought a couple of hundred pounds of muscallunge to show that they did business.

The largest muscallunge taken anywhere this season, so far as I have learned, was that killed by Mrs. C. F. Tatum, in Big St. Germaine Lake, of Wisconsin. This fish was sent down to Kaempfer for mounting. It weighed 46lbs., and was the largest muscallunge that I have ever seen. The largest I ever heard of taken in Wisconsin was 55lbs. By the way, I should be very much obliged if some one familiar with St. Lawrence and other angling records would tell me which is the heaviest weight of muscallunge for those waters. I would like very much to know the heaviest weight of muscallunge taken in the United States or Canada.

Mounting Trout.

There is displayed in a show window on Washington street, this week, a trout mounted in a curious and effective way. This was the second largest trout taken by the Oliver party on the Nepigon, account of which was made earlier. This trout was mounted by making a half-section of the skin, cutting it along the back and belly, the half-skin being then sewed neatly about its edges to a piece of birch bark. This makes a very fetching style of mounting.

Obituary.

In speaking of noted Chicago anglers a week ago in these columns, I mentioned the name of Mr. James L. High, a Chicago lawyer who has won more than a passing fame by his legal works, which are accepted as standard in their field. I mentioned Mr. High as one of the Chicago anglers who control Canadian salmon leases. It is very sad to record this week the death of Mr. High, who passed away Oct. 3, of spinal meningitis. Mr. High was an expert angler, and an enthusiast in the gentle art. He had a grand collection of useful and valuable angling literature, including several editions of Walton's "Complete Angler." Some copies in his library are said not to be duplicated in any American collection. In large circles both of business and of high class sport Mr. High will be sadly missed.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

The New Brunswick Trout Season.

EDMUNDSTON, New Brunswick, Oct. 1.—The trout fishing for the year has ended, and many were the 1, 2 and 3-pounders taken, a few of 4, 5 and 6lbs.; and two above these weights were captured in the Madawaska, in September. I spent two days in fishing as a sport; I generally go as guide and paddle and pole my own canoe; but this time a friend wished to go, and as I was the better fisher, he was to manage the canoe. We were proceeding up the river, Joe using the pole, I casting as we slowly breasted the stream. A man on a raft a short distance above us attracted our attention, as he was fishing. We were finding some fault with the way he was handling his rod and casting his flies; and had come close to him, when I heard a sharp crack behind me. Turning quickly, I was just in time to add my balance to help Joe, as he was tumbling out, and over went canoe with both of us into the cold water 4ft. deep. My first look was to this man on the raft, as I naturally expected to hear a roar of laughter from him. I know had I been in his place I could not have helped it, but there was not a sound, and his face was as sober and solemn as of a judge about to pronounce sentence. We waded the canoe ashore, straightened things up, and went out to see the man, for I felt annoyed at him for his sullen silence. When asked why he did not laugh, he answered that he did not see anything to laugh at. After this accident, I felt it would be prudent for me to manage the canoe, and I did to the finish, without further mishap. We took quite a number of trout, but I never can forget the ducking at the close of this fishing year.

Now for the next three months we will look after the deer, caribou and moose for the pleasure of the sportsmen who may favor us with their presence. The two first named animals are found in the near vicinity. While the moose roams further back in the more dense forests, where the trapper often runs across them while trapping for mink, bear, otter, marten, fisher, fox, loup-cervier and beaver. These trappers have lines of traps very often extending sixty miles, over which they go back and forth once in two weeks during the winter, at times seeing some discomfort, but having lots of pleasurable, profitable excitement, and making more money than they could by any other kind of work. Large game is plentiful, but the fur-bearing animals are becoming scarcer as the years roll by. S. J. RAYMOND.

Spirit Lake Fishing.

OSKALOOSA, Iowa, Oct. 2.—*Editor Forest and Stream:* I have just returned from my annual fishing trip to Spirit Lake, where I had a splendid good time. I did not catch as many fish as usual, but have no cause to complain, only that the lake is getting lower every year. Where there was good fishing three years ago, now the water is not more than 2ft. deep. The great lake seems to be gradually drying up. The State fish hatchery, located at the lake, is sadly neglected; everything connected with the business has gone to ruin; the pools are all dried up or nearly so, and none of them contain any fish.

THE OLD MAN.

New York Fish Plants for 1898.

THE Fish Commissioners of New York have put out during the year which ended Oct. 1. They were divided as follows: Brook trout, 4,058,807; brown trout, 960,743; rainbow trout, 188,260; lake trout, 914,511; pike, 17,550,472; bass, 116,450; red throat trout, 1,000; yellow perch fry, 2,555,300; yellow perch fry (three months old), 7,500; lobsters, 6,550,000; shad, 10,897,400; tomcods, 47,000,000; whitefish, 24,100,000; frostfish, 5,785,000; cisco, 15,000,000; muskellunge, 2,650,000; herrings, 1,500,000; smelt, 48,000,000; shrimp, 65,000; pickerel, 50. The total counts 187,809,733.

Bass in Central New York.

Ithaca, N. Y.—Local anglers report some of the finest bass fishing thus far enjoyed, the catch per angler averaging twenty-five bass per day. The best local bass grounds are found along the east side of Cayuga Lake, beginning at a point just off shore from the Esty Lookout, and running thence north in the direction of Ludlowville.

At Cayuga, across the lake from Union Springs, anglers have been, and are still, taking beautiful specimens of the pike, pickerel and muscallonge family, and now and then an enormous (for Cayuga Lake) smallmouth bass. Some very large pickerel and muscallonge are taken at Cayuga during October and early November. Trolling appears to be the favorite method of angling for the big fellows at this season of the year.

M. Chill.

Nets in Oneida Lake.

Syracuse, N. Y., Oct. 7.—*Editor Forest and Stream:* The State Fisheries, Game and Forest Commission at a meeting held in Albany yesterday passed a resolution permitting net fishing in Oneida Lake until Dec. 1 next. This shows what politics will do. Oneida Lake has been ruined—and opening these waters two months to every one will clean what few fish are left. One trap net set on the bars or shoals will take every bass that there is near it. The law giving the commissioner the right to grant these licenses should be repealed. I do not think the commissioner should have allowed this to be done no matter how much influence was brought. L.

The Kennel.

Fixtures.

BENCH SHOWS.

Oct. 14-15.—Braintree, Mass.—N. E. K. C. open air show. Address Secretary Open Air Show, Braintree, Mass.

FIELD TRIALS.

Nov. 3.—Connecticut Field Trials, East Hampton, Conn. Entries close Oct. 29. John E. Bassett, Sec'y, P.-O. Box 603, New Haven.

Nov. 7.—Indiana Field Trials Club's trials, Bicknell, Ind. S. H. Socwell, Sec'y.

Nov. 11.—Eastern Field Trials Club's trials, Newton, N. C. S. C. Bradley, Sec'y.

Nov. 15.—International Field Trial Club's trials, Chatham, Ont. W. B. Wells, Sec'y.

Nov. 15-17.—Central Beagle Club's annual trials. L. O. Seidel, Sec'y.

Nov. 22.—Fourth annual field trials of the Monongahela Valley Game and Fish Protective Association, Greene county, Pa. A. C. Peterson, Sec'y, Homesdale, Pa.

Dec. 5.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

Brunswick Fur Trials.

Roxbury, Mass.—The Brunswick Fur Club will hold its tenth annual field trials, Barre, Mass., during the week of Oct. 17.

The club headquarters will be at Hotel Barre. The Derby, open to all hounds whelped on or after Jan. 1, 1897, will be run on Tuesday, Oct. 18. Entries close at 10 P. M. on Monday, October 17; the entry fee is $2. The club diploma will be given to each of the three winners in this stake, and the first prize winner will also receive a silver medal and hold the R. D. Perry cup for one year.

The all-age stake will be run on Wednesday, Thursday and Friday, Oct. 19, 20 and 21. The entry fee is $3. Entries close at 10 P. M. on Tuesday, Oct. 18. The three winners in the hunting, speed and driving, endurance and trailing classes will each receive the club diploma. The first prize winners will also receive silver medals, and the hound making the highest general average in all classes will receive a special prize of five dollars and the club medal, and will hold the American field cup for one year. The Pope memorial cup will be held for one year by the hound showing the best combination of trailing, speed and driving.

The trials will be judged by Messrs. S. B. Mills, Eugene Brooks, W. A. Bragdon, A. B. McGregor, H. J. Given and Bradford S. Turpin.

The trials are open to the world, and all lovers of the chase are invited to be present, to enter their hounds and enjoy a week of good sport.

Bradford S. Turpin, Sec'y.

Points and Flushes.

Volume 17 of the Greyhound Stud Book contains the names, colors, ages and pedigrees of greyhounds registered therein up to June 1, 1898, besides a voluminous collection of other pertinent matter, 356 pages in all.

The Sanitas have recently brought out a new preparation, Sanitas Embrocation, for external application in the ills of man or beast. It is commended specially for its antiseptic qualities, for family use and for athletes and veterinary purposes.

Yachting.

The work of lengthening the ways in front of the Herreshoff works, at Bristol, begun several weeks ago, will probably be completed before the end of the month. There will then be water over the cradle for the hauling out of Defender. It is reported that she will be fitted out and sailed from New Rochelle to Bristol by Mr. Iselin. It is also reported that the contract for a new defender was signed on Sept. 28 by the Herreshoff Manufacturing Company and Com. J. P. Morgan and Mr. C. Oliver Iselin.

Painting a Yacht.

A correspondent asks for the best method of painting a yacht used in the waters of the Great Lakes; whether white lead and oil alone are best, or whether zinc white can be used to advantage. He also asks for a preparation for the seams which will remain hard under water. Perhaps some of our readers who have experimented with paints can aid him.

Dominion.

(*Concluded from page 296, Oct. 8.*

The "scow" type, as represented by Question, has two distinctive points; the first is the material change of form, the reduction of midship section and increase of effective length at great angles of heel, as already described; the second is the lack of freeboard and the absence of sheer, or even a reverse sheer, the middle being higher than the ends. The boats having practically no depth and no internal space, there is not even a cockpit, at most a small opening in which to stow light sails, compass and water jug. As a corollary to the excessive heeling and gain of actual for a given measured length, is the possibility of building to a much shorter nominal or measured length than in the boats of the old type, and of adding to the sail area; and this addition is really necessary when it is considered how much the effective area of sail, compared with the measured area, is reduced by the angle of heel. As the first effort of a young amateur in an entirely new field, with nothing in the way of data to guide in what was necessarily an experiment, El Heirie reflects great credit on her designer; but she is marked by the weak as well as the strong points of the new type. In the matter of proportions of length and sail, with but one boat to depend on, Mr. Crane perhaps did well in adhering closely to the general proportions of the class, 14 to 15ft. l.w.l.; as he had no opportunity for experiment in this direction. In his method of handling the lines so as to produce a good form when heeled, he displayed a great deal of skill, the boat proving very fast on the wind and faster than others of the type when free.

While Mr. Crane was one of the first to appreciate and to handle intelligently the opportunity for evading the measurement of L.W.L. which the "scow" type afforded, he failed to place a true value upon the accompanying feature of very low freeboard, and gave this a prominent place in the design of El Heirie in 1896, and also of Al Anka and Momo in 1897. Thus far there has been nothing in the performance of the numerous scows to demonstrate the value of this special feature, which has won for them the nickname of "barndoor" through their appearance when upright, the deck, with its slight camber both fore and aft and thwartships, being almost flat and awash in a light sea.

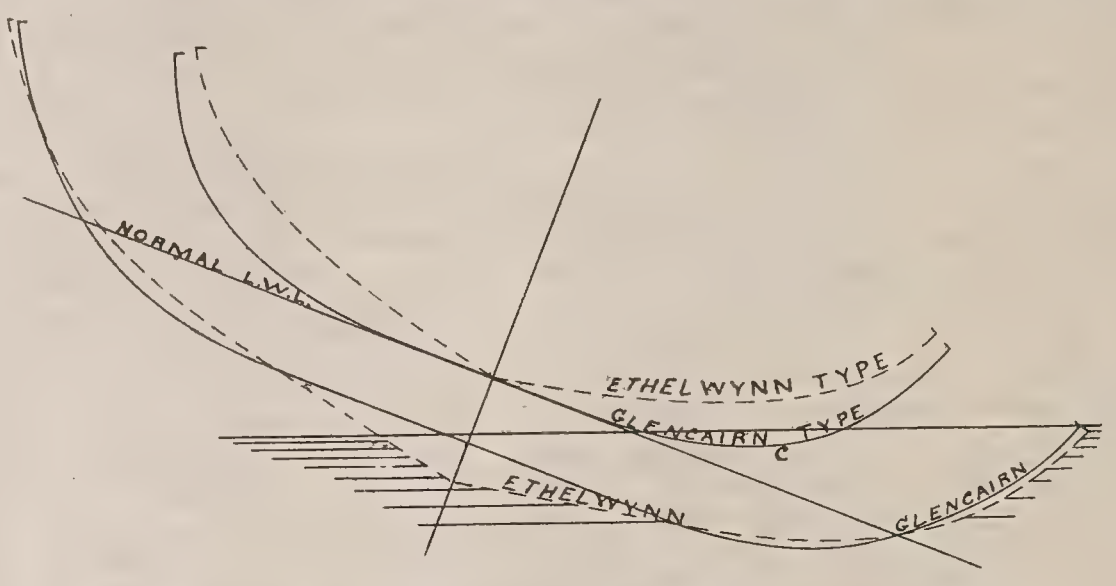

FIG. 3. STUDY OF ETHELWYNN AND GLENCAIRN II. INCLINED.

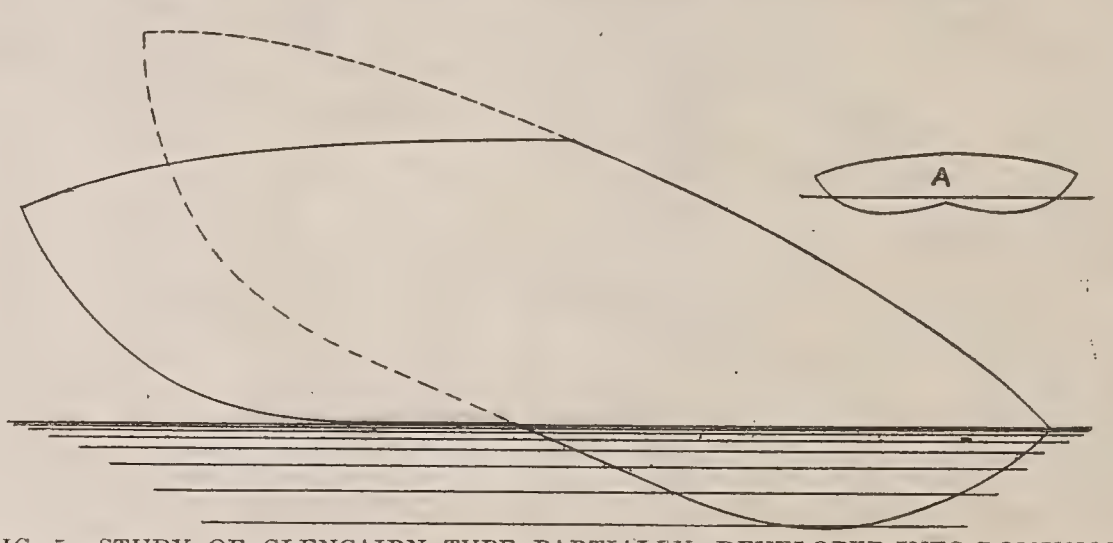

FIG. 5. STUDY OF GLENCAIRN TYPE PARTIALLY DEVELOPED INTO DOMINION.

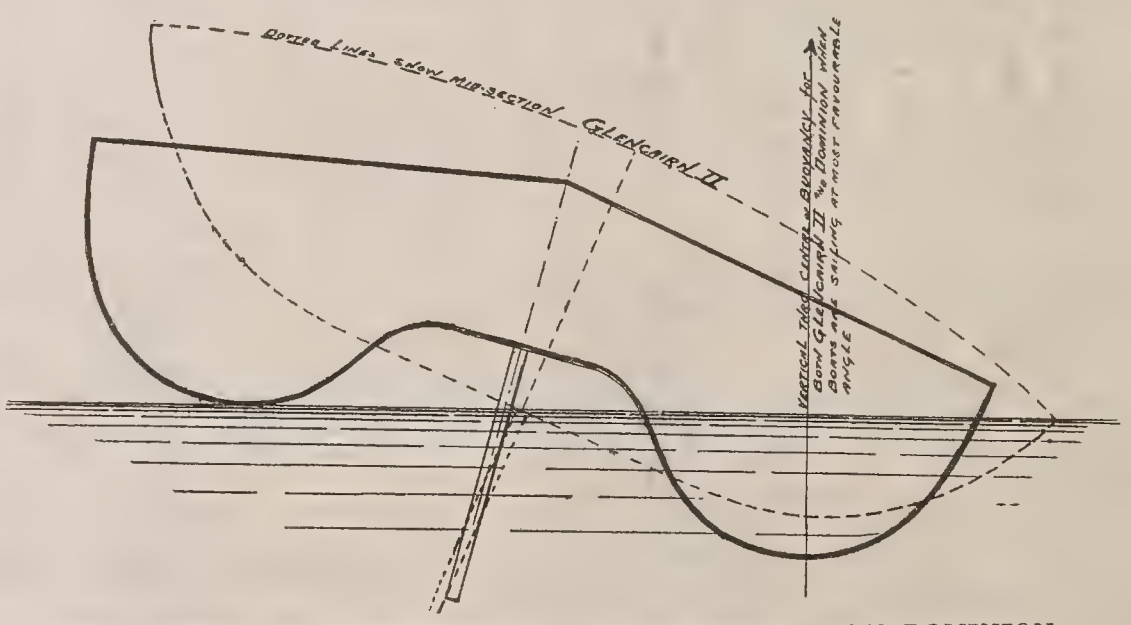

FIG. 6. STUDY OF GLENCAIRN AND DEVELOPMENT INTO DOMINION.

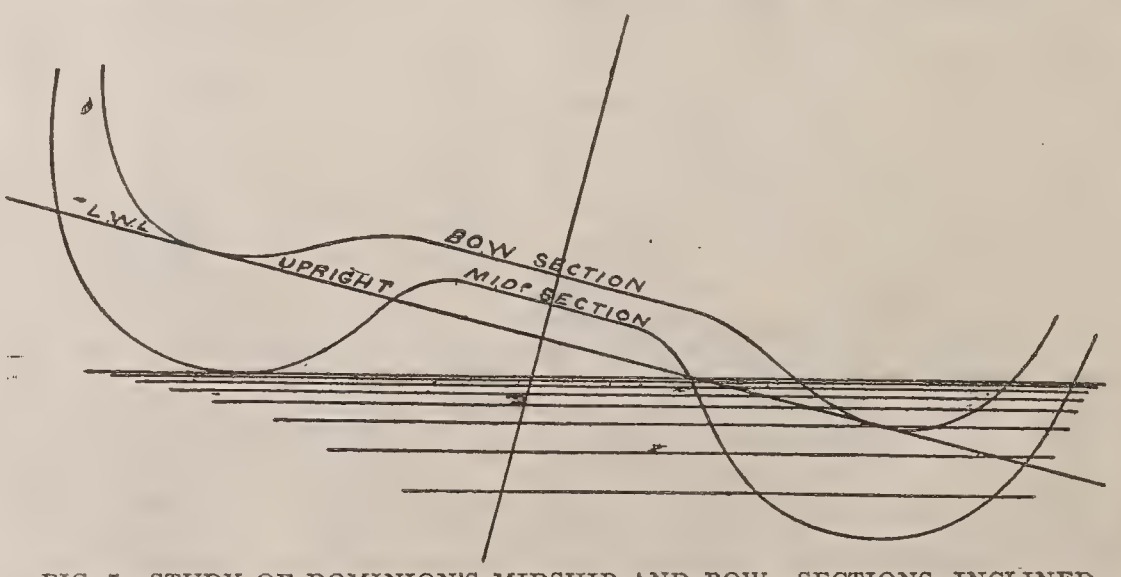

FIG. 7. STUDY OF DOMINION'S MIDSHIP AND BOW SECTIONS, INCLINED.

In attacking the same problem from the same starting point, Mr. Duggan from the beginning rejected the "barndoor" model, both in its essentials and in externals, giving his boats a good freeboard amidships and a decided sheer, quite as much as in the old type. What this amounts to in the way of "bottom to sail on," as the old term went in the cutter and sloop days, is shown in Fig. 3, the added two or three inches of freeboard amidships are worth far more as bottom on the lee side than they cost in windage on the weather side. With this, the two Glencairns and their fellows of the 15ft. and 20ft. classes are notable for the absence of such purely freak features as the bows of El Heirie, Al Anka and Momo; and after the essentials are secured in the proper shaping of the immersed bilge, the remaining lines are carried out to conform as closely as possible to the conventional yacht shape. The result is a

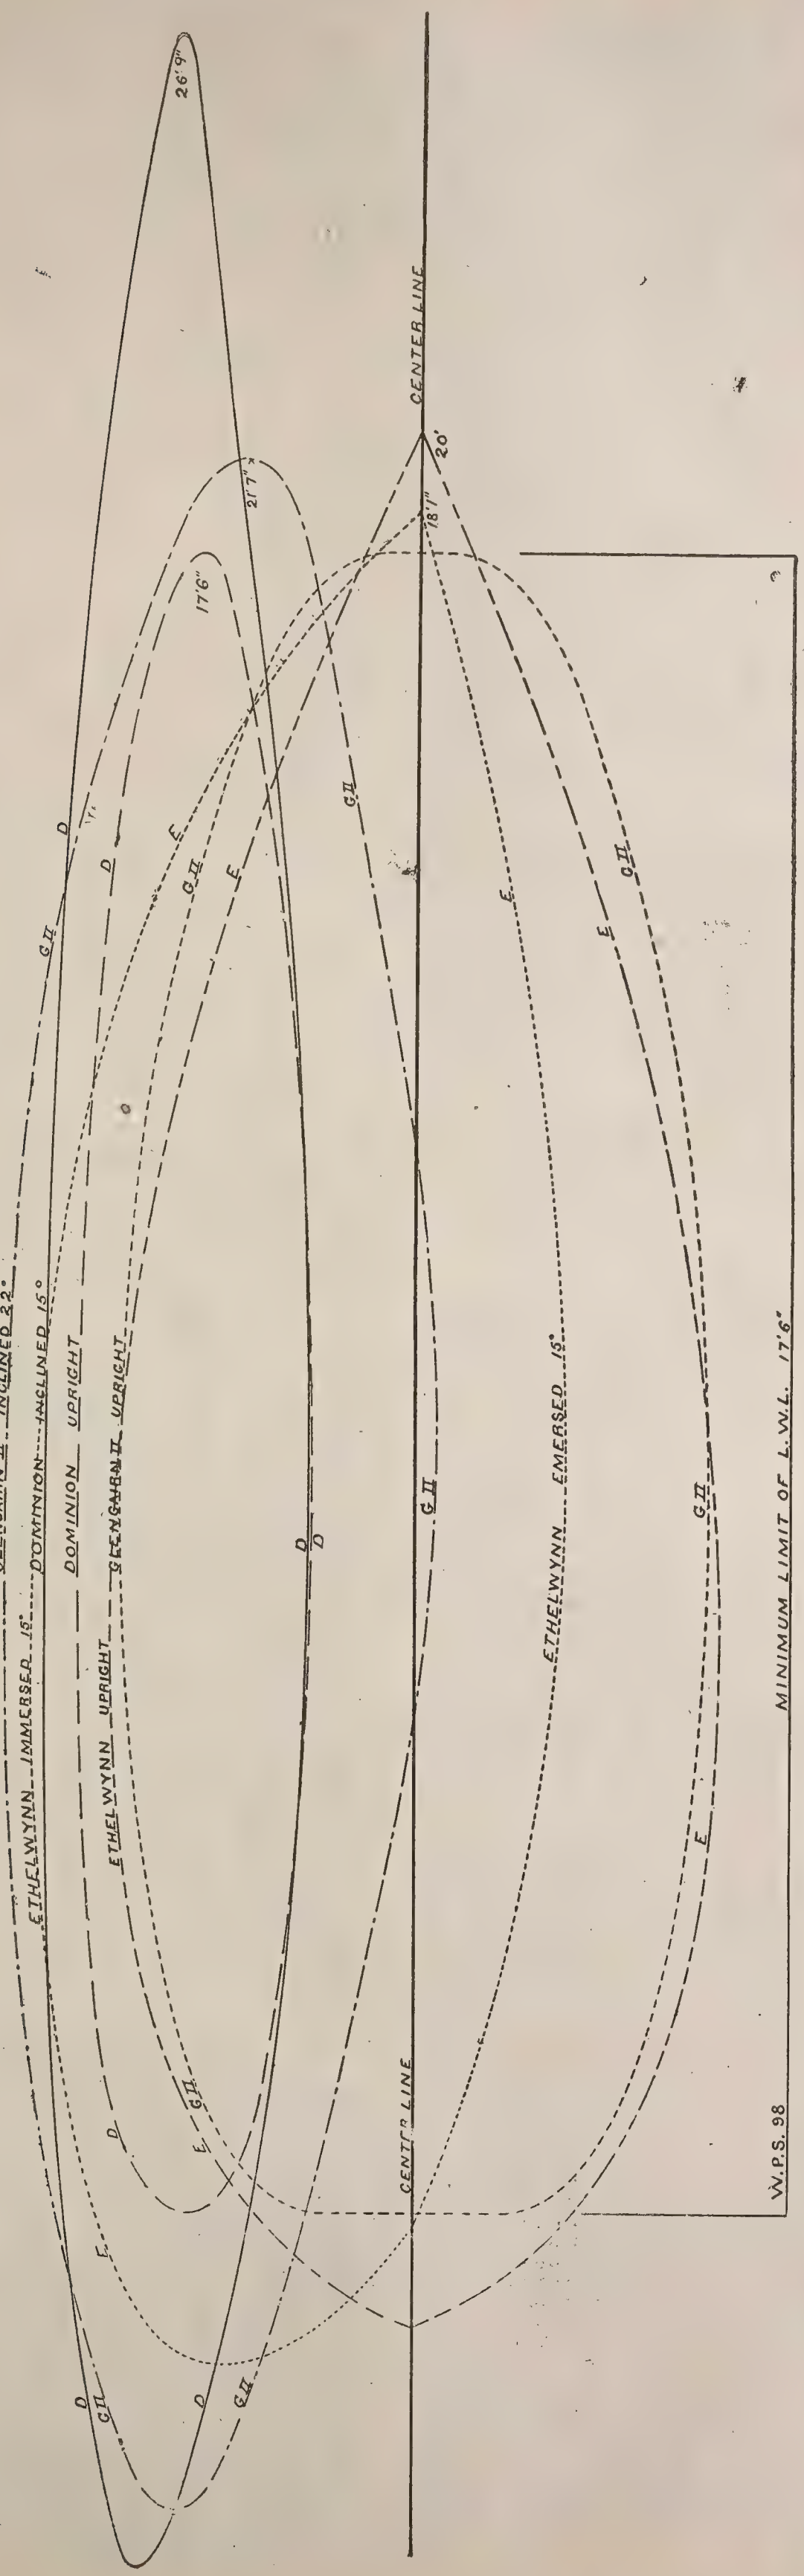

FIG. 8. STUDY OF INCLINED AND UPRIGHT WATERLINES OF ETHELWYNN, GLENCAIRN II. AND DOMINION.

boat that is staunch and able in a sea, and at the same time of fairly good appearance, even beside the shapely craft of the old type.

In their first competition, in 1896, Mr. Crane was at a disadvantage compared with Mr. Duggan, as he undertook to design but one boat, working alone on her. Mr. Duggan, on the other hand, with the assistance of Mr. Shearwood, began his special study of the 15ft. class in the fall and continued it all winter, designing and superintending the construction of seven boats; the last and best, Glencairn I., being begun after the first boats had been tried in several races. The preliminary canvass of the subject was very thorough, after the method already outlined above, and resulted at a very early stage in the actual building in the rejection of the Ethelwynn form and the adoption of the features afterward perfected in Glencairn I. But one of the seven boats was over 14ft. l.w.l., several were just over 13, and the latest, Sothis and Glencairn I., were but 12ft. 6in. l.w.l., giving a sail plan of nearly 300sq.ft.; that of Ethelwynn in 1895 being but 198sq.ft. This sail plan, ably carried by Glencairn I. at Oyster Bay, was an important factor in the winning of the cup for the first time.

A careful study of the work of the two designers in 1896-7 and 8 will show on the part of Mr. Duggan an early appreciation of the three great factors of advantage, the perfection of the form of the bilge, with its increase of length; the reduction of measured length and the increase of sail area; and the retention of ample freeboard; these being developed to a higher degree in each successive boat up to Dominion. Such a study will show ample grounds for the decisive victory of Glencairn I. over El Heirie, and of Glencairn II. over Momo, and will suggest further that had Speculator been chosen to defend the cup this year, it would still have remained in Canada.

The very radical change from the old type to the new, as brought about by El Heirie and Glencairn I. in 1896, was accepted as a matter of course by all directly interested in the Seawanhaka cup. Both designers were praised for their clever work, and every incentive was offered to them to continue in the same line of development. The size of the competitors was increased, by the Seawanhaka C. Y. C., from 15 to 20ft., and both parties agreed to a limit of 17ft. 6in. as the minimum L.W.L., with its sail area of 500sq.ft. In the course of a long and thorough discussion of numerous details of the races, a number of minor changes of measurement, etc., being made, no proposal came from either side to limit the undue development of the newly discovered principle of the single-hull-double-bilge, with its patent evasion of the standard measurement of load waterline.

The extinction of the old type of yacht was accepted as a distinct advance in designing; and each side started in to rival the other in the production of an up-to-date racing machine that should achieve but one object, the winning of the cup.

The problem was materially simplified by the elimination of one of the principal variable factors, the ratio of L. to S. A. by the mutual agreement on a minimum limit of 17ft. 6in. to the L.W.L., with its corresponding maximum of 500 sq. ft. for the sail area; the two designers being thus on an equality in this question.

In dealing with the other two of the main factors, the form of bilge giving the greatest increase of effective length and the question of freeboard and sheer, Mr. Crane made a compromise between El Heirie and Glencairn I. The general dimensions and model of the new Al Anka and the second boat, Momo, were practically the same as in Glencairn I., wider than El Heirie, and with a decided flare to the topsides. In the matter of freeboard and form of bow, however, the characteristics of El Heirie were retained, there being a low freeboard, little sheer and an abrupt snubbing in of all the forward lines, making a blunt and exceptionally ugly bow on Al Anka, while that of Momo, though far less extreme, was still cut off short of the fair termination of the for and aft lines.

The five boats designed by Mr. Duggan for the new class, though varying in beam from 7ft. to 9ft., were all of one general model, an adaptation of Glencairn I. to the new class and conditions, the general form being little changed. The midship section, freeboard and form of bow, carried out to the fair ending of the lines, were practically enlarged and adapted to the 20ft. limit of the class and the 17ft. 6in. limit of L.W.L.

In the minor details Momo was of comparatively heavy construction, with moderate crown to the deck and a shoal self-draining cockpit. Her centerboards, of which she had several for the purpose of experimenting, were of solid steel or bronze of about 200lbs. weight, and her sail plan was notably high and narrow. The Duggan boats, Glencairn II. for example, were of very light construction, with an excessive crown to the deck, a cockpit open to the floors, with no bulkheads, a built centerboard of about 400lbs., and about 2ft. more on the base of the sail plan and 2ft. less on the hoist than Momo. While Momo proved herself very fast in a light air, and was fast off the wind in all conditions, she was at a serious disadvantage beside Glencairn II. in the strong winds and sea that marked most of the races. With some 2in. less freeboard for her whole length, nearly 2ft. less bow, with hard blunt lines, and a high weight of rig even when reefed, she made a poor showing except in the light weather of the first day, at which time a fair comparison of the two was impossible, owing to the disabling of Glencairn II. at the start.

The performance of Glencairn II. in both light and heavy weather, she having proved the best of the defending fleet in the light weather of the trial races, showed very little margin for improvement within the rules and conditions of the class. Her proportions and general model, the result of the extensive experiments of 1896 in the 15ft. class and of the trials of 1897 in her own class, seemed hardly capable of improvement. Her construction was as light as was consistent with reasonable safety from a racing standpoint, with a very small margin for reduction of weight, though capable of improvement in the way of better plank fastenings. Her rig was satisfactory, but her canvas was poor, good sail-makers being less easily found in Canada than in the States.

If their work of the present year is a true criterion,

both designers accepted the same conclusion from the races of 1897; that Glencairn II. in model, construction and details was capable of but little improvement. In the first of his 1898 boats, Strathcona, Mr. Duggan practically repeated Glencairn II., using the ship-lap in place of the ribband carvel construction, with a gain in strength, but a loss rather than a gain in weight. In the second boat, Speculator, the small changes of model were merely experiments which might or might not prove successful, the construction being the same as Strathcona. The third boat was Dominion, and after her a fourth, similar to the first two, was started and advanced to the planking stage, when work was abandoned, as both Speculator and Dominion were fully up to expectations, and it seemed safer to concentrate all efforts in perfecting them rather than in trying a fourth boat. In Strathcona and Speculator the general details, weight and construction of centerboard, arrangement of cockpit, etc., were the same as in Glencairn II., but the sail plan was altered in the direction of Momo, the gaff being well peaked up and the hoist increased.

In the model of his three new boats—Seawanhaka, Cicada and Strathcona—Mr. Crane practically followed Glencairn II., and there was no distinctive point of difference in model between Seawanhaka, Strathcona, Challenger and Speculator as the four lay side by side at the Dorval pier; the differences were merely in details, a hardening of the bilge, a little more or less flare to the topsides, and a difference of method in handling the abnormal fullness of the bilge in the extreme bow, which feature characterized all alike.

It was evident that Mr. Crane fully appreciated the fact that in the comparatively slight advance from Glencairn I. to Glencairn II. the possibilities of the rule had been about exhausted, and that no promising line of advance was in sight. In looking for some possible source of advantage in speed, he very naturally turned to construction, to which he had previously given comparatively little attention, being content with the best of the current practice of the shops. This time the construction was made the leading feature of the design, and every effort was made to reduce the weight of hull to the lowest factor of safety that was admissible for a short series of races. As a means to this end, a special system of contruction was designed by Mr. Crane, the details of which have been already described in connection with the late races.

The principle of this system is that the skin and frames are disregarded entirely as elements of strength, the frames being used only to give the form to the structure and to hold the skin, and this latter in turn having no duty to perform except to keep out the water. All the complex strains of the vessel are imposed on a series of metal trusses, two principal members running fore and aft, the distance between them being about half of the beam of the vessel, with a secondary series of thwartship braces spaced about 2ft. apart. The trusses were built mainly of bicycle tubing, with very light steel angles for the upper and lower members. While in the Duggan boats the skin was figured as a material element of strength, the thickness of the planking, 5-16in. in the boats of 1897, being increased to nearly ⅜ this year; in the Crane boats the sole consideration was that the planking should hold together under the mere pressure of the water. In the first two boats, Seawanhaka and Cicada, intended to sail the series of trial races as well as the final cup races, the planking was full 3-16in., or ⅛in. less than in the Duggan boats of 1897. The third boat, Challenger, was started in June and intended only for the cup races, which might be assumed to cover at most five or six days of sailing, with a few informal trial spins against Seawanhaka after both arrived on Lake St. Louis. Her planking was of 3-16in. stock before laying, being reduced still further in the finishing off. The decks of the three boats were similarly light, 3-16in., and in spite of a small gain in strength through the planks being laid "in-and-out," they were hardly thick enough to bear the weight of a man unless his movements were deliberate and careful.

In the case of Challenger, all that was required was that the trusses should take the main strains, the frames should hold their shape, and the planking should keep out the water for a matter of a week or probably less, the condition of the boat after the cup was won being of no moment. The boat, in addition to the preliminary trials with Seawanhaka, sailed four actual races, one in light weather, one in a fresh breeze and sea, and two in a good breeze. The trusses, as far as could be seen from the shape of the boat, did their work well; the sheer was still fair, and there was not the bodily pulling up of the whole bow that was seen in Seawanhaka after the trial races. The work of the frames, as shown by the local fairness of form, was only partly done, each successive day showed an increasing number of humps and hollows; that fairness of lines which at first characterized the boat gradually disappearing. The planking proved a failure, as it developed checks in different places from day to day, and after the third race was practically a wreck.

In the secondary features the three Crane boats showed important changes from last year. The watertight cockpit was discarded for the open well with light slats on the floor timbers, the opening in the deck was both long and wide, much larger than in Glencairn II., one object, apparently, being to save weight; and there were no bulkheads. The centerboards were of composite construction, bronze sides filled with lead; they were fitted, after a plan of Mr. Crane's devised the previous year, with rollers on the bolt, so that the board could be slid forward or aft in a long trunk to suit the balance of the sails. In addition to this they each had two pieces of mahogany, one about 5in. wide and one of double the width, fitted with a brass track, by which either could be hung on the after side (the top) of the board, thus increasing its area. The sail plans were of different proportions, some lofty and narrow, as in Momo in 1897, and others broader on the foot and with proportionately less hoist. It will be remembered that during the trial races the high and narrow rig of Seawanhaka was exchanged for the lower and broader rig of Cicada, the former boat being improved. The rig carried in the cup races was, we believe, the broad and low one or of medium proportions.

The design of Dominion was made at the beginning of May, by which time it was pretty well established that the boats of 1898 on both sides would show no material change from and in all probability no improvement on Glencairn II. We are not aware of the origin of the suggestion which led Mr. Duggan to take up the further development of the new principle, but it is hardly possible for one to study carefully the leading features and successful performances of the scow type without reaching the conclusion that in theory at least they are widely separated from the old normal type and as closely allied to the double-hull type. This was pointed out plainly in the FOREST AND STREAM as long ago as the cup races of 1896, and we have discussed the question of the theory and of the possibility of its successful application in practice with many yachtsmen in the past two years. An interesting study in this direction is shown in Fig. 5, where the broken line represents the windward side and bilge of the Glencairn section. When this section is studied with a view to its improvement, the idea very naturally suggests itself that as the only part to be considered as the boat proper is the immersed bilge, shown by the heavy line, the emersed side, high in the air and offering a material amount of windage and a strongly inclined deck, might just as well be dropped to the position shown by the full lines on the weather side, making a form of section such as is shown at A in the same figure. In this new section the immersed portion at 22 degrees heel is exactly as before, but the weather side offers much less windage and a deck that is practically level, with a slight gain in the lowering of weights.

This mere cutting apart and spreading a boat of the Glencairn type would not of itself produce satisfactory results, but the idea of it suggests a very wide field of development, the first step being the further perfection of each of the two individual bilges. The original body plan of Glencairn II., which we have had in our possession, shows in pencil over the inked lines a rough sketch of just such an operation, the extreme beam of the individual bilge when heeled being cut away and the area of section thus reduced being restored by adding to the depth. In Fig. 6 is shown one of Mr. Duggan's studies of this particular point, the section of Dominion as thus finally derived from that of Glencairn II., the beam of the latter being reduced from 4ft. 4in. to 2ft. 9in., the depth being increased from 10in. to 14in., and the area being the same. This new section was worked out so as to keep the center of buoyancy when heeled to the most effective angle in the same position as in Glencairn II.; these angles being for the latter 22 degrees and for Dominion but 15 degrees. In Fig. 7 is shown one of Mr. Duggan's studies of the midship and bow sections, similar to those in Fig. 3, in which Ethelwynn and Glencairn were compared. The extent of actual immersion of the bow section, at the fore end of the L.W.L., indicates a material gain in length over Glencairn, just as she already gained over Ethelwynn.

The advantages attending the new section are surprising; in the first place for the same stability of hull the section itself is greatly improved in outline, with much less beam, greater depth, and a great increase of area and of effective surface to the lateral plane; the area of the weather side, exposed to the wind, is reduced by nearly a third, the deck is made very much more convenient for the crew both in hiking, when that is necessary, and in handling canvas; the lessened angle of heel has a beneficial effect on both sails and centerboard in two ways, it increases the area and also the effectiveness of each square foot of surface.

When we turn from the midship section to the sheer and half-breadth plans, as finally perfected, reproduced in the FOREST AND STREAM of Oct. 1, other important advantages are apparent. Even with the yacht in the upright position, the improvement of the fore and aft lines resulting from the new form of midship section is very evident. The beam of each hull in this position is now 2ft. 6in., with a L.W.L. length of 17ft. 6in., the level lines, diagonals and bow-buttock lines being all fair and of easy sweep. It is when the yacht is heeled to her effective angle, however, that the great gain is apparent. In this position one-half of the total weight is taken from the weather bilge and imposed on the lee bilge, increasing its displacement by 100 per cent. and immersing to an extraordinary extent both of the long overhangs.

We have shown in the previous issue that in yachts of the normal type, intended to be sailed with keel and both bilges immersed, the gain in effective length by mere heeling is but small, even in the latest yachts with very long overhangs. When we come to the extreme of the new type as represented by Dominion, we find possibilities of gain such as were never before realized. When the inclined plane of flotation of Dominion is plotted as for Ethelwynn last week, and for the same angle, of 15 degrees, the effective length increases to 26ft. 9in., a gain of 9ft. 3in. It is well worthy of note that while the gain aft is 3ft. 9in., but 7in. over Glencairn II., the gain forward is 5ft. 6in., as compared with a gain of but 1ft. in the bow of Glencairn II.

In the case of all boats of the Glencairn type the abnormal lengthening of the forward lines when heeled is accomplished in a most bungling and unworkmanlike manner, by carrying the turn of the bilge out through the entire length of the bow and in some places forcing the lines into hard lumps that offend the eye. To the uninitiated eye even of an expert who is unfamiliar with this peculiar phase of advancement in designing, there is no reason for the lump that is certain to be but too plainly visible at one point or another of the bows of the modern scow type; but when the boat is seen heeled to her effective angle the purpose of this lump is readily discerned, as it makes the fore end of the L.W.L. plane and really lengthens the effective L.W.L.

In Dominion this lengthening of the forward lines is not only much greater in extent, as just shown, but it is accomplished in a most artistic manner. As stated by us at the time of the races, in one sense the yacht has not one hull nor two, but four; when upright and in measuring trim she floats on two short hulls, of 17ft. 6in. measured length. Above each of these is another hull of nearly 36ft. over all length, and when the yacht is heeled to her sailing angle one of these upper hulls is immersed until it uses effectively a very large proportion of this length. The large diagram shows the normal and inclined load lines of the three typical boats, Ethelwynn, Glencairn II. and Dominion, the former design being enlarged to the 20ft. class, with the original proportions of L.W.L., and so giving 20ft. L.W.L. The variations in beam and length in the change from the upright to the inclined position are tabulated as follows:

COMPARISON OF CHANGES IN BEAM AND LENGTH DUE TO HEELING.

	Angle of Heel.	Beam at L.W.L.		L.W.L.		Gain in Length	
		Upright.	Inclined.	Upright.	Inclined.	Forward.	Aft.
*Ethelwynn..	15deg	6 5	5 7	20	18 1	loss	5
Glencairn II..	22deg.	6 2	4 6	17 6	21 7	1	3 1
†Dominion....	15deg.	2 6	2 9	17 6	26 9	5 6	3 9

* Enlarged from 15ft. class to 20ft. class.
† One bilge only.

This diagram illustrates many of the points touched on in the present discussion; it shows, for instance, the serious waste of measured length in the Ethelwynn as compared with the Glencairn type even in the upright position, the actual loss of nearly 2ft. of effective length in the former compared with a gain of over 4ft. in the latter when both are heeled from the upright position to the effective limit of inclination. The changes in the beam of the two are as striking. Ethelwynn loses 10in. as she heels and Glencairn 20in. In Ethelwynn the inclined plane of flotation shows a large area on the windward side of the centerline, in Glencairn the inclined plane barely laps the center line. The extent of the shifting of the center of buoyancy to leeward may be gauged very closely by merely estimating the center of each of the inclined planes. The inclined plane of Dominion shows a great gain over Glencairn, especially in length, but also in decrease of beam, making a long and beautifully formed spindle.

It must not be assumed that the perfected Dominion, as here described and illustrated, resulted directly and immediately from the recognition of the truth of the principle which we have endeavored to set forth in these articles; on the contrary, the problem has many practical difficulties, only a portion of which have thus far been surmounted. When off her theoretic angle, either in sailing free or at frequent intervals when on the wind, she is slow compared with the Glencairn type. It is by no means an easy matter, even after some experience, to keep the right angle under all variations of wind in force and direction so that the weather hull is just clear of the water; and when it is fairly immersed she is another boat. If any one can speak feelingly of the pleasure of handling Dominion for the first time and with no knowledge whatever of her striking idiosyncrasies, it is Mr. Jarvis, who steered her, with only a few hours' trial, in her first cup race. Even in the hands of her designer she is yet, both individually and as a type, largely an unknown quantity. There is still ample room for the improvement of her speed by longer trial; and she is at best but the first experiment, presumably capable of improvement in ways not yet apparent. Even as she stands, she is as a plain matter of fact the best racing machine yet produced in the 20ft. class, far faster in spite of all defects under certain conditions, fully as stanch, seaworthy and strong, more comfortable for pleasure sailing, and making very much easier the deck work of racing.

We had at the outset no intention of carrying the description of Dominion beyond the limits of a single paper, but the subject has proved a most interesting one to us at least, and we believe that it is of great importance at the present time; the necessity for a radical revision of the rules and stringent legislation against the extremes of modern designing being more pressing every year. Our contention from the first has been that the design of Dominion is not a mere abstract freak, violating all yachting proprieties and deserving only to be frowned down by the honest condemnation of all good sportsmen, but that it is the natural and inevitable result of a special system of designing whose legitimacy has been freely recognized by all yachting authorities. Not alone in the course of preparation of this series of articles and the designs, but in many discussions and arguments with yachtsmen, we have been compelled to make a much more thorough study of the whole subject than was possible during the hurry and excitement of the races; but this study has only served to confirm our first opinions, as published immediately after the races.

It seems hardly necessary now to touch upon the question of the catamaran, as it has been abandoned by those who raised it, but if it were worth while to waste the time upon it there would be little difficulty in demonstrating that there is nothing whatever in the principles of the catamaran type or in the various features of the best boats of the type which could suggest or lead to the development of Dominion; and that the principles of Dominion, notably that of sailing on one bilge or hull, if applied to any existing catamaran would result in failure. The Boston Globe, which is one of the few daily papers which have attempted to discuss the question fairly and intelligently, adopted the catamaran side at the outset, immediately preceding the cup races, and has maintained it ever since, classing the double-hull boat as necessarily a catamaran. In its issue of Oct. 2, in connection with the plans and description of Dominion, which it pays us the compliment of reproducing, it says:

Taking up the "catamaran" question, it is evident that neither in design nor performance is Dominion a catamaran, as perfected by the Herreshoffs and as generally understood in the yachting world. Yet she is clearly a double-hulled boat in that she has two distinct waterline planes and hence two hulls for the purposes

of measurement, regardless of the means used to keep those hulls together.

In design and in actual sailing she is a double-hulled boat. In construction she has but a single hull. Clearly design should have the call, and the boat be placed in that class. She is indeed an elaboration of the Challenger, Speculator and Glencairn II. principle, but the line between single and double-hulled boats would seem to be reached when the central portion of the boat clears the water.

This is the distinction the writer made when he first saw the boat, and he sees no reason to change his opinion. There was nothing specific in the agreement for the match to bar a double-hulled boat, and so designer Duggan was within the letter of the law.

What Dominion actually is has been shown pretty plainly in the course of these articles, and we have little doubt that many who at the outset condemned her as a catamaran and her designer for building a machine to race against an honest boat will change their opinion; at any rate, here she is before the yachting world, and the immediate question is no longer how or why she came, but what is to be done with her? If she is to be accepted, as her predecessors have been, on her established merits, well and good; as a freak and a racing machine she at least possesses many advantages over the other freaks and machines of the 20ft. class.

If she is to be barred, there is work ahead for some one during the coming winter. The mere arbitrary statement, unsupported by proof or argument, that she is of a prohibited type, is likely to find little favor with fair-minded and progressive yachtsmen. Assuming that she may fairly be classed as a double-hull boat, there will probably be serious difficulty in establishing a precedent for barring her on this ground. If it be sought to make a precedent by drawing a plausible line between the boat with a plane of flotation which is one and undivided in upright position, and one in which there are two distinct planes, there is still the possibility of the type surviving by such an alteration of the design as shall preserve its essential features and at the same time keep the hollow of the floor barely below the water when measured. We are of the opinion that the only satisfactory solution of the question and the only just method of dealing with Dominion is by such a radical change of the rule as will put a fair valuation upon those elements of advantage which she now enjoys freely in company with Glencairn and Challenger; and that, in barring her, if it goes so far, will bar them with equal certainty, and make way for a reasonable and sensible type of small yacht for the cup racing. W. P. S.

Yacht Measurement.

LONDON, Sept. 29.—*Editor Forest and Stream:* Owing to my absence from New York, the FOREST AND STREAM of Sept. 10, containing Mr. R. E. Froude's remarks on the measurement question, has only just now been read by me. My interest in such action by the clubs in the near future as shall promote yacht building and much greater activity in racing than has been had for a long time past, is such that I think it desirable to present different aspects of some matters from those offered to us by Mr. Froude. He states that "the primary and legitimate function of any rating rule is to measure size, in order to eliminate the element of mere 'size' from the competition. When, therefore, a rule directly provides that by increase of some measured dimension the rating for racing is decreased, such rule clearly contradicts this primary and legitimate function, and avowedly becomes a mere engine for the control of design." It does not appear to me that Mr. Froude's definition of the primary function of a rating rule is one that meets the common apprehension, and it very manifestly neither comprehends nor includes the legitimate function of a good and adequate rule. Since, however, he gives (and with apparent approval) as the purpose of the girth and beam rule "to take a more compact form"; "to take a larger area may be, but expressly a larger area relatively to the extreme cross section dimensions," we are left to infer that he approves a rule by the operation of which a lessened rating is secured by an increased area of midship section, provided the designer is restricted as to the form of his midship section.

It is my opinion that this restriction should not be put upon the designer, that he should be charged equitably, as nearly as can be estimated, for the use of levers which are known to give advantage; and, should be credited, as economic considerations would require, with the extent of work done as represented by the area of midship section, and that the equities having been satisfied, the designer should be left with all the freedom possible to work out his problem to his own satisfaction, and with accommodation to his owner's needs.

It would be a manifest oversight of the requirement of American conditions to regard the sail tax as "broadly equivalent to a tax simply on sail carrying power," and to eliminate the factor representative of sail area, or to take the power itself, however represented, as indicating the measure of advantage that can be gained in racing by the use of large areas of canvas in American waters, under average conditions. The premium on large sail plans, in such case, would be extravagantly heavy, and the result could only be disappointing and disastrous to yacht racing. It must be kept in mind that no large participation in yacht building and yacht racing can reasonably be hoped for without some consideration of, and adaptation to, the wants of the average owner, and that while it is no proper function of any rule to furnish an undue premium for any special type of vessel, the equities and features should be so considered and dealt with that a good and acceptable type should have at least an even opportunity for racing successfully. It is, I think, useless to expect any really satisfactory racing with vessels of much cost until these conditions have been brought about. J. H.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

YACHTING NEWS NOTES.

The Gilberts Bar Y. C., of Waveland, Fla., held its annual meeting on Oct. 1, the following officers being elected: Com., H. E. Sewall; Vice-Com., F. W. Willes; Sec'y, C. B. B. Harrison; Treas., E. S. Harmer; Referee, J. H. S. Panter. The officers' addresses are: H. E. Sewall, Commodore, Sewall's Point, Fla.; C. B. B. Harrison, Secretary, Waveland, Fla.

Canoeing.

Red Dragon C. C.

THE Red Dragon C. C. held its fall paddling races for silver prizes at Wissinoming, Pa., Saturday, Sept. 17. The course was from the Blue House to the Red Dragon club house, a distance of one-half mile. There was a light south wind, with ebb tide. The open canoe double-blade paddling race was one of the closest in the history of the club. Sprite, E. W. Crittenden, made a grand spurt at the finish and caught Proa, M. D. Wilt, napping. Mr. Crittenden was declared winner; time five minutes.

The tandem paddling race for open canoes, single-blade, was an easy victory for Sprite, E. W. Crittenden and H. M. Rogers, over Proa, M. D. Wilt and Lloyd Titus; time four minutes..

On Sept. 24 and 25 the Red Dragon C. C. took a paddling cruise to Burlington, N. J. The fleet included Chiquita, J. E. Murray; Wanderer, F. L. Wise, E. Heminway; Proa, M. D. Wilt, Lloyd Titus; Sprite, A. S. Fenimore, E. W. Crittenden; Elinore, Harry McCormick, H. Rogers; Kazim, Chas. Zimmerling, Lieut. Cook; Fineen, J. M. Hamilton. Commodore Harry Fleischmann, with the launch Spark, accompanied the fleet. His crew consisted of H. Ripp Fleischmann and H. E. Bachmann.

The party left the club house at 4 P. M., reaching the Lakanoo Boat Club headquarters, Burlington, at 7 P. M. The supper was at Marlin's Hotel, and the evening was enjoyably spent at the Lakanoo Boat Club, where a smoker was given in their honor.

The fleet returned home on the following day, reaching the club house at 4:30 P. M. The weather was hardly favorable for canoeing, as the sky was cloudy, and a chilling wind blew during the afternoon, yet all reported a grand time.

The gun club of the Red Dragon C. C. will commence the season's trap-shooting about the first week of November. Several prizes have been donated, and a series of ten bi-monthly shoots will be held, with regular weekly practice. A handicap system will be used and points awarded, so that the poorer shots will have an equal chance to win with the best. The club is in a very prosperous condition, and several new members have lately joined. W. K. P.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Rifle Range and Gallery.

Fixtures.

Oct. 21-23.—Los Angeles, Cal.—First fall tournament of the Los Angeles Sharpshooters. Open to all riflemen. F. S. Hicks, Sec'y.

Hoboken Tournament.

THE tournament of the Hoboken Schuetzen Corps, and the Independent Schuetzen Corps, of New York, at the Union Hill Schuetzen Park, was concluded early this week.

Hoboken Schuetzen Corps.

Ring target: Herman Neumann 64, George Friedrichs 64, Ernest Fischer 61, George Wehner 49, James H. Kruse 63, Michael Capp 42, Charles F. Muller 60.

Point target: George A. Friedrichs 12, Michael Capp 16, Julius Berger 14, Emil Berckmann 18.

Medal winners: Champion class, Ernest Fischer; first class, Julius H. Kruse; second class, George A. Friedrichs; third class, George Wehner.

Point medal winners: Emil Berckmann, Julius H. Kruse, Geo. A. Friedrichs, Charles F. Muller, Julius Berger, Michael Capp and George Wehner.

Best bullseye: Herman Neumann, diamond medal; Charles F. Muller, gold medal.

Independent Schuetzen Corps.

Ring target: Emil Berckmann 65, Ernest Fischer 68, Andrew Peters 62, H. W. Schmidt 58, Carl Jack 61, C. F. Muller 62.

Point target: Emil Berckmann 18, Ernest Fischer 18, Andrew Peters 14, H. W. Schmidt 15, Carl Jack 13, Charles F. Muller 7.

Medal winners: Champion class, Andrew Peters; first class, Henry W. Schmidt; second class, Charles F. Muller; third class, Carl Weis.

Point medal winners: Capt. Claus Basse, Ernest Fischer, Emil Berckmann, Henry W. Schmidt, Charles F. Muller and Carl Jack.

Most bullseyes: Andrew Peters, first prize; William Schmidt, second prize.

Medal for best man target score: Ernest Fischer.

Trap-Shooting.

Fixtures.

Oct. 11-12.—Mt. Sterling, Ill.—Mt. Sterling Gun Club's two days' tournament. J. Breldenbend, Sec'y.

Oct. 11-14.—Baltimore, Md.—Fourth annual fall tournament of the Baltimore Shooting Association; two days at targets, two at live birds. $100 added each day. Geo. S. Harrison, Sec'y.

Oct. 12.—Reading, Pa.—South End Gun Club's all-day tournament and trophy shoot. Arthur A. Fink, Manager, Reading, Pa.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Oct. 12-14.—Dayton, O.—Rolla Heikes' tournament; one day live birds; $200 added to target events.

Oct. 15.—Bound Brook, N. J.—Central New Jersey League team contest.

Oct. 18-21.—Belle Meade Stock Farm, near Nashville, Tenn.—Two days at target; two days at live birds; $500 added. W. R. Elliston, Manager.

Oct. 19.—Lyndhurst, N. J.—Twenty-five-bird handicap, $10 entrance; 10 birds, $5 entrance. T. W. Morfey, Sec'y.

Oct. 25-27.—St. Louis, Mo.—Tournament at Dupont Park.

Oct. 27.—Dexter Park, Brooklyn.—Opening live-bird shoot of Greater New York Gun Club. H. S. Lippack, Sec'y.

Oct. 27-29.—Louisville, Ky.—Tournament of the Kentucy Gun Club. Championship of Kentucky on last day, 25 pigeons. Emile Pragoff, Secretary.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 23.—Hackensack, N. J.—All-day target tournament. C. O. Gardner, Jr., Sec'y.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

1899.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties n all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The opening shoot of the Greater New York Club (incorporated) will take place at Dexter Park, Jamaica avenue and Enfield street, Oct. 27. The competition will be at live birds, four events. No. 1 is at 5 birds, $3 entrance, birds extra at 25 cents. Second event, 7 birds, $5, birds included. Third event, miss-and-out, $3, birds extra. Fourth event, Incorporation Handicap, 15 birds, $10 entrance, $15 added if ten or more entries; if fifteen or more, $22; if twenty or more, $30; if twenty-five or more, $37 added. Price of birds, at 60 cents per pair, deducted from purse. All guns to stand on or behind the 25yd. mark to suit the shooter, but no shooter has the right to change his handicap after his first shot in this event. Class shooting.

Under date of Oct. 8 Mr. C. O. Gardner, secretary of the Bergen County Gun Club, writes us as follows: "The Bergen County Gun Club, of Hackensack, N. J., will hold an all-day target tournament at its grounds, three minutes' walk from the Hackensack station of the N. Y., Sus. & W. R. R., on Wednesday, Nov. 23. On that occasion the club will do its best to make up an attractive programme, and can at any rate promise its visitors a good time and plenty of shooting. Very few grounds are easier of access than our, as they are less than three-quarters of an hour's run from the New York side of the North River."

Mr. E. D. Fulford, Utica, N. Y., writes us as follows: "I wish to make a correction in my letter of last week in FOREST AND STREAM. I intended to say, and thought I did say, 'there are 100 semi-amateurs offering to do our work in their different places for ammunition or a gun.' It is all in the letter, but I think shifted." Mr. Fulford's note of last week, as corrected by him in the part referred to, would read as follows: "What is more, as you well said, and as I am in a position to know, there are over 100 semi-amateurs, that are putting up the squeal, trying to undermine the honest man by offering to take care of a certain county or travel for ammunition only or a gun."

Messrs. Von Lengerke & Detmold, 318 Broadway, New York, have issued recently an elaborately illustrated catalogue, with a complete descriptive text and price list, 128 pages in all. The illustrations of the guns and the text therewith are particularly complete. The "Knockabout" gun, which they make a specialty of in the way of a good gun at a moderate figure comparatively, adorns the first page. The catalogue will be sent on application.

There is a need of a trophy for competition among the shooters of New York and vicinity. At present there is no competition which has more than a club significance. A trophy, with handicap conditions governing it, and restricting the competition to an area within fifty or seventy-five miles of New York, so that there would not be material expense or loss of time in travel, would meet a long-felt want.

Mr. W. F. Parker made an excellent run on the first day of the Newburgh tournament last week, scoring 82 targets consecutively. There is quite a high degree of class work in such a performance,

Mr. Ed Taylor, of the Laflin & Rand Powder Co., was in attendance at the Wopsononock tournament, and on the first day smashed 115 out of 130 targets, practically a 90 per cent. gait. On the second day he missed only 13 out of 155, a .916 per cent. gait. We presume Mr. Taylor was using the new smokeless powder, recently put on the market by his company, the Laflin & Rand Powder Co.

At the Iowa State shoot the L. C. Smith cup was won by W. R. Milner, of Des Moines, on a score of 19 out of 20, Grimm, Budd and Gilbert standing at 20yds. There were three cups, one each for the 70, 80 and 90 classes. No one qualified for the 90 per cent. cup. Mrs. Murray, of Stillwater, Minn., captured the handicap cup with a score of 24 out of 25.

Mr. A. C. Paterson, in "Western Traps," refers to Admiral A. G. Courtney as Col. Courtney, and that he shot at a 90 per cent. gait at Chicago recently. He shoots that way as an admiral, not as a colonel. He was promoted for gallant service during the late war, on the theory that the man behind the gun has something to do with the good shooting of it.

In conversation with Mr. Ed Taylor, ballistic expert of the Laflin & Rand Powder Co., we learn that the new smokeless powder of that company is a most gratifying success in every particular. It burns almost free from residue, has hardly any perceptible recoil, and gives a very high velocity with a minimum of pressure.

The Brooklyn Gun Club will give a series of prize shoots twice monthly, the first one to take place on Saturday of this week. Two good prizes, at least, will be given at each shoot. If time permits, after the programme events are finished, 1-cent target events will be shot. For further particulars address John Wright, care Von Lengerke & Detmold, 318 Broadway.

A gentleman who will be missed much from the trap-shoots in the East journeyed westward to his home in St. Louis recently. His uniform affability, and even tranquility, whether he won or lost, were but a part of his many good qualities, as a companion and sportsman. His nom de fusil is Chase.

Messrs. C. P. Hotaling and Frank Carlough, of Tuxedo, N. Y., were participants in the tournament of the West Newburgh Gun and Rifle Association at Newburgh last week. They enjoyed the competition, and being of the right sort, made many friends. Considering that it was their first participation in open competition, they made a very good showing.

In "Western Traps" this week will be found a mention of several shoots which are to take place in the West in the near future. Guns are not stored permanently in any section, even if there is a pessimistic opinion here and there that shooting is going to the bow-wows or vice versa.

Jack Fanning's neat little performance on the second day of the Altoona tournament last week, 152 out of 155 targets, is not a matter to be passed over lightly. Incidentally he killed 15 birds straight in the live-bird event, and then killed, as will be seen by the report of the Wopsononock tournament, some 40 more straight.

The contest for the Chicago challenge trophy, between the holder, Mr. Silas Palmer, and Dr. Shaw, is fixed for Oct. 18.

BERNARD WATERS.

IN NEW JERSEY.

East Side Gun Club.

Newark, N. J., Oct. 6.—Following are the scores of a team race between the East Side Gun Club, of Newark, N. J., and the Forester Gun Club, of Newark. This match was somewhat impromptu, as some mistake was made in sending out the notices.

Team race:

East Side Gun Club—Perment 22, Fairmont 21, Hassinger 19, Koeller 19, Otten 19, Schortemeier 19, Fischer 12—131.

Forester Gun Club—J. Fleming 22, De Long 21, C. E. Smith 21, D. Fleming 14, Ripley 13, Winans 8, Hayes 17—116.

Sweeps were shot as follows:

No. 7 was the club shoot.

New Utrecht against Endeavors.

The first of a series of matches between the New Utrecht Gun Club, of Woodlawn, and the Endeavor Gun Club, of Marion, was shot on the grounds of the former on Oct. 8. The contest was a reasonably close one, the New Utrechts winning out, however, by the handsome margin of 12 targets in the lead.

The New Utrecht members entertained the visitors with pleasing hospitality, and administered the defeat so graciously that it was a pleasure. The return match is to be shot on a date not yet fixed upon.

The feature of the shooting was the performance of Capt. Money, who seemed to shoot better as the light grew darker and more misty. He smashed 72 out of his last 75 so easily that he did not seem to be trying.

There was a heavy downpour in the forenoon, which ceased soon after midday, but a heavy, dark sky and an atmosphere far from clear made very hard shooting.

The team shoot, 50 targets per man, entrance free, targets free, honors to the winners. Scores as follows:

Capt Money	11111110111111110101101111010111111101111110101111	—41

S. H. T. 3

Forester Gun Club.

Newark, N. J., Oct. 8.—The Forester Gun Club, of Newark, N. J., held their regular monthly shoot to-day. The weather was very poor for trap-shooting. Only a few members were present and shot Sergeant system, which was new to them. The traps were overhung with a fog. J. Fleming led the shooters with the highest score for the afternoon's sport. Score:

J Fleming	6	6	5	6	9	6	9	6	..	
J H Cummins	3	4	3	4	4	4	4	4	6	
Dr Ripley	5	2	5	6	4	..	..	..	..	
W Kugler	4	4	2	4	5	..	..	..	..	
D Fleming	4	5	6	4	4	..	..	..	..	

MASCOT.

Iowa State Tournament.

DES MOINES, Ia., Oct. 6.—The twenty-first annual tournament of the Iowa State Sportsmen's Association closed to-day and was a success in every particular. The weather was fine, but a stiff breeze made the target shooting quite difficult, which will account for low averages. The targets were thrown from two sets of expert traps, Sergeant system, and the average flight was about 60yds. and 8ft. high. The four money equitable system of dividing money was used, and gave the best of satisfaction. The open programme for the two first days was ten 15-target events each day, with $5 added to each event.

Shoot No. 16 of the second day was for the L. C. Smith cup, at 20 targets. Grimm, Budd and Gilbert were handicapped to 20yds. The cup was won by W. R. Milner, of Des Moines, on a score of 19 out of a possible 20. Three cups were given for averages for the two days, one each for 70, 80 and 90 classes. As no one made 90 per cent., this cup went back to the Association, and was shot off on Thursday. S. A. Tucker, J. E. McDowell, Mrs. Murray and Martin scored 24 out of 25. This was a handicap shoot. Tucker had 2 added, McDowell had 2 added, Mrs. Murray had 4 added, and Martin had 4 added. The three gentlemen waved their claim to the cup, and Mrs. Murray takes the cup home to Stillwater, Minn., as a mark of her ability to handle a shotgun, and will receive a handsome sum when the cup is shot for at the next meeting. Gilbert, Budd, Grimm, Worthington, Taylor, Hallowell and Mortensen qualified in the 80 class, and on the shoot-off Gilbert won with 49 out of 50.

Milner, Kimball, B. R. Smith, Long, Crossman, and Mrs. Murray were the contestants for the 70 class cup, and Milner won the cup on shoot-off with a score of 42 out of a possible 50.

The State two-men team trophy was shot at 20 live birds per team, Grimm and J. G. Smith, of the Algona Gun Club, and Worthington and Budd, of the Capital Gun Club, of Des Moines, tied on straight scores. In the shoot-off at 10 birds for teams Worthington and Budd again killed straight and won the trophy. Grimm, Budd and Gilbert were handicapped to 32yds. in this cup event.

Among the participants from outside the State were S. A. Tucker, representing the Parker gun and a good talker; J. J. Hallowell, representing the Union Metallic Cartridge Co., and a good worker; Mrs. P. S. Murray, of Stillwater, Minn., one of the best all-round lady shots we have ever seen handle a shotgun. She kills live birds in a style that would do credit to many experts. Mr. R. R. Kimball, of Omaha, a good fellow and a good shot.

Inclosed find copy of a very able address delivered by the president, Mr. John G. Smith, of Algona, Ia.

The following officers were elected for 1899: J. G. Smith, Algona, President; W. R. Milner, Des Moines, Vice-President; C. T. Chubb, Algona, Treasurer; Guy Taylor, Algona, Secretary; Board of Directors: L. C. Worthington, Des Moines; C. T. Callison, Cummings; L. C. Abbott, Marshalltown; Fred Gilbert, Spirit Lake; W. N. Birdsall, Runbeck.

S. A. Tucker and Jack Hallowell were in the best of good humor owing to Parker guns and U. M. C. shells winning both State trophies and two or three average cups. Worthington and Budd both used Hazard powder in winning State team cup. Gilbert, Grimm and Mrs. Murray used Du Pont powder. Milner shot his special hand-loaded shells in U. M. C. cases.

The tournament was held on the grounds of the Des Moines Gun Club, one of the best shooting grounds in the United States. Algona was selected as the place of holding the next convention and tournament.

Tuesday, First Day, Oct. 4.

Events:	1	2	3	4	5	6	7	8	9	10

President J. G. Smith, in his annual address, said:

"In looking over the work of the Iowa State Association for the Protection of Fish and Game, for the last twenty years, the question comes up: What have we done? Let us look at the condition of things years ago and look at them now.

"I well recollect when the first gun club was organized at Algona, and we joined the State Association, when it held its first meeting in this city. We had fair 'game laws,' but they were violated on every hand. No one cared to try to enforce the laws, and if they had tried to do so public opinion would have been against it. Now, whatever may be said to the contrary, our game and fish laws are as well enforced as any laws in our code. If we can get all the shooters in the State of Iowa to join some good gun club, we shall have but few violations of our game laws.

"The State of Iowa has done but little toward stocking our streams and lakes with fish, and nothing toward replenishing the State with game. The people of the State would be glad to have the State keep up with other States in that respect, but our legislators seem to forget the value of fish and game, and we are left far behind almost every other State. Our Governors seem to think that the office of Fish Commissioner is a sort of political plum to pay for party work. They are not selected for any particular fitness for the work they have to do. Now it seems to me that it is time for our State Association to demand that they have some voice in the selection of a Fish and Game Commissioner. I think there has never been a member of our Association in that office since it was created. It would seem strange if the Governor should ignore our State militia in the selection of the adjutant-generel, or our Dairy Association in the selection of a dairy commissioner. Why should he ignore our State Association in the selection of Fish and Game Commissioner? We can vote, and when our next Governor and Legislature are chosen vote for men that are willing to do us justice, whatever the party may be. One year from next November 10,000 votes will count, if they are thrown one way, and there are more than 10,000 voters that are with us. Let us exact a pledge from every man we vote for that he will do us justice. That is all the members of the Iowa State Association for the Protection of Fish and Game ask for, and that they will demand.

"A bill was presented to the last General Assembly asking for the removal of the dam in the Des Moines River at Bonaparte. That dam is so constructed that it is impossible for any fish to pass up the river. It is about twenty-four miles from the mouth of the Des Moines. Millions of fish that come from the Mississippi are stopped there, and the consequence is that the river north of there is almost deplete of fish. Two hundred and fifty thousand people in the Des Moines Valley were not able to get justice from the last General Assembly. Petition after Petition was sent there, containing thousands of names of the best men in Iowa, asking for the removal of the Bonaparte dam. I have talked with many members of the last General Assembly, and every man told me that he knew it was wrong to stop the fish from going up the river. Yet the General Assembly had not the courage to right this wrong. There are fish enough destroyed by the Bonaparte Dam every year to stock the whole State of Iowa. The damage to the State cannot be estimated. I have not as yet been able to find a man in Iowa who is not in favor of the removal of that dam, cost what it will, and the cost will be but a few thousand dollars. The taxpayers are in favor of it, but the politicians stand in the way. Money enough was wasted in the last revision of the code of Iowa to have removed all the obstructions from the Des Moines River.

"Gentlemen of the State Association, one year from next November I hope you will consider carefully how you vote, and if the politicians do not have their own way the people of the State will get justice.

"I make no complaint in regard to the money expended by the State of Iowa, but this I do complain of, the State of Iowa has not done justice toward its fish and game. Our rivers and lakes should be stocked with fine fish. Our woods and prairies could have plenty of game at very little expense. All the members of this Association ask is fair treatment. They are all taxpayers and good citizens.

"During the last session of Congress Representative Lacy introduced a bill to stock the different States with and protect by law the new varieties of pheasants that have been brought into the country from the Old World. I ask the sportsmen of the land to give him their hearty support. It has been demonstrated that we can with little care have plenty of Mongolian and English pheasants in every part of our land. The expense will scarcely be noticed. Many of our sister States have already taken up the work and have met with great success. You and I may not see the benefits of such work, but those that come after us will say that 'We lived not wholly for ourselves.'

"On account of the planting of large groves of timber in Iowa the increase of quail has been very great. Large coveys of quail can be seen to-day where twenty years ago such a bird was unknown. In many places in Iowa quail are almost as plenty as in the Southern States. There is plenty of food for the quail and the pheasants; all that is needed is timber to protect them in cold weather."

HAWKEYE.

Audubon Gun Club of Buffalo.

BUFFALO, N. Y., Oct. 8.—Following scores are from Audubon Gun Club's club shoot. The second event was the club badge shoot. B. Talsma won Class A, Jacobs won Class B, W. R. Eaton won Class C. On Wednesday next the annual field day and merchandise shoot of the club takes place:

C. J. MAYER.

The contest between teams of the New Utrecht Gun Club and the Endeavor Gun Club last Saturday at Woodlawn was a thoroughly enjoyable affair, both in respect to its competitive and social features. The New Utrecht Club served a substantial, palatable collation, the best testimonial of appreciation being the vigorous onslaught made on it during the afternoon. Scores: New Utrechts 234, Endeavors 222. The New Utrecht Club declared all regular club programmes off to make a clear field for this club contest. It was intended to be a ten-men team contest, but the Endeavors could not muster over six men, so the race was shot accordingly. It is the first of a series which the New Utrechts intend to organize, and should be the beginning of more activity in trap-shooting matters about the vicinity of New York.

Our correspondent at the Des Moines tournament reports that both Messrs. S. A. Tucker and J. J. U. M. C. Hallowell were in excellent humor, as the Parker guns and U. M. C. ammunition won both the State trophies and two out of three average cups.

Worthington and Budd, of the Capital Gun Club, of Des Moines, won the State two-men team trophy at the Iowa State Sportsmen's Association's tournament last week. They used Hazard powder in segregating the trophy.

Confabulations of the Cadi.—VIII.

On the day after the Cadi's birthday, the members of the Egyptian Gun Club committee convened in the shade of the lodge as per adjournment of the last meeting. Each one had a coppery tinge on his cheeks, swollen eyes, a tired feeling, and a passionate fondness for cold water—a common sequence when friends assist at a birthday of a friend, and thereby have an opportunity to fill their stomachs gratis while rejoicing.

"The meeting will now come to order," said the Cadi, languidly. "I am troubled with something of a headache to-day, my friends, caused, I think, by the turkey which I ate yesterday, so you will please be as expeditious as possible."

Manufacturers' Agents.

"It seems to me, though I say it with as much delicacy as possible," said Le Loup, "that if you, as chairman, would preside over the meeting instead of doing all the talking, we would transact more business. I move you, Mr. Chairman, that we bar all manufacturers' agents. No, that is not what I mean exactly. We do not wish to bar them. If we do that we cut ourselves off from substantial revenue. I move that we allow manufacturers' agents to shoot for targets only."

"Second the motion," said Moke.

"Before I put that motion," said the Cadi, "I wish to make a few remarks on it, as I am quite certain that there is no one here other than myself who will oppose it. Your purpose plainly is to take advantage of the manufacturers' agents' position, and make them a source of revenue to the utmost extent possible. You bar them from competing for any of the purses, yet you charge them the full price for targets, ignoring the fact that they add greatly to the prestige and importance of a shoot, make it more attractive for visitors, who always are pleased to see the highest exhibitions of skill and hard competition, rather than the awkward efforts of mediocre performers, and thereby contribute a substantial advantage to the club. Moreover, you know that it is necessary in a business way for them to attend the tournament, so you are simply taking a commercial advantage of their necessities and the opportunity offered regardless of any considerations of sportsmanship. There is no justification in asking them two or three cents for targets under the circumstances. It costs nothing extra to throw the targets for them in the tournament, for the same workers serve for all, and are paid exactly the same whether they throw a few hundred targets more or less in a day. In consideration of the quid pro quo, you should at least throw the targets at cost for the manufacturers' agents."

"I object to that view," said Le Loup testily. "We are running this tournament to make some money. I suspect, Mr. Chairman, and I say it with all due respect and affection, that you are talking chiefly for your own advantage. As a manufacturers' agent you are barred, so that it would be quite the proper caper for you to have the views which you just now expressed, rather than views which would be for the welfare of the club."

"I wish you to distinctly understand that I am not a manufacturers' agent," retorted the Cadi, without in the least losing his temper.

"Do you not receive your shells free?" queried Moke.

"That's none of your business," promptly replied the Cadi. "By some unaccountable process of reasoning, you seem to consider yourself privileged to pry into my personal affairs in the most impudent manner. A manufacturers' agent follows a legitimate and useful business. His personal affairs are his own, yet you impudently ask him, 'Did you pay for your shells?' I do get my shells free, and I have a gun free, but I consider that my own affair."

"But you thereby have an advantage over us in the tournament," eagerly objected Ephraim.

"You traveled on a pass some time since to a tournament? Yes. Didn't that give you an advantage over the others who paid their fares? Did traveling on that pass make you an agent of the railroad? I have my ammunition free, but I have no more powers as an agent than you have, so far as representing the company is concerned. Some men have bank accounts; some, sense; some this, that and the other thing, all of which are advantages over some one else."

"But by shooting the ammunition you give your indorsement to it," interposed Moke.

"You give your indorsement to ammunition when you buy it, do you not, good Moke? You would not buy your ammunition if you did not approve of it, would you? Again, the manner in which I get my ammunition is a personal matter, and a piece of impudence on your part to pry into, but I permit you to discuss it because there seems to be a general opinion that it is the proper caper to pry into our affairs. Do you get your groceries free, Le Loup?"

"It seems to me that that question would come under the head of an impertinence," replied Le Loup.

Neither Fish, nor Flesh, nor Good Red Herring.

"Certainly," assented the Cadi. "A few more words in respect to the simon pure amateur who objects to the slightest smirchings of professionalism, particularly when it is manifested by a man who can shoot better than he can. Do you know that one of the chief petty annoyances of the manufacturers of guns and ammunition is the persistent and insistent importunities by so-called amateurs who are secretly endeavoring to obtain free guns and free ammunition? Some who wear the pure white raiment of the amateur, and are proud of it, seek to secure a gun or a thousand or two thousand shells for a dollar, or for nothing, with a receipted bill for the full price, so that, if there is ever any question raised as to their amateurism, they will have the receipted bill to show and prove an amateur standing.

"Do you know that you are all professionals quite as much as are the manufacturers' agents? They get a salary, it is true, but there are other things as well as that which make men professionals. If you are intent on barring professionals, you should be consistent and bar all professionals."

"I don't think you are talking reason or good sense," said Le Loup. "It seems to me to be mere assertion."

"Well, I receive no salary, but do receive some shells. That you claim makes me a manufacturers' agent. On the flimsiest pretext you bar me because you wish to do so on any pretext. Anything of professionalism that you cannot secure for yourself serves to convict me. Now you shoot with professionals, shoot for money, shoot in public tournaments, consider only the money features of the competition, and talk only of them; in short, you go as far as you can in professionalism, and would go further if you could do so, as all manufacturers of guns and ammunition know; yet you have the audacity to assert that you are an amateur, while following the full available scope of professionalism, while I am a professional because, forsooth, I accept the present of some shells and a gun. The better way would be to deal honestly with yourselves and with those you term professionals, by shooting all together and establishing a handicap as is proper and becoming."

"You are crazy," said Le Loup. "It would be impossible in the first place to establish a handicap for so many different shooters, and a good many would quit shooting if they were classed as professionals."

"Whether they would quit or not has nothing whatever to do with the abstract merits of the case," retorted the Cadi. "A fact is a fact, neither more nor less, whether they quit or not. It, however, remains to be determined whether they would do so. A handicap is a matter which can only be established by men who have a knowledge of the capabilities of the shooters, and the moral courage to impose what they consider just conditions. Quite as much ability is necessary in handicapping as in any other branch of sport, and much more than is commonly considered. As long as it is all professionalism, instead of the fiction in respect to amateurism, I say let all shoot together with the same equity which obtains in bicycle racing, yachting, horse racing, etc., where a handicap befitting the conditions is imposed, and there is then a competition instead of a discrimination among things that are alike."

A Sporting Authority.

"I think that you are wrong in your ideas of what constitutes professionalism," said Moke. "Have you a copy of Webster's Unabridged?" The book was produced, and Moke read as follows: "'Professional—A person who prosecutes anything professionally, or for a livelihood, and not in the character of an amateur; a professional worker.' What do you think of that, good Cadi? This work is considered the great authority in America. I consider that this definition settles the matter."

"Not in a technical sense," replied the Cadi. "It refers more to business occupations than to sport. However, the clause 'not in the character of an amateur' is as good proof for my contention as it is for yours. However, the dictionary is a very poor authority on matters of this kind, for Webster, good lexicographer that he was, and able as have been the editors who revised his great work from time to time, was weak on sporting subjects. Here is Webster's definition of that useful field dog, the pointer: 'One of a breed of dogs trained to stop at the sight of game, and with the nose point it out to sportsmen.' He could not well have been more vague and inaccurate in that number of words. The setter he defines with equal inaccuracy as follows: 'A hunting dog of a special breed originally derived from a cross between the spaniel and the pointer. Modern setters are usually trained to indicate the position of the game birds by standing in a fixed position, but originally they indicated it by sitting or crouching.'

"It would be difficult to be in greater error if one tried purposely for it. As to the pointer, and the setter too, for that matter, he points naturally without any reference whatever to a man and a gun. He uses his nose to determine the whereabouts of birds that he may catch them, and he rarely sees the game which he points, nor is it desirable that he should do so; since, if he can see the game, it also can see him, which diminishes his chance of success accordingly. The point is merely the act of locating the game for the final spring and capture of it. The dog, when hunting birds, is silent and stealthy in his seeking, for if they once take wing his chances are ended. But the same dog gives tongue merrily when in pursuit of a rabbit or other prey which has no wings, for he can cope more successfully with anything which will remain on the earth's surface instead of rising into the air. The dogmatic assertion that the setter is a cross between the pointer and the spaniel is something very novel in the literature of that useful dog, and is neither taught nor believed to be so by sportsmen. In looking for a definition of the word trap-shooter, I do not find it at all in Webster's Unabridged, so with your good permission I will dismiss the worthy gentleman from any suspicion of being a trap-shooting or sporting authority."

"While I do not admit your contention, you have a certain troublesome craftiness in your arguments, friend Cadi," said Le Loup. "I think that your opinions are really from feelings of resentment because you are barred, and that therefore they after all have only a personal significance."

"Of course, I recognize that you and many others will think that," replied the Cadi. "I know how pleasing it is to fit a motive to the words and actions of others, which is as much to their disadvantage as possible. It is a pleasing and cheap way to dispose of a subject which one cannot answer in any other manner. Your bar of me has not any special personal significance, for while Hopie Jane is able to work and the rabbit crop is good, I am in no danger of losing my means of livelihood. With you, however, barring me has a personal significance. You do not care a sou for the principles of sport any further than you can work them to your own advantage. You bar me because I can shoot better than you can; that is the case in a nutshell. Follow out your prejudices by barring every man who can shoot better than you can, till the happy moment arrives when all the shots, better than you, are barred, and you stand boldly out as the best shot yourself—at that auspicious moment, something is likely to happen."

"Humph!" said Le Loup, "you are going to say that they will bar me, but to-day we live and to-morrow has its own troubles. They will never bar me, for before that time comes there will be a general reformation. If that time should come, however, I can then shoot for sport."

The Double Profession.

"As a matter of policy, friend Cadi, do you think that it is a good thing for the manufacturers' agents to shoot in tournaments?" queried Moke.

"As a matter of policy, they should not," frankly replied the Cadi. "It is a bad business policy for the agents to take a competitive part in the tournaments. The other shooters feel that there is a certain degree of hardship imposed on them in buying ammunition and guns of the agents or the houses, as the case may be, and then have a number of agents come along and make the actual use of the goods in competition a source of further revenue. No dry goods merchant would send out a drummer with the understanding that he was expected to play games of chance or skill with his customers, and thereby make his salary. Manufacturers should pay their agents a sufficient salary to live on without any considerations of winnings to supplement it. You can no more expect trap-shooting to thrive under such a policy than you could expect sheep to thrive where wolves ate the sheep faster than they could multiply, or that chickens would fight hawks, or that a watermelon patch could withstand a raid by Senegambian chieftains. Agents can display their wares and skill without shooting for money. In the matter of professionalism, however, they differ from us only in a matter of degree, though a somewhat ultra degree of the business; but in the matter of policy, it is bound to end badly for them in time and check the growth of shooting and consequently of trade."

"There is a lot of good amateur competition in the United States to-day, friend Cadi," said Moke. "That good turkey has affected your liver, and your eyes see yellow in consequence."

"If it exists, Moke, be so good as to tell me where this amateur interest has its home and habitation," retorted the Cadi. "There are trophies without number for open professional competition. There are tournaments without number which are for professionals in everything excepting perhaps the name. I defy you to point out a single trophy, of a public character, for amateur competition. Also point out a single tournament of any importance which is given for the genuine amateur. The 80 per cent. man or less is commonly called an amateur, as if the degree of skill was the test instead of his purpose and his practice. An 80 per cent. man may be a professional, and indeed some of them are."

"Well, I call for a vote on my motion, which was duly seconded and quite as duly forgotten," said Le Loup.

"Awfully sorry, old man," replied the Cadi, calmly, "but not to-day. It is the prerogative of the chairman at a meeting of a gun club to put the question or not, as best accords with his fancy; but aside from that you will have to excuse me, because I have a violent headache—turkey never did much agree with me even on my birthday. This meeting stands adjourned to this day next week."

BERNARD WATERS.

Wopsononock Tournament.

ALTOONA, Pa.—Altoona has not been heard of in shooting circles for several years. Messrs. U. S. Houck, W. S. Bookwalter and G. G. Zeth got their heads together some time ago and determined to bring it to life again by holding a shoot at Lookout Point, Wopsononock, where the Pennsylvania State shoot was held some years ago. The spot is famous for the ideal background it affords, there being nothing but the blue dome of heaven before you as you face the trap; and misses are lost in space many hundred feet below the score. From a pavilion built at this point you can see, on a clear day, a half-dozen counties and a portion of the State of Maryland, although the border line of the latter is almost a hundred miles distant as the crow flies.

Altoona lies nestled in the picturesque Juniata Valley 1,500ft. below you. Back of you is a plateau of hundreds of square miles of forest, jungle and other cover, where all kinds of game, from bears and deer to the artful ruffed grouse, abound. As Jack Fanning and the writer on Thursday evening stood watching the setting sun throw its last lingering touches on the frost-guilded panorama, Jack remarked: "Is there a spot on God's green earth more fair?"

Friday morning dawned with indications for rain. The trip up the mountain was uneventful except to those of us who had never before traveled this winding stair of railroad, taking a course a half-dozen times as long as the distance would be up an incline. On the train were Paul North, of Cleveland; J. S. Fanning, of San Francisco; L. B. Fleming and R. B. Bennett, of Pittsburg; J. B. Holsinger and J. A. Rhoades, of Johnstown; Ed Taylor, of New York; S. L. Longenecker, of Bedford; W. S. Smith, of Osterberg; Dutch Volk, of South Fork, and a score or more of other enthusiasts from nearby towns. There were ten target and one live-bird event. In the target events the Jack Rabbit system of dividing purses was employed, the live-bird event being class shooting, four moneys.

Event No. 6 was for a medal, local shooters only being eligible except in the sweep. U. S. Houck, of this city, was the winner. The targets were faultlessly thrown from a magautrap. The scores:

Friday First Day, Oct. 7.

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	15	25	10	10	15	15
Fanning	10	8	9	9	12	19	9	8	12	15

Houck	1202202222200w	Bastian	2120120202110w
Stine	222222212222110—14		

Fanning did some fine exhibition work after the race was over, killing some 40 birds straight in illustrating what Gold Dust powder would do at long range on fast-flying birds.

Saturday, Second Day, Oct. 8.

On the morning of the second day we woke up to find it raining in torrents. Undaunted, however, by the elements, quite a number started up the mountain, while a goodly number either remained in the city or started for their homes. On the mountain top we found ourselves in clouds so thick that shooting was out of the question. The boys put in the time for an hour or more exchanging yarns, Paul North and Old Reliable Taylor incidentally scoring Sharkey Fanning for not being able to keep pace with them on the day previous. Jack didn't say much, but he must have thought a lot, for after the clouds had broken enough to begin shooting, he went after them in fine style, breaking, as will be seen by the score, 152 out of 155 targets, the last 77 being straight.

Among the new faces to-day was a Clearfield party, consisting of H. E. Hummelbaugh, L. J. Jimeson, F. Plympton and Miss Ray Test, the latter a bright little girl, who began shooting with the Clearfield Club several weeks ago. She shows a remarkable natural ability, handling the gun like a veteran, and if properly tutored will some day become a first-class shot.

All events were shot under the same system as the first day, the principal one being a 50-target race for the championship of Blair, Bedford, Huntingdon and Cambria counties. Non-resident shooters were permitted to enter for the sweep. U. S. Houck easily won the championship by the clever score of 48. Fanning broke his 50 straight; in fact, he was not doing any missing during the latter part of the day. The scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	20	10	15	50	10	10
Fanning	10	10	9	9	20	10	14	50	10	10
Houck	9	8	10	9	19	9	14	48	7	9
Taylor	9	10	9	8	20	9	15	46	7	9
North	9	8	8	8	19	8	14	47	9	9
Fleming	9	10	8	10	18	9	12	48	8	9
Smith	8	8	7	9	15	9	11	39	8	5
Killitts	7	7	8	10	15	8	13	37	7	9
Kline	9	7	8	8	18	8	13	35	..	..
C E Rhoades	8	9	10	6	..	..	..	..	..	..
Richey	10	8	8	9	18	7	14	39	10	5
Longenecker	..	..	..	..	14	8	..	..	8	4
Plympton	..	..	..	..	..	8	11	..	..	..
Miss Test	..	..	..	..	..	7	8	..	..	..
Rhoades	..	..	..	..	..	7	13	43	9	..
Hummelbaugh	..	..	..	..	..	7	13	..	..	5
Copelin	..	..	..	..	..	9	10	35	..	..
Forney	..	..	..	..	..	..	9	..	..	..

Although the elements were aginst the attendance (probably fifteen to twenty shooters not venturing out), the shoot was a success. Every one in attendance was delighted with the treatment he received at the hands of the management, and promised to aid in giving Altoona one of the big shoots of the season next year. Such hustlers as Paul North, talking magautrap; Jack Fanning, showing how to smash 'em with Gold Dust, and Ed Taylor, booming Laflin & Rand, do lots of good in reviving an interest in shooting. They will always receive the glad hand in Altoona.

The Newburgh Tournament.

THE tournament of the West Newburgh Gun and Rifle Association, Oct. 4, 5 and 6, can be classed only as a failure, though we regret that it was so. The local interest seemed to be astonishingly small. On the first day Mr. David Brown, the president, was confronted with the problem of running a tournament single-handed, no small matter when it is considered that there is cash, trap-pulling, refereeing, scoring, etc., to be attended to. However, with the assistance of the visiting shooters the details were managed after the best manner possible under the unfavorable circumstances.

On the second day the conditions were more favorable. The secretary, Mr. W. A. Kidd, acted as referee and squad hustler. Mr. John A. Wood, the captain, and Mr. George Weller also assisted.

Had it not been for the manufacturers' agents who were present, there would have practically been no tournament. Messrs. Norton, Parker, Banks, Fulford, Leroy and Glover did the bulk of the shooting. Mr. Gus Greiff was present on the second day.

Besides the regular programme, three special events were shot. No. 1 was at 25 targets, $1 entrance, high guns; scores as follows: Banks 22, Fulford 22, Parker 22, Leroy 24, Glover 21. The ties on 22 were shot at 5 targets and each tied on 4. Second ties: Banks won.

Special No. 2, 10 pairs, $1: Parker 17, Banks 16, Fulford 19, Leroy 16, Norton 10.

No. 3, 5 pairs, $1: Parker 8, Banks 9, Fulford 9, Norton 9.

Tuesday, First Day, Oct. 4.

Wood	..	..	..	..	..	..	11	11	..	..

Besides the regular programme, there were three extra events: No. 1 was at 20 targets, $1 entrance, expert rules; scores as follows: Banks, Glover, Leroy, Fulford and Taylor, 16 each; Parker, 13; Tallman, 18.

No. 2, 10 pairs: Banks and Glover, 14; Leroy, 15; Fulford, 18.

No. 3, expert rules, 25 targets: Banks, 19; Glover and Leroy, 22 each; Fulford, 23.

Trap around Reading.

READING, Pa., Oct. 8.—The coming shoot of the South End Gun Club, of this city, to be held Oct. 12, promises to eclipse any shoot held in this vicinity for many years. Thus far there are five teams entered in the trophy shoot, for teams of five-men each from gun clubs of the State. They are Mt. Penn Gun Club, of Reading; Shuler Shooting Club, of Pottstown; Keystone Gun Club, of Lebanon; South End Gun Club regulars and also their No. 2 team, called the Ponies. Teams are also expected to be entered from the West Chester Gun Club, Twin City Gun Club, of Royersford, and Spring City; Harrisburg Shooting Association and Pottsville Gun Club. The committee expect to throw about 5,000 targets from the magautrap, which will be used during the whole tournament. The management has been left to Arthur A. Fink, of Reading, who is working very hard to make the tournament be the banner shoot of management for the year.

Pottstown, Pa., Oct. 8.—The Shuler Shooting Club, of this place, held a practice shoot this afternoon, Capt. Wickersham carrying off the honors with 25 straight. Summaries:

First event, team shoot, for teams of four men each, 25 targets per man:

Smith's team—Smith 23, Shaner 18, Davis 19, Cole 18—78.

Grubb's team—Grubb 24, Wickersham 19, Saylor 17, Longacre 12—72.

Second event, teams of five men each, 25 targets per man:

Grubb's team—Grubb 21, Wickersham 22, Saylor 22, Longacre 16, De Witt 15—96.

Smith's team—Smith 23, Shaner 20, Davis 16, Cole 19, Guest 13—91.

Sweeps followed. The scores:

Events:	1	2	3	Events:	1	2	3
Targets:	25	25	25	Targets:	25	25	25
Grubb	23	20	..	Slonaker	17	..	16

Wickersham	18	25	..	Saylor	14	21	..
Guest	18	..	..	Longacre	..	18	18
Smith	23	20	..				

Seyfert, Pa.—The Keystone Gun Club, of this place, held a club shoot at David Lutz's Hotel. The principal event was the club shoot, 10 targets each man. The score of the club event: John Glass 7, Wm. Huffert 7, David Brown 6, John Quinter 5, David Lutz 4, Fred Brown 4, Frank Glass 3. Shoot-off for first: Glass 9, Huffert 8.

DUSTER.

Piasa Gun Club.

ALTON, Ill., Oct. 7.—Subjoined are scores of the annual amateur fall shoot of the Piasa Gun Club, of this city. It proved a disappointment as to attendance, and the club will accept this as an evidence that it is not advisable to cater to amateurs only. However, the sport was good, and some creditable scores were made. Messrs. Craig, of Woodson, and Riehl, of Alton, won the high average honors:

First Day.

WESTERN TRAPS.

Montgomery Ward Medal Shoot.

CHICAGO, Ill., Oct. 8.—Cloudy weather and a cool wind blowing out to the right quarter from the score were conditions that met the fourth medal shoot for the Montgomery Ward & Co. diamond emblem. There were eighteen entries, and the affair was, as usual, a very pleasant one. Owing to the growing shortness of the days and the cloudy weather, it was dark before the event was concluded, the shooting not commencing till about 2 o'clock and continuing till after 4 o'clock. It was decided to shoot off the ties next Friday, Messrs. Fletcher, Hollister, Eich, Alabaster and Barto all being tied on 20. Later it was discovered that Mr. Hollister could not be present next Friday, and at a late hour it was decided by Mr. Leffingwell, manager, that Mr. Hollister should be seen and if possible an earlier dater than Friday set for the tie shoot, all others concerned being willing to come at any time that would please Mr. Hollister. Whoever wins in the tie will be a new man to hold the medal, and it seems likely now that the man who can win it twice will be apt to own it, though it is the hope that twelve different men will hold it and be obliged to meet in a grand contest at the finish next January.

Some odd things came out in the shooting as usual. Comly, who once won the medal with a 12lb. gun, to-day appeared with a 6¾lb. gun. He missed his first bird, then ran 13 straight single-barrel kills in elegant style, and seemed a winner. Then he missed 2, killed 1 more, missed again, and withdrew back of place. Barto pounded along to his 19th bird, which he killed dead out. He got one handicap bird, which was all he needed to shoot to land him in the tie. Miss Porter could have gotten into the medal class by killing all her handicap birds, but missed 2 and scored 18 total. Dr. Shaw killed 10 straight, then missed 2 straight and sat down. Geo. Roll, who was limit man in the handicap, lost 3 and fell back of the medal. Geo. Thorne, who was only given 2 birds, came out with 18. Hollister, who had only 2 birds, shot in great shape and laid claim on the emblem, coming in with Eich, 2 birds; Fletcher, 5 birds; Alabaster, 3, and Barto, 2 birds. The wind was at times very fresh, and the shooting was not easy, the birds going well. Next time, it is decided, the shooting will be begun at 11 A. M., so that the event may be finished the same day. Following are the scores:

Geo Thorne, 28, 2	22022202222222220202	22	—18
W B Leffingwell, 30, 2	020220*2210112201122	22	—16

Glen Ellyn Live Birds.

To-day Si. Palmer invites a few friends out to his farm near Glen Ellyn, twenty-five miles west of Chicago, where each year he gives one of the slickest little shoots of the season. He has about 400 birds ready for the shooting. and he claims that these birds are the fastest that are ever trapped around Chicago. They are strong country birds, fresh caught and so trapped that they head direct for their native barn as soon as released. They are said to offer the keenest sort of sport.

Milwaukee Defeats Chicago.

The Chicago team of live-bird shots who this week went up to Milwaukee under the leadership of Sheriff Pease, in the expectation of taking the measure of the live-bird cracks of the Milwaukee Gun Club under the lead of W. D. Cantillon, failed of that laudable purpose. They shot at 25 birds per man, and stood for a tie, but Mr. J. E. Flanigan, of the Chicago team, missed a bird that had alighted on the ground and waited for the second barrel that never came, so the score stood Milwaukee 148, Chicago 147. The Chicago men are not satisfied, and in a couple of weeks will try it again. Following are the scores of the race:

Chicago.

Joseph Barto	1220121221111122222222221—24
James Pease	2120210102201202021221121—19
J J Healey	2201220122022222201112212—21
J E Flanigan	2222212222220202020022022—19
Robert Simon	1212112211021222121211111—24
R S Mott	0121200102001101201222112—17
D Dwyer	2122201222212220111221121—23—147

Milwaukee.

George Johnson	2222222221222011212221222—24
J Bush	1221012212122221121111111—24

H Roland	1001111211011020202121212—19
W D Cantillon	1212212112222120112212202—23—148

Charlie Budd's Shoot.

Charlie Budd's shoot at Des Moines this week drew out nineteen programme finishers the first day. Gilbert was apparently in his usual good form and carried off top average, 136, Hallowell close with 135, out of 150.

St. Louis K. C.

That long-promised team shoot between St. Louis and Kansas City is still in the future, though the local papers of each town declare the home team is spoiling to eat up the foreigners. We Chicago folks are in a position to give St. Louis advice about going up against those white men from the Kaw River, and our advice is: Don't!

Belle Meade.

Mr. W. R. Elliston, secretary, writes regarding railroad fares to Belle Meade shoot at Nashville: "Shooters are to pay full fare to Nashville, and when they buy their ticket have agent to fill out a regular excursion blank, stating that they are coming to Belle Meade to the shoot. When they arrive at Belle Meade, the writer will sign certificate, and on it they can get one-third rate back home."

The Man up a Tree.

The editor of the Maquoketa, Ia., Telegram seems to be a man of good fair common sense. This week he went to a trap shoot for the first time in his life, and began his education in trap matters. He saw the class shooting system at work for the first time, and naturally, to a man up a tree, it did seem a little strange and unaccountable. This is what he said about it:

"Bert Trout probably won the most money. In this particular he was certainly lucky, for more than once he carried off a bigger portion of the money than many who had far better scores. For example, take event No. 1 on Tuesday, in this he only broke 18 birds, while Young, Hipschen, Bittner, H. Brown and Brown broke 19 each. The latter, however, secured but 90 cents each, while Mr. Trout carried away $3.35.

"It does seem to me that is an idiotic way of dividing the moneys. Where three, for example, break 10, say, and secure first prize of, say $4.50, each receive but $1.50, while the next lower man, who breaks but 9, carries away $3. He should in reality be fourth, but in prize money he would fare much better than those who shot better than himself. There is one way of dividing the money, called the "equitable"; in this each person receives a percentage of the prize proportionate to the number of birds he has killed. This is fair to all alike, and this method commends itself at once to all. It is to be hoped that the Timber City Gun Club will adopt this method in future shoots."

My advice to the fellow shooters of that gun club is to let that editor man alone, for if he ever begins to shoot as straight as he can think, he will do them all up. He has arrived at the truth in the course of one afternoon. A lot of shooters have been at the game for twenty years and haven't got that far along yet.

Coming Events.

Sycamore Gun Club, of De Kalb, Ill., will hold its annual tournament Oct. 12-13.

Soo Gun Club, of Sioux City, Ia., will give a live-bird and ta shoot Nov. 16-17. Anything with Soo on it is good.

Lincoln, Neb., has a gun club known as the Capital City Club, which is among the main hustlers of the State. It captu the State shoot for next spring. The new grounds of the Ca City are now in order and the winter campaign is begun regular club events.

Nichols Gun Club, of Nichols, Ia., gives a two days' ta shoot Oct. 13-14. Equitable system.

Lewiston Gun Club, of Lewiston, Ill., gives its annual tou ment Oct. 21-22. Equitable system.

Waukegan Gun Club, of Waukegan, Ill., gives its annual shoot Oct. 14-15.

Cincinnati Gun Club, a great one, with a great future, ope this week its fall and winter campaign.

The shoot of the Daddy of them all, at Dayton, next w will be attended by a goodly number of the Old Guard. They not bar the Young Guard.

E. HOUG.

1200 BOYCE BUILDING, Chicago, Ill.

Chicago Challenge Trophy.

The contest between Silas Palmer, holder, and Dr. S. Sh challenger, for the Chicago challenge trophy is set for Tues Oct. 18, at 2:45 P. M., at Watson's Park, Burnside Crossing. A large attendance it looked for on this occasion.

Shooting and Fishing Trophy.

It is intimated that the Woodstock Gun Club, of Woodst Ill., are contemplating issuing a challenge to Eureka Gun C of Chicago, for the Shooting and Fishing trophy, recently won the latter club from the Garfields.

Eureka Gun Club.

The Eureka Gun Club held its weekly contest last Satur afternoon. The day was comfortably worm. A soft sunli and a mild left-quartering wind prevailed the entire time. attendance was good. The club's target season ends this mo and the medals in classes will be awarded for highest and sec highest averages on the ten best scores of the season. A now appears, there are several members very close for Class Class C is about cinched, and F. P. Stannard has first claim Class A. Among those present who participated in to-day's sh was Col. A. G. Courtney, of the Remington Arms Co., dropped in to see the trade on his way South. He shot in g form at a 90 per cent gait. The topnotcher of the day was Hoss Stannard, who broke 98 out of 100, missing his 11th and 9 Mr. Stannard has been doing excellent shooting for some t past, and it will take a good one to defeat him on targets.

The events were largely shot on the magautrap. The scores:

Events:	1	2	3	4
Targets:	20	15	15	25
F P Stannard	19	14	15	25
A G Courtney	16	14	14	21
V L Cunnyngham	17	12	12	24
J S Houston	15	13	11	..
A C Paterson	..	12	..	..
C C Hyde	..	..	5	..
F M Smith	..	..	..	5
De Maris	..	..	..	8

Events:	1	2	3
Targets:	20	15	1
A W Adams	17	14	1
Dr Morton	16	..	.
F Hollister	14	..	1
Dr Shaw	15	13	1
E M Steck	..	9	.
W D Stannard	..	15	1
C W Carson	..	12	.
W F de Wolf	..	9	1

The trophy event was at 25 targets. F. P. Stannard won C A, V. L. Cunnyngham won Class B and A. C. Borroff Class C.

Class A—E. M. Steck 17, F. P. Stannard 25, A. G. Courtney A. W. Adams 23, A. C. Paterson 18, W. D. Stannard 22, J. Houston 21, Dr. Shaw (visitor) 23, F. Hollister 16.

Class B—C. W. Carson 19, C. C. Hyde 12, V. L. Cunnyngh 21, W. D. de Wolf 17, J. Walters 16, R. B. Carson 16, Morrey

Class C—A. C. Borroff 19, De Maris 15.

The Eurekas desire to extend to the members of Garfield Club, whose grounds closed Oct. 1, the privilege of shoot on their grounds during the month of October, at the sa rate as its club members—targets at one cent each.

Homing Pigeon No. 98—724 is reported by a Connecticut respondent, to whom it came in a crippled condition on S 26; and it died the following day.

H. C. H., Little Mountain, Ohio.—Is the gray squirrel a mi tory animal? I have often wondered why it cannot be fo in this vicinity until about Aug. 15. Ans. The gray squir make remarkable migrations, congrgating in the autumn in mense numbers and moving off in the same general direct

A. H. P., New York.—Is not the bird commonly and regul known in this vicinity as a shitepoke a heron? Is it not the l green heron? If not a heron, what is it? Ans. It is the gr heron (*Ardea virescens*). Coues says of it: "This is a pretty and engaging little heron, in spite of the ridiculous name by which it is so well known to the great unwas democracy of America." And Wilson wrote of it: "This c mon and familiar species owes little to the liberality of pu opinion, whose prejudices have stigmatized it with a very vul and indelicate nickname; and treat it on all occasions as wo less and contemptible. Yet few birds are more independent man than this; for it fares best, and is most numerous, wh cultivation is least known or attended to; its favorite reside being the watery solitudes of swamps, pools and morasses, wh millions of frogs and lizards 'tune their nocturnal notes' in chorus, and undisturbed by the lords of creation."

PUBLISHERS' DEPARTMENT.

The Rod and Gun.

THE hunting grounds and fishing streams of the two Virgi are among the most attractive to the true sportsman in United States, not alone for the quality of game they offer, also for their accessibility to the great cities of the East West, the light tax they impose upon the purse, and the plea given an outing among Virginia mountains by their great sc beauty and interesting historic associations. The circuit of miles around Clifton Forge, which embraces Bath, Highland Alleghany counties, and the great Virginia Springs Basin, is questionably the best mountain deer region between the Ro Mountains and the Adirondacks. Speckled trout abound in the streams of both Highland and Alleghany counties, while are abundant in Cow Pasture, in the James between Clifton F and Natural Bridge, and in the Greenbrier River, in the vicinit Fort Spring and Alderson. For further information add H. W. Fuller, General Passenger Agent Chesapeake & Ohio R way, Washington, D. C.—*Adv.*

THE Rochester Machine Tool Works, of Rochester, N. Y., recently shipped one of their larger size Buckley Patent W Tube Boilers to a party in England, which is designed to c a working pressure of 250lbs. per square inch. This boiler tested to a hydrostatic pressure of 600lbs. per square inch out showing signs of weakness.—*Adv.*

THE writer would like to communicate with some one knows of a good partridge ground within easy traveling tance of Buffalo, N. Y., and who can furnish a good dog for purpose. Would want to hire services of both dog and ow Address Joseph Harris, over No. 272 Main street, Buffalo, N. *Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 22, 1898.

VOL. LI.—No. 17. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

And what sport doth yeeld a more pleasing content, and lesse hurt and charge than angling with a hooke, and crossing the sweet aire from Ile to Ile, over the silent streames of a calme Sea; wherein the most curious may finde proft, pleasure and content. Captain John Smith, 1616.

IN OCTOBER.

THE days of the year dear to the sportsman's heart are these—October days, full of soft, hazy light, mellow sunshine and change in the great transformation time of nature, when the earth has completed its labors for a season and lies by in rest. There are days which are gratefully warm, others which are bracingly cool, as the struggle between the sun god and the frost king for the time being favors the one or the other. The full sway of the latter is presaged, for his few magic touches have already wrought wonders on the garbs of field and forest, making them resplendent in bright colorings of browns, yellows, scarlets, purples, dull greens, with an infinity of tintings and shadings, all in the most exquisite harmony whether in mass or in detail, pleasing to the beholder beyond the power of words.

To the sportsman, these days bring the realization of many expectant weeks. He has in mind a lovely nook where the alder or other favoring cover grows, wherein the ground is damp and slightly wet in part and shaded. Therein are a few woodcock to be taken—birds of beauty and mystery, any one of which to the thorough devotee is worth more than precious jewels or fine gold. No small skill is his who can bring this bird of darkness to bag, a trophy of sure eye and quick and cunning hand, and a morsel to delight the palate of the epicure of epicures.

Or the fancy of the sportsman may take him into wooded swamps, or into the densest thickets of hill and vale, valley and mountain, where the fallen timber and rugged ledges are spread in never ending profusion, in the home of the prince of birds, the ruffed grouse. In haunts secluded from man, this being of supernatural cunning and swiftness of wing can defy man and dog and gun, if all do not work together as one machine which is controlled and guided by a master mind. The dog must be alert and careful, yet without hesitation or over-forwardness, if he would cope with the beautiful and bold bird of the forest; while the man must be equally alert, silent and self-possessed, qualities attained by but few, to say nothing of the matter of skill.

Or mayhap the choice of the sportsman is the beautiful bird of the fields and woods, which brings so much of good shooting to all the lovers of the dog and gun. He is the bird of all the sportsmen, is this pretty, gamy quail, with his beautiful colors and swift flight. The gunner of moderate expertness has more or less pursuit of him, for many times he will deign to make his play against the sportsman in the open. The sportsman of the highest skill will in him find a worthy object, for at other times he seeks the cover, and when filled with the strength, beauty and daring of the autumn he is a good second to the prince of birds.

The ducks, in burnished garb, strong and big and swift, have begun their southward home-coming, and in due time, according to place and season, they bring joy to him whose sport is best taken in a boat, or over decoys, or on the pass where only the highest skill can cope with the swiftness of the birds.

There is beauty everywhere in nature. For the wheelmen in the leaf-besprinkled roads through richly-colored fields and forests. For the knight of the camera, everything is dressed and composed for his special edification and use. For all people who love nature there are beauties of wood and field spread in lavish profusion everywhere.

THE NEW ORDER IN MARYLAND.

IT is a decided satisfaction to have warrant for the record that the Maryland State Game and Fish Protective Association is steadily making progress toward the attainment of its purposes. President Geo. Dobbin Penniman reports that the operation of the game warden system provided by the last Legislature is proving extremely successful. During the first year after the appointment of the game warden and his deputies a great many arrests were made, because the people could hardly appreciate the fact that the game laws in Maryland were at last to be taken seriously and rigorously enforced. This year there have been comparatively few arrests, and very few complaints of violations of the law. The violations which have occurred have been more through ignorance of the sweeping provisions of the general game law, passed by the Legislature in 1898, than from the desire as a rule to violate the law. Governor Lowndes has been extremely active in supporting the Association, and his assistance has counted for much. With an efficient game warden, Mr. Robert H. Gilbert, and with the aid of over 200 deputy game wardens, scattered throughout the State, Maryland has been changed from a State where the game laws were honored rather in the breach than in the observance to one of the best protected States in the Union.

One serious defect in the Maryland game protective system is found in the local jealousy which has prevailed for years in the Legislature, which gives a different game law for nearly every county. The general game law includes at present only a few counties, but it is drawn on a broad basis, and from the increasing sentiment through the State toward a uniform season there is no doubt that at the next session of the Legislature the Association can bring in a great majority of the counties which are at this time under their local laws.

THE DEATH PENALTY AND ROBINS.

NEAR Paterson, N. J., last Saturday, an Italian engaged in robin shooting in violation of the law was apprehended by a game warden, who commanded him to surrender his gun. Instead of doing this, as the warden relates, the gunner made a quick move and covered the warden with his gun, and the warden thereupon drew a revolver and killed him. The affair has provoked just the newspaper comment that was to be expected. Shooting robins, it is said, is at worst a trivial offense; to inflict the death penalty for violation of the game laws is a dreadful thing. It is dreadful indeed, or would be if ever done. But by no process of reasoning can the act of this New Jersey warden be described as an infliction of the death penalty for robin shooting. The warden shot the man in self-defense, either actual or mistakenly so supposed. If his own personal peril was real, his act was justifiable; if he was mistaken as to the Italian's intent—and it may be said as to this that even the calmest and coolest of us all might draw a wrong conclusion when looking into the muzzle of a shotgun in hostile hands—the impelling motive of the deed was none the less that of self-defense. The relative importance or unimportance of the game laws has nothing whatever to do with the case.

In fact, the nature of the original offense itself was not involved and has no place in determining the justifiable or unjustifiable character of the warden's course. Precisely the same principles would govern had the offense been horse-stealing in the country, or the blocking of city traffic with a peanut stand. The circumstance which led to the killing was the menacing resistance to arrest, the pointing of the gun, which action the threatened officer affirms he understood to mean for himself that he must shoot or be shot. The simple and only fact to be decided is as to the reasonableness of the plea of self-defense; and it must be judged here just as it would be had there been no robin shooting whatever, or had the warden been a private citizen and not an officer.

But the game warden was an agent of the law, engaged in performing his duty. When he apprehended a gunner violating the law it was his business to arrest him. Had the lawbreaker submitted to arrest, he would have been taken before a justice and upon conviction would have been fined $20 and costs, or in default of payment would have been jailed for a stated time. This is the New Jersey penalty for robin shooting. It is the only punishment provided by the law or imposed by the courts. The death penalty has never been inflicted in New Jersey for the offense of robin shooting. It is not likely ever to be. But in New Jersey, under the existing regime, it is recognized that the game laws are intended to be enforced; they will be enforced; and human nature is such that wardens engaged in arresting law violators will, when confronted by the muzzles of shotguns, be very prone to shoot in self-defense. When this may happen their course is not to be prejudged by newspaper talk of the dreadfulness of the death penalty for shooting robins.

SNAP SHOTS.

Commissioner Wentworth, of New Hampshire, wrote in these columns last week that it was the intention of Mr. Austin Corbin to organize a club of sportsmen, to whom would be extended the hunting privileges of the Blue Mountain Forest. Mr. Corbin tells us that such a club has already been formed. The plan has grown naturally out of the conditions which prevail. The owners have had very little time since the death of the late Mr. Corbin to enjoy the resources of the forest, and as the game is increasing uniformly and with great rapidity, it has become absolutely necessary to take some steps to keep down their numbers, and this is now to be done by enlarging the number of persons entitled to the privilege of hunting or fishing. The project contemplates a five-year membership, with the privilege of shooting at least one deer and two wapiti a year, and such other game as may be decided by the governors, who will consist of an equal number of the proprietors and the new members. There will probably be no limit to the shooting of small game, and the privileges as to large game will depend upon its supply and condition. The initiation fee and annual dues are to be devoted to the maintenance of the preserve, the increase of small game, and possibly the erection of a substantial addition to the central station, where are located kennels, stables, etc., and which will be the site of the club house. In addition to this place, the various camps throughout the forest will be available for the use of members—the main purpose, we are told, being to offer to congenial friends simple but comfortable quarters, and as much liberty in the forest as is consistent with its future development.

Virginia too has the disadvantage of local county jealousies in the game law; as a correspondent writing from that State well puts it, in some counties a man would have to carry a memorandum in his hat to remember when he could and when he could not "shoot certain game." Our correspondent endeavored last winter to introduce the non-shipping provision; and realizing that it would be impossible to secure the passage of such a measure for the entire Commonwealth, drew a law for his own county only, had it printed, got a petition seven and a half feet long signed by influential citizens, asking for its enactment, and took it to Richmond himself. "But I could not get it introduced," he writes, "because our member of the Legislature thought it might be a bad political move; in other words, that it might offend a certain class of voters who shot and sold game." This is not the last of such effort, we may be sure. The time is coming in Virginia, as it has come already in many other States, when members of the Legislature will be governed by the interests of the public, and not by a "certain class of voters who sell game."

The Vermont Commissioners, in a paragraph quoted in another column, give their opinion that the game interests of that State require the abolition of market shooting. The recommendation is based upon a recognition of the fact that the traffic in game is the agency which is promoting destruction out of all proportion to the public interest. This is only another way of saying that with unrestricted sale of game the common advantage of the citizens of the State at large is sacrificed to that of a class. To prohibit the sale of game is to promote the greatest good of the greatest number. We hope to see the FOREST AND STREAM Plank incorporated in the Vermont game law in the current session of the Legislature.

The Sportsman Tourist.

In the Louisiana Lowlands.—V.

BY FRED MATHER.

[*Continued from last week.*]

Doctor Gordon found that the Colonel had merely sprained his ankle, but that it might take a month for him to recover, and forbade him to indulge in another bear hunt, even in the saddle, until he gave permission, and after our errand of mercy in caring for the wounded dogs we spent the evening in the Colonel's room, where the Colonel insisted on my repeating all the stories I had entertained him with, for the benefit of the Doctor, who, much to my surprise, not only enjoyed them, but related a few himself. His excessively formal manner, to which I took a dislike at first, thawed out considerably, and it was evidently not affected.

"Sir," said he to me, "I am very glad that you have decided to remain here a few days longer, and I hope to have the pleasure of shooting with you, sir. I came down into this country to visit old friends and enjoy a little hunting, and only arrived yesterday. I had notified the Colonel that I would drop in on him this evening, and my messenger brought back word that the Colonel was on a bear hunt, and had been injured, and that is how I happened here when you arrived, sir."

My problem now was to decide on the Doctor's nativity. In those days my ear was good on dialect and accent. Strictly speaking, the Americans have no dialects, but there are several accents, forms of pronouncing words and the use of local phrases that are peculiar to certain districts. This is not so much the case now as it was years ago. I must solve this riddle as a pleasant task, for no doubt the Doctor would tell me all about it if asked. He "came down into this country," therefore his home was north of it. His name denoted that some ancestor was "frae the land o' cakes," but Dr. Gordon was evidently born in America, but where? There seemed no marked accent to betray him.

The Colonel was lying easily, with his injured ankle well bandaged and protected from the weight of the bed covering by a light frame. Occasionally the Doctor would remove the wrappings, wet the ankle with some embrocation and again wrap it up. Then he would prepare something for the patient to take internally, and, in order to be sure that it was correctly compounded, he took a dose himself and insisted on my doing the same, "for fear," as he said, "your ankle might be sprained." There was lemon and sugar in the prescription, and it was not in the least disagreeable.

The talk had run in various directions, shooting different kinds of game, fishing for many different fishes, in different States and Territories, when, after applying another soothing embrocation, the Colonel suggested: "Tell us about that swan shooting trip, Doctor. I know that our friend will like to hear it."

"Certainly," said I.

The Doctor's Story.

"It's not much of a story," the Doctor remarked, "but there's one foot of the swan, and what became of the other I never could find out." And he drew from his pocket a pouch made of a swan's foot. The nails were left on, the bones taken out, and the skin split between the toes and the edges, and then tanned. A silken top with a shirr-string had been added, and it was a most unique tobacco pouch.

"Was that all that you got from that swan?"

"Yes, he left me that as a memento. You see it was this way. It was in the first year of the reign of President Buchanan; let's see, that was in 1857—yes, sir, 1857. I was then thirty years old, and had just graduated, but was in no hurry to settle down to the practice of medicine, because my parents were well off, and it was not necessary that I should. So, in the autumn of that year I joined two young sawbones, whose needs were no more pressing than mine, on a duck shooting trip to Beaufort, on Pimlico Sound, in North Carolina. We tried the swamps about Pantego for ducks and frogs without getting many ducks, for they were difficult of approach, but the frogs were large and fine. Then we shifted to the Pago River, and only found a lot of bluepeters and other worthless birds, and we reckoned it was best to go down on Pamlico Sound, where the natives said that not only ducks and geese were feeding, but swans also. We hired a native who was a fisherman, gunner, oysterman and beach-comber, as the season or the occasion required, to take us in his little sloop, which had a little cabin in it. He was to sail us where we wanted to go, provide fresh water, and do the cooking when necessary for two dollars a day, which was more of a sum then than now. We laid in provisions, such as we could get, ham, bacon, eggs, biscuits, etc., and started in the good sloop Eliza Jane, Captain Bill Smith. He had a quantity of fishing tackle and wooden decoy ducks, and the outfit was complete.

"We sailed about for a week, shooting from blinds on the islands, and trading ducks for provisions at the little settlements, where a hen's egg was worth as much as a duck, but that didn't trouble us. Sims fell overboard while landing a big fish, and Abbott tried to rescue him with a boat hook, but only rescued the seat of his trousers; Capt. Bill did the rest by lying on the deck and catching his hand. Fortunately the Captain was a bachelor, and was handy with the needle. A week passed and found us in a blind on Roanoke Island an hour before daylight, and a heavy fog covering everything. It was very still, and we could hear movements of fowl on the water near us.

"An hour is a long time in a blind on a raw morning, but we kept perfectly still, for Capt. Bill had whispered 'swans.' His practiced ear had detected some sound that ours did not. Just as the sun came up a puff of south wind suddenly lifted the fog high enough from the water to show a flock of swans at a long shot that were startled at finding themselves so near shore, and were swimming away. Four double guns sent messengers after them, and the flock started to take wing, but one lay on its side in the water, apparently dead. I jumped into the skiff and Capt. Bill rowed me out. The flock was pounding its great wings on the water a quarter of a mile away, for it takes a swan a long time to get on the wing, and I was watching them gradually rise when Bill said: 'Take him in.' A leg lay stretched toward me, and I caught it and began pulling. At this the huge bird gave a flop, left its foot and part of its leg in my hand, and at the same time struck me in the eye with the tip of its wing, righted itself and started off after its fellows. And not a gun in the boat! I could not have used one, for my eye pained me so much, but Bill spoke feelingly on the subject, much as an army mule-driver does when the pontoons are stuck in the mud. As we neared shore he called out: 'Boys, Gordon didn't want a whole swan, so he only brought in a drumstick.' Oh! the pain in that eye, and the other was weeping so with sympathy that I had to be led ashore. Cold-water applications were the best that could be done in that place to keep down inflammation, and when my two medical friends gave the order to start for home I knew that the case was serious. I lost an eye, but gained a tobacco pouch. My friends decided that the swan's leg had been broken many days before, and was only hanging by the skin, and that a shot from our guns had struck it in the head and stunned it. That seemed to be a reasonable explanation, and we accepted it."

We all examined the pouch again, as now it had a history, and I discovered that a date had been written on it, but was now indistinct. I had noticed the Doctor's glass eye when we first met, but it was only to be noticed in certain lights and in some expressions of his countenance.

I had followed his story closely, watching every word for an accent that would betray his nativity, and the result was: He pronounced the President's name after the Virginia fashion "Buck-hannon," and not "Bewcannon," as Northern men do. He said "well off" instead of "wealthy," and that's New England. "Autumn" instead of "fall," English and perhaps parts of the South. He said "Bewfort" and not "Bowfort" when he spoke of Beaufort; that's Carolinian. He "reckoned," which is Western, and called coots "blue-peters," but that's a local name along the sounds where he was shooting. The problem was not solved.

The Colonel's Story.

After the Doctor had finished the tale of the swan's foot and the lost eye, he at once attended to his professional duties, bathed the ankle, bandaged it, and administered the internal medicine. The patient was propped up in bed, and said: "The Doctor is a philosopher, who takes things as they come, and doesn't worry about them after the temporary pain has past. His swan's foot pouch is unique and useful, but few men would care to make the exchange he speaks of in such a light manner."

"One might as well speak lightly of it," replied the Doctor, "for the thing was done, and anything I might say to-day could not alter the fact. If I had been consulted about the trade before it was consumated, it is probable that I would have declined the offer of a single swan's foot for an eye, and might have demanded a whole swan, or a thousand swans, the number being based upon the day's market quotations of swans and eyes. The exchange was not profitable to me, and it is doubtful if the swan gained much, but when a transaction is closed, as my eye was, and there is no chance of reversing the conditions, then I believe in taking it as one does the every-day ills of life which are forgotten on the morrow."

"In other words," said I, "the Doctor does not believe in wasting tears over a pail of spilled milk when the grocer will sell you cans of the condensed article, if you have the price."

"Exactly so," the Colonel replied, "but all men's minds are not built on the Mark Tapley model." And he was silent for some minutes. I fancied that he was thinking of his son George, who was killed before Atlanta, and his younger son, Terrill, who was wounded at Port Hudson and came home to die. Perhaps the Doctor thought this, but our eyes never met while our host was meditating. Soon he remarked: "It is not wise to meddle with any large wild animal that has been shot and seems to be dead. Of course that is an axiom which is as plain as that two and two make four, but men forget it, just as Dr. Gordon did when he exchanged an eye for a swan's foot. We all make blunders, and I never grieve over them, they are personal matters that could have been avoided; but—"

"Now, Colonel, let me bathe your ankle again," said the Doctor, and he did it; "you were going to tell us a story of some kind about wounded animals; let us have it."

"Yes, yes, I forgot; pardon me. It was just an ordinary deer hunt in the swamps and canebrakes, when I was a boy of fourteen, just the age of my grandson, 'Jack,' who seems to be the Major's favorite. Let's see, that was long ago; but I remember that it was the year in which Andrew Jackson was installed president for the second time."

"In 1833," said the Doctor.

"It was in November of that year, and I was a boy of fourteen, as I said, and my father organized a big deer hunt. Deer have always been plenty about here; but in those days there were more than now, and all the planters were sportsmen, and each would have a meet on their own estates once a year, and join in a grand time. There would be fifty or sixty men from perhaps twenty plantations, a hundred or more hounds, and some dogs of mixed ancestry, with drivers, body-servants and an assortment of darky boys of all ages, who managed to get leave to come on one pretext or another. On such a hunt there might, during the three days it usually lasted, be fifty or sixty deer killed. They were gathered by the negroes and after being dressed were taken back to the plantation. The dogs were fed on the neck and fore quarters, so that at the grand barbecue on the last night there was no meat wasted.

"I had learned to use a rifle, and had obtained consent to go with the party on my first hunt. When I mounted my horse, as the head huntsman blew his horn that morning, I wondered why the party was so slow in starting. It seemed hours; it may have been twenty minutes. The dogs, strangers to each other, were fighting and the negro drivers were plying their whips, and all was excitement. Finally father and his friends came out of the house, where they had been planning the hunt, leaped to their saddles and we started.

"Then I noticed that the party was divided into four sections, and that two of the drivers were white men, overseers on the plantations, who loved the hunt. As we were from six to ten miles west of Alexandria, on Red River, the parties took the four points of the compass. We went west to the first crossroad, and then turned south, and the dogs of our division were put out. A dog here and there bayed on a cold track, and the different packs of dogs seemed to separate from the dogs that they did not know. Here was a pack from one plantation in full cry on a fresh track, there were several hounds tonguing in an uncertain manner, while yonder was an occasional note from a hound on a cold track, but who had hopes. Men had golloped down this road and up that, until I was bewildered. I fully understood that each horseman was to use his own judgment and keep the roads parallel to the movements of the hounds when the deer were in the canebrakes or the thickets, keeping ahead of the hounds and only joining in the chase when the deer took to the tall timber or the open country, where a man could ride. We proposed to shoot the deer and not to have the hounds run it down, in the English fashion, hence every gentleman carried a rifle.

"I had been keeping in advance of some hounds on my right, which were running in brake and thicket, when I came to a crossroad and went down it a few rods, thinking to get a running shot as the deer crossed. A great oak on my right, close to a rail fence, gave a grand shade, and here I could see the deer as he crossed the road within shot, as it appeared, from the voices of the hounds. My rifle lay easily across the saddle, and I felt sure of a shot on the jump, hit or miss. My horse had the rein on his neck, and was nibbling the grass. Like lightning from a clear sky, there was a crash, a start, and I knew no more.

"When my senses returned I was in bed with a broken leg, a broken arm and the scalp from the back of my head torn loose. I learned that a big buck had leaped the fence where my horse was grazing under the oak and had cut his quarter with a hoof, and this naturally started him on a run; I was thrown and dragged, but fortunately I wore low shoes, and the left one, which hung in the stirrup while my scalp was torn, came off and left me in the road until I was picked up. The horse had given me quite a severe cut, and I spent some weeks in bed with the broken bones, and that's all there is of the story."

Concerning Things Theatrical.

"Colonel," said I, "your story lacks a proper ending. There should have been a historian there to picture the grand barbecue which wound up the hunt. The deep pit with glowing coals, which were the result of cords of wood burned while you were hunting, the wagon loads of roasting ears and all the accessories of a grand barbecue, including the songs of the darkies and their feasting and dancing. As a wind up, that part of the programme is a fitting afterpiece, not exciting, like the hunt, but more amusing."

"My idea exactly," the Doctor remarked, "but from what you say it is evident that your notions of the sequence of amusements is that of a past age, for now there is no afterpiece at the theater. When I was a boy not many years older than you, the play was the thing, the *piece de resistance*, and a farce followed as dessert. At the old Bowery Theater I remember Ned Forrest in the tragedy of 'Jack Cade,' followed by the farce of 'Lend Me Five Shillings,' but if those plays were billed to-day the order would be reversed, and the farce would be called a 'curtain raiser.' There are tastes in matters theatrical as well as in other things; for instance, see how the minstrels have departed from the original darky songs and humor, until—"

Here the Colonel broke in with: "The theater is all right if the play is good, but I went to see some minstrels once and found a lot of white men who had blackened their faces, and one of their songs was:

> "My darling Nellie Gray,
> They have taken her away,
> And I'll never see my darling any more."

That was too much for me, and I left my seat in disgust."

The Doctor winked his good eye at me and asked: "Wasn't the singing good?"

"The voices were excellent, sir, but the sentiment! The idea, sir, of such a thing; making a heroine out of a colored woman may be all right in some places, but not in Louisiana, sir." And the Colonel groaned at the pain in his ankle, which he had disturbed, and the Doctor attended to it.

The Doctor had, as we became acquainted, dropped the dignified "sir" when he addressed me, and I was amused to see how the Colonel quickly assumed it when he was disturbed. And then the Doctor was familiar with "the old Bowery pit" in his youth—in those days, when the Bowery represented all that was picturesque in New York City; when Chanfrau played "Mose," the rowdy volunteer fireman, and when the "pit," now the orchestra circle, was the cheapest part of the house. I looked at the Doctor curiously, but dropped my eyes when his met them. The riddle was unsolved.

"There will be a corn shucking to-morrow night," said the Colonel, "and as both of you seem to be fond of that sort of thing, I propose that you go. It will be on the next plantation, and hardly a half-hour's ride. No, no; never mind me," at a motion made by the Doctor to say something, "Old Tom will only be too glad to come up and bathe my ankle, and spend the evening here until you return."

Going to the Shucking.

We passed the next day riding, pitching quoits with the boys, and in playing cribbage. The young moon was just visible before it followed its master below the horizon as we four mounted our horses and started for the shucking. The boys were naturally on the lead, but we older men walked our horses and talked, I ever on the alert to solve the problem.

Said the Doctor: "Of course you have seen that

the Colonel's world is narrow and is bounded by prejudice on all sides."

"Partly true," I replied, "but he is not as narrow in his views as you may think, nor are his prejudices as strong as you judge them. In proof of this I am here as his guest, and I am what is called a 'Yankee,' who fought in a war which cost him his two sons and left him almost a financial wreck. No, Doctor, I reject your estimate of the Colonel, although you are an old-time friend of his, while I have known him barely a fortnight. He has strong prejudices, and most men have the same. His are in the direction of his personal afflictions, and are so natural that I have the greatest respect for them. He lost everything he held dear in a cause which espoused heart and soul, and when I try to put myself in his place, and to think as he thinks, I am not a bit intolerant of his opinions, although I do not agree with them."

Then, for the first time, I became aware that the Doctor was studying me; that was a proposition that had been thought of, but now that it was evident that I was regarded curiously, I hastened to dispel any mystery about myself, for there was none.

"May I ask how you, a Yankee soldier, came to be the guest of Colonel B., and not only his guest, but also holding the esteem of his widowed daughter, Mrs. H., who has told me that you have roused her father from his despondency, and thereby, as one might say, brought sunshine into the household?"

"Nothing easier to answer. I happened to come down on a Red River steamer with the Colonel some weeks ago, when he refused my advances on the forward deck. Then a little girl fell overboard, and I jumped in and brought her out. The Colonel saw it, and asked me to his room to dry off and take something hot; and while doing these things I happened to tell him some old stories, new to him, and he opened his house to me. As he was fully aware of my service in the Civil War, I deny your allegation that he is narrow-minded and that his world is bounded by prejudice, and in the terms of the ancient joke, 'I defy the allegator.' You are more a man of the world than the Colonel, but the Colonel has also the trait of discriminating between a cause and an individual, as is instanced in 'David Copperfield.'"

"I see," said the Doctor, "you are welcome as a man and a sportsman, who has by some means or other raised our host out of the depths of himself; his daughter has said as much, and I add my testimony to hers. I come down here occasionally in the hunting season, but not since the war began have I seen the Colonel laugh before last night. You must stay here until he can get out of bed, and we'll do a little shooting."

"Can't do it, Doctor, much as I would be pleased to, but I am not here for pleasure, as you are, but have duties to perform for my employers, although I am allowed the largest liberty in the disposition of my time, and while I have finished my work on Catahoula Lake, I must go to the rivers flowing into Lake Pontchartrain and collect the aquatic fauna there."

By this time we came in sight of the great fire where the corn shucking was to be held, and our interest centered in that. Pausing on a mound, we could see the torches of bands of negroes which were coming from the different plantations, and occasionally could hear a note or two of their chants as the light wind drifted them our way.

The Doctor started on, and I followed. We neared the plantation, and he halted and said: "There'll be more fun to-night than you'd find at a dozen wakes." The problem again confronted me. "Wakes" are a remnant of Irish heathenism which the Catholic Church has not been able to eradicate. The wake may occur, but is not common in the South, and again I marked Dr. Gordon down as from New York or the East, for the Irish had hardly penetrated beyond Chicago in those days. I was noting every word he uttered.

When we gave our bridles to the boys we were welcomed in true Southern hospitable style, a style which was in vogue in the North when the same conditions prevailed, for civilized man is the same the world over. In isolated communities a man who bears the stamp of a gentleman is welcome, in urban districts he must prove his title.

The boys had heralded our approach, and as guests of Col. B. nothing was too good for us.

[TO BE CONTINUED.]

Errors in the Official Adirondack Map.

Editor Forest and Stream:

The State Forest Commission map of the Adirondack forest and adjoining territory, dated 1893, is a handsome work, laid off on a generous scale. It measures more than 5ft. in length by about 6in. less in breadth, and its scale of 2in. to the mile gives opportunity for detail that is lacking in smaller maps. Unfortunately the map is in many respects a disappointment, and its chief value is confined to the one particular of showing State lands as distinguished from private holdings.

In the matter of woods and trails, location of natural features and names, the map contains many errors, and a small map such as Stoddard's is of greater value for the traveler. Here, for instance, in a small section of Essex county, are half a dozen mistakes in names. Whaton's Bay for Whallon's Bay; McComp Mt. for McComb Mt.; Shanly Brook for Shanty Brook; New Comb for Newcomb P. O.; Resiconia Mt. for Resigonia Mt., and Hopkins Park for Hopkins Peak. In the matter of roads, well-traveled ones are omitted, while roads of lesser importance are given. A tourist using the L. A. W. Road Book of the State in conjunction with this map would be sadly puzzled. As a single instance, there is no road on the map connecting the important towns of Whallonsburgh and Essex, though, as a matter of fact, there are three separate routes between the two places.

One of the roads from Whallonsburgh to Westport is given on the wrong side of the Boquet River.

As to mistakes in the location of natural features, an instance of wholesale errors may be found in the Roaring Brook tract, near the boundary of Totten and Crossfield's purchase, and the old military tract east of Keene Valley. This is a mountainous tract, bounded by the Au Sable and Boquet rivers, and various tributaries of these streams.

There are seven mountains shown in this tract, and of these only one, Mt. Baxter, is laid down in an approximately correct position. The other six are all too far east, and this is in a general way proved by the fact that the Giant, the chief mountain of the group, is placed east of the sources of the Roaring Brook, which empties into the Boquet River. There are two Roaring Brooks, it should be stated, in this tract, the second running west into the Au Sable River. If the map were correct, tourists climbing the Giant by the regular trail from the west would have to ford the head waters of the Boquet Roaring Brook, but as a matter of fact all the courses of this stream rise east of the Giant.

Beede Brook (unnamed on the map), which empties into the Au Sable, has its source around the northern shoulder of Giant, between that mountain and Green Mountain, but on the map the watershed is shown as pitched in the opposite direction. Moreover, Knob Lock Mountain is shown east of the unnamed brook, which enters a branch of the Boquet near Peter Liberty's house, whereas, as a matter of fact, it is west of this stream. The summit of Bald Mountain is shown to be within two miles of New Russia, whereas it is nearer four.

To sum up in a general way, a glance at the map would give the impression that the southwestern part of the Roaring Brook tract was low country, and that all the high mountains were in the northeast portion. In reality the direct opposite is the case, the mountains culminating to the west and south. Incidentally the small pond lying at an elevation of 3,500ft. between the Giant and Bald Mountain is left out, though shown on Stoddard's map.

I have given some specific instances of errors that can easily be verified. The chartographer of what is now the Fisheries, Game and Forest Commission of New York had at his disposal a wealth of official maps and field notes from State surveys. Verplanck Colvin's work in the Adirondacks is too well known to need comment. Its accuracy is unquestioned. Why was not this material put to better use? The result has altogether too much the character of an uncorrected proof sheet to be worthy of the great State of New York.

J. B. BURNHAM.

El Comancho Ghost Dancing.

I HAVE have been cooped up among the white folks of this Eastern country for a year now, and the longer I stay the more discontented I get. I feel just like the bears out in Lincoln Park, I guess, for they spend their days in pacing back and forth, always to and fro, before the iron bars of their den, until they have worn the stone floor smooth with their feet, and great patches of short fur are on their sides, where they have rubbed against the bars as they turned in their ceaseless patrol.

I have learned the definition of "chained to business," and I'm sorry.

However, there are a few spots where a ray of outdoor life enters my present situation and helps to make things bearable.

The white folks here have a queer way of politely listening when they ask you for a story, and then they also look at you in a way that says "You are lying" when you tell them about the high mountain peaks, the gray sage desert or the silent pine woods. Mind you, they are too polite to tell you right out that you lie, but they say it with their eyes, and to us outdoor folks who have listened to the silence of the air at an elevation of 14,000ft. above this old world, who have sweltered in the killing heat of the sage deserts, who have wandered through the great forests until we knew the meaning of its voices and have tossed about the sea with only the waste of water to meet the dome of the sky above us, and know about the things we speak of from experience, this look is worse than the words, for it gives us no chance to strike back. No "eye for an eye or tooth for a tooth" there, you know.

It rankles and the innermost soul of the narrator rebels against the white folks, for he reads the signs he sees just the same as he reads the signs of the wilderness and knows what passes therefore in the listener's mind. Verily this world is not all annexed to Chicago yet, I am happy to say, and so I can still exist here for a time.

But I am ghost dancing again, and, of course, I see visions, as all ghost dancers do. They come and go like these new fangled moving pictures they throw on a screen at the theaters nowadays. You see, it is this way:

I look out of this thirteenth story window of mine, up here against the smoke cloud that hangs over the city, and as I look it somehow seems to change, and there are mountains where there should be nothing but the great stretch of buildings—bad lands, I call 'em—dimming away into the smoke.

Then the mountains are gone and the rolling sage plains or the blue pine woods appear right where, I know from experience, there is nothing but houses and white folks and grip cars and patron wagons and—things for miles.

It's a mirage, I suppose. I've seen pictures of lakes out there in the dry country, right in the air, and these visions of mine I suppose belong to the same tribe.

I've ghost danced this way before, too, and if I just keep at it long enough I find it takes me back to the wilderness, somewhere, some day, some way. That is the way the present state of affairs will end, I am sure, and a day will come when the smoke-clouded city will sink below the eastern horizon, and I, the one who wanders, T'solo, will see a country where white folks are few and room is plenty, and then I will have peace and no more dancing for a time.

A-nah! It is writteh in the signs and it will be so.

I shall sally forth about daylight on the morrow, clad in an outfit that Chicago would probably call "tough," and armed with a fish rod and sundry hooks, flies, spoons and other ammunition. The first cars that go south toward Wolf Lake are not crowded with fine folks, because they sleep until the sun makes short shadows, therefore not many will look askance at the old hunting coat with its sacred stains gathered in past trips into the wilderness, and besides, it is my coat, to wear even in Chicago if I choose, no matter what people may think or do about it—and to-morrow I'll sure wear it.

There will also be an old creel with a worn strap, there will be a dangling knife hanging to my belt—I discard "galluses" on these trips, you know—and a sunburned hat will be my war bonnet, the same, by the way, that has been my companion before full many times.

Thus I will sally forth bright and early, even before the sleepy gripmen on the cable line are through yawning, nor will I stop until I reach Wolf Lake, over in the edge of Indiana.

Now this lake has a muddy margin, and full many tules grow in all its length and breadth, for it is shallow from one end to the other, so that he who owns rubber boots of goodly length may wade and wade a full day long, and not cross his own trail once.

Of course, there are many white folks who know of this lake here, almost against the city limits of Chicago, and they know that full many bass and pickerel dwell there, and so they too sally forth and cast their lines in pleasant places—that is, they will go out there with a big basket filled with certain sandwiches, sundry bottles of beer, and for armament they will have a multitude of long cane poles with a big cotton line attached, and many throw lines also with a string of hooks on each.

All these hooks will be carefully baited with liver and other jokes on the fisher, and he will cast them into the lake and in many hours they will return, and after eating and drinking the contents of his basket the fisher will carefully pull in all his lines and go home on the late car.

I shall see these fishermen when I wade away among the tules with my light rod and many frogs to cast among the rushes for the bass and pickerel I know are balancing there in the shadows.

The fishermen will say one to the other, "Seest thou the fool who wadeth among all the rushes to fish, thinking not that the fishes will flee before, and he will get none of them therefore?"

I to myself will smile, and in my own mind think, "The man who sitteth on yonder lake rim knoweth not of the pleasure he misseth thereby, simply because he lacketh wisdom in the way of fishes. I have a mind to subscribe him to the FOREST AND STREAM that he may obtain knowledge."

And that reminds me that I have recently rescued a promising youth from the ranks of these fishers, and he now bids fair to become a fisher after the ways of him who fishes fair and reads of others fishers in FOREST AND STREAM, for he has already shown an inclination to study the ways and read the signs that mean a good string and sport for the stringer.

Perhaps my young friend will spy my old brown coat moving among the rushes out there to-morrow, and he will join me, and together we will cast our frogs among the tules and speak few words in our enjoyment, and that will be a day when there will be no ghost dancing.

EL COMANCHO.

Natural History.

The Buffalo in the East.

My old Morse's American Geography, 1796, says, in speaking of the fauna of Pennsylvania, that "Useful quadrupeds, in the new districts, are deer, in great numbers, beavers, otters, raccoons and martens. Buffaloes rarely cross the Ohio. Elks but seldom advance from the North. Panthers, wildcats, bears, foxes and wolves are not rare; the last do most mischief, especially in winter; but the fur of all is valuable. In the thick settlements, rabbits and squirrels are frequent; also minks and muskrats in marshes; opossums and groundhogs are rare." Whatever may be said of the other animals here specified, we may predicate of the buffaloes that now they never "cross the Ohio," and very rarely any other stream in the United States. The passing of the buffalo is about an accomplished fact in this country. It is long since any lived in Pennsylvania; but certain local names and traditions go to show that this animal once inhabited the glades and hill slopes of western Pennsylvania.

The *Urus* of the Hercynian forest described by Julius Cæsar in "*specie et colore et figura*" doubtless differed in nothing essential from his congener of our Western plains as portrayed by Captain Carver 1,800 years later: "This beast," says Carver, "is larger than an ox, has short, black horns, with a large beard under his chin, and his head is so full of hair that it falls over his eyes and gives him a frightful look. There is a bunch on his back which begins at the haunches, and increasing gradually to the shoulders, reaches on to the neck. Its head is larger than a bull's, with a very short neck; the breast is broad and the body decreases toward the buttocks." The great point of differentiation between the ancient European buffalo and that of this country is that the former, as Cæsar remarks, spares neither man nor wild beast which it has espied; while of the latter Captain Carver observes that it will run away at the sight of a man, and "a whole herd will make off when they perceive a single dog."

A century and a half ago the buffalo had already retreated from the western slopes of the Appalachians to the west and southwest. As late as the year 1755 they were still numerous in central Ohio. Colonel James Smith says that a party of the Indians by whom he had been adopted, in that year killed a number of buffaloes at a salt lick, which he afterward located as nearly as he could as somewhere between the Muskingum, Ohio, and Scioto. He says: "About the lick were clear, open woods, and thin white oak land, and at that time there were large roads leading to the lick, like wagon roads." These roads were beaten by the buffaloes in resorting to the lick.

From this neighborhood they seem to have speedily retired before the face of their foes; and in the days of Daniel Boone we find that they were still abundant in Kentucky. "Immense herds of buffalo," says his biographer, "ranged through the forest in every direction, feeding upon the leaves of the cane or the rich and spontaneous fields of clover," Dr. Joseph Doddridge,

writing in 1824, observes that at that time the buffalo and elk had entirely disappeared from the western part of Virginia; but implying at the same time that those animals had formerly been found there. Dr. Doddridge had been familiar with that region from about the year 1780. All the evidence goes to show that at one time the entire Mississippi Valley was the grazing ground of the buffalo.

Captain Carver speaks of the "amazing number" of these animals in his day. The readers of Irving will recall his description of the vast herds that formerly roamed over the plains of our Far West. All the earlier writers agree in their wonder at the size of these herds, which sometimes embraced thousands of individuals. The decimation of them, to say nothing of their extirpation, would have seemed an impossibility. On down to the middle years of the century which is about closing, the buffalo still existed in almost undiminished numbers; but the last fifty years have witnessed his practical extinction. A few specimens are found in some private and public parks, where they are preserved at great expense and trouble. In spite of every precaution, the butcher of animals, from whose murderous hands nothing is safe, still occasionally gets in his work, and the few remaining specimens are made fewer still. It makes one indignant to read such an item as this, which I find in a recent newspaper:

"Lord Clifton and Mr. Robert Lowther, owners of the 'N. F.' ranch, have returned from England. They first came to this country after the elks and buffaloes had disappeared, and are quite willing to spend several weeks in verifying some of the stories of the excitement of buffalo hunting, which have been told them by the old-timers of the Musselshell. Lester Moffett, of the 'Keg Handle,' who is an experienced buffalo hunter, says that he would cheerfully pay any reasonable fine for the pleasure of trying his hand again at the most exciting of all sport. It is quite possible he will pilot the Englishmen in the wild and desolate country through which the hunters must pass before they can reach the table land upon which the bisons are supposed to be ruminating."

The pity is that the violation of the law can be compounded by the payment of "any reasonable fine." There are many rich men to whom the payment of a fine is a bagatelle when it stands between them and their selfish enjoyment. The penalty for killing the buffalo should be a long imprisonment without the option of a fine.

T. J. CHAPMAN.

PITTSBURG, Pa.

Several Things.

Editor Forest and Stream:

Your correspondent, D. W. Prowse, in your columns Oct. 8 tells how he carried away a suspender, and was obliged to forego shooting because he could not manufacture one from twigs and rushes.

I am surprised that he should have selected such poor material when there is a wealth of good material everywhere in the woods. A small birch or hazel sprout twisted would answer very well, but if he wanted a gilt-edge pair of suspenders he could find the material in the ground. The roots of many trees and shrubs afford a good tough tying material. The bark on moose wood (*Dirca*), alias leatherwood, wicopy, etc., has a tough fibre. I do not know that moosewood grows in Newfoundland, but the bark on an elm root is about as tough, and the small roots are all right anyway.

I want to ask the writers for FOREST AND STREAM if they ever saw a mink hypnotize a ruffed grouse? I was on the way to the city last Friday morning when a turn in the path brought into sight a large mink, apparently coal black. His peculiar actions caught my attention first, but soon I saw a ruffed grouse about 12ft. beyond the mink. Every feather stood up on the grouse, causing the bird to look as large as a small turkey. The mink was making figure eights, moving from side to side of the grassy path, which was over 5ft. in width. His movements were so rapid the eye could see only a black streak. While I could not see the mink move toward the grouse, I saw that the distance between them grew less quite rapidly. Feeling sure that the grouse was doomed, for it seemed unable to do anything but follow the rapid motion of the mink, I stepped forward and gave a shout. The grouse flew away, and the mink let out a yell that seemed loud enough for a tiger. The mink yelled at me from a stone wall while I was near, and as soon as I went along he came out to the path smelling around for the grouse. If this was not a case of hypnotism, will some one please name it.

I have a pet toad, a little fellow that hopped into my sleeping quarters one morning last spring. He preferred to get under a bit of canvas, but if he could do no better he would crawl under a newspaper. I fixed him a residence by knocking a hole in the side of a flower pot. I inverted the flower pot in a paper box partly filled with dry dirt. Inside the pot I put a circular piece of heavy duck. In warm weather he sits on the duck. If the weather is cool he claws up the duck and sits on the dirt with the duck over him for protection. In cold weather he burrows into the dry dirt with the piece of duck over him. I did not put the toad in his new house. I just placed it on the floor one morning when he was coming in to sleep, and he crawled through both holes in the box and flower pot, as if he knew all about it.

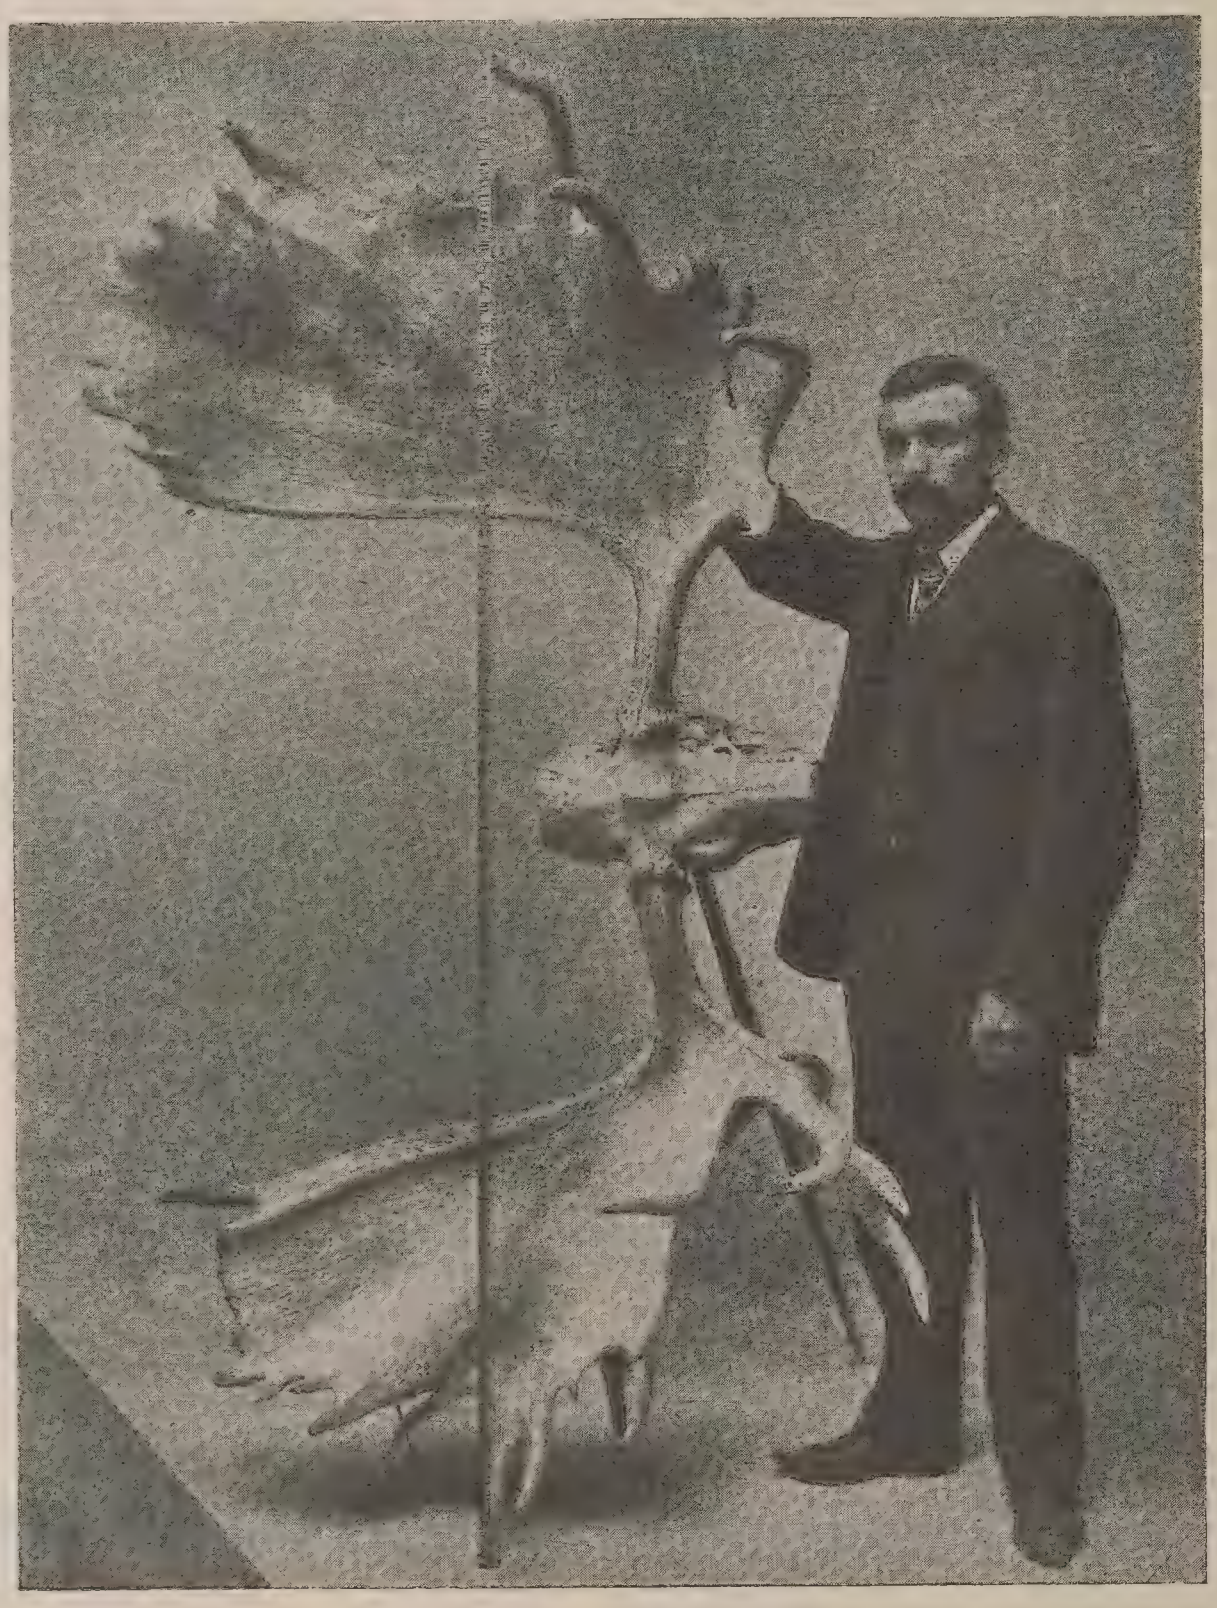
HERMIT.

A Snake Bite and a Snake Weed.

MR. HERBERT BROWN sends us this report, taken from the Phœnix, Ariz., Republican:

"A Mexican employed at Fowler ranch was bitten by a 5ft. rattlesnake a couple of days ago. The bite was on the hand, similar as to location to that received by M. Bourgougnon, and which resulted fatally. The Mexican's arm swelled rapidly, but the swelling did not extend beyond the elbow. As soon as possible after he was bitten he applied a plant known as snakeweed, a species of euphorbia and called by the Mexicans golandrina. The swelling was arrested instantly, and in half an hour had passed away, leaving no other marks than the punctures upon the hand inflicted by the snake's fangs."

An Alaskan Moose Head.



TACOMA, Washington, Oct. 1.—*Editor Forest and Stream:* In your issue of March 6, 1897, you showed cut of a pair of moose horns belonging to me that spread 73¼in.—at that time the largest moose head on record. I have the pleasure of sending you photograph of a set of moose horns that break all previous records, and stand to-day the largest and most massive moose head on record. Spread of the horns is 78½in.; width of the blades following the curve, 18in., with 40 prongs, four of the prongs on the under side not showing in photograph.

I have some seventy-five moose heads, and have handled and seen hundreds of them, but this discounts by far any moose head I have seen. The horns, as you will notice, are on the natural skull, and just as the animal was killed.

In showing this photograph to the readers of FOREST AND STREAM, I wish you would make the cut large enough to show the figures on the tape line, and also show that the skull has not been cut.

When you published the former cut of moose horns, although the cuts were splendid, they were not large enough to show figures on the tape, and I received hundreds of letters asking if the horns really spread that much, and what size was the man standing alongside, and all manner of questions. While it showed that FOREST AND STREAM is read far and wide, it caused me to answer a great many letters, and if you will show the figures on the tape it will save me lots of writing. You might also mention that the horns are not for sale.

W. F. SHEARD.

ALASKAN MOOSE HORNS.

The tape measure records from tip to tip 6ft. 6in.

Fighting Porcupines.

OCT. 8.—*Editor Forest and Stream:* One characteristic of the Canada porcupine, which I have never seen noted, but which no doubt is common enough, is its pugnacity at certain seasons. As the two instances which I have noticed occurred in October, I suppose the manifestation is directly connected with the rutting season.

In both instances I had stopped to listen while still-hunting deer, having heard some noise made by the porcupine. The animal approached from a distance of 30 or 40yds., moving quite slowly, its quills erect and making a snapping noise with its teeth. In the first case, which happened four years ago, it gave utterance also to a kind of noise like the clicking of a small hydraulic ram, but in the latest instance, two days ago, no such noise was made.

In both cases the porcupine came within 6in. or so of my foot, and not wishing to lose any of my toes, for the animal could easily have bitten through my moccasins, I gave it a tap on the first dorsal vertebra with the end of my rifle barrel. In the first case I killed the porcupine, but in the other instance I purposely did not hit very hard, and after it had regained its feet it waddled off at a pretty fast gait along its runway, under a slash of fallen trees. I am curious to know how the porcupine would have given fight. It is possible it might have wheeled at the last moment and given me a slap with its tail, as it fights dogs, but I rather imagine it would have tried to bite my feet or legs, judging from the way it was snapping its teeth. Its action impressed me as being more than a bluff; if it was a bluff the porcupine certainly had the nerve of a monumental poker player.

J. B. BURNHAM.

Frog and Pike.

Editor Forest and Stream:

Mr. Mather's note in your issue of this week on the frog and the fish prompts me to send you these observations from Walton's Angler:

"But before I proceed further, I am to tell you that there is a great antipathy betwixt the pike and some frogs; and this may appear to the reader of Dubravius, a bishop in Bohemia, who, in his book "Of Fish and Fish Ponds," relates what he says he saw with his own eyes, and could not forbear to tell the reader; which was:

"'As he and the Bishop Thurzo were walking by a large pond in Bohemia, they saw a frog, when the pike lay very sleepily and quiet by the shore side, leap upon his head; and the frog having expressed malice or anger by his swollen cheeks and staring eyes, did stretch out his legs and embraced the pike's head, and presently reached them to his eyes, tearing with them and his teeth those tender parts: the pike, moved with anguish, moves up and down the water, and rubs himself against weeds and whatever he thought might quit him of his enemy; but all in vain, for the frog did continue to ride triumphantly, and to bite and torment the pike, till his strength failed, and then the frog sunk with the pike to the bottom of the water; then presently the frog appeared again at the top and croaked, and seemed to rejoice like a conqueror; after which he presently retired to his secret hole. The bishop, that had beheld the battle, called his fisherman to fetch his nets, and by all means to get the pike, that they might declare what had happened; and the pike was drawn forth, and both his eyes eaten out; at which, when they began to wonder, the fisherman wished them to forbear, and assured them he was certain that pikes were often so served.'

"I told this, which is to be read in the sixth chapter of the first book of Dubravius, unto a friend, who replied: 'It was as improbable as to have the mouse scratch out the cat's eyes.' But he did not consider that there be fishing frogs, which the Dalmatians call the water devil, of which I might tell you as wonderful a story; but I shall tell you, that 'tis not to be doubted, but that there be some frogs so fearful of the water snake that, when they swim in a place in which they fear to meet with him, they then get a reed across into their mouths, which, if they two meet by accident, secures the frog from the strength and malice of the snake; and note, that the frog usually swims the fastest of the two.'

There is frog lore for you. Bishop Dubravius published his work in 1552; and Walton took his extracts

doubtless from the English translation, which appeared in 1599, with this charming prefix:

THE BOOKES REQUEST.

Reede over, then judge,
Condemne not before:
With judgment just reject,
Or els imbrace my lore,
Mine Author was the first
And last, as I suppose,
That we did assay
These secrets to disclose,
If ought be wrought awry,
And seeme to thee unsounde,
With penne I pray amende,
And not with tongue confounde.

Florida Turtle Eggs.

Editor Forest and Stream:

I doubt if there is a State in the Union where everything in the shape of bird and beast is being so rapidly exterminated, regardless of common sense or common interests, as in Florida. Nearly every beautiful bird has gone, and now the turtle is following in their wake. There is scarcely a foot of the Florida coast that is not patroled nightly as long as the season lasts. Some of the eggs were sent to me once, and I tried to eat them, but I'd get very hungry before I'd try it again. Unless the law steps in to stop this stupid war of extermination there will soon be an end of the turtle trade; but that good result is hardly to be expected, for the average Florida legislator is about as inconsiderate as the bird and animal life exterminators.

The turtles in question weigh hundreds of pounds, and what is taken from one nest would, if left to mature, feed an army for a week; but between the bears and the other fellows, these inoffensive mammoths, like their friends, the manatee, seem to have a limited future in Florida.

DIDYMUS.

ST AUGUSTINE.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Hunting on the Mermenteau.

A Louisiana Outing.

BOB and I left Chicago Saturday morning, Feb. 26, at an early hour, bound for the Crescent City, where we had planned to meet Jack on the following morning at the St. Charles Hotel. We awoke early Sunday morning to find our train speeding along through a semi-tropical country, less than fifty miles from New Orleans. We met "our Jack" as per appointment, and immediately planned to turn our backs on civilization. Our destination was among the fields and marshes of Vermillian Parish. We reached Jennings at an unearthly hour in the morning, and after a three miles' drive over rivers and swamps, the water in the roads frequently submerging the hubs of our wagon, we landed at Lake Arthur, La., and were received by our kindly host, Mr. W. D. Reeves.

After half a day's rest and recuperation, we took a whirl at the quail and snipe around the hotel over a trio of pointers under the guidance of Mr. A. S. Pinney, to whom I had a letter, and with whom Jack was well acquainted. Allow me to take my hat off and throw a few bouquets to this self-same Pinney—as true-hearted and considerate guide as ever graced a wilderness, and as faithful, industrious and generous natured hunter as ever built a blind or bagged a bird. We called him the Captain after the first day or two out with him, adopting the sobriquet given him by the native Creoles and Cadians, and he proved more than worthy of the title.

That afternoon we shot ten or a dozen quail and a few snipe, and "the next day it rained," but we started out again next morning. After an hour's trot over the fields, we had to pile out of the wagon and send back after a fresh horse, our plan being to take a short cut to a crossroad to the north, where our driver was to meet us. While taking the short cut, which turned out to be the longest way 'round, four kildeers got up a little in front of me, and I made a double on two of them, and the other two circled around to the place of beginning, where out of compassion I shot them also, much to the disgust of the other boys, who were all counting on a shot at them. I was accused of "hoggishness," "monopoly," "kildeer slaughter" and divers other crimes and misdemeanors, but as up to that time we had bagged no game, we left it go at that, and started over toward the designated rendezvous.

We finally reached the team, and after a hearty lunch, eaten while we rode, we came to some quail ground and put the dogs out, getting up several coveys, out of which we cleaned up fifteen or twenty birds, "wiping each other's eyes" occasionally, but each fellow getting a fair killing. We next struck a field of wet ground where a Cadian (French Creole) told us there were "plenty 'kosh kosh'" (jacksnipe). We found them wild as hawks, but brought back four or five apiece to the wagon. So ended the second chapter.

That evening we laid our wires to engage Capt. Dyer's steam launch, reported to be seaworthy, with a comfortable cabin and modern appliances left out. We bought a week's provisions, including canned stuff and staples, fresh eggs and vegetables. Capt. Pinney's good wife volunteered to make us plenty of fresh bread and a supply of doughnuts, "the kind mother used to make"; and we arranged for a trip down the Mermenteau River through Grand Lake, White Lake, Mud Lake and thence to the Gulf of Mexico.

Four merry hearts throbbed joyously and exultantly under as many corduroy vests as we put off from the dock one morning, and for three hours we glided over the surface of the pellucid Mermenteau through a wonderland of moss-hung china oaks, palm trees and cactus growths, wooded islands, grassy bayous and orange groves, emerging into Grand Lake and thence to Shell Beach, the island home of John David, a genuine Creole, whom we found on shore to greet us—a veritable Robinson Crusoe, with the man Friday left out. We stopped over night with David, Jack and I shooting plenty "kosh kosh" and supplying a fine breakfast for the crowd the next morning. In the course of our investigations we came across a considerable number of relics of Indian pottery and an old Indian grave.

We started at about 9 o'clock in the morning, bound for the Gulf, and with a hasty good-bye to John David and his Creole children, and the ten thousand dollars of treasure which he was reputed to have buried on the island, we steamed up and entered Grand Lake with some misgivings, but with the stoutest of hearts.

We proceeded without incident until we reached a point seven or eight miles out into Grand Lake, where the adventure of our lives was awaiting us.

We had observed when we started some ominous-looking clouds to the eastward, which in themselves might have been a sufficient foreboding to a less venturesome crew, but dauntless and foolhardy as we were, we had put forth regardless of consequences in our top-heavy craft, recking not of danger or a drenching, resolved only to reach our Eldorado—the home of the ducks—the Gulf of Mexico. When we had got about the middle of Grand Lake, ten miles from the nearest shore, a wind squall struck us, the waves rose 10, 12 and even 15ft. above us as we lay in the trough of the sea, and we realized all too late that we had taken our lives in our hands, and were helpless.

Every time our boat dipped we shipped two or three tubfuls of the wettest kind of water, and realizing our danger, some of us talked, others prayed, and others kept a golden silence; but all were scared as we had never been scared before, thinking of the "old folks and little ones at home."

For an hour and a half or two hours—which seemed a century—we buffeted the waves, balancing the boat as best we could, the Captain giving his commands to his engineer to "lower the speed" and "let off steam," meanwhile taking off his coat and getting down to the serious business of saving human life, as he was then and there called upon to do, bidding us "balance all," like a dancing master at a cotillion, fully sensible of the responsibility resting upon him for the success of the dance.

Add to this the fact that our engineer had inadvertently thrown some live coals into his fuel bunkers, and presently the soft coal ignited and we had a bonfire at sea—in short it was a "toss-up" among us whether we should burn alive or die like drowned rats in a trap; but presently, with the aid of a water bucket and with water from the lake—which was plentiful—we extinguished the fire and continued our fight with the waves alone.

Meanwhile our skiffs, which were towed by chains in the wake of our boat, became completely submerged, our oars and two or three buckets and other loose stuff were washed away, and the outlook was fearful in the extreme. One of the chains broke at this time, and our gallant Pinney, at great personal risk, and in obedience to an order from Capt. Dyer, went aft to secure the boats, and succeeded in doing so after great difficulties, but to our intense satisfaction. In fact I attribute our final delivery to the fact that these submerged skiffs, bearing down on our boat, kept us from toppling over, for as the wind would strike the roof of the yacht, it would serve to upset it, and the extra weight supplied by these water-filled skiffs helped to steady our course through the angry sea.

When at length we reached a headland where wind and wave alike abated, our handshake all around was among the best evidences of the narrowness of our escape.

If, by chance, any of us could have reached this point or any stray bunch of dead trees without life preservers or with the help of God, it might have been fifteen months before any boat would have picked us up, for that part of the lake was entirely unfrequented by any kind of life except buzzards and bald-headed eagles, to whom we would have been an easy prey.

Without further adventure we passed Mud Lake and Grand Cheniere, thence through to the Gulf, anchoring at the mouth of the Mermenteau, and thence proceeding by land to Franklin's, three miles from the river. On the way thither the rabbits were as thick as cats, or as hair on a dog, and as I approached toward evening a bunch of prickly pears, not knowing whereat I kicked, I put forth my foot to flush a possible covey of blue quail, of which I had read many tales, and ran a needle about 2in. through my rubber boot and into my foot, requiring a surgical operation to extract it. Add to this the onslaughts of countless mosquitoes, of which we had been forewarned, and the pangs of remorseless hunger and thirst, and it is needless to say we hailed our advent to even a semblance of human habitation.

That night, after a repast of canned stuff, water-soaked bread and lemon tea, a beverage as new as it was distasteful to our Northern appetites, we were assigned to a room probably 20 by 30ft. in dimensions, 10 or 12ft. above the ground, the house being supported by piling as a provision against high water from the Gulf, or its adjacent bayous and marshes.

Before retiring we took note of divers large brown and speckled hens laying eggs in as many boxes, barrels and other convenient roosts in close proximity to our beds, and also of sundry crevices in the flooring, though which, by the faint illumination of a single lamp, we could detect (and we assert the fact without the aid of imagination and "without fear of successful contradiction," as our good friend Fogarty would say) a favored few of that ignoble but democratic tribe, the genus hog, to whom, as it subsequently developed, was accorded the prerogative of assembling in delegations beneath our abode, without danger of interruption, let or hindrance. Three fellow sufferers on the nights of the 4th and 5th of March, respectively, A. D. 1898, will attest the incontrovertible fact that never in the history of journalism, fiction or real life had mortal suffered the agonies of such a baneful series of uninterrupted nightmares as we four endured those nights. If by any chance we closed our eyes in slumber, the smells that emanated from that hog pen awoke us, and the cries and squeaks and grunts and unutterable lamentations that arose at intervals through the night kept us awake. Add to the hogs the ticks and ants and mosquitoes and certain other infinitesimal but persistent denizens of all hen roosts, that infested our beds and clothes, and the reader can realize in some faint degree a few of the drawbacks to the complete and unqualified luxury of our abode.

But there we were within a hundred yards of the beautiful Gulf of Mexico on the one hand, and miles on miles of marsh land on the other, the Gulf stretching out with ineffable beauty before us, far as the eye could reach and further, bordered with a peerless beach of myriad sands and shells of infinite shape and color; and the marsh denizened with wildfowl around the waning grasses—the Gulf the acme of an artist's dream; the marsh the hunters' paradise, the home of the ducks and the geese, the curlew and the ring-tailed marlin.

The two days following our arrival at Franklin's marked an epoch in all our lives, for after our faithful Pinney had built us a couple of good blinds—it having been agreed that no gun should be fired until both blinds were ready—though the ducks, meanwhile, almost alighted on our gun barrels—none of us, I am sure, ever had such unrivaled duck shooting in our lives.

Green-winged teal, mallards, widgeon, whistlers and pintail swooped down upon, over and around us as fast as we could shoot, our guns grew so hot we had to dip them in the bayous to keep them cool enough to handle. Bob and I had the best of it the first day, having the choice of blinds, but though Bob is a crack shot at the trap, and I used to make some modest pretensions to some skill in the field, the number of "cinches" we missed and let go was something appalling, although an occasional long shot or a double would console us into believing we weren't so bad after all.

Without dwelling on details, four of us in less than two full days killed over 350 birds, the great majority of them ducks or "canard," as the Creoles call them, but a good many curlew, plover, snipe and ring-tailed marlin—the latter bird being entirely new to me; it is about the size of the curlew, flying something like a duck, generally close to the water; and distinguished by a semi-circular marking on the tail, which accounts for its name.

About noon the second day I borrowed Bob's game carrier—a device for facilitating the removal of game—threatening to kill a goose or break a leg. I waded three miles and a half toward the goose country—some flats adjoining Mud Lake, where we had observed some heavy flights and heard some vociferous "honking." On my approach thousands of geese and brant rose in a body and circled off to the south. I thought that it was all over; but reaching the shore of Mud Lake I noticed on the far side what seemed a half-mile or more of snow drift, but presently a white cloud arose, not of snow, but of solid geese and brant, and made across the lake toward my position behind a bunch of reeds.

As they drew near me they towered out of range, which was most discouraging, but I lay closer under cover, and noticed a flock of perhaps twenty coming my way not over 40yds. above the water. When they were almost upon me the flock divided, three birds "side stepping to the right" on the translucent air, but as it seemed the next moment concluding to rejoin the flock. In doing so the misguided trio passed directly over me and ran right into a couple of charges of No. 4 shot from the old Parker hammerless, two of them out of the three succumbing to the effects of the fire and falling almost on top of me.

I had a bowl of an old pipe in my coat without the stem, which I had lost, and wishing to have a quiet smoke of—well, you may call it self-complacency—I extracted a quill from the wing of one of the dead birds and improvised a very satisfactory pipe stem out of it, and had my little smoke; and after securing the victims, which weighed close to 10lbs. apiece, firmly in the game-carrier, I started back toward our blinds. Five more brant flew over me on the way back too close for their own good, but possibly decoyed by the birds thrown across my shoulder. At any rate, I picked and shot two more out of the bunch, and then sufficiently burdened with the first two, and with the weight of my 10lb. gun, heavy hip boots and corduroys, I managed to retrace my steps three miles or more across marsh land, knee deep with mud and water, to a place I named Welcome Ridge, where, after a brief but threatening interview with some long-horned Texas steers, which were inclined to dispute my passage, I came across Mr. Franklin, who was on horseback, and whom we had engaged by the day to keep the ducks stirred up.

I asked him to give me a lift with the geese. If some of the birds were wild that day how should Franklin's Mexican pony be characterized when my four white 10lb. pilgrims were thrown across the pommel of the saddle. Franklin had asked me to hold the pony while he loaded on the game; but I doubt if Sandow or any other modern Samson could have withstood the strength of that frightened steed when he realized that those four ghostly reminders were thrust upon him. He reared up on his hindlegs, kicked, plunged, trembled and kicked again, until he finally disentangled the bridle from his forelegs, and disengaging himself completely of his feathered tormentors, the head of one of which he flattened out like a pancake in a paroxysm of kicking and genuine horse-fright, he "lit out" into the prairies at a Vo Tambien gait, where after considerable maneuvering Franklin at last secured him.

I finally got back with the geese to the boys, and after firing a few last rounds at the teal and pintails we called a halt and took up our decoys and game, and two hours later, after a hearty lunch, said

our good-byes and proceeded back toward the Mermenteau River in the direction of our boat. On the beach a band of Franklin's pretty children volunteered their services in gathering sea shells for me, and we picked up enough to fill two cigar boxes. It was not without the keenest sense of regret, even sadness, that we said adieu to our good friends, and the shore birds and the placid waters of the Gulf.

We were all impressed with the beauty of the Spanish moss, which we found wherever the shores were wooded, draping the branches of the trees and deepening the shadows that fell beneath them. Here and there graceful sprays of mistletoe and holly heightened the effect; and the scene was beautiful beyond description when at sunset the foliage glistened with countless dewy gems and was radiant with the glow of the sou hern sun.

We stopped that night at Grand Cheniere, a picturesque Creole settlement, meanwhile having stored our birds in one of the large skiffs with a canvas covering to keep them from the sun. On the way up the river we encountered a Creole captain of a small sloop, who met us in a rowboat and dropped back in tow, joining us forward in a few moments after securing his boat. Some one from the sloop yelled "Fire!" as we passed by, and looking back we discovered the stranger's overcoat, which he had carelessly left in his boat exposed to the burning cinders from our smoke stack, ablaze and smoking. When he rescued it there was little left but the collar and a pair of sleeves, and I fancy the poor Creole had to charge up that trip to profit and loss.

The day after we reached Lake Arthur we were all invited by the engineer of our boat, Monsieur Louis Toups, to a goose dinner a la Francaise in honor of the Yankees, as he called us. It developed on better acquaintance with Toups that he had fought on the Confederate side in the late Civil War, but his war stories and allusions—I had almost called them illusions—his marvelous tales of hair-breadth escapes "in the imminent deadly breech," and of his capture, single-handed, of numberless renegades and deserters, and his sagacious prognostications of the events to be recorded in the annals of our future history, all paled in insignificance and receded from our transient recollections before his three-ply, double-distilled, eighteen-karat bear story. It was the legend of a man who killed 760 bears in a single year with the aid of Toups himself and a leash of hounds, and a scaffold.

He averred that this man—whose name, for reasons of his own, he withheld—had devised a plan of building a raised scaffolding a few feet from the ground, large enough to accommodate nine or ten couples of bears, and something in appearance, as we gathered, like a dance platform at a fair ground. This scaffolding was built within a few hundred yards of the bear thicket or canebrake where the hounds were put in; and as soon as they got the bears started from their respective lairs to escape the dogs, Mr. and Mrs. Bruin and the Misses and Messrs. Bruin would all take to the scaffold, according to programme, and not make the mistake of seeking a more inaccessible retreat. Here they would form sets something like a waltz quadrille or a prairie queen, and be shot down one at a time to the tune of three or four Winchester rifles and the music of the hounds, which, we were led to suppose, would "all join hands and circle round" until the last bear was dead. If, perchance, a young and guileless bear hound should be required to furnish a test of his staying powers, the master of the hounds would throw him up among the bears on the scaffold early in the action, and if he got a blow from one of Bruin's paws and lived, he was decided to be "a good bear dog." I believe Toups had rehearsed these tales so often that he has almost come to believe them himself.

We had a most delightful repast, hunters' style, thanks to Toups' good wife and the bright eyes of their children, and thanks to appetites born of exercise and privation; and in spite of many quips at our host for not lubricating his machinery with bear grease, and with much ill-timed admonition to him against "firing outside his boiler" the next time he ran a party out through a squall on Grand Lake, we said our farewells to him and his, and leaving Bob at Lake Arthur for further rest and retrospect, Jack and I quit the country; and our hunt was over.

BARNUM.

A Trip Down in Maine.

BALTIMORE, Oct. 10.—*Editor Forest and Stream:* I returned from the Maine woods last P. M., and as FOREST AND STREAM is the sportsman's record, I will "rite yu thes fu lines."

There were four in the party—three from Philadelphia and myself. I did not amount to much after we got into the woods, but of that hereafter. To get to our objective point we had twenty-five miles of wagon, a carry of one-half mile, and nine miles of canoe on lake. We all started well prepared to camp. Imagine our surprise when we found a good frame house with all the appointments of a first-class summer resort hotel in the woods, right in the wilderness. Consider that this is thirty-five miles from the railroad—eleven miles by canoe—and you will appreciate the energy of the man and woman who would locate here and then undertake to educate their children—and their children are educated—in circumstances so unfavorable in so far as transportation to the center of letters is a factor in the matter of education of youth. I was curious to know how this was accomplished so far from the means of ordinary instruction. On inquiry I found that the mother had been a teacher of schools in the earlier years of her life in Pennsylvania, and the hereditary intelligence of the mother had been developed and built upon by the teachings she applied during the long absences from the schools to which access was possible. All glory to the mother.

Now to our hunt. The first day my friend R—— took the setter for grouse; no result, partridge very scarce, did not get a shot. The other members of the party, Walter and Abe, went for deer. Abe will be known hereafter as the moose caller, because of his disposition to hold his hands on his stomach and grunt like a bull moose. To return, Abe and Walter went for deer. Walter cut the head off a grouse; did not connect on deer; saw plenty of sign. Grouse very scarce and nonplussed the dog by flying into the trees.

Second day.—Not any result; plenty of deer "spoor," tracks like sheep fold, but deer had just left when we got there. By the way, deer have this unceremonious way of bidding good-bye before saying howdy.

Third day.—This was the *dies gloria* for Abe; came in at dark of day; good Lord; shot him through and through—big buck—six points—leaped 10ft. high at the shot; lots of blood; followed him by the blood into the brush until it was so dark we could not follow the trail; too bad, too bad; got supper and started with lantern to find a wounded deer in the brush. Of course I didn't go. I have been there. But the boys were enthusiastic and I let them go. Hunted until late in the night, but did not find the deer that was shot through and through, and jumped 10ft. in the air at the crack of the gun. *Sic transit.*

Fourth day.—Went out to find the wounded deer; did not succeed in search; might have passed within 20ft. of it, and it would not have made its presence known, but our boys did not know this fact, because it was their first experience with the wily animal. This day Walter shot and killed a nice yearling buck, which was the only deer killed on the hunt.

The following day being Sunday was close time in Maine. Last day we all went out early, 4 o'clock; waited for light to shoot; jumped a deer; could not see if yearling, buck or doe. Boys did not want meat, they wanted horns. Five shots fired; deer went off with flag up; came back in brush to investigate the noise. Guide standing beside R—— took deliberate aim and fired; deer ran with flag up; four shots fired.

Here I left the party and took a logwood to hunt alone, as I was impressed that I had not any chance with a guide who would take the first chance to shoot.

The weather was warm—hot—and we could not bring any game out. I was particularly impressed with the scarcity of grouse (partridge). We got all we wanted to eat of venison and grouse. What the boys wanted was horns. Moose tracks and "spoor" were frequently seen along the boggy trails where the moss was abundant, and the call of the bull was "heard in the land," more frequently, however, at camp when Abe "got on to it." The ough-ou-ough-ough-ough accentuated was a signal that Abe was prepared to replenish his inner man.

But the best of the trip was when Abe first heard the buck "whistle." He was quietly seated watching for the approach of a deer where the signs showed a crossing, and passed quietly into the arms of Morpheus. Stamp, stamp, followed by chiugh-chiugh. "What is that?" said Abe, waking up at the moment, "deer sure." He had heard it before, but not in so intense a manner, when he had shot the buck that jumped 10ft. in the air at the crack of the rifle. The deer had got his wind, and was trying to locate him. He did locate him and left sans ceremony, and Abe came back to camp a disappointed but a wiser man.

E. S. Y.

Notes from New Brunswick.

FREDERICTON, N. B., Oct. 12.—It is a rather singular fact that while the record spread of moose horns for this Province (and it was also the record spread for Maine and Nova Scotia) remained for many years at 62in., in two successive seasons a moose should be killed in New Brunswick which has entirely outclassed these figures. The moose shot on the Tobique last fall by Stephen Decatur, of Portsmouth, N. H., with a spread of 66in., was thought by many to be a freak, but this view of the matter will have to go by the board now that Mr. F. H. Cook, of Leominster, Mass., has brought out a moose from the same locality with a spread of 67. Have a few of the giant moose of Alaska emigrated to the Tobique, or do these figures mean that where the moose has a favorable feeding ground, and is unmolested for a period of years, he attains a growth far surpassing that which is possible where he is hunted and harried, and where his food supply is precarious? It is a peculiar circumstance that of the many fine moose shot in New Brunswick during the last five years all heads of 60in. or over have come from the headwaters of the Tobique and the Restigouche (with the exception of one specimen shot by Mr. Bodkin on the Nepisiguit), while on the adjacent waters of the Nor'west and Sou'west Miramichi no moose has been taken for many years with a spread of over 56in. It looks as though a 6ft. head might yet be secured in New Brunswick. Chief Gabe, of the Milicete Reservation, claims that forty years ago he shot a bull moose on the Restigouche with a spread of over 6ft., but in those days the antlers were valueless, and he left them in the woods.

I have only heard of three parties of the many which have outfitted at Fredericton this season for the hunting grounds that have failed to secure either moose or caribou, and two of these had excellent chances. Some sportsmen are, of course, better shots and better able to tramp the woods than others. It is pleasant to know that our genial friend, Fred Talcott, of Providence, who last year failed to connect with his noble moose, has this time come out with the Stars and Stripes flying at the fore. In a personal note Mr. Talcott says: "I went into camp on Salmon Brook, crossing Cains River at the Forks, was in the woods two weeks, and killed a moose and a caribou. James Fowler, now eighty-two years old and over, did the calling and brought in three bulls, one at a time, of which I killed the best. A party of American sportsmen went in with Tom Weaver for guide. He lives a few miles below Blissfield. They had great luck; got one moose, two bears, two caribou and one horse. I am told the gentleman who killed the horse made a particularly fine shot at 400yds., thinking he had his sights on a moose." I have been unable to learn the names of the party who went with Mr. Weaver. Perhaps the man who shot the horse is modest. At any rate, he must be a good fellow, for he paid the full value of the horse without a murmur. The moose secured by this party had a spread of over 4ft. Mr. Talcott mentions a fact in regard to the mammoth moose killed by Mr. Cook on the Tobique that adds greatly to the value of the trophy, namely, that Mr. Cook himself called up the moose. It often happens that the sportsman who sits shivering in his blanket on the barren is really a much better caller than the guide whom he is paying $3 a day to terrify the wilderness.

Writing under date of Oct. 5, Jerome Bradley, of Dobbs Ferry, N. Y., says: "I have been home now over a week from my hunt up the Nepisiguit, and feel that you would be pleased to hear of our success, since you so kindly 'put me on' to that game paradise. My friend, Henry Soennichsen, and myself managed to fill our game bag with one moose, two caribou and four bears. Moose seemed to be very scarce; caribou very plentiful. We could have shot at least ten more. We saw over forty. The bears are more than plentiful; we saw eighteen. I don't feel as though I ought to kick, having in two trips shot two moose, four caribou and six bears."

George H. Adams and H. F. Whittier, of Lawrence, Mass.—which seems, by the way, to be a very prolific breeding ground of good sportsmen—have returned from the hunting grounds on Little Sou'west Miramichi, after an absence of seventeen days. They had John Wambolt as their guide, and brought out two fine moose, the largest having a spread of 55in. with twenty points, and the other a measurement of 45in. with twenty-two points.

Thomas Cox, of Fredericton, and Thomas Porter, of Two Brooks, Victoria county, had a short hunting trip the other day up the Gulquac. They brought out a two-year-old bull moose.

It is difficult to secure anything like full returns from the Restigouche, where a small army of American sportsmen are now encamped. All that I have been able to learn is that Messrs. Grew and Gardiner, who were hunting with C. B. Gray, brought out three fine moose heads, one of them 60in. wide; that Dr. Rainsford, of Stillwater, had captured a moose and caribou; that the Jenkins party on the same ground had one moose and two caribou; that the Whiting party, on the Patepedia, had three moose, and the Sylvester party, on the Upsalquitch, two moose and two caribou. Some of these were mentioned in my last communication.

Messrs. Walter L. Pierce and E. W. Jones, of New York, who spent three weeks in the Gordon Brook country with Frank Bartlett, of Doaktown, as guide, did not have quite the measure of good fortune to which their qualities as thorough sportsmen entitle them. They succeeded in downing one nice caribou, but no moose.

Perhaps the first case of a woman shooting a moose occurred last week near Edmundston. The lucky lady was Mrs. John S. Eagles, of Saint John.

Some light is thrown on the question of the weight of a full-sized bull moose by the fact that one shot on the north branch of Gibson Creek, by Edward Williams, was brought into Woodstock and weighed, when dressed, 700lbs. There can be little doubt that the live weight of this moose was full 1,200lbs.

A pedler named James McDougall had a lively adventure with a moose, while on a partridge hunt at Riley Brook, on the Tobique. The moose showed such signs of pugnacity that the pedler took to a tree. The moose remained under the tree for over an hour. McDougall then lost his balance and fell fair upon the moose, bringing out a handful of hair. The moose then concluded that the peddlar was becoming pugnacious and hurriedly broke for cover. There may be two sides to this story. This is the pedler's version.

There is good moose hunting to be had within fifteen miles of Fredericton. Will Chestnut, who was out to Bull Pasture Plains last week, to inspect the duck ponds, saw two bull moose and a cow in the two days he was there. Moose are frequently seen at Waasis and Rusigornich, but are not molested, as the hunting of moose and caribou on the western side of the River St. John is prohibited.

The .30-30 controversy still rages with great violence. One of the warmest advocates of the handy little weapon last year was Dr. Bishop, of Boston. But since the Doctor had to shoot six bullets into a bull caribou before he could stop him, and since his moose walked away when he ought to have passed in his cheeks, the Doctor has been doing some of the tallest kind of thinking.

But just here there is a shuffle in the amen corner, and Deacon Sumner L. Crosby, of Bangor, arises to remark: "By the way, I have just received twelve large caribou heads from Newfoundland, all killed with the .30-30 Winchester, soft nose bullet. W. L. Rice, of Cleveland, Ohio, one of the sportsmen, told me that he killed a bull caribou at 650yds. with one shot, and that three shots was all he fired at any of the caribou."

Personally, all guns look alike to me—for a side shot. For an end shot give me lots of lead. Then again I think some shots by some people don't hit sometimes.

FRANK H. RISTEEN.

In Cerritos Blind.

LOS ANGELES, Cal., Oct. 3.—*Editor Forest and Stream:* Nine of us assembled at the depot, all in good spirits and eager for a glimpse of the webfeet, for it was the afternoon of Sept. 30, and on the morrow the duck season was to open. For seven long months we had been waiting for this very day—why then shouldn't we be jolly fellows?

There was the Insurance Man, the Lawyer, the Banker, the Capitalist, the Merchant, the Real Estate Man, the Judge, the Governor, and the Student, and we were a three-fifths majority of a duck club of fifteen members—the rest couldn't come—"chained to business," probably.

Our destination was the preserve of the Cerritos Duck Club, about fifteen miles from Los Angeles, a preserve comprising a lake somewhat over a mile long, one about half a mile long, and several smaller ponds. This preserve, owing to the protection afforded the birds and the abundance of feed for them, is a famous place for ducks and affords some of the best shooting to be had in Southern California.

The warning clang of the engine bell sounded, and we boarded the train; nine leather cases, whose outlines indicated their contents, were deposited in a corner under the watchful eye of the Insurance Man—his own beautiful little gun was in one of them, and it is the apple of his eye. The train bowled along at a fair

ate, and soon the name of our station was shouted by he brakeman. Arrived at the club house, but few moments were lost in getting into sweaters and canvas oats, whose frayed appearance was evidence that the vearers were by no means novices in the sport of duck hooting. Then each one busied himself with preparaions for the morrow's shoot till a call from the ranch ouse sent us on a double quick to a good dinner, after vhich cards were brought out and the choice of blinds ecided by drawing from the ace to the nine-spot. The nsurance Man drew the ace and the Student followed vith the deuce, which gave them first and second choice.

The blinds having been determined, the next thing vas to place the decoys—and to this end the Student nd the keeper took one of the boats and rowed from lind to blind, placing from three dozen to fifty wooden ecoys in a crescent form about each one. These linds are water-tight boxes, sunk flush with the surace at the lake's edge—the top screened from view by a ringe of growing weeds. They are fitted up with a eat and shelf for shells, and make a very comfortable lind, as one is protected from the wind and securely idden from the sharp eyes of the ducks.

The decoys placed, Charley and the Student returned o the cabin and found the rest of the members disussing that inexhaustible subject—guns. From this he conversation drifted to stories of duck shoots long one by, after which we enjoyed a social game of cards, nd then all turned in for the night, the Judge and the Governor going over to the ranch house, where they ould revel in the luxury of sheets between their blankets. s there were but five bunks in the cabin, the Insurance Man and the Student spread their blankets on the floor nd laid down to dream of countless flocks of ducks hovring over their decoys—a dream which was partly ealized in the morning. Just before the lights were put ut the Capitalist, while lying in one of the lower bunks, ound that by bracing his long legs against the mattress f the one above him he could lift it with its occupant everal inches—which he at once proceeded to do, much o the discomfort of the Real Estate Man, who in turn nstituted a rough and tumble pillow fight to give vent o his injured feelings.

It seemed to the Student that he had hardly closed is eyes when he was rudely awakened by having a heavy oot planted within an inch of his head—it was 4 A. M., nd ten minutes later nine sleepy shooters were sitting round a table on which a smoking hot breakfast was aid. Breakfast over, nine shell-laden hunters tramped r rowed to their respective blinds. Those who were o shoot on the ponds pushed their decoys over to the linds in a two-wheeled cart, and while the Banker was truggling to get his cart over a drainage ditch, cart nd contents overturned into 18in. of cold water, from nder all of which the unhappy Banker extricated himelf with difficulty. After a half-mile walk along the hore of the lake, the Student reached his blind, and fter laying out a supply of shells amused himself by olling cigarettes and watching the ducks, which by his time were being routed from the ponds and came n great flocks to the main lake. A great many lit among he decoys, and a flock of about sixty sprigs settled in a ittle arm of the lake back of the blind, and not 10yds. rom it, giving the Student a fine opportunity to study heir habits.

It was not yet dawn, but a full moon was shining brightly through the rifts in the clouds, for the sky was partly overcast. In this uncertain light four big coyotes trotted around the lake shore, stopped to take a drink and gaze for a moment at the flock of decoys, and then came so close to the Student's blind that he could have touched them with his gun. The first gun had not been fired, so they were safe enough, and seemed to realize it, for they stayed around the blind for several minutes, till at last the Student threw a clod at one of them, and away they went over the mesa like ghosts of departed greyhounds.

Dawn was breaking in the east—it was light enough to shoot and flock after flock of teal and sprigs wheeled by within easy range, many of them dropping among the decoys. Still the first gun was not fired, though the Student's fingers tingled, and he kept sliding the safety button of his hammerless back and forth nervously. For a full half-hour he waited, and then the first gun cracked a half-mile away to his right. It was almost immediately answered by another to his left, and then the Judge's gun sounded across the lake. Just at this moment the Student saw two teal—straight incomers—making for the decoys, and he opened the season with a clean right and left on them. They fell not 10yds. apart, their little black paddles beating a frantic tattoo in the air. Then for the next hour there was a perfect fusillade along the lake shore and from the ponds. Ducks were flying everywhere and coming from all directions—incomers, tailers, sky-scrapers, and crossing birds made the sport fast and exciting.

They were for the most part young birds that had been bred on the grounds, and were badly rattled by their experience "under fire." After that the shooting quieted down, till by 9 o'clock but few birds were flying.

The evening before Charley had told us that he had a tame checker breast goose, which was in the habit of flying about the lake, and asked us not to shoot it in case it went near any of the blinds. This injunction lost for the Student a nice pair of checker breasts, for during a lull in the shooting two of these birds (neither of which was the keeper's goose, as it afterward proved) flew over his blind not 40yds. high.

At 9 o'clock the Judge began taking in his decoys, and the Student followed suit, and together they walked back to the cabin, each with a goodly string of fat birds.

About 12 o'clock a strong wind sprung up, increasing in violence till it was a regular gale, which kicked up quite a sea on the lake and covered its surface with whitecaps. At this time the Student volunteered to take a boat across for the Governor. Now the Student has never prided himself on his prowess at the oars, and the boat had no keel. So the result was that the boat went stern first, sideways, and every way but the right way, but after a deal of hard work and unshipping of the oars he reached the Governor's blind, and loading his duffle on board, the Governor stepped in and risked his life and fortune with the landlubberly Student. The return voyage was made without mishap, though at times the Governor looked dubious.

One by one the others came back to the cabin and hung their birds on the side of the house, till a very creditable bag for the first day graced the wall. The Student was high gun, with the Insurance Man a close second—just one bird less than the Student had. The wind continued to blow with great violence till train time, 4:30 P. M., and this fact, and the unwonted exercise of the morning, had whetted our appetites, so that we did full justice to a miscellaneous cold lunch, after which we lounged about the cabin, discussing the morning's sport till time to go to the station. The train was a few minutes late, but we reached town on time, and one and all declared that the opening shoot had been a great success.

If the Insurance Man and the Student had been a whole circus in themselves, they would not have caused more craning of necks than they did as they walked up town with their birds slung over their shoulders.

CULPEPPER.

Maine and Boston.

BOSTON, Oct. 15.—Hunting parties are now in order, and some of them are already returning. Considerable success in the capture of deer is noted by the hunters returning from Maine, with the remarkable feature that a good many bucks are being captured, whereas in former seasons the early captures have been does in majority. The Menotomy Club, made up largely of Arlington sportsmen, has just returned from a ten-days' hunting trip to Camp Foley, Northeast Carry. The company was made up of J. W. Ronco and N. J. Hardey, of Arlington; Dr. Lowe, of Newton; Dr. Scott and Mr. Evans, of Jamaica Plain; Dr. Killihur, of Woburn, and Dr. Rogers, of Boston. Three fine deer were obtained, two bucks and a doe. Partridge shooting exceeded the expectations of any in the party. One individual, the cook of the company, Mr. Ronco, was ahead in that sport, his score being 32. Others were taken, of course, but were more readily found about the camp, by the cook, than in the deep woods, where the others were hunting deer.

Hunters in the vicinity of the Rangeleys are getting a good many deer. From Billy Soule's several have already been brought out. Two or three have been taken in the vicinity of Bemis; one of the finest heads ever taken in the Maine woods. Mr. Richards has taken his two deer at the Upper Dam, and one or two others have been taken in that vicinity. The Camp Stewart party of four got a fine two-year-old buck. Lester Poor has taken a fine buck near the head of Richardson Lake. At the Big Richardson Pond the Harry Dutton party got one deer. Clayton Sweat has been guiding a party at his camp on that pond, and they have secured at least one deer. The editor of Puck, Keppler, has been camping at the same pond, and his party has had venison in camp.

Mr. Geo. T. Freeman and O. W. Whittemore, of Arlington, are just out from a most delightful Maine hunting trip, and one full of adventure. They went to Norcross, on the Bangor & Aroostook Railroad, and from thence to North Twin Dam. From that point they went up the lakes and carries a long distance to a pond to the west of Mount Katahdin. Here they got three deer, two bucks and a doe. Several times they tried to photograph a big bull moose, but failed of the desired snap shot. It was before the 15th of October, and the big fellow seemed to be aware that he was not in danger of being shot, except with the camera, and that he did not care for. He seemed to inhabit a peninsular between the ponds, and was not exactly willing to leave his quarters when the hunters approached. At one time—they saw him several times—Whittemore was ahead, while Freeman was behind with the camera. Whittemore came within a short distance of his lordship, lying down. He called to Freeman to come up with his fishing rod and "wake him up." Freeman also had a good look at the old fellow as he dozed in the sun. But the camera did not work. Another time they saw him lying on a hillock near to the shore of the pond; the hunters being only a few rods from the shore. At another time a big buck deer came out of the woods and went up the shore of the pond, followed by a doe, when tagging on behind came the big moose. This time the camera was at the camp. They saw, in all, over forty deer and five moose—three bulls and two cows. Both men declare that they want to make the same trip when the moose law is off. They feel sure that the bull moose could have been shot but for the close season.

A great many deer are coming into the Boston market; altogether too many to have been legally shot and shipped. Indeed the deer come in piles, without name or tag of ownership, though the law expressly provides that moose, deer and caribou shall be accompanied by the owner, plainly tagged and marked. Evidently the railroads are forwarding deer illegally. I am told that one moose has already reached the Boston market, though the open season in Maine does not begin till Oct. 15. The receivers say that the moose came from the Provinces, but it is darkly hinted that it was shot in Maine. There is work for the Maine commission in stopping the flood of game coming out of Maine; begun this year, following the tremendous illegal shipments of deer received last year, after the open season closed.

BOSTON, Oct. 17.—Mr. Walter L. Hill, secretary of the Sportsmen's Show, of last spring, has returned from a trip to Europe. In Scotland he fished for Loch Leven trout. Friends, members of a Paisley fishing club, invited him to try the trout in their preserve. An old reservoir has been converted into a fish pond, and is kept well stocked. Mr. Hill found an American split bamboo rod in the rooms of the club, and determined to try it. It was light and shapely, but the Scotchmen declared that it was "only a toy; and no length of line could be put out with it." Mr. Hill tried it, and, much to their surprise, he cast fully as far as they were able to do with their heavier English or Scotch rods. He also took six trout, the string weighing about 4lbs., which they also regarded as an excellent catch, both as to numbers and size. The cast he used Mr. Hill has preserved. The three flies are dark and remarkably small, without the sign of a red or any bright-colored feather. He will try the same cast on Maine trout next spring.

Elmer R. Snowman, of Rangeley, was before the Supreme Judicial Court at Farmington, Me., last week, and as expected was found guilty of guiding without a license. Only a technical defense was offered: that the work performed was not necessarily that of guiding. The case went to the jury without argument, and that body quickly returned the above verdict. Mr. Snowman's counsel asked to have the whole matter dropped, but the commissioners, through their attorney, were determined to push it to the utmost. An appeal was made, and the case now goes to the law court. A great deal of interest is manifested in the case. The court room was crowded during the proceedings. It is hoped by the enemies of the guide law that before the law court the law will be shown to be unconstitutional. The commissioners and friends of the measure are equally confident that it will be fully sustained.

Proceedings have been dropped in the case of the prosecution of Col. Edward B. Stoddard, of Worcester, Mass., and Mr. Henry Roeloffs, of Philadelphia. The matter was to have been tried before the Supreme Court at Farmington last week. According to reports at the time, Warden Huntoon, of Rangeley, arrested these gentlemen for illegal fishing in Rangeley Stream; that is, fishing above a certain bound, set by authority of the Fish and Game Commissioners, under the statute. It is understood that the gentlemen were prepared to prove that the sign or board had been moved up the stream by authority of Commissioner Stanley, and that they were not fishing in closed waters. Suddenly it was announced that the commissioners had concluded to drop the whole matter. It is also reported that Senator W. P. Frye, of Maine, and other gentlemen of influence, had appealed directly to the commissioners, representing that the proceedings were senseless and useless. The sentiment is strong among sportsmen, familiar with the location and the proceedings, that the defendants should have been given a chance to prove their innocence in court.

Mr. E. S. Shannon, of the Boston office of the Associated Press, has been on a bird shooting trip to Phillips and Weld, Me. Francis Henwood, of New York, has obtained a fine buck deer at Kennebago. Generally the local and Maine hunters are getting the most of the deer thus far. City sportsmen are complaining that most of the hunting sections are badly overdone before they get there. It is reported that even the foremen and engineers on the Bangor & Aroostook and Phillips & Rangeley railroads carry rifles, and fire from the moving trains at deer on the track. Deer are still coming into the Boston markets in a most shameful manner, if the non-transportation Maine law is to be enforced at all. I saw another big pile on Saturday, without tags or marks of any kind. These could not have been the legal game of sportsmen. The Maine papers say that not the usual number of deer are being received in the city markets of that State. The reason is a good one; they are coming, illegally, to Boston.

SPECIAL.

CHICAGO AND THE WEST.

The Mythical Mr. Hicks.

CHICAGO, Ill., Oct. 15.—The city directory of Milwaukee, Wis., may or may not contain the name of one L. H. Hicks. Even should the directory print his name, it does not print the street address which this Mr. Hicks desires to be known as the point at which he does his trading. To the public at large this fact would at first not appear to possess any special interest, though perhaps we shall see that the public might well have a very direct interest therein. To certain express companies, trading as common carriers between the cities of Milwaukee and Chicago, the name and address of Mr. L. H. Hicks are very well known, and they represent a certain commercial value. This value attaches, not only during the open shooting season, but has done so all through the closed season, and in spite of the Wisconsin laws regarding the killing and shipping of game.

Mr. L. H. Hicks is not Mr. L. H. Hicks. His address is not Milwaukee, but Chicago. He is a Jekyll and Hyde Mr. Hicks, whom now you see and whom now you don't see. A great many illegal shooters and shippers of game in the State of Wisconsin, killers of chickens, grouse and red-coat deer, know Mr. Hicks, of Milwaukee, very well. For a long time they have been shipping their illegal game to Mr. L. H. Hicks, Milwaukee, knowing very well that it would not be delivered to Mr. Hicks, but be forwarded, finally to turn up in the hands of H. L. Brown & Son, of Chicago, commission merchants, and handlers of poultry and game. To the latter concern, I have no doubt, Mr. Hicks, of Milwaukee, has been a valuable friend.

The newspapers of Milwaukee have discovered a great deal more news about the violations of the Wisconsin game laws than have the representatives of the law, for that purpose appointed. For some time the leading Milwaukee papers have been calling attention to the many instances of open or covert violations of the law. Warden Ellarson, it seems, appointed Deputy Warden August Zinn to look into the case of Mr. Hicks. Deputy Zinn, it seems, is a hustler, the sort of which Wisconsin needs a great abundance, and he succeeded this week in catching Mr. Hicks, as it were, in the process of changing his coat. The express companies, who, without doubt, have been carrying this illegal game, and who will, without doubt, continue to do the same thing, profess the most extreme and friendly interest in this matter, and state that they are very sorry they did not know who Mr. Hicks was, and that henceforth they will be very guarded in what business they transact for him. The express companies regret very much the pernicious activity and reprehensible resourcefulness of Mr. Hicks.

Too much credit cannot be given to the Milwaukee press for getting details which were handed over to the proper authorities, which resulted in the discovery of Mr. Hicks, as well as for their sound stand for something beside political activity in matter of the deputy wardens over the State. An evening Milwaukee paper states: "Deputy Game Warden Zinn's work is a sample of the activity which the framers of the game law had in view when they provided for the policing of the game

country by wardens interested in the preservation of Wisconsin fish and game."

That is good doctrine. Wardens are put in power as servants of the people, and they are sworn to do their duty under the law.

Koshkonong.

There has been complaint arising to the point of indignant protest over the violation of the sneak boat law on Lake Koshkonong, in Wisconsin. I have earlier described this peculiar form of duck shooting, which seems to have been originated and perfected on Lake Koshkonong. It is a most deadly form of open-water shooting, and calculated to break up the bodies of ducks on their feeding beds. It is an exciting form of hunting, and one demanding skill, and were it not so destructive it might be called sportsmanlike. It was long ago put under ban in the State of Wisconsin, but it is well known that it has been very frequently practiced by shooters who could not endure the sight of the great bodies of canvasback lying out into the open and refusing to work. A number of these little sneak boxes, provided with aperture for the invisible sculling oar, were constructed this fall on Koshkonong, and no good purpose is subserved by denying that they went into general use. Many appeals were sent to the State warden. Many newspapers published the fact that the State warden ought to visit Koshkonong. Finally the State warden published the fact that he was going to visit Koshkonong. Now it is published that he did go to Koshkonong. I have not seen mention of any arrests. A Milwaukee papers says: "The fish and game laws of this State were never better drawn than now. They insure to the poor as well as to the rich sportsman an opportunity for honest sport, and there is an intention to see that the laws are enforced. Complaint similar to that from Koshkonong comes from Pukaway and Fox Lake, and in fact from nearly every section of the State where wildfowl abound. It is the general impression among sportsmen and hunters that the laws as they now stand are all right, and that the only thing needed is their strict enforcement."

A New Sort of Big Game.

Mr. C. L. Hayden resides at Columbus, Ohio, visits in Chicago, and lives most of the time out in Arizona, where he has had some very interesting shooting trips. He is just starting this week for another trip, going to Holbrook, Ariz., for his outfitting point. He tells me that the Mogollon Mountains still preserve their ancient reputation as a good deer country. He also tells me that he heard of a great many mountain sheep in some of the ranges north of Phenix, Ariz.

It was Mr. Hayden who informed me of a species of big game which is now being hunted in Arizona, and which, I think, will appear as a novelty to most of the readers of FOREST AND STREAM. This is nothing more nor less than that well-known cherubim of the mountains, the burro, or sawed-off jackass of the West. It seems that numbers of these burros have gone entirely wild, and range, literally wild asses of the desert, over the mountains and mesas of Arizona. These herds are met with forty to seventy miles north of Phenix, and they are looked upon as legitimate wild game. The cowboys kill them whenever they can, because they run off tame stock, just as the wild mustang horses formerly did. Mr. Hayden says that he killed three of these animals, and he is ready to pronounce them about as hard game to hunt as any he ever saw. They are wilder than deer, and will run at sight of a man at any distance, from 1,000yds. up. They are very difficult to knock down, and shooting the .30 caliber, full mantel bullet, he failed to stop one, which was shot lengthwise of the body, and then crosswise back of the shoulders. (Had he used the soft nose bullet this result would have been different.)

I don't know about this burro business. I have often felt like killing a burro, because of its annoying personal habits, but I never liked the taste of the meat, and unless I had lost a burro, and wanted him to pack my flour, I don't know that I would go out hunting after him. You can't kill all the asses in the world, and we might as well be resigned. In many ways the burro is an amiable creature. I once knew a tenderfoot out in New Mexico who shipped one home to his children in Philadelphia. He paid $1.25 for the burro, and it cost him $84 express. I used to savvy burro plenty at one stage of my career, but I do not recollect ever having seen one go faster than a walk, so that this information about their big game qualities comes somewhat in the nature of a surprise.

Dope and Ducks.

Mr. J. B. Whittemore, of Galesburg, N. D., will, I am sure, pardon me for using a portion of his letter for the benefit of other "all-the-time readers of FOREST AND STREAM." In regard to mosquito dope he has this advice: "I am a little of a drug man, and your mosquito dope formula leads me to suggest that you add to the ounce of vaseline, tar, etc., about half an ounce of the best insect powder. It will not make it any more disagreeable as an application, while it will, in my opinion, very much increase its efficacy.

"This is a very nice country about here, with considerable game yet, chickens, and ducks, and a few geese. Next time you come to North Dakota stop off and visit with me. I have been here fifteen years, and know all the game pockets. When you want news from up here, I am at your service."

I hope Mr. Whittemore will not forget his last promise. The FOREST AND STREAM wants all the North Dakota news it can get, all the time.

Another Side-Hunt.

The shooters of Big Rapids, Mich., last week arranged for a grand side-hunt. W. J. Trott and W. L. Small were selected as captains, and chose sides from among the gun-bearing contingent who have a grudge against the game in that vicinity. There were thirty-seven men on each side, and I have no doubt that the birds and animals suffered after the usual fashion of side-hunts. This is a good way to keep down the game supply, which I infer must have become dangerous to the citizens of Big Rapids.

A Saturday Night Train.

Deputy wardens this week arrested John Silverman, Jacob Crowback, Nels Johnson, Fred Fostberg and Joseph Odork, the charge being that of shooting water fowl around Lake Calumet between the hours of sunset and sunrise. From the location of the offense, and some of the names of the offenders, I am inclined to fear that the officers of the law may have nabbed some of my friends of the Saturday night train, earlier mentioned in FOREST AND STREAM.

Dubuque Sportsmen.

Dubuque, Iowa, has a shooting club known as the Minnewaukon Hunting Club, which has a large membership. It is a custom of this club to make annual pilgrimages to North Dakota, more especially to the Devil's Lake country. This week the club started for its fall hunt, there being twenty-two sportsmen in the party. This means that $550 will drop into the treasury of North Dakota, or rather that the half thereof will fall into the jeans of Game Warden Bowers. This is a pretty good contribution for one city.

Texas Game Country.

Before long a great many persons will be inquiring for shooting country in the South, notably in the State of Texas. It is not always that a good shooting country has good hotel accommodations near it; so that it is a pleasure to speak of a place where it seems sure one may find both these desirable qualities. So far back as last June my friend, Joe Irwin, of Little Rock, Ark., wrote in the FOREST AND STREAM about the sport he had found at High Island, Texas, which he said was as good a point for jacksnipe and mallards and other marsh ducks as any shooter could ask—and Mr. Irwin is used to good shooting all the time. This High Island country I take to be not very far from the sea marsh country where, about five years ago, I had the best snipe shooting I ever saw in my life, and where one could have killed all the ducks he cared to kill. This point was only about twenty-five miles from Galveston, and I note that the distance to High Island is stated as only about two hours' run from Galveston, so I presume is much the same country. It is one of the best wintering grounds for wildfowl to be found anywhere in the South, and I think it especially good for snipe. The Sea View Hotel is a recent thing in this country, and is said to offer attractions not only in winter, but in summer. I have some correspondence about that region which it may be well to offer now, for the benefit of any intending to make a Southern trip. The writer goes on to say: "Until within the last two years this favored spot, High Island, on the Gulf coast, had been known and enjoyed chiefly by the ranchmen, but it may now be better known. Take a map of Texas, and on the coast you will observe a long, narrow peninsula; midway the strip is located High Island, a beautiful fertile elevation, surrounded on one side by the Gulf of Mexico, on the other by Galveston or East Bay, and on the other sides by a meadow. From Beaumont to Bolivar Point, which is just across the bay from Galveston, runs the Gulf and Interstate Railroad, and this is the road that will bring you to High Island. It is a two hours' ride from either Galveston or Beaumont." E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

A Hunting Cat.

CHARLOTTE, N. C., Oct. 2.—Mr. Warren Roark, of our city, a local celebrity in rifle shooting and squirrel hunting, besides being the proud possessor of the most distinguished squirrel dog in the State, has a hunting cat, which the enclosed photograph shows to be on a point, awaiting the crack of Mr. Roark's rifle, to retrieve the sparrow, so sure to fall.

When Mr. Roark strolls out about the cotton platform

A HUNTING CAT.

(where he is engaged as city inspector), for the purpose of adding to the feline commissary, the cat invariably accompanies him, evincing as much delight as a pointer pup in a prospective quail hunt. When game is sighted the cat crouches low, with her eyes fixed upon the bird, and the instant it falls pounces upon it, takes it to her master, and is ready for another one. She "seeks dead" and trails a wing-tipped bird with remarkable speed and unerring certainty.

B. W. SPERRY.

Notes from the Pine Tree State.

CORNISH, Me., Oct. 7.—The prospects for this season's sport are not of the best; there are but few partridges, and practically no squirrels. It is principally upon these two species that we have to depend for our fall shooting, with now and then a luck shot at a duck or a woodcock. Doubtless a few brace of the latter might be had most any day with a good dog, but we have no dogs here trained for wing shooting, and where one has to do his own hunting, in such cover as the woodcock frequents, he is seldom in a position to shoot when the bird rises.

Deer are still frequently seen all through this section, and it is probable that quite a number may be shot in nearby towns in Oxford county, which is not included in the area covered by the five-year law. Those of us who have not the means of visiting more distant hunting grounds are looking ahead to the expiration of this law, in the hope of getting a little big game hunting near home.

During the summer several of our riflemen have been keeping up their practice by shooting woodchucks. It is surprising the amount of sport these little animals afford, and one always has the additional satisfaction of knowing that he is ridding the farmer of one of his most troublesome pests.

I. W. Colcord, with his .32 caliber, has borne off the honors on this game. He shot one through the head at 75yds., and knocked over another specimen weighing 12½lbs. The latter was declared to be the boss 'chuck by all who saw it, and we would like to hear of a bigger one.

Fishing, for some reason hard to explain, has been better than for several years past. Hundreds of brook trout were taken early in the season, and later many good catches of bass, pickerel and trout were made on surrounding ponds.

The best boat fishing I have heard of was that enjoyed by Mr. E. L. Watson, our enterprising furniture dealer, who camped for two weeks on Peabody Pond, Sebago. He took many fine red-spot trout, his best catch being a 5-pounder. But the incident of the trip he takes the most pleasure in relating was the capture of two trout, hooked at a single cast. He was in a boat alone, with an extremely light fly-rod, and it required a tussle of fully two hours before he had them in the net. They weighed 1lb. and 4lbs. respectively.

Perhaps the most successful bass fishers this season were Wm. Ayer and Ned Woodbury, who took eighty bass in a day's fishing on Long Pond, Parsonfield, many of them ranging between 2 and 4lbs. This pond has recently been stocked with salmon, which are reported as doing well. TEMPLAR.

The "Forest and Stream" Plank.

[From the Report of the Vermont Commissioners of Fisheries and Game.]

MUCH has been said in the papers and magazines devoted to the interests of the sportsmen during the past years, advocating the prohibition of the sale of game, not only for shipment outside of the State, but for home consumption. Market hunters adjacent to our larger towns make a business during the open season on partridges of hunting these birds for a living. The men who do this hunting are usually well posted on the habits of the birds, and in many cases have various coveys located previous to the open season, so that they can go to them before the young birds have scattered and bag a large number daily. It is not an unusual thing for market hunters to sell from seventy-five to one hundred and fifty birds each season. One market hunter therefore destroys on an average as many birds as seventy-five sportsmen can do for pleasure. Of course, many sportsmen kill a large number of birds, but the majority of them secure none, or one or two birds. If the market hunting could be stopped entirely it would probably stop the killing of one-half of the partridges which now annually fall in Vermont before the shotgun.

An added protection would be to limit the number of birds which any one person can lawfully kill in one day. Any sportsman ought to be satisfied with five birds. It is possible to kill many more with the use of trained dogs. If the law is passed limiting the number of partridges which can be killed in one day, the same section could advantageously limit the number of pounds of trout which can be lawfully taken by one person in one day.

Reasonable.

NEW YORK, Oct. 17.—Very well said, and very apropos, was that one short editorial paragraph in FOREST AND STREAM last week, on the editorial page, word for word as follows:

"The hunter is required to distinguish between a moose and a deer, and between cow and bull, or buck and doe, before firing his shot. Is it too much to demand that he shall also distinguish between moose or deer and a human being before he shoots?"

If we kill the farmers' hens, turkeys, sheep, cows, horses, mules, asses, peacocks, goats, or the putting up of his fences after taking them down, the aforesaid farmer has a just ground of action. But if we kill the farmer, or his wife, children, or the stranger within the gates, we only are guilty of an accident, although we pressed the trigger purposely.

An accident is something which human foresight could not guard against, unless I am hunting deer, and then anything pertaining to the wild impulse of the moment is an accident if I kill a man; if I kill a deer it is calm, skillful sportsmanship. This is following out to a conclusion what should be the statute law, for which suggestion I am indebted to the editorial aforementioned.

A Texas Diana.

MAGGIE lives at the head of the creek, and lately a wild cat or some other "varmint" has been taking off her chickens. The other morning, when she and her mother were fixing up the house, they heard the old dog baying something about a mile off. Thinking that it might be some animal that was fond of chickens, they saddled up two of the horses and started to the dog, Maggie carrying the shotgun and a couple of shells loaded with

urkey shot. When they were pretty close to where the og was baying, they saw that he was jumping round big buck and making desperate efforts to catch him by he nose. Maggie slipped off her horse and managed to reep up within 25yds. without being discovered, and hinking that two charges of turkey shot might prove hore useful than one, pulled both triggers at once. 'ortunately for her shoulder, one cartridge missed fire, nd the buck ran about 50yds. and fell dead on the top of little ledge of rock on the hillside. Maggie's mother ow came up with the horses, and they led the oldest nd quietest of them under the ledge the deer was on, and etween them managed to roll him into the saddle. 'hen there was a grand procession back to the ranch, Iaggie's mother going first with the gun, and then ime the buck with Maggie sitting behind the saddle olding him on. When I asked her afterward how she anaged to ride behind the saddle, she blushed; they ere not likely to meet any one out there anyway.

The deer was unharmed excepting the shot wounds. suppose he was too proud to run from a single dog, and hen found the dog a bit too much for him.

PURBECK.

A Maine Moose Country.

Naty Fogg, Jock Darling's grandson, whose hunting camps are on the Sebois chain of lakes, in northern Maine, writes that the hunting is better than he has ver known it, and that there are very few sportsmen in his section this fall. This is a condition of affairs a good many sportsmen are looking for. Many gave up their hunting trips, first to the Adirondacks and later to Maine, because they were being too much crowded by other sportsmen, and to this fact is partly due New Brunswick's rise in popularity. Given good hunting and plenty of elbow room, and most sportsmen would prefer the hunting grounds nearest home.

The chances for moose in Fogg's neighborhood, when he season opens, are very promising. A spike horn buck in the velvet was killed there a few days ago. There was apparently no cause for the abnormal condition.

J. B. B.

A Story of Jefferson.

WHILE he was playing "Rip Van Winkle" at Chicago, Jefferson once went to the theater very much exhausted by a long day's fishing on the lake. As the curtain rose on the third act it disclosed the white-haired Rip still deep in his twenty years' nap. Five, ten, twenty minutes passed and he did not awaken. The audience began to get impatient and the prompter uneasy.

The great actor doubtless knew what he was about, but this was carrying the realistic business too far. The fact was that all this time Jefferson was really sleeping the sleep of the just, or rather of the fisherman who had sat eight hours in the sun. Finally the gallery became uproarious, and one of the "gods" wanted to know if there was going to be "nineteen years more of this snooze business!"

At this point Jefferson began to snore. This decided the prompter, who opened a small trap beneath the stage and began to prod Rip from below. The jagged comedian fumbled in his pocket for an imaginary railway ticket, and muttered drowsily, "Going right through, 'ductor."

At this entirely new reading the audience was transfixed with amazement, when all at once Jefferson sat up with a loud shriek, evidently in agony. The exasperated prompter had "jabbed" him with a pin. Consciousness of the situation came to him and the play went on after that with a rush.—Philadelphia Saturday Post.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Yukon Adventures.

(*Continued from page 264.*)

Lake Lebarge.

LAKE LEBARGE is the last and largest of the lakes at the headwaters of the Yukon. It is thirty-one miles long and from three to five miles in breadth. Except for extensive flats at each end the lake is bordered by low ranges of fantastically shaped mountains, showing large areas of naked rock. Near the lower and on the east side these hills are particularly remarkable for their abrupt forms, culminating in tower-like summits of white limestone.

Lake Lebarge is named after Mike Lebarge, one of the employees of the Western Union Telegraph Company, who, more than thirty years ago, were looking for a trans-Alaskan route to Asia. It seems pretty certain that Lebarge never saw the lake, but in some way his name has been tangled up with it. George Holt, who was murdered by the Indians at Cook's Inlet in 1885, seems to have been the first white man to have reached Lake Lebarge. He made the trip in 1878. The Chilcat and Chilcoot Indians effectually interfered with the exploration of this portion of the Yukon Basin, and it was not till 1880 that the white men again saw Lebarge. This time it was a party of twenty-five prospectors who, through the effective agency of Captain Beardslee, of the United States Navy, better known to the readers of FOREST AND STREAM as Piseco, established amicable relations with the Indians, and gained access to the forbidden country. From that time on each year saw a handful of white men on the upper Yukon, but the number was very small, and individual prospectors were widely scattered over the immense inhospitable wilderness up to the time of the Klondike excitement.

Lake Lebarge is a bad place for camping, owing to its rocky shores and general scarcity of timber. It is subject also to high winds. When Major Walsh's outfit of police crossed, several of the boats were nearly swamped. Constable Barnes handled an oar in a boat which was steered by an old sea captain in the Government employ. Half-way down the lake the mountainous waves began breaking inboard, and as the precipitous shores made it impossible to land, it looked very much as if the boat would be swamped and all on board drowned. It was bitter cold, and the frozen spray mingled with sleety rain.

Barnes hung to his oar till, despite his violent exertions, he was chilled to the bone. Thinking he might as well die comfortably, he stopped rowing for an instant and prepared to put on his warm pea-jacket.

"What you doing there?" the old captain roared.

"Putting on my coat, sir," said Barnes.

"Drop it and take your oar, you'll be in a warm enough place before long."

In our voyage down the lake night overtook us just below Richtofen Island. The wind was blowing strong from the south, and in our desire to take advantage of the help it gave, we passed several likely camping spots. When finally we wanted to land, a sheer wall of rock prevented; against which the waves were breaking in foam, and we could not find any protection for our boats. The night was overcast, and soon all landmarks faded out, and we were left alone with the howling wind and troubled waters, with only a thin outline of the shore to be seen. We took in our sails, and for an hour or more rowed along as near shore as we dared go, looking for a harbor. At length I saw an indentation in the shore line. I rowed close in under the shadow of the mountain, heading unwittingly toward some semi-submerged rocks. My heart stood still when of a sudden I saw only a few yards away a wave break, and out of the white boil the black, jagged points appear. The reefs extended to right and left, and escape seemed impossible. I threw my head boat round, but the other, swept on by the wind, was carried against the rocks, and for an instant hung suspended. The next she was lifted clear and out in the open waters of the lake.

Again we resumed our search for a harbor. The rocky wall-like shore line became diversified by occasional shingle beaches, but on these the waves were breaking so that we dared not land. I kept my eyes fixed on the rear boat, fearing any moment she would disappear, for I was nearly positive she had sprunk a leak, but the night was so dark that I could not detect her gradual settling in the water.

It was not till with a lurch that almost stopped the progress of the head boat the other turned over, only showing a few inches of her side and bottom above water, that I knew for certain the worst had happened.

For the second time I had a nasty sensation in the cardiac region. I had on heavy hip boots, and it was several hundred yards to the nearest beach through water that approximated the freezing point in temperature. The capsized boat contained, besides half our provisions, picks, shovels, axes and other hardware, and, as she was built of canvas with the lightest of wooden frames, there seemed to be nothing to prevent her going to the bottom like a shot, and dragging the other boat along.

My first inclination was to cut the rope connecting the two boats and abandon the sinking craft, but it wasn't pleasant to think of losing the necessities the boat contained, and I resolved to hang on. Calling to Mac to stand by to help, I turned for the nearest beach. This necessitated a course in the trough of the sea—the shore directly to leeward was bare rock—and the rowing was hard and tedious.

What kept the boat afloat during the two or three minutes required to make the distance is a mystery. The only reasonable explanation seems to be that a small amount of air was retained by the upper side of the boat, and the articles in sacks took some time to wet through.

It is a fact, however, that she kept on top until we got her into shallow water, and then sunk. In this position she acted as an anchor for the leading boat, keeping her end on to the sea and just clear of the beach. This was fortunate, as Mac's boats had to be attended to. If any one of our four canvas craft had been left alone in this situation they would soon have pounded to pieces on the beach.

Into the icy water we both went, and the waves filled our boots and drenched our clothing. I held Mac's boats off while he unloaded, and afterward we carried them up on the beach high and dry. Then we went at the salvage of the remaining boats, and some time after the middle of the night had rescued about everything, the canvas which was tacked closely around the gunwales of the submerged boat having prevented her cargo from falling out.

Fifty rods back from the beach was a little group of firs in a hollow protected from the wind, and here we built a great camp-fire and dried our clothes and had a bite to eat. Afterward we stretched ourselves beside the glowing embers and had a few hours' sleep.

The following day was mild, windy and sunny. We spread out on the beach tools, clothing, beans, dried fruits and other articles, and before night had them pretty well dried out. We could not get rid of all the moisture, however, and during the winter were troubled by the frozen condition of particular articles.

All the glacial streams which supply the water to the river were frozen, and had ceased running, and the Lewis almost ran dry. In the Thirty-Mile River, as the stretch between Lake Lebarge and the Hootalinqua is called, the irregular bottom was cropping up everywhere. The perils of navigation were increased a hundred fold. We played checkers with submerged boulders that howled for our lives and roared with vexation when we escaped. The noise they made was enough to turn a man's hair white.

Below the mouth of the Hootalinqua the river improved, and the Big and Little Salmon rivers and the Nordenskiold were passed without incident. Here we averaged thirty-five miles per day, despite the fact that daylight now only lasted about a third the time one has it in mid-summer. Ice was running in the river, but there was always a clear channel, and our progress was not impeded. The country near the Big Salmon is attractive, and the hills wooded from base to summit wherever seen, something very unusual.

Nov. 3 we had a hard time chopping our boats out from the ice, which had formed around them in the night. The Indians at the Nordenskiold offered us moose meat for two bits a pound. About noon we saw an Indian canoe poled by two men rounding the angle of a clay bluff below. They hailed us and we crossed to their side of the river. They informed us that Adney sent word he had passed White River and hoped to reach Dawson. They were refugees from Dawson. Near the point they passed Adney they had lost their boat in the ice, and traveled up to Selkirk on the shore ice. Here they purchased another boat, and though they had scarcely any provisions and still had 300 miles to travel, they were in good spirits and confident of getting out alive. It is certain that they had to relinquish their boat the following day, and no doubt they had a tough time to reach the coast.

Five Fingers.

We were approaching Five Finger Rapids, with regard to which we had heard all kinds of contradictory reports. Some even went so far as to say these rapids were more dangerous than any above. Pink Rapids, five miles below, was also the subject of much contradictory report. Dawson has put it on record in his official report that Pink Rapids do not exist, or at most the rapid is of trivial importance.

As a matter of fact, both rapids are bad under certain conditions of water. Five Fingers is dangerous in high water, and Pink Rapids only when the water is low.

Both rapids are on stretches of the river having an easterly direction, and as the course of the river elsewhere, without exception, is north or west, it is easy to locate the approach.

Early in the afternoon of Nov. 3 we swung sharply to the eastward, and knew we were close to Five Fingers. We could see trails in the snow all over the northern hillside, where men had traveled to inspect the rapids before going through. The men from Dawson had told us something of the rapids, and we lost no time looking them over. We took the right hand channel and went through without incident.

The rapid is caused by the occurrence of several bold rocky islands between which the river has cut narrow channels. At one time, no doubt, there was a fall here caused by the barrier of conglomerate rock. The rapid proper is only a few yards in length. The water passes over a dam-like formation with a long swell at the bottom. We put our boats through backwards and succeeded in preventing the pairs ramming each other by rowing hard against the current the moment the freight boat's progress was checked by striking the wave.

Pink Rapids showed whitecaps from shore to shore, and there seemed to be no clear channel. We chose a place only 15 or 20ft. from the right hand bank of the river, and as we passed over the reef that forms the rapids we could very plainly see the bottom.

Mush Ice.

It was bitter cold that night, and when we arose the following morning several hours before daylight, as was our custom, we heard a new noise from the direction of the river. It was a crackling noise such as would be made by crumpling stiff paper, interspersed by monotonous swishings and scrapings.

Mac went down the river to get a pail of water and came back with the bucket full of slush instead. "I am afraid it's all up," he remarked, "you can't see any open water, and I can't jam the bucket down through the stuff." This was the dread mush ice in earnest. Up to the day before ice which had formed on ropes and oars melted when dipped in the water. Now the reverse was the case, and they accumulated ice by immersion. The temperature of the water was actually below the freezing point, and only the swiftness of the curren kept it from congealing into a solid mass of ice. As it was, it was a river of slush that momentarily became moulded into circular cakes, turning upon their axes as a result of the friction of the banks.

Much of the ice formed on the bottom of the river in eddies formed by the irregular bed of the stream, and such ice from time to time broke loose and rose to the surface, carrying with it rocks and stones. Ice formed on the bottoms of our boats, and when we pushed off into the current our oars soon became so heavy with the accretion that we could not comfortably

handle them, and much of our time was spent breaking off the ice. The weight of ice on the boats constantly drew them deeper in the water, and by the following day we were seriously alarmed lest our heavy freight boats should be pulled under and swamped from this cause alone.

Only when the current of the river swung to the opposite side from that we happened to be following could we see open water or have any control over our boats. Such a deflection that evening gave us an opportunity to land on an island, and very thankful we were to set foot on shore again. All day we had seen no one, and the track of a wolf on the shore of the island was the only indication that life other than our own existed. To protect our boats from the ice we felled several good sized spruce trees, so that their outer ends formed a breakwater, and succeeded in holding them in position to sheer the ice off by chopping slats in the thick rim of shore ice at the water's edge.

Loss of the Boats.

The next day conditions were even worse. Once we were almost carried against a perpendicular buttress of rock, on which the full current of the river set, and which ground the ice cakes into flour. These cakes had now grown in size and solidity, and most of them would have borne a man's weight. When Major Walsh's party had their trouble with the ice, in which they lost three boats and a man, those who escaped from the wrecked boats walked ashore on snowshoes over the moving ice. Freeman, Bowles and Weinberg saw a collision with jammed ice was inevitable, and leaped from their boat just as it was sucked under without ever touching the ice. Bowles and Weinberg got secure footing, and eventually reached shore, but Freeman missed and his body has not yet been found. Freeman's Point, twelve miles below the Big Salmon, will recall the man and his tragic taking off in years to come.

Early in the afternoon of Nov. 5 we decided to take advantage of the first favorable opportunity to make a landing. Several times we endeavored unsuccessfully to reach the shore, and after each attempt had to work desperately to get back into the channel before being carried on crags or bars. At length, just at the head of the Ingersoll Islands, where the river widens to a mile, and where among numerous islands it becomes very shallow and very swift, we managed to get our boats up to the rim of shore ice. The current dragged them along this so that a man, to keep up with them, had to go on a jog trot. It was a difficult matter to get from a small boat to the shore ice, and required a jump similar to that taken in getting off a street car. Mac had the misfortune to slip, and his boats, which were above, were dragged down on mine. Mac held on like a bull dog and was pulled into the water over his boot tops. The combined pull of the boats also drew me into the water, but fortunately it was shallower, and together we managed to bring the little flotilla to a standstill. The ice was piling up in an alarming way about them, however, and there was no timber or suitable camp spot near by. Quarter of a mile below we could see the grove of spruce trees that marks the flat of Wolverine Creek, and as the shore line was bad the entire distance, and there were indications of a cove near the timber, we resolved to let the boats down to this place.

Soon after the start was made the current set in more strongly to the bank we were on, and we began to have trouble. I had secured a long spruce pole and ran ahead, keeping the boats clear of the shore ice and snags, while Mac followed, holding the rope to which our little flotilla in tandem was attached. To gain a moment's time Mac tried to snub the boats on a sweeper. The rope broke and it was only by a quick leap into the nearest boat that Mac saved them from going adrift. We tied the broken rope while running to keep up with the current, and then Mac crawled out over the boats with the intention of tieing all together with our inch cable.

Before he had made much headway at the job we came to a place where the sweepers, or trees, tumbled into the river from the cut bank above were so bad that I could not follow the shore. I called to Mac that I would meet him below, and threw the rope which I held into the boat.

On top of the bank the snow was knee deep, and it was worse than a sack race to get through it. I shed my hat, coat and vest, and eventually reached the river at a clear spot ahead of the boats. Near at hand was a protected cove, where we could draw them up in safety. My first thought was of thankfulness that the boats had not distanced me, but the next moment this was changed to horror, for two boats appeared, followed by a third, detached from the others, and nowhere was Mac to be seen.

The two boats struck the ice nearly at my feet, but I was so filled with the idea that Mac had met with an accident that I did not attempt to stop them. Instead I ran back up the river's edge.

A hundred yards above I found him looking for me. The boats had been carried against the ice; he had jumped out and tried again to snub them, with only one fast to the heavy rope. First two had broken loose, and then the third. Night was upon us, and with the start they had gained we could catch them neither by running or in the boat which remained. This boat contained bedding, cooking outfit, clothing and one rifle. All our provisions were lost. J. B. Burnham.

North Carolina Quail.

Garfield, N. C., Oct. 11.—The prospects for quail in this vicinity are of the very best. It is almost impossible to walk through any of the fields without putting up a large covey of quail. I have made special inquiry of a great many farmers in this neighborhood, and they all report more birds than they have had for a number of years. The reason for the abundance of quail this year is that so few were killed last fall and winter, also the exceptional good breeding weather which we had during the past summer. The open season on quail in this county (Rowan) is from Nov. 15 to Feb. 15.

A. H. G.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in Forest and Stream.

Where to go.

One important, useful and considerable part of the Forest and Stream's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsman for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

The Nipissing Country.

Lockport, N. Y.—It is but one night's ride from the metropolis to Lockport, the county seat of the Cataract county. We invite the New Yorker to take another night's journey, this time due north, with a party of Lockport gentlemen who annually for ten years have made the delightful pilgrimage. Leaving the peerless city of Toronto on the Grand Trunk Muskoka express for North Bay, the northern terminus of that road, we will soon lead him to a region whose pleasures are not anticipated by the smoky and poky guide books, and whose joys are untamed by descriptions from some railway pamphlet on "fishing and hunting resorts." True, we have left behind the roar of mighty Niagara not many hours since, but we are nevertheless "far from the madding crowd."

Midway between the sandy shores of noble Lake Nipissing and the pine-clad banks of the foaming Ottawa lies Lac du Talon. Some enthusiastic traveler who has threaded his way from Lake Ontario to Hudson Bay, and gazed from many a vantage point upon the lake-dotted landscape, has written: "Like a virgin goddess in a primeval world, Canada still walks in unconscious beauty among her golden woods, and along the margin of her trackless streams, catching but broken glances of her radiant majesty, as mirrored on their surface." Felicitously indeed is that imperial Northland likened to the immortal huntress, Diana. The Great Lakes are her crystal throne, the Muskokas are three graces attending her, the Georgian Bay is her bow, Nipissing is her silver crown, but Lake Talon is the pearly crescent that never fades from her regal forehead.

The vigilant representatives of Uncle Sam at the Niagara Falls custom house are easily pursuaded that the party is not engaged in the smuggling business, for they recognize in the advance guard the temporarily dignified countenance of the county judge and the stern visage of the sheriff, and so the baggage goes over the border without ruffling a fly or turning a Winchester snuggly concealed between the blankets. We rapidly skirt the lake shore, and after a brief breathing spell at hustling Hamilton soon find ourselves in Toronto. The evening train carries us swiftly through the fine farms and picturesque villages of the lower peninsula, and soon we get a sniff of the northern breezes as "bracing as the breath of an Alpine wind." But the charms of Muskoka and the delights of the Georgian Bay country are nothing to us, and we leave them behind without a lingering regret, for we seek the land where the crowd does not jostle. The veterans who have been there before relate marvelous tales as the train thunders on of remarkable catches of fish, deer invading the camp, wolves that drive away sleep. Doc tells how he drove off a bear on the trout stream with a .38 caliber revolver, which caused a tenderfoot to announce regretfully that he will have to forswear the delights of trout fishing, because he left his revolver at home, and carrying a rifle with a rod in the wilderness is impracticable. It is the tenderfoot's "buy" at Allandale, the Queen of Simcoe, and when the train starts again he has gained courage enough to assert that he will try the trout stream, gun or no gun.

The rising sun on Lake Nipissing illuminates the Pullman windows and arouses the tourists to a scene of wonderful beauty. North Bay is a picturesque village, attractive in spite of the puffing engines of the railroad center, because of the marvelously beautiful setting nature has given it. Yankee Perkins has a genuine New England breakfast ready for the hungry travelers at the Pacific House. After the meal he exhibits with pride his magnificent collection of mounted heads, trophies of the hunt in that region. Moose, elk, caribou, deer and bear, all magnificent specimens, whet the appetite of the hunter, and he involuntarily breathes a regret that this is merely a tame angling party, and that the hunting season is not on. He is reassured when Game Protector S. A. Hunting, a most courteous Canadian, observes just incidentally that the settlers are permitted to kill a deer in the way of self-support. The cook, Adolph, who has been picked up by prearrangement at North Bay, smiles quietly, and sententiously remarks that venison is good to eat any time if properly prepared. The game official, who is one of the most efficient wardens of her Majesty's Province, after sizing up the party, deems it unnecessary to remind the visitors from the States that he does not tolerate the reckless slaughter of game.

The C. P. R. has two passenger trains east daily, one at 1 A. M. and another at 8 P. M. The Lockport party heretofore depended upon freights to reach Ruther Glen, twenty-nine miles east, but on that fateful day there was not a freight nearer than Sault Ste. Marie, so the party put in the day at North Bay. The Glen was reached at 9 o'clock, and a portage by night on Lake Talon, five miles, was out of the question. The station agent hospitably invited the trappers from the south to camp out in the station house among the mowers, pork barrels and egg crates.

At daybreak, Hank Hill, the only settler in the vicinage, a Yankee who was rapidly getting rich raising hay from 1,100 acres at $12 per ton, was there with his hay rick and farm hands. He carted the baggage to the lake, where the guides were in waiting with boats. The beauty of that inland water more than met the expectation of the travelers. The pine-covered hills rose on every side, their dark edges reflected in the limpid mirror, making an entrancing study in the clare-obscure. Little islands everywhere dotted the smooth surface, now shutting out and then revealing hidden beauties of scenery beyond. Five miles up the lake we located Camp Niagara on an elevated point, which sloped down to the water by a wide sanded beach. To the right loomed an aggregation of rocks 1,000ft. high, which were punctuated with dens and caverns which we learned afterward were tenanted by all sorts of beasts of the forest. Ducks in martialed flight sailed overhead, wondering at, but not frightened by the intruders. Geese stretched their great wings in hurried retreat before the advance of the baggage-laden flotilla. Disobeying orders that not a line should be put into the water until camp was completely made, Doc surreptitiously drew from his bag his pet muscalonge spoon, and before guide Swisher had pulled twenty rods had 50yds. of line trailing in his wake. Milling magnate Witty, chief of the commissary department, and captain of our nine, shouted at him: "Doc, you have disobeyed orders, and I arraign you before the court."

Responded the judge: "Guilty; and I sentence you to stand imprisoned in the confines of the camp during the first three deer hunts. Take up your slack there; you blundering son of Walton, you'll lose him."

In an instant the canoe and skiff squadron hove to without any signal from the flagship, for Doc was engaged in deadly combat with a finny monster that in less time than it takes to relate it had three times vaulted into the air, showing the glistening scales of a powerful 'lunge. The unhappy Doc, who had fished those waters for nine years past, and who assumed to give the complete angler pointers on trolling, glared first at one and then another as advice, expostulation and entreaty were hurled at him from every boat. The 'lunge did a neat somersault over the nearest skiff, endangering the angler's $2 line, and then plunging for deep water came up a moment later near the captain's craft. In sheer desperation Doc managed to reach to his hip pocket, and clinging with a death grip to his rod, while his automatic reel sang a merry song, he whipped out his revolver, shouting: "I'll give you pirates just three seconds to give me sea room and to make for that offing before I open fire." The tip was given with such earnest that the boats fell off without further ado. The battle was a fierce one, but Doc triumphed. "Only a 12-pounder," he remarked, dryly, as he landed the fish; "just a nice dinner for me and Swisher; you pirates do not deserve any."

"You could have landed that fish with half the fuss without a rod; you don't want a rod trolling," suggested the Sheriff, tentatively. "There's only one sign board between here and Hudson Bay, and that points south. It reads: 'This way for pot-hunters.'" And that's how the friendly enmity between Doc and the Sheriff started.

Lively work saw the three tents pitched, bunks built, the stove erected, the dining table awning up, the hammocks under the pines swung by noon. Some one had strayed into the brush back of camp with a shotgun under his arm soon after landing, and he returned with a half-dozen plump partridges. Adolph apologized for the hasty meal to which all sat down at 1 o'clock, but the fish garnished with water cresses, the birds adorned with lettuce, the smoking platter of bacon, boiled potatoes, bread, butter and coffee, deserved, if they did not receive, a prayer of appreciative thanksgiving. During the meal one of the guides made the Judge restless by innocently relating in an aggrieved tone how a moose had acquired a liking for his turnip patch back in his little five-acre clearing in the mountain. Giving a wishbone a parting touch, he pushed back his tent stool and addressed the jury: "Gentlemen, I respect the majesty of the law, allowing that respect to suffer no abatement even in a foreign domain, but I submit to you that the statutes of Her Imperial Majesty should not protect and cherish under the panoply of a $60 fine any four-footed beast that has acquired a taste for vegetables in a benighted region like this, where grass is so plentiful, and where turnips are so scarce. Swisher, how long will it take us to reach a point where a reasonably good marksman could protect your friend's turnip patch?" And that is only the beginning of another story, which would have to deal with the triumph of equity over justice, and whose sequel is a pair of magnificent moose antlers, which shall soon adorn the mantelpiece of the Judge's domicile in Lockport.

Back of the camp, near the rocks before spoken of, in a deep glen, was a pond ten acres in extent. That afternoon we found along its moist margins tracks that the guides assured us denoted the presence of deer, bears and panthers. After this discovery, rifle practice was in order. Doc placed a bottle on a stump down along the shore 150yds. away, and all took a shot off hand. Eight bullets passed the crystal, leaving it untouched, until the veteran leveled his piece and smashed it into small fragments. There was no living with the champion until the next day. A fox on the rocks across the ravine had been noticed surveying the camp at intervals. When he appeared again the Sheriff was ready for him. It was a good long range, subsequently pacing the distance and carefully estimating the ravine made it 350yds. The marksman rested his gun against a small pine and fired. The beast fell backward, and was found by the triumphant Sheriff among the rocks dead as a stone, shot through the head. Within two days four more of the party defeated Doc in the rifle contests, the mark being a soap box placed on a point 450yds. from camp, demonstrating that the Sheriff's remarkable shot had taken his nerve.

Around the camp-fire at night the smaller parties that had been out during the day on the lake, or up the trout streams, told of the game they saw and the signs of game met with everywhere. The region in the open season must be a veritable paradise for the hunter. But angling was the avowed concern of the men of Camp Niagara, and to it they chiefly devoted themselves. Lake Talon and neighboring lakes, which were reached by short portages, abounded with small-mouth black bass, pike, pickerel, muscalonge and lake trout. The season was early for lake trout, but several fine specimens were caught by deep trolling. The largest black bass was captured by Aluminum Works Davis. It was a beau

ty, 23in. long, and weighing 5lbs. 2oz. "Boss" Corson, of the Lockport Union-Sun, ran him a close second with a 5lb. black bass. To the Sun representative fell the honor of catching the largest string of brook trout, capturing in three hours more than a lazy man would want to carry a half-mile on a smooth trail. Muscalonge were most plentiful in Pine Lake, and they fought like demons as fierce as the rugged hills that overshadowed their native depths.

This story, too long already, can give but a brief intimation of the glorious sport afforded in that enchanting Nipissing district, only one night and a day distant from the heated thoroughfares of New York. The nights are delightfully cool, and the days are days of comfort in that northland. We have blazed the trail for you, and with the autumn glories of Lake Talon beckoning you, perhaps you can be pursuaded that another summer would prove too long a postponement for the unadulterated pleasures in store for those who there get "near to nature's heart."

M. H. Hoover.

The Montana Grayling.

Editor Forest and Stream:

In an interesting article on the grayling of Montana (Forest and Stream of July 23), Dr. J. A. Henshall, the well-known angling writer and ichthyologist, writing from Boseman, Montana, says that these fish exist "only in the three forks of the Missouri River—the Jefferson, Madison and Gallatin rivers, and their tributaries." This statement excludes it from the Missouri and its tributaries inflowing below the three forks, the birthplace of the Missouri proper.

It is true that the fish, both in its Michigan and Montana habitat, shows the same apparent capriciousness in the choice of its home that its European brother in England and in Europe generally has long been noted for, but the range in Montana can be considerably extended beyond the limits mentioned by Dr. Henshall.

During a period of some ten years past the writer has been frequently connected during the summer months with the field work of the Geological Survey in Montana, and in this way has gained an extensive and intimate acquaintance with all that mountainous part of Montana which lies east and south of the Missouri, and north of the National Park. He has fished, often from pleasure and frequently from necessity, in the greater number of its streams, and has gained information of the others from observation and the knowledge of local residents. A considerable amount of information concerning the habitat of the grayling in this region has been thus gained, and it may be useful to put it on record here.

They are found in Deep or Smith River and its tributaries, and according to local information in Belt River also. These are the two first most important affluents which fall into the Missouri from the east, above the three forks. The author has not found them in the smaller streams which run directly into the Missouri, like Sixteen-Mile and Deep Creek, near Townsend, nor has he heard of them in these streams, though it is quite possible that they may occasionally occur. Their existence in Smith River is mentioned in the report of the Ludlow expedition to the National Park in 1875, by Messrs. Dana and Grinnell, and they are reported as attaining (if memory of the passage is correct—the report not being at hand) a weight of several pounds, which is much above anything seen by the writer.

In the streams mentioned the average weight is about half a pound, with individuals running to a pound, while those of a pound and a half are quite uncommon. This is, of course, merely the writer's experience as to size.

In the streams running into the Missouri below Belt River the grayling has neither been seen nor heard of by the writer. Thus it does not appear in Highwood or Shonkin creeks, nor the Arrow or Judith rivers, although the head waters of these streams contain an abundance of trout (*Salmo mykis*). Nor does the Musselshell system contain them or trout either, though its head waters are admirably adapted to either, it abounds in whitefish (*Coregonus williamsonii*), which, as it exists in all the streams mentioned in this article, is thus the most widely distributed of the three members of the salmon family found in these waters. Similarly the magnificent system of waters of the Yellowstone does not contain the grayling, though it abounds in both trout and whitefish. Concerning the streams falling into the Missouri on its left or west and north bank, the writer has no information.

In general, it may be remarked here that the shallow, winding, oozy streams which rise in the lower cretaceous country of this region contain neither trout nor grayling, though sometimes the whitefish in considerable abundance. This is due to the character of the water, which often contains considerable alkali; the whitefish appear to be able to stand a quite strong solution of it.

Nor is the grayling found in the rapid, torrential head waters of those systems it inhabits, although these mountain brooks usually contain trout to their very heads. The description, in fact, given by Sir Humphrey Davy, of the conditions of stream required by the grayling are as true in Montana as in England; he says: "They do not dwell like trout in rapid, shallow streams; nor like char or chub, in deep pools or lakes. They require a combination of stream and pool; they like a deep, still pool for rest, and a rapid stream above, and a gradually declining shallow below, and a bottom where marsh or loam is mixed with gravel, and they are not found abundant except in rivers that have these characters."

Of all the streams which contain this fish in Montana, that the writer has seen, Sheep Creek, in the Little Belt Mountains, a considerable tributary of Smith River, answers the above description best, and it also contains the most grayling, and its upper portion, which runs for miles through beautiful mountain encircled meadows and open parked country, affords the finest angling for this fish that is probable one can obtain.

The writer recalls looking cautiously over an old stump on the bank into a pool about 5ft. deep, from which he had just taken several specimens of this beautiful fish, and seeing resting quietly at the bottom a school of about forty more ranging from half a pound upward, with but a few small ones.

The same stream contains an abundance of both trout and whitefish. Each has its distinct habit of place in the stream. The trout, as usual, are found just where the swift water of the ripple breaks into the pool, the grayling lie lower down in the upper half of the pool, or reach where the water, though moving swiftly and not yet come to rest, does not break or boil, while the whitefish are more apt to be found in the shallower and quiet water, toward the tail of the pool or reach. Thus the angler, moving downward, may take specimens of all three on the same fly from the same pool. The whitefish, from their quick motion and small mouths, are the hardest to hook, they recall in their manner the dace or chub of Eastern streams. They are quite good game on the hook, but not as much as the trout or grayling. As between the latter two the palm must be awarded to the trout; the grayling, although high game, is not so long and persistent a fighter. His habit of curling sideways in the swift water puts a heavy strain on the rod at first and produces the impression of a larger fish.

Both for trout and grayling in these waters black flies are generally best, such as the black prince, black hackle, black gnat, etc. Flies of gray or gray mixed with yellow, or green, such as the professor and grizzly king, will be found excellent. The coachman is also a good fly. But the black are most serviceable in the long run. Winged flies may be tied on No. 8 hooks, the hackles, which, as usual, are best used as droppers on No. 9 or 10, sproat sizes. The grayling, like the trout, take the fly with a quick rush, and require a quick strike.

The best time for fishing is in the middle of the day, and this applies to both trout and grayling. In these high mountain regions there is even in midsummer a sharp chill in the air, until it has been warmed by the sun, and consequently no insect life abroad to tempt the fish to commence feeding. The fact that the writer has caught trout during a heavy snowstorm in early September does not disprove the generality of this rule. The long, late afternoon and evening fishing of more genial climates is unknown here.

On the table the grayling is an excellent fish, resembling strongly the whitefish of the same habitat, but in the writer's opinion is not the equal of the trout there found. On a number of occasions, while camped on Smith River and its tributaries, all three fish have been on the table at the same time, and our party have always unanimously declared in favor of the trout. But then, *de gustibus non est disputandum.*

It appears to the writer that it would be an excellent thing if the Montana Fish Commission could introduce this beautiful and interesting game fish into the Yellowstone system of waters. It is not probable, from what experience we have of the habits and character of the grayling, that it could in any way injure the supply of trout, and it would in the future, if successfully established, add to the interest and pleasure of the angler and sportsman, an increasing number of which every year visit those waters.

L. V. Pirsson.

New Haven, Oct. 1.

Vermont's Fishing Interests.

The fourteenth biennial report of the Vermont Commissioners of Fisheries and Game gives a highly satisfactory record of the fishcultural work during the years 1897-98. We quote:

We have now in our ponds about 3,500 breeding fish and several times that number in yearlings, which will keep the supply of breeders up to the full capacity of the hatchery for many years. There has been no unusual mortality among the breeding fish. Our landlocked salmon and lake trout have never yielded any eggs, probably because of their confinement in unnatural waters. Our rainbow trout do not yield eggs until late in winter or early spring, and a very small per cent. of the eggs taken ever materialize in healthy fry. Our brown trout give a few eggs, but are not a success. Our Vermont brook trout are the only fish that thrive in Vermont brooks and brook water, and to them we devote our time and attention. The year 1897 was remarkably prolific; more than 90 per cent. of all the brook trout eggs materialized in strong, healthy fry, and were successfully planted. The number of brook trout fry planted in 1897 was 1,028,000, and the total plant of all kinds 1,375,400, being a number almost equal to any two previous years. The year 1898 was an off year; not more than 50 per cent. of our brook trout eggs materialized in fry; 585,000 brook trout fry were planted, and a total plant of 972,200 being a number in excess of any year prior to this biennial term. While 1898 was not as successful as the commissioners would desire, the work of the two years are very gratifying indeed.

The commissioners cannot account for the great mortality in 1898; 100,000 eggs failed to fertilize, 300,000 fry died in the sac period and 100,000 died in our hatching troughs and nursery ponds after having fed well for a few weeks. Advices from other fish hatcheries indicate a like unusual mortality.

Does the Fish Hatchery Pay?

Our present biennial appropriation is $5,500. The output of fry for the same period is 2,288,000; the output of fingerlings, 59,600. The fry at $2 per M. and fingerlings at $30 per M., which is the market price during this period, would amount to $6,334. It is therefore a matter of demonstration that the hatchery has not only been self-supporting during the present biennial period, but has paid for all additions and improvements, with a balance in favor of the hatchery. Taking the other and larger view of the question, the hatchery pays. The commissioners have satisfactory evidence from responsible citizens in all sections of the State that the trout planted from the hatchery do live and increase, and that our brooks are fast becoming repopulated, and our ponds are furnishing good fishing. To satisfy the most skeptical that Vermont is on the forward march as a summer resort State, I ask you to compare the hundreds of beautiful ponds and lakes, with their spacious hotels, cottages and camps, where thousands of our own people mingle with visitors from abroad during the summer months, with conditions that existed ten years ago.

The Six Inch Trout Law.

The main argument in favor of a law placing a limit on trout as to length is in the fact that by thus protecting the small trout they have at least one opportunity to spawn and reproduce. This law is well observed by sportsmen throughout the State, although there are communities where sentiment is very generally opposed to the law, and where fishermen who fish for numbers rather than size and regardless of sport utterly disregard the law. It has its objectionable features in that the careless fisherman, not in sympathy with the law, will maintain that a small trout once hooked almost invariably dies. That this statement is not true may be substantiated by the fact that several thousand short trout were caught for stocking the breeding ponds at Roxbury, with no noticeable mortality as a result. Nearly all the New England States have followed the example of Vermont in placing a statutory limit upon the trout to be legally caught.

There has been a misunderstanding among many fishermen who were of the impression that it is legal to take trout of less than 6in. in length from public waters for stocking private waters. In cases of this kind the owners of the private waters have been allowed to restore the short trout to the public waters again without further action.

It is a notable fact that in communities where public sentiment upholds this law better fishing prevails than in more rural communities where the fishing should be the best.

The law is growing in favor among sportsmen as they begin to see results from its enforcement. It must be confessed, however, that in many of the mountain streams the law is almost totally disregarded.

New Varieties of Salmonidae.

The thirteenth report speaks of the rainbow trout as being introduced by the commissioners in waters formerly the habitat of the brook trout, but which have been changed in the progress of civilization to such an extent that while the water is still comparatively pure, it reaches too high a temperature in the summer months to sustain the speckled trout. It is found that the rainbow trout will stand a higher temperature of water than the speckled trout, but its successful introduction in waters described above has not been very encouraging. There are, however, a few streams where it seems to thrive.

The steelhead trout has been quite extensively introduced by the U. S. Fish Commission into the waters of Lake Champlain and tributaries of the lake. Sufficient time has not expired since this work was begun to know whether the experiment will be successful or not. Frequent catches of this species have been reported. This trout in its natural habitat sometimes attains the weight of 18 or 20lbs.

The U. S. Fish Commission is co-operating with the State Commission in introducing the landlocked salmon in Vermont waters. It is proposed to confine the work to very few desirable lakes until this species is thoroughly established to such an extent as to warrant collecting spawn from them. The lakes in which the work has been begun are Morey, Willoughby and Caspian. There are a few other lakes sufficiently large and of suitable water for the successful propagation of this valuable species, which has become so popular in Maine and New Hampshire.

Where salmon are introduced into a lake, it is considered desirable to have an ample supply of fish food for them, and the smelt is regarded as the most desirable food to introduce. Adult smelt have been introduced in some of our Vermont waters from time to time, and also smelt spawn. The commissioners were somewhat doubtful as to the results of introducing smelt spawn, but have recently been informed that smelt have been seen in Caspian Lake, which must have resulted from the spawn thus introduced.

Free Hook and Line Fishing in Lake Champlain.

Some people have frequently argued that hook and line fishing in Lake Champlain should be free at all times of the year, and that there should be no close season on any fish inhabiting the lake. The fish of the lake are not protected at all except the black bass. It is well known to all bass fishermen that black bass can be caught off from their spawning beds without even baiting the hook, and in such quantities that if the liberal laws now in force are amended so as to permit free hook and line fishing, the rapid depletion of the black bass will follow. The commissioners do not believe that the people of Vermont who are most benefited by the revenue from summer tourists want the law changed. At present our laws are more liberal for the waters of Lake Champlain than the laws in any other one of the New England States or of New York State, which protects the fish in Lake Champlain much more fully than does Vermont. If any change is to be made in the existing laws for the protection of fish, it might be proper to shorten the close season on the wall-eyed pike, which now prevails as to the tributaries of Lake Champlain and other waters. The black bass in Lake Champlain does not get through spawning before June 15, and protects its young for some little time after the spawn have hatched.

St. Louis.

Oct. 8.—Exceedingly heavy rains last week throughout Arkansas and south Missouri have caused a flood in those sections, and high water prevails, so that the angler is again shut out from his favorite fishing grounds. There is not a club preserve in that section which has had two weeks' consecutive fishing during this entire year.

Fishing at the new preserve of the Castor River Fishing and Hunting Club in southeast Missouri was first-class during the last two weeks in September, when the water was in good condition. Members who visited the club house at that time made remarkable catches of black bass, many of these running of large size. It is the intention of the directors to have a deputy fish warden appointed within a few weeks, and put a stop to the

netting for market, which has heretofore been practiced during the cold weather of the fall.

In a recent letter to me from State Fish Warden Burford, he says that he has had over 500 convictions since he took the office, and mostly at his own expense. The Missouri Legislature made no appropriation for game and fish warden, and petitions are now being gotten up to send to the next Legislature, asking for an appropriation and also for changes in the present laws. Among the changes desired, the following clause is one which it is desired to have stricken out:

"Provided, That nothing in this section shall be construed to prevent any person from catching fish with a seine, with meshes not less than 2in. in size, in any stream of water flowing through or bordering on lands belonging to such person: Provided, that such person shall not use said seine for more than two hours in any one day. Approved March 24, 1897."

This gives the market fisherman a loophole which he has not been slow to grasp, and netting for market is going on in defiance of sportsmen and fish wardens. It is certainly a shame that the great State of Missouri should not properly protect its fish and game, and I hope that the readers of FOREST AND STREAM will agitate the question until protection can be had.

ABERDEEN.

An Idyl of the King.

Two parallel wooded ridges and a deep, narrow pond between, waving rushes, lilypads, where little frogs skipped and spattered, minnow-haunted shallows and dark shadowy pools. This was the kingdom of Prester John; and his throne was in the shelter of a large hemlock, which years ago, narcissus-like in love with its own reflection, had leaned over more and more until it splashed headlong into the watery depths, a victim to egoism and a haunt for the wily bass.

Now Prester John was a bass. A small-mouthed, large-brained, black bass, with many pounds of weight, many degrees of shrewdness and many years of experience. And the reason of his name was the reason of his ways; for mighty as he was, yet he was but a myth, the inspirer of weird legend and the suggester of exaggeration. He was sought for, sighed for and schemed for by many, but his existence was reputation, not knowledge, and his kingdom was one of shadows and mystery. Hence was he named for the fabled sovereign of the mirage kingdom of the deserts, Prester John, the mystery of the middle ages.

In this watery kingdom of his were many subjects, well-favored, high-spirited fellows, who from time to time succumbed to the blandishments of rod and reel; but of the king could no man say it that he had ever sniffed or tasted of bait, fly or spoon. But there is a day for all things; and so it proved with Prester John. For one day came the Professor and said unto the scribe: "Come, give over the consideration of switchboards and jars of battery and lines and cables; gird up thy rod, and let us together seek the kingdom of Prester John and dally with the king." And so it came to pass; and with good store of flies, crabs and minnows we embarked.

The Professor, in his courtesy, insisted that I should begin; so while he managed the paddle I stood in the bow and dropped three members of Seth Green's "Big Four" in the vicinity of likely-looking snags and rafts of lilypads. The first ten minutes gave me excellent exercise in casting, but no other results. "Bill," said I to the Professor, "ferry me near that submerged brush heap." Whish! went the line. Snap! "Pooh! nothing but a rock bass. Wouldn't you think he'd have the sense to know he wasn't wanted? That's a good place for a big fellow, though. I'll try again. Ah! I've hooked the King. Back water, Bill; if he gets in the brush he's gone."

But it wasn't the King by several pounds; and as the Professor with the landing net lifted him into the boat he remarked: "A good lusty fellow, but only a peer of the realm."

Then I took the paddle and the Professor the rod.

Now the Professor was a man skilled in the ways of fish and fishing. He knew how many fins and how many scales a fish should own, and what he was when he had more or fewer. He knew the length, breadth and thickness of their scientific names, and said these names were changed frequently for other reasons than merely to cause confusion. But more than this and better, he was skilled in the cast, wary with enticements and patient of results. For many years he had wet his line in the waters of the St. Lawrence, and the lakes and streams of Maine and the Adirondacks. In short, he was such an one as was truly fitted by nature and experience to dally with the King; and therefore I placed him where he might reach the waters that bordered the throne of the mysterious Prester John. Then carefully and skillfully dropped the flies upon the water—governors, doctors, premiers, grizzly kings and coachmen—all classes, colors and professions. But nothing resulted save the circles in the water that spread and widened and made wavy lines in the tree pictures reflected in the pond from the shore. Then crabs were lowered enticingly into the depth and dangled beneath the log, and finally a large, plump minnow was sent to try his charms. This caused a sensation. A shadow moved on the bottom; and then slowly, majestically, a huge form glided up through the waters, and pausing within a foot of the minnow regarded the whole situation with sardonic composure. He looked at the fish, the fishing tackle and the fisherman as though to say, "Who are you that with your transparent deceits and idle splashings disturb the meditations of the King." Then turning solemnly he returned to the shadows whence he came. He was magnificent.

"By the beard of the Prophet and the whiskers of Peffer, I'll have that fellow if it takes three moons, sidereal time," quoth the Professor.

"Und ich auch," I replied in the language of the Kaiser.

And then we moved on to ease our nerves with lesser fish. We met with fair success, taking several of about 2lbs. weight, and at divers times we sought the King, but he vouchsafed us not another glimpse.

About an hour before sundown we landed and held a council of war. We resolved, first, that the unapproachable must be approached, the uncatchable caught, and the unidentified identified. Second, we discussed all the bait that we had ever tried, read of or heard of, and lastly we started on a tour of investigation. I soon came across an old stump, and thinking to find some grubs, kicked it a hearty kick, thereby shattering it into many fragments, and at the same time destroying the shelter of a brood of half-grown field mice.

"Bill, here's an idea. Let's try him with one of these little sinners. I don't believe old Prester John gets fresh meat very often, and it may tempt him."

It was a new idea anyway, and with two of the mice we sought the pond. Again we approached the well-known domain of royalty.

The sun had set, and the gray shadows were just beginning to creep out from the woods over the water. Bats fluttered here and there, and now and then a swallow dipped and left a streak of silver in the dusky pond. The occasional quawk of a heron or deep bass of a frog made the ensuing silence more impressive. As silent as the shadows we moved on. The Professor had tied a mouse to his hook; and as we neared the old log he cast. Once, twice; only the splish of the bait and the faint, tinkling drops from the line. Thrice. Splash! Smash! Dash! "I've hooked him. Back me out quick. He'll break the line or pull me in. For Heaven's sake, pull out into the middle." The Professor was wild.

"Keep cool, Bill, likewise a tight line. We're all right."

And so we were; for I had backed out well into the middle, and there was open water on every side for the King to play in. And how he did play. He rushed and dashed and tugged. He fumed and sulked. He came for the boat like a Spanish tauro; and shot away again like a submarine projectile; and twice he leaped clear from the water, falling again with a mighty splash that told of his weight and proportions.

But the line was strong and the hand was firm; and the rushes grew weaker and less frequent. Little by little he was brought nearer and nearer; slyly the landing net was pushed beneath him; thump! and Prester John the King had left his kingdom to please the appetite of man and be no more feared of fly or frog or minnow.

"Who-o-o-o?" queried a little screech owl from the woods on the hill. "Who," quoth the Professor. "Who but the King, and if he weighs not more pounds than five, may I go supperless to my nightly cot."

And then we paddled to shore and disembarked, and the spring scales—with the aid of a match—said "five pounds and six ounces."

"It is well," said the Professor. "He reigned long, and his life was good and his death was mighty. He fought a good fight, and he died as a King should die—in the thick of battle in all his might and glory."

May his throne be soon filled by one as bold as he, and may we know his successor as well as we know him; and finally, in the words of the fickle French, "The King is dead—long live the king."

CHICAGO AND THE WEST.

Large Muscallunge.

CHICAGO, Ill., Oct. 15.—Several good-sized muscallunge have turned up this season in Wisconsin and Minnesota, as I have from time to time had occasion to report. I think I have heard of but three that went over 40lbs. each. To-day I learn of another one that was caught the first week of October by Charles E. Lewis, of Minneapolis, near Hayward, Wis. This fish weighed 40½lbs., and is entitled to go among the records of heavy fish, as it is rarely that a muscallunge is reported from these waters which weighs over 40lbs.

Run of Rock Bass.

For some reason best known to themselves, the rock bass make a fall run up the St. Joseph River, of Michigan, usually in the month of October. Last week this run of rock bass reached the neighborhood of Buchanan, and some very heavy catches were taken, it being stated that one fisherman would catch nearly three bushels in one day's fishing. I recollect that some twenty years or so ago, on the Skunk River, in Iowa, we used very often to see these large runs of rock bass (which in that country we always called "goggle-eyes), but this run was always in the spring and not in the fall. There used to be a dam at what was known as Reed's Mill, near Newton, a very famous fishing place at that time. There was no fishway in this dam—indeed, so far as I know personally, there has never been a fishway in any Iowa dam—and, of course, the fish could not get up any further, except in very high stages of water, when the dam was nearly submerged. As they moved around below the dam in big schools, we would catch long strings of black bass, wall-eyed pike (which we called salmon), catfish and goggle-eyes. I never saw a yellow perch in that stream, and we rarely ever caught any crappies. When the word got out that the goggle-eyes were in, we dropped all other business and went to the Reed's Mill dam. These fish would lie in schools along the bank below the dam, and would bite as fast as we would pass a piece of minnow to them. It was nothing unusual to catch a pail full of them in a little while, and I remember this, even to-day, as one of the keenest sporting pleasures of my boyhood life. I do not understand why this run of rock bass should go up the St. Joseph River in the fall, as the fish spawns all through the season, from spring to fall.

Iowa Fish.

Speaking of Iowa fishing, I notice that matters are better out there now than they were when I was doing my boyish fishing there. Commissioner Delevan has been doing for the Iowa waters as much as his limited appropriation will permit. He has been planting mostly bass and crappies, with some wall-eyed pike. I notice with regret that the carp seems to have run from the Mississippi River into a great many Iowa streams. When I lived out there the State gave 50,000 majority each year to the same political party, and there were no carp.

Pollution of Streams.

A nitro glycerine concern, on the banks of the Wabash River, in Indiana, has been flooding the river with refuse of a poisonous nature, and as a consequence the fish life of that stream has been destroyed for a long distance. Residents along the Wabash are protesting bitterly against this state of affairs.

At White Pigeon, Mich., a paper manufacturing company emptied a great vat of chloride of potash into the St. Joseph River, and killed a great quantity of fish. The concern will be prosecuted.

Dirty Devil.

The fish warden of Utah is having trouble in Wayne county with a reservoir built near the head of Dirty Devil Creek, where 2,000 acres of back-water has been formed by a dam of great size across the creek. A similar reservoir has been built on East Cañon Creek, also without provision for the passage of the fish. What, with the reservoir and the irrigation ditch problems combined, the fish and fish wardens of some of the Western States have a hard time.

Meshes of the Law.

During the month of September, State Warden Osborne, of Michigan, made thirty-two arrests and secured twenty-seven convictions. Fifteen arrests were for violations of the game law, and seventeen for violations of the fish law. The sum of $308 was collected in fines.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

A Half-Column of Appreciation.

New York.

Little Falls, N. Y.—I have read FOREST AND STREAM since I was old enough to read at all, and have always been one of its most honest admirers. J. R. B.

Massachusetts.

Boston, Mass.—I have tried all summer to get time to write to you. I wanted to send you the best word I knew how to write anent your splendid anniversary number. I never saw anything equal to it. You manage to put up the best paper ever heard of. * * * What splendid papers Mr. Burnham has written on Alaska. They are the best things I have seen on that part of the world anyway. I wish I knew Mr. Burnham. I have a half-written report, or series of papers, on my last fall Maine woods excursion, but I fear it will never be finished. I mean to go again this fall if it is possible. It is my life preserver. C. H. AMES.

Pennsylvania.

Philadelphia, Pa., Oct. 1.—Say to Mr. Mather that his "Louisiana Lowlands" keeps his well-known and now famous crest "full high advanced." It is at his best. If I were a little more of a "sport" I would enjoy "Confabulations of a Cadi," but the real brightness of these Cadi sketches touches and warms the cockles of my heart.

Germantown.—Please continue on with your most useful paper, as it is one of the fixtures of the house. R. P.

California.

Oakland, Cal.—That the FOREST AND STREAM could not fail to prosper under a management as able as its present goes without saying, and that it may always be as well conducted is the earnest wish of your old-time correspondent.

FORKED DEN.

Massachusetts Again.

I was a New Hampshire boy, born near Lake Winnipiseogee, with Ossipe Mountain for a northern limit to the world, and can and do appreciate old county folks and speech like those in Mr. Robinson's chapters. I am one of the unfortunate class that can't go fishing, but I can read, and have read the paper for twenty years, and hope I shall be able to read it twenty years longer.

C. E. N.

Canada.

Montreal.—I am sure that Mr. Mather's sketches have been a source of great pleasure to me, in fact your whole publication (FOREST AND STREAM) has been to me for I think now twenty-five years. I think I am a subscriber since almost the FOREST AND STREAM was started. J. C. W.

Michigan.

Detroit, Mich.—The journal improves each year, and is a credit to American enterprise. W. P. M.

Connecticut.

Enclosed please find $10 for FOREST AND STREAM for three years. Hoping that some of my descendants will duplicate this subscription for a like term a hundred years from now, I am fraternally, G. E. W.

Another from California.

Please send the binder by mail. If there are any extra charges I will remit same. After taking FOREST AND STREAM six months it seems like an old friend, and I can't get along without it.

E. B. S.

Minnesota.

Benson, Minn.—FOREST AND STREAM is a paper every sportsman and lover of nature should keep, and it is a pity there are not more true sportsmen to learn the principle which it advocates. If every subscriber would go to work and strictly keep within the bounds of the law, and see that his neighbors and friends did the same, I believe the game would soon multiply, but as the matter stands now, no amount of legislation will help unless the laws are obeyed. K. O. K.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

"Hants."

THE coon discussion in FOREST AND STREAM is rather amusing for a summer's diversion; and, from the simplicity of coon lore in general, it seems morally certain that this was its origin. The numberless devices that capture coons are well known to most woodsmen, especially here in the South, where, next to the possum, of all varmints the coon is most prized by the colored contingent. Snares for his destruction are laid wherever he is likely to walk "in the glimpses of the moon," the most common, simplest and most taking of all being an auger hole in a log that crosses a branch or slough. Four horseshoe nails are driven through the edges of the hole, pointing downward; a little honey or sorghum is then poured into the hole; the coon noses out the sweets, inserts his paw to secure the feast, and —passes the remaining hours of darkness in wondering over the remarkable detaining power of the bees that grasped the offending member just at the instant he attempted to withdraw.

For the man who would revel on roast coon there is no surer way of catching his coon; but the darky, an axe and the "yaller dorg" in conjunction serve the same end, and are far more productive of sport. Once, when the nights had grown long, and the frosts of November had denuded the trees and congealed the miasma exhaled from the swamps through the long, deadly autumn, two friends, with a half-dozen curs and a couple of darkies, invaded the haunts of varmints noctivagant,

My friends were quite young, yet in their teens, while the dogs and Jul'us, one of the darkies, were veteran hunters. The moon should have shone, but lowering clouds obscured its sheen, and a fine rain was falling—an ideal night for a hunt.

Near the edge of the swamp the dogs struck the trail of a lusty old fellow, learned in all of the wisdom of coons, and out for a frolic. He, doubtless, before had often been chased, and in less than an hour had "tapped" twenty trees and led the cry for a couple of miles through bogs and across branches in such bewildering maze that the huntsmen attempted to blow off the dogs in disgust. In the language of Jul'us, however, "Dere 'us Ruler what 'us deef to er horn when arter er coon, an' he driv' 'im so hard an' he driv' 'im so fas' dat he jist 'beleged ter clam' fur 'is hide; an' when wes got dar, dar he wus!"

Yes, "dar he wus" for sure, as a brush fire revealed, well out on the limb of a tree entirely too large to cut without spoiling the hunt. Buck, the younger negro of the two, was famous for climbing, so, divesting himself of shoes and coat, he grasped a friendly grapevine and was soon on the limb and between the tree and the coon. To quote Jul'us again, "Dar sot Buck an' dar sot de coon, an' wes could see de coon jes' lack wes could see Buck, but Buck 'low dat dere wa'n't no coon up dar. Wes tole 'im ter clam out an' shuck 'im off, but when de lim' 'gin ter ben' Buck got skit'ish an' triflin' an' I make 'im cum down, an', ole es I is, up I clim' an' out on de lim' I went, but when I git dar, I did'n' see no coon, nuther; but de gem'men an' Buck dey 'sisted dat dey seed 'im, so I crawl out on de lim' fur es I could, an' I shuck an' I shuck, but dat coon des would'n' turn go, an' den I couldn' see 'im no how. By 'n' by Buck got manish an' he say so much I got mad, an' down I cum, an' up he went ergin. Sho' nuff soon's I hit de groun' an' look up dar sat dat coon out on de lim', an' he look es big es er dorg.

"Wal, sah! Buck crawl out on de lim', he did, an' de fust thing he say: 'Wher' dat coon gone?' Den I got skeerd right straight, fur dar sot de coon right befo' his eyes. I look at de gem'men an' de gem'men look at me; an' dey tell Buck ter cum down an' les go. Buck 'low he boun' ter hab dat coon ef he up dar, an' he ke'p on er crawlin' out on de lim'. Fust thing yer kno' de lim' 'gin ter crack, an' den we all seed dat coon jump an' run right squar' through Buck, jes es sho es yer lib, an' go er skin'in' up de tree. Wes tole Buck what we see, an' den he gib one yell an' down he cum, half er slidin' an' half fallin', an' de wool on hees head dun ris up lack 'nit'in' needles. Soon's he could talk fur his teeth er chat'rin', he said he neber seed no coon, an' he neber felt nothin' but sumpin' cole lack sweepin' th'ough 'im, an' den he kno'd er hant had 'im sho."

In the scramble to get away from the specter, Jul'us did not fail to remember that the dark is all dangerous when spirits stalk abroad, so he grabbed a pine knot to light the forest way. Now Jul'us, upon this occasion, bestrode a mule that was giddy even beyond the wont of his treacherous kind, and it was only a little while before some flaming rosin from the torch came dripping upon his aristocratic loins, and then there was a circus that roused the mirthful owls for a mile around. For a minute there was an exhibition of buck jumping that would have filled a bronco with envy, and then a tearing away through the forest to an accompaniment of squeals and yells, thumping saplings and flounderings though bog holes that composed a nocturne the grandest that swamp had ever known. The performance was brief, but served as a diversion that relegated the ghostly coon to forgetfulness, and after poor Jul'us had been rescued from the slough where he had finally landed over the ears of his steed, the hunt was resumed, this time, on foot, while the horses were left tied by the side of the path, where they could be conveniently found when wanted.

The hunt was now made upon higher ground, and by midnight five fine, fat possums were securely tied in a bag. At this juncture the mist that had fallen gently all the while changed to rain, with every prospect of a downpour. A deserted house near by offered refuge, but Jul'us for reasons that he was unwilling to divulge declined the friendly shelter, saying that, as his mule was gone, he would risk a further drenching and cut across the fields for home; so off he trudged, the bag of possums upon his back, and with two or three dogs at his heels. His return a short while after was as violent as unexpected, for he came as a whirlwind, bursting in the rickety door, and measuring his length upon the floor, where the slight blaze the boys had kindled on the hearth revealed him lying with bulging eyes, minus hat and bag, and virtually speechless from fright, as he could only at intervals painfully articulate that word of baneful import, "Hants, hants!" By dint of some rubbing and much whisky, Jul'us recovered sufficiently to tell a gruesome tale of passing through a joining hillside pasture and running into the arms of a whole "flock er hants" that had pursued him, with reaching arms, to the very door. A yell from Buck, who declared he could see them at the window, put a period to the story, and then a friendly lightning flash relieved the agony by revealing three curious donkeys, with extended ears, gazing placidly in the direction whence the victim of their inquisitiveness had disappeared. The guying that Jul'us received for his foolish fear roused his "gizzard," and the whisky he had drunk infused his soul to boasting, so when the rain had slacked and the huntsmen sought their horses for the journey homeward, none was so bold as he, despising the terrors of the forest's gloom. With axe upon shoulder he led the way along the path, and sighed for ghosts to battle with and overcome.

Even and anon he would swing the axe from hand to hand, discanting on the pleasure it would give him to encounter ghoul or gnome that he might smite him hip and thigh.

Now one of the boys was riding a mare, followed by a foal that had been made a pet from birth. The colt was standing in the path, doubtless watching the return of the huntsmen, and Jul'us, not seeing him in the dark, ran full against him just at the moment his soul most panted for combat with powers of evil. The docile creature, expecting a caress, extended his velvet muzzle, and Jul'us says caught him by the nose. Be this as it may, that valiant hero forgot that he was weaponed, threw the axe away and, striking through the bushes, treated the party to an imitation of the impromptu performance enacted by the mule a few hours before.

The next morning the boys returned and rescued the axe from the bushes, and the bag of possums from the pasture.

WM. M. HUNDLEY.

M. V. G. and F. P. A.

THE inaugural beagle trials of the Monongahela Valley Game and Fish Protective Association, to be held at Carmichael, Green County, Pa., Nov. 28, is most complete in its programme, as will be noted in the following list of events:

Derby Class A.—For dogs and bitches 13 to 15in., whelped on or after Jan. 1, 1897.

Derby Class B.—For dogs and bitches 13in. and under, whelped on or after Jan. 1, 1897.

Open Class C.—For dogs and bitches, all ages, 13 to 15in., that have not been placed first in any all-age class in field trials.

Open Class D.—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any all-age class in field trials.

Entries for Classes A, B, C and D close Oct. 24. Fee to start, $5, of which $3 forfeit must accompany entry; $2 to start. Moneys divided in three purses, 50, 30 and 20 per cent.

Brace Stakes.—For dogs or bitches 15in. and under. Entries close at the drawing. Fee to start, $5. Two purses, 60 and 40 per cent.

Pack Stakes.—For four dogs or bitches under 15in. Entries close at the drawing. Fee to start, $10. Two purses, 60 and 40 per cent.

Champion Class.—For dogs or bitches 13in. or under, having won one first prize in any open field trial class (except Derby and Futurity). Entries close at the starting of class.

Champion Class.—For dogs and bitches 13 to 15in., having won one first prize in any open field trial (except Derby and Futurity). Entries close at the starting of class. Entrance fee for the champion classes, $5. Two purses, 60 and 40 per cent. The title of field trial champion will be awarded to winners in these classes.

The club retains 20 per cent. of all entrance money. Address all entries to the Secretary, A. C. Paterson, Homestead, Pa. The judges are Dr. George Gladden and Mr. W. H. Beazell. Both are experienced gentlemen sportsmen.

Canoeing.

The A. C. A. Annual Meeting.

THE annual meeting of the executive committee of the American Canoe Association was held on Oct. 17, at Buffalo, Com. Thorn presiding. The usual routine business of the Association was carried out, the details of which will appear next week. After a prolonged discussion it was decided to hold the 1899 meet among the Thousand Islands, the exact locality being as yet not settled. The date will be from Aug. 4 to Aug. 18.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Yachting.

THE annual meeting of the Y. R. U. of the Great Lakes will be held on Oct. 29, at Buffalo.

THE annual meeting of the Lake Y. R. A. will be held on Nov. 5, at Kingston, Ont.

The Seawanhaka Cup.

THE question of the competitors for the Seawanhaka international challenge cup in 1899 has been settled by the decision of the Royal St. Lawrence Y. C. to accept the challenge of the Seawanhaka C. Y. C. The reasons for selecting the Seawanhaka C. Y. C. again instead of the Inland Lake Y. A., whose representative was in Montreal with a challenge on the day after the last race, are given in the following letters:

J. W. Taylor, Esq., Commodore Inland Lake Yachting Association, St. Paul, Minn.:

Dear Sir—I beg to confirm our telegram of 24th ult., announcing that we had accepted the challenge of the Seawanhaka Corinthian Y. C. for the season of 1899.

As you are no doubt aware, the deed of gift provides that priority of date in receipt of challenge need not govern during the thirty days following the termination of the last match, and it was under this provision, and after mature consideration, that our committee, who had previously decided to give up the cup, concluded to accept the challenge of the Seawanhaka Corinthian Y. C.

The recent match was followed by so much newspaper and other comment, and the reputation of the cup seemed so much endangered, that when a challenge for next year was received from the Seawanhaka Corinthian Y. C. it seemed to be in the best interests of international yachting that the challenge should be accepted, and we acted accordingly.

We know the keen interest our members take in our class of boats, and we feel assured that the acceptance of your challenge would have been followed by a good contest, which could not have failed to benefit the sport.

I am directed therefore by the committee to express their sincere regret that we shall not have the opportunity of meeting your club in a friendly contest next year, but trust we shall have the pleasure of seeing a large representation of your Association at our races.

Your friendly letter of the 29th ult. has just come to hand, and we thoroughly appreciate it. Yours very truly,

J. C. C. ALMON,
Sec'y Sailing Com. R. St. L. Y. C.

W. S. Morton, Esq., Sec'y White Bear Y. C., St. Paul, Minn.:

Dear Sir—Replying to your favor of the 14th inst., I would inform you that the Seawanhaka international challenge cup is at present in the custody of the Royal St. Lawrence Y. C., of Montreal, which club won the match for it in August last.

You are probably familiar, through the press reports, with the facts that there was considerable controversy over the selection of the double-hulled yacht Dominion as defender of the cup, and that a formal protest was in consequence lodged by our club's representative with the sailing committee of the Royal St. Lawrence Y. C.

This protest was not allowed the Royal St. Lawrence committee adhering to their determination to sail Dominion, and as it seemed to our representative the most sportsmanlike course, the American yacht Challenger sailed the match, which, as you are doubtless aware, resulted in Dominion's victory.

This action by the committee of the Royal St. Lawrence Y. C. caused some little strain of the cordiality existing between the two clubs, and some of our members were at first inclined to engage in no further contests with the St. Lawrence Club.

The Royal St. Lawrence Club on their part held a meeting, and decided, in view of the disagreement and hostile criticism of their course, to return the cup.

We would not, of course, in honor accept the cup without having won it in fair contest, nor indeed, under the terms of the declaration of trust, had the Canadians any right to return it before the time for receiving challenges for the next season should have expired. But after conference with a representative of the Canadians it was decided that the most satisfactory way out of the difficulty was for the Seawanhaka Club to challenge for a match in 1899.

This determination was acted upon and the challenge has been forwarded, and we learn that it has been received by the Royal St. Lawrence Y. C.

We have not, however, up to date received any official notice of its acceptance.

In the event of its being accepted, we should welcome with great pleasure a representative yacht from your club as a competitor in our trial races, and sincerely hope that you may have at least one vessel ready in time.

Apologizing for this late reply to your letter, which has been occasioned partly by the writer's absence from town, I am very truly yours,

CHARLES A. SHERMAN
Sec'y Race Com. S. C. Y. C.

The following letter has been received in New York, and in accordance with its suggestion arrangements are being made for a meeting of representatives to discuss the terms for the next race.

Royal St. Lawrence Y. C., Montreal, Oct. 7.

Charles A. Sherman, Esq., Sec'y Race Com. Seawanhaka Corinthian Y. C., New York:

Dear Sir—I beg to confirm my letter of the 24th ult. and acknowledge receipt of your letters of 20th and 28th ult. We understand that it is your desire to frame rules that will produce a type of boat more generally useful than those that recently competed, and in this we shall be glad to meet you.

Could you not arrange to meet us in Montreal? We shall be glad to see you at any time that is convenient for yourselves. Yours very truly, J. C. C. Amon, Sec'y.

Yacht Measurement.

Editor Forest and Stream:

In the consideration of the new measurement rule, we may lay down these two axioms:

A. If it fails to tax present racing machines so as to practically prevent their winning races against otherwise desirable yachts, it is a failure.

B. If it permits the building of a racing machine of any different or new type that can win against a wholesome yacht, it is a failure.

Let us investigate these two points:

First. Yachts of known elements can be compared to ascertain whether or not Axiom A is met. For this purpose I have taken the published speed records of the '98 20-footers, the Seawanhaka Corinthian 21ft. knockabouts, a fast 34ft. centerboard sloop that has won a majority of races in her class, a fin-keel 34ft. sloop, the Herreshoff 30-footers and a yacht of the 43ft. class of the conventional type, and have compared them in the table herewith given. These dimensions are taken from published records, with the filling in taken from sketches made by me, and while not strictly correct, are very nearly so. The speeds are taken from the times actually required to cover courses of known distances, eliminating all races in which there was a report of flukes or changes of wind. The 20s and the 30s are strictly racing machines. The centerboard 34 has relatively small accommodations. The fin 34 and the 43ft. yachts have about the same accommodations.

From your point of view the 21 and the 43ft. yachts would be considered of a wholesome type. From my point of view none of them are, unless it might be the fin 34, since the other two yachts have both an excessive displacement compared with available room, and remarkably slow speed as compared with their driving power (sail area).

The table shows the various dimensions when erect and when heeled to the sailing angle: the displacements, ballast, righting moment and sail area. The racing length is computed according to the old rule, the Hyslop rule and the Y. R. U. rule; the depth in the Hyslop rule being taken as the depth of keel in centerboard yachts exclusive of the centerboard. The column headed "Seconds per mile" is useful in determining the column headed "Equivalent racing length," which latter shows the racing length at which the various yachts should sail in order to equalize their chances to win prizes in ordinary Sound racing weather.

It will be seen that in the two racing machines an enormous increase of racing length must be imposed by the rule; that in the case of the 21-footers an enormous decrease must be made, and if the various elements given are carefully studied, three facts must show with startling distinctness:

(a) The absolute failure of any of the rules to meet existing conditions of yacht designing.

(b) The impossibility of making any rule which will meet these conditions if the elements of the rule are determined from the yacht when riding on an even keel.

(c) The absurdity of the assumption that any indirect method will give a correct measure of the displacement, righting moment or speed of a yacht.

Second. Either the Hyslop rule or the Y. R. U. rule is in its elements absolutely hopeless, since the measurement of L.W.L., when erect, puts a premium on the flattened elliptical waterline which may be carried so far as to produce a yacht with greater beam than L.W.L. for measurement purposes, but which, when heeled to the sailing angle, will have a waterline of elongated elliptical form, small displacement, small skin friction, large righting moment, and very fast; the element of sail area being the one element which should be at a maximum, would be made so by cutting down the other elements. The elements of beam and draft, while restrictive, do not have any influence on increasing displacement. The element of girth tends to the production of an exceedingly undesirable form. The element of midship section is one which can be easily evaded, as I demonstrated last March.

It may be thought that the ultimate development of the racing machine has been attained by Mr. Duggan in Dominion, but I am constrained to differ, since I find it easy to design a yacht with as good an inclined waterline, greater righting moment, and, in my judgment, fully as fast, having but a single hull.

With all of the elements of the rule then tending toward the design of a yacht of a most objectionable form, the simple question remains as to how large such a yacht can be built. This is a purely engineering problem. As such I have no hesitation in affirming that certainly a 43ft. class yacht can be built, and I believe that a 90ft. class yacht can be built, which would follow all of the principles of form shown in the 20s, which could race certainly throughout one season and perhaps two, and which would be absolutely worthless except as a racing machine. The fact that Challenger and Seawanhaka practically broke up under the strain of a few races simply shows that engineering principles were not applied to their construction.

The argument made in favor of the Y. R. U. rule, that it is giving satisfaction in England, is completely refuted by the showing made of its futility when applied to existing yachts.

With the demonstration then of the absolute worthlessness of the old Seawanhaka rule, the Hyslop rule and the Y. R. U. rule, does it not seem a pity that those who advocate these rules do not refute the arguments which I have raised against them, or abandon them.

I have repeatedly challenged a discussion in your columns of the fundamental principles involved in the determination of a measurement rule, both by making assertions and by asking pertinent questions, without eliciting a response. Does it not therefore seem a fair assumption to make that those who profess to have carefully studied the subject, and must therefore have their side of the case freshly and strongly in their minds, do not dare go before the yachtsmen of the world with a statement of it that cannot be disavowed in case they are proven to be entirely wrong. One explanation I know of, and that is that they do not read your paper, this in itself being a confession of lack of real interest and ignorance. Geo. Hill.

The Flying Proa.

Stottville, N. Y., Sept. 15.—*Editor Forest and Stream:* The following description of the proa is given by Anson in his "Voyage," with an illustration:

The construction of this proa is a direct contradiction to the practice of all the rest of mankind. For, as it is customary to make the head of the vessel different from the stern, but the two sides alike, the proa, on the contrary, has her head and stern exactly alike, but her two sides very different. The side intended to be always the lee side being flat, while the windward side is built rounding, in the manner of other vessels. And, to prevent her oversetting, which from her small breadth and the straight run of her leeward side would, without this precaution, infallibly happen, there is a frame laid out from her to windward, to the end of which is fastened a log, fashioned into the shape of a small boat and made hollow. The weight of the frame is intended to balance the proa, and the small boat is by its buoyancy, as it is always in the water, to prevent her oversetting to windward; and this frame is usually called an outrigger. The body of the proa, at least of that we took, is formed of two pieces joined endways and sewed together with bark, for there is no iron used in her construction.

She is about 2in. thick at the bottom, which at the gunwale is reduced to less than 1. The dimensions of each part will be better known from the uprights and plans contained in the annexed plate, which were drawn from an exact mensuration; these I shall endeavor to explain as minutely and distinctly as I can.

Fig. 1 represents the proa with her sail set, as she appears when seen from the leeward.

Fig. 2 is a view of her from the head, with the outrigger to the windward.

Fig. 3 is the plan of the whole; where AB is the lee side of the proa; CD the windward side; EEGH the outrigger or frame laid out to windward; KL the boat at the end of it; MNPQ two braces from the head and stern to steady the frame; RS a thin plank placed to windward to prevent the proa from shipping water; this serves too for a seat to the Indian, who bales, and sometimes goods are carried upon it. I is the part of the middle outrigger on which the mast is fixed. The mast itself is supported, Fig. 2, by the shore CD, and by the shroud EF, and by two stays, one of which may be seen in Fig. 1, marked CD, and the other is hid by the sail.

The sail, EFG in Fig. 1, is of matting, and the mast, yard, boom and outriggers are all made of bamboo. The heel of the yard is always lodged in one of the sockets T or V, Fig. 3, according to the tack the proa goes on. And when she alters her tack they bear away a little to bring her up to the wind; then by easing the halyard and raising the yard, and carrying the heel of it along the lee side of the proa, they fix it in the opposite socket; while the boom at the same time, by letting fly the sheet M, and hauling the sheet N, Fig. 1, shifts into a contrary situation to what it had before, and that which was the stern of the proa now becomes the head, and she is trimmed on the other tack. When it is necessary to reef on furl the sail, this is done by rolling it around the boom.

The proa generally carries six or seven Indians, two of which are placed in the head and stern, who steer the vessel alternately with a paddle, according to the tack she goes in; he in the stern being the steersman.

The other Indians are employed either in baling out the water which she accidentally ships or in setting or trimming the sails. Thus much may suffice as to the description and nature of these singular embarkations. I must add that vessels, bearing some obscure resemblance to these, are to be met with in various parts of the East Indies, but none of them, that I can learn, to be compared with those of the Ladrones, either for their construction or celerity, which should induce one to believe that this was originally the invention of some genius of these islands, and was afterward imperfectly copied by the neighboring nations.

We must remember that all this was written over one hundred and fifty years ago. It will be seen by above description that in tacking a proa the whole sail goes outboard to leeward and is reversed; rather a dubious operation in a heavy sea or hard blow.

On account of her light construction a proa cannot hold her way long, so all danger from a back sail would be avoided. The rolling gear, so much used on small craft in England, would seem to have had its origin in the sail of these old-time proas. R. C. Leslie speaks of the proa of the Friendly Islands, first seen by Tasman in 1643, and says that it is of far more homely form than one found at Ladrones and described by Anson. Leslie says that the proa of Friendly Islands is most interesting from the way the yard is supported by a mast raking forward, like the "trinchetto," or foremast, of an Italian felucca. Speaking of possible origin of the proa's rig, Leslie says he believes the natives of Friendly and Ladrone groups to be of Malay origin. As the lateen sail is the sail of the Indian Ocean, it would seem to have traveled east into the Pacific, through the Malay Islands, and probably west toward the Mediterranean, up the Red Sea, via the Arab Elbow. Leslie also spells the name proah, but does not give his authority. This theory may account for the sail, but does not trace the peculiar hull construction.

Woodes Rogers, the English privateersman, visited the island of Guam in Ladrone group in March, 1709, and his account of the proa agrees well with that given by Dampier and Anson. While Rogers' ships were working up to island the captain records, "there came several flying prows to look at the ships; they run by us very swift; but none would venture aboard."

As Rogers' ship was probably not doing better than four or five knots, close-hauled, this gives us no line on speed of proa.

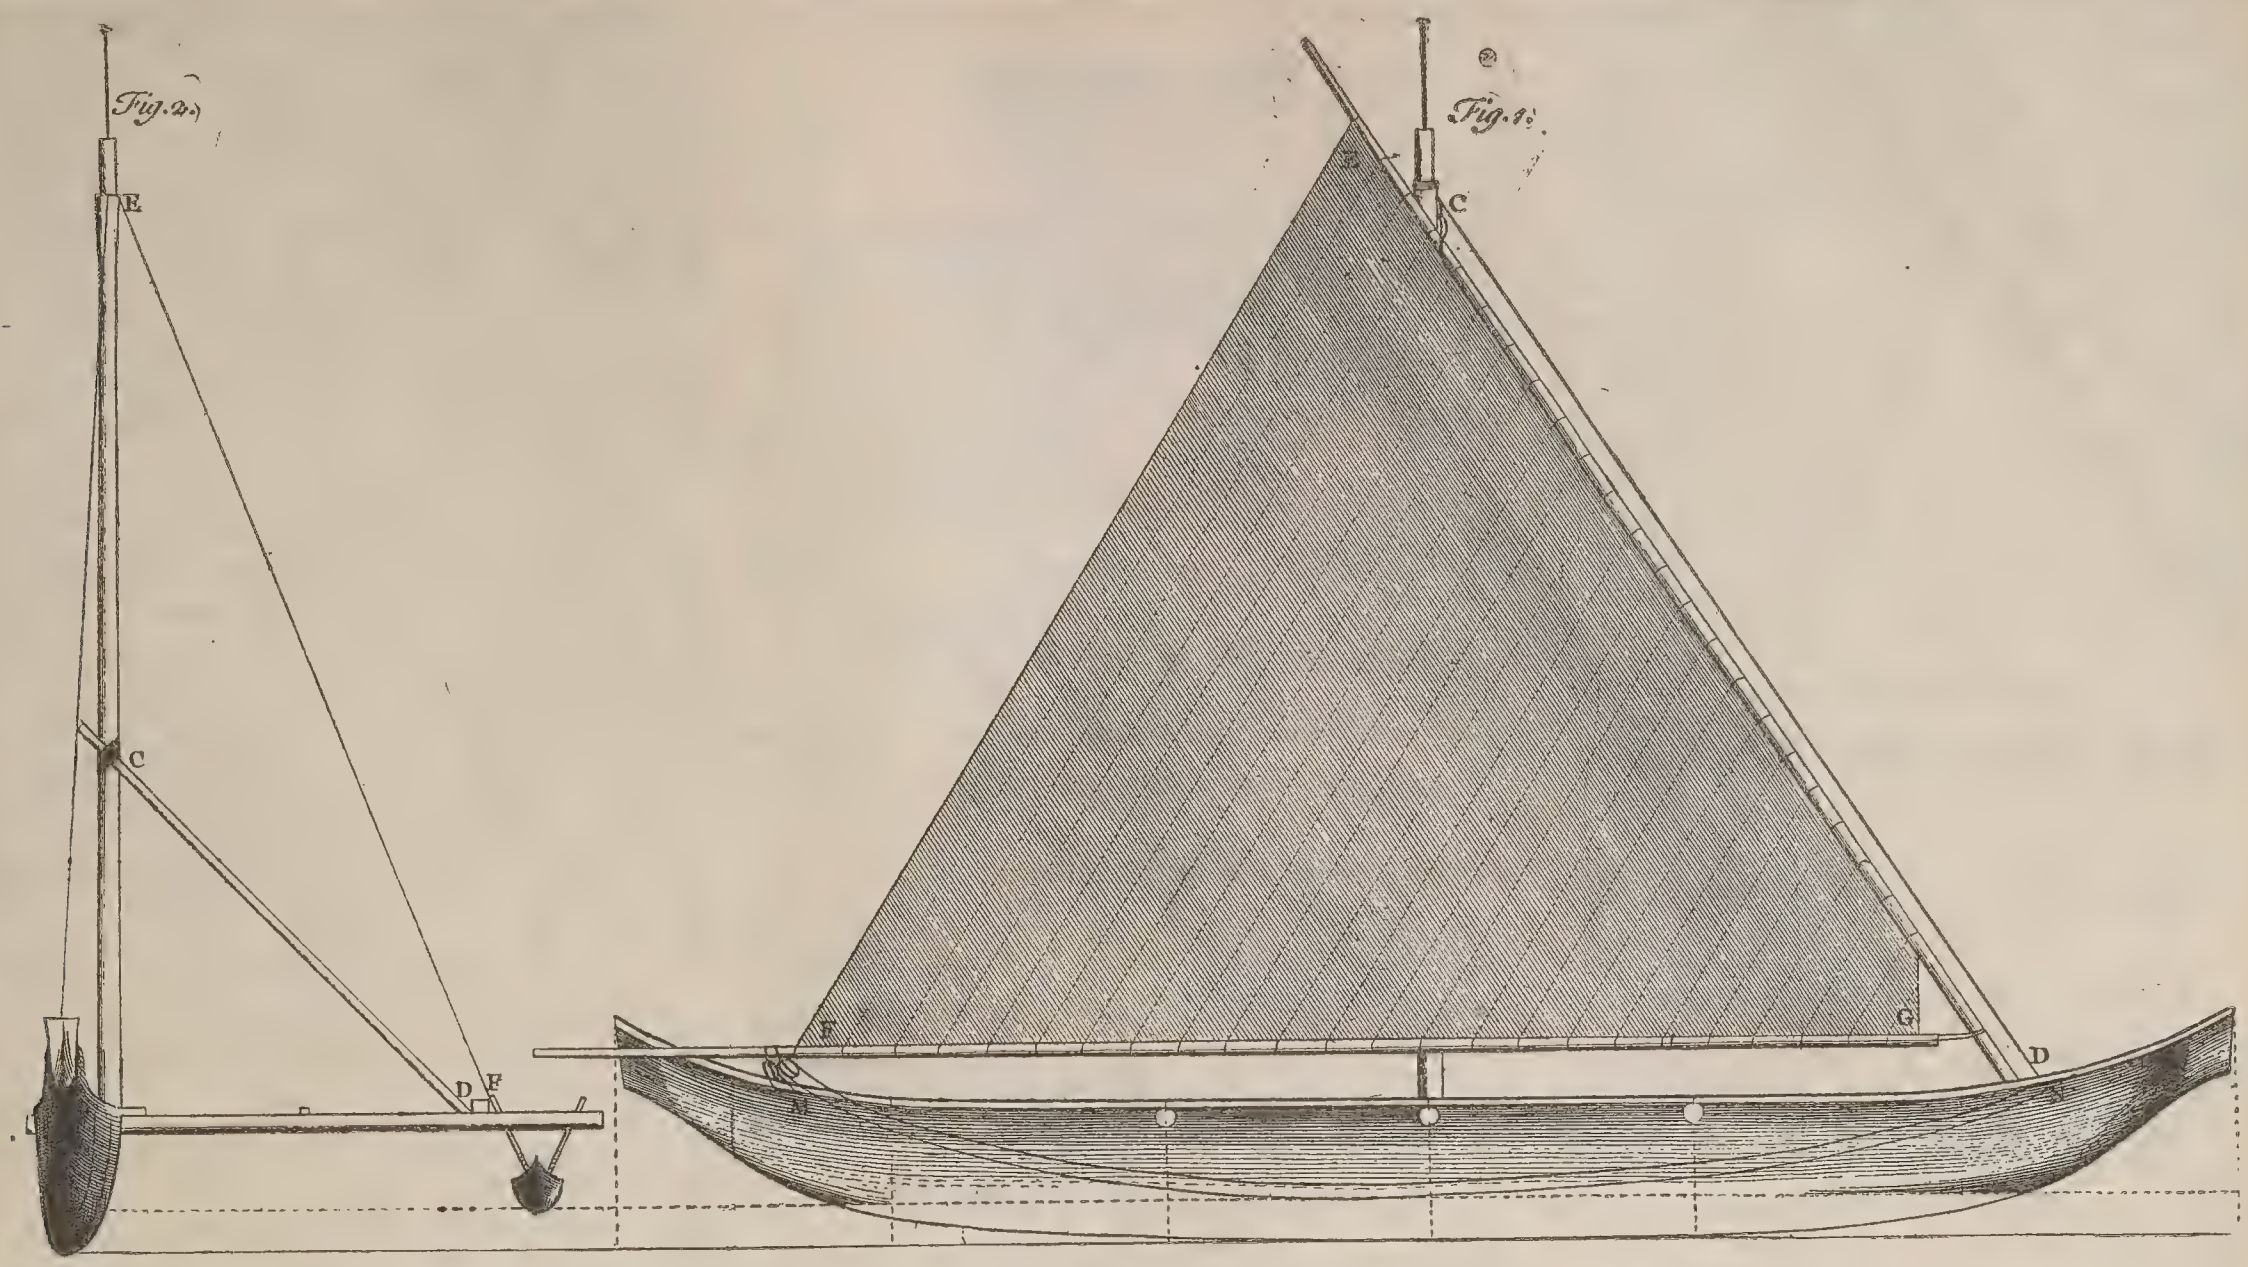
While this little English fleet laid at Guam, refitting after a long, hard voyage across Pacific, they treated the Spaniards with great consideration, paying for what they wanted and establishing a fair trade with natives and Spaniards.

In return for this kindness, when fleet was ready to sail, the Spanish commander presented Rogers with a proa, having noticed the captain's interest in these curious craft. Rogers took this proa on deck and carried her to England, thinking, as he says, "it might be worth fitting up to put in the canal in St. James Park (London) for a curiosity, since we have none like it in this part of the world."

Rogers figured the speed of the proa at 20 miles or better.

It is possible that it was this proa of Rogers', or one built on her lines, referred to by Anson as having shown such wonderful speed when tried at Portsmouth, England, early in that century. A. C. Stott.

The New Y. R. U. Rule.



The general features of the rule adopted by the Y. R. U. of N. A. were given in connection with the report of the meeting; the full details are as follows:

Measurement.

1. Yachts shall be rated by racing measurement, which shall be determined by adding together the load waterline length, the beam, .75 of the girth × .5 of the square root of the sail area, and dividing the sum by 2.

$$\frac{L.W.L. + B. + .75\,G. + .5\sqrt{S.A.}}{2} = R.M.$$

2. The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim in smooth water, with any person

THE FLYING PROA—FROM ANSON'S "VOYAGE."

or persons, who may be aboard when the measurement is being taken, stationed amidships.

If any part of the stem, sternpost or other part of the yacht below the load waterline projects beyond the length thus measured, such projection shall be added to the measured length; and a form, resulting from the cutting away of the fair line of the stem, sternpost or the ridge of the counter for the apparent purpose of shortening the load waterline, shall be measured between fair lines.

The measurement for load water length shall be made with the same number of persons on board as are allowed for crew in the yacht's class, whose average weight shall not be less than 150lbs.; or, at the option of the measurer, with a dead weight equivalent thereto.

The measurer at the time of taking his measurements shall affix a metal plate as a distinctive, permanent mark at each end of the load waterline.

3. The beam shall be taken from outside to outside of the planking on the broadest part of the yacht, and no allowance should be made for wales, double-planks or mouldings of any kind.

4. The girth shall be taken from L.W.L. to L.W.L. under the keel at a point 0.6 of the distances between the outer edges of the L.W.L. marks from the fore end. The girth shall be measured along the actual outline of the vertical cross-section at that point at right angles to the L.W.L. If the draft forward of that point exceeds the draft at that point, twice such excess to be added to girth. In taking these measurements all hollows on the fore and aft under water profile of the vessel to be treated as filled up straight.

To the girth of centerboard yachts must be added twice the distance between the lower side of the keel to the center of the area of the centerboard when lowered to its full extent. Centerboards when ballasted, except to overcome flotation or fitted with bulbs or otherwise, to be measured as fixed keels.

Measurers shall mark the points for measuring the girth as follows: By fixing three metal plates of suitable size on each side of the yacht not less than 2in. or more than 6in. above the L.W.L., level and parallel thereto, and not less than 3ft. or more than 6ft. from end to end, so that the center mark of the three coincides with the distance 0.6 from the fore edge of the bow marks.

The measurer shall also place a plate coinciding with this center mark under the rail or covering board, and another on the side of the keel perpendicular to the L.W.L. level. The distances between the L.W.L. level and the horizontal marks to be measured when the yacht is afloat in smooth water and deducted from the girth as obtained from center mark to center mark.

Measurers may accept for the measurement of girth the designer's written certificate or drawing certified to as being correct by designer and builder. But this shall not relieve the owner from fixing the marks heretofore described, or relieve him from the responsibility of the accuracy of the certificate and proper position of the marks. In the event of a measurement protest the yacht must be measured as heretofore provided.

5. The sail area shall be ascertained by taking a perpendicular along the after side of the mainmast from the under side of the sheave of the highest halyard block or sheave on the topmast to the upper side of the boom, when resting on the saddle or on the lowest part of the gooseneck, the distance of which point from the main deck or house deck shall be recorded by the measurer, as well as the other points used in measurement.

The forward point of measurement of the base line shall be midway between the intersection of the bowsprit and jibtopsail stay and the center of the tack cringle of the jib or flying jib when set. The after point of measurement shall be the outer end of the main boom in schooners, cutters, sloops and catboats, and of the mizen boom in yawls.

The maintopmast shall be measured from the hounds of the lower mast to the under side of the sheave of the highest halyard block or sheave on the topmast; 80 per cent. of this length shall be taken from the extreme length of the main gaff measured from the inside of the jaws to the outer end, and the remainder shall be added to the base line.

In all cases where the length of the spinaker boom exceeds the distance from the forward side of the forward mast to the forward point of measurement, such excess shall be added to the base line. The length to be taken for the spinaker boom shall be the extreme distance of its outer end from the center of the fore side of the mast, on which it is carried, measured when the boom is in place for use.

In pole-masted yachts and those not carrying topmasts the distance between the under side of the sheave in the throat halyard block and the under side of the sheave in the uppermost halyard block or sheave on the mast shall be used for determining the length of the base line in the same way as is the topmast when one is carried.

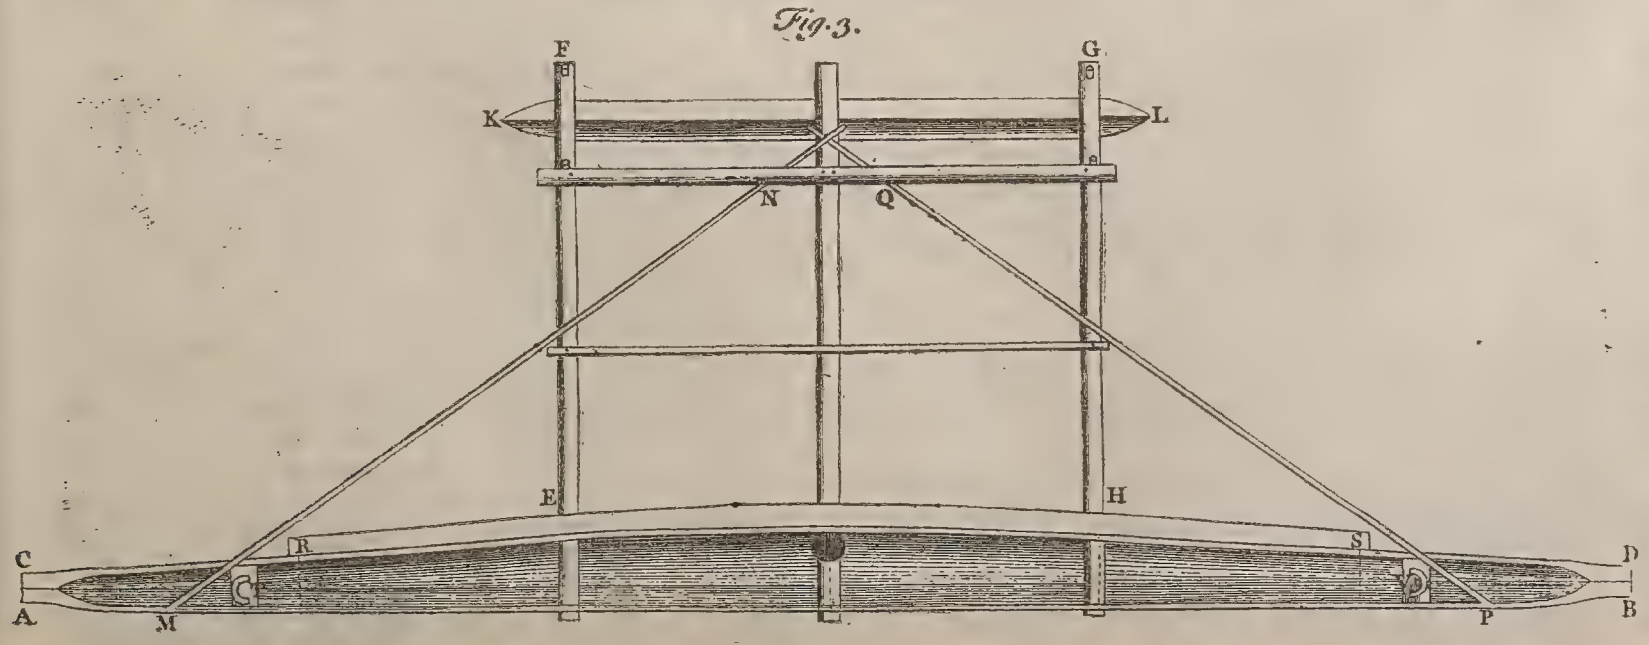
In yachts which do not carry headsails the forward point of measurement for the base line shall be the after side of the mast, or of the foremast, if there is more than one mast.

The sail area from these figures is obtained by multiplying the corrected base by the perpendicular and dividing by 2.

Where in any case, owing to peculiarity of rig, the sail area of a yacht cannot in the opinion of the measurer be fairly measured in the customary way, he may with the sanction of the race committee take such measurements as will enable him to compute the actual area of sail carried or that may be carrid in the spars used.

The prescribed method of measuring shall, however, be adhered to in all cases where practicable, and where the leach of a sail is extended beyond a straight line, or where, as in a lug mainsail, the luff extends forward of the mast or the head is rounded, the increased area resulting shall be added to that obtained by the customary measurement.

6. The racing measurement of a yacht launched after Oct. 1, 1898, shall be assumed to be the maximum limit of her class.



7. If a yacht after having been officially measured be increased in load waterline length, beam, girth or sail area, the yacht must be remeasured before starting the race.

8. If through protest the measurement of a yacht be called in question, the race committee shall direct the measurer to remeasure such yacht, and the result as reported by him shall be final. The usual fee for measuring shall be collected from the owner if the measurement be found to exceed the measurement filed; and from the person protesting if not.

The owner of a yacht so protested shall present his yacht for measurement immediately after the race, when so required by the race committee.

9. A yacht whose official racing measurement has not been filed with the race committee prior to the start of a race shall not eligible to compete.

Fig. 3.

Classification.

All yachts shall be classified by racing measurement, and shall be divided into classes as follows:

Schooners: First class, all over 100ft.; 100ft. class, not over 100ft., and over 80ft.; 80ft. class, not over 80ft. and over 65ft.; 65ft. class, not over 65ft.

Sloops, cutters and yawls: First class, all over 65ft.; 65ft. class, not over 65ft. and over 52ft.; 52ft. class, not over 52ft. and over 42ft.; 42ft. class, not over 42ft. and over 36ft.; 36ft. class, not over 36ft. and over 30ft.; 30ft. class, not over 30ft.

Time Allowance.

Time allowance shall be calculated on racing measurement.

Allowance for Rig.

Yawls shall be rated at 93 per cent. of their measurement in their classes.

Crews.

The total number of persons on board a yacht shall not exceed the allowance in the following schedule:

Schooners: First class, one person to every 2ft. of racing measurement or fraction thereof; 100ft. class, 35 persons; 80ft. class, 25 persons; 65ft. class, 15 persons.

Sloops, Cutters and Yawls: First class, one person to every 2ft. of racing measurement or fraction thereof; 65ft. class, 15 persons; 52ft. class, 12 persons; 42ft. class, 9 persons; 36ft. class, 7 persons; 30ft. class, 5 persons.

No person shall board or leave a yacht after the starting signal has been made, except in case of accident, or injury to a person on board.

Rifle Range and Gallery.

Fixtures.

Oct. 21-23.—Los Angeles, Cal.—First fall tournament of the Los Angeles Sharpshooters. Open to all riflemen. F. S. Hicks, Sec'y.

Tournament at Shell Mound Range.

THE twenty-shot rifle record of the Pacific Coast, on the German ring target, was broken by Dr. Lee O. Rodgers yesterday at the Shell Mound range. This feat was performed while shooting for the champion class medal of the Germania Schuetzen Club, single entry. Dr. Rodgers' score in twenty shots was 461 rings. The individual shots were 23, 23, 19, 24, 23, 24, 21, 23, 24, 22, 22, 24, 23, 24, 25, 24, 23, 25, 22, 23—461. The doctor was highly commended for his remarkable marksmanship, which to riflemen has much significance. The last ten consecutive shots were kept within a 6in. circle, and eighteen out of the twenty were kept within the same space; which, considering the distance, 200yds., off-hand, means that he must have been under a terrible strain to hold out so well.

His previous record in twenty shots was 451. He broke the coast record, which was 454, held by F. P. Schuster. The latter held the honors of being high man of the West only two months. The next in the line was A. Strecker with 451.

It is believed that it will be many a day before Dr. Rodgers' mark will be reached on the coast. The doctor has been an enthusiastic rifleman for the past twenty or twenty-five years, and has won many medals and honors, but of all he is more proud of yesterday's performance. During the last of the shooting over half of the members of the Germania Club were present watching every shot with the keenest of interest, and when the last was announced they gave him an ovation that any man would be proud of. None were more eager to express their congratulations than Schuster and Strecker. While it cannot be stated now as a fact, it is believed that 461 rings is the highest record ever made in the United States.

The day was none too good for fine rifle shooting, the light varying every few minutes so that the elevation was hard to keep. In the bullseye contest for cash prizes in the Norddeutscher Schuetzen Verein D. Salfield won first money on a center measuring 261 points on the machine. In the San Francisco Schuetzen Verein D. B. Faktor won out in the champion class and H. Stelling, of the third class, forged to the front with 411 rings. J. E. Gorman, of the Columbia Pistol and Rifle Club, is now in the lead for the members' medal, having passed A. B. Dorrell, who is now in the southern part of the State. G. M. Barley, of the same club, is making good progress with the pistol, his best yesterday being 39, Columbia target count. Lieut. J. Staude and E. Jacobsen, of the Independent Rifles, tied on 44, military target count. The scores of the several clubs were as follows:

German Schuetzen Club class medal shoot, 20 shots, German ring target—First champion class, Dr. L. O. Rodgers, 461 rings; second champion class, D. B. Faktor, 437; first class, R. Stettin, 405; second class, J. Gefken, 398; third class, William Goetze, 359. Best first shot, F. P. Schuster, 24; best last shot, R. Stettin, 25.

San Francisco Schuetzen Verein monthly class medal shoot, 20 shots. German ring target—Champion class. D. B. Faktor, 427 rings; first class, not filed; second class, John Gefken, 300; third class, H. Stelling, 411; fourth class, H. F. Lilkendey, 377. Best first shot, John Gefken, 25; best last shot, N. Ahrens, 25.

Norddeutscher Schuetzen Verein bullseye contest for cash prizes, machine measurement of centers—D. Salfield, 261 points; W. F. Garms, 298; O. Lemcke, 370; F. P. Schuster, 412; W. Gottschalk, 420; J. D. Heise, 432; H. Sterling, 494; J. Peters, 676; W. Morken, 847; C. J. Hinck, 976; L. Brune, 1,062; C. F. Rust, 1,149; J. Lankenau, 1,155.

Columbia Pistol and Rifle Club—Rifle, 10-shot scores, Columbia target—Champion class: D. W. McLaughlin, 50; F. E. Mason, 56.

First class—J. E. Gorman, 59; O. A. Bremer, 86.

Second class—M. J. White, 78; A. Hinterman, 85; G. Barley, 115.

Third class—E. W. Moore, 88; G. Mannell, 106; B. Jonas, 128.

Members' rifle medal, re-entry, 10 shots—J. E. Gorman, 57-65; O. A. Bremer, 83; G. Mannell, 102.

All comers' re-entry matches, Siebe pistol medal—G. M. Barley, 49-52; F. E. Mason, 56-59.

Pistol, 50yds., 10 shots, class medals for members only—Champion class: C. M. Daiss, 44; A. H. Pape, 46; Dr. L. O. Rodgers, 58; M. J. White, 66.

First class—F. E. Mason, 50; G. M. Barley, 55; J. E. Klein, 77.

Second class—J. Hinterman, 86.

Third class—J. P. Cosgrave, 84; N. H. Neustader, 99.

All comers' re-entry matches, Siebe pistol medal—G. M. Barley, 39-67-71; J. C. Gorman, 35; A. H. Pape, 40-42-48; J. P. Cosgrave, 54-56-56.

Small rifle—N. H. Neustader, 50.

Independent rifles, medal shoot, 10 shots, Blunt military target—Lieut. J. Staude, 44; E. P. Jacobsen, 44; Sergt. G. W. Mitchell, 42; Sergt. C. Andrews, 41; Lieut. E. Moenning, 35; Corporal J. A. Stang, 35; J. H. Kuhlke, 33; H. Gaetgen, 32; F. H. Laun, 29; H. Staude, 20; C. J. Staude, 19; H. Gaetgen, Jr., 25.—San Francisco Call.

Iroquois Rifle Club.

THE annual tournament of the Iroquois Rifle Club, Pittsburg, will take place on Oct. 24 to 27. On the first day the members' match will take place. It is open to members only. Conditions, 50 shots off-hand, in 10 targets of 5 shots each.

Tuesday, Wednesday and Thursday is the all-comers' match, entrance per target of 3 shots each, 35 cents, or 3 targets for $1. Re-entries unlimited. There are 21 prizes in this match.

The Stephens trophy match, open to all, is a bullseye contest, entrance $1. No re-entries. Each contestant is entitled to three shots, the best single shot by machine measurement to count. Mr. A. C. L. Hofmeister, Secretary and Treasurer.

Conlin's Gallery.

AT the Food Show in Madison Square Garden, New York, Mr. Conlin has established his shooting gallery on the Twenty-sixth street side, at the exhibition, adjoining the main floor, and easy of access. It is fully fitted up for rifle, pistol and revolver shooting and practice as usual. The show opens at 10:30 A. M and closes at 10:30 P. M.

Under date of Oct. 14, Mr. Willey, secretary of the Dansville Gun Club, Dansville, N. Y., informs us as follows: "The Dansville Gun Club will hold an all-day shoot Nov. 24, Thanksgiving Day. The club now has a shed roof over the score 20ft. wide by 80ft. long, which gives ample protection to shooter and spectator from the weather. We expect to have the most successful amateur shoot ever held in western New York."

Trap-Shooting.

Fixtures.

Oct. 18-21.—Belle Meade Stock Farm, near Nashville, Tenn.—Two days at target; two days at live birds; $500 added. W. R. Elliston, Manager.

Oct. 19.—Lyndhurst, N. J.—Twenty-five-bird handicap, $10 entrance; 10 birds, $5 entrance. T. W. Morfey, Sec'y.

Oct. 22.—Wissinoming, Pa.—Philadelphia Trap-Shooters' League shoot, on grounds of Florists Gun Club.

Oct. 22.—Belle Meade, Nashville, Tenn.—Heikes-Elliston match for cast iron medal.

Oct. 25-27.—St. Louis, Mo.—Tournament at Dupont Park.

Oct. 27.—Dexter Park, Brooklyn.—Opening live-bird shoot of Greater New York Gun Club. H. S. Lippack, Sec'y.

Oct. 27-28.—Oakbrook, Pa.—Tournament of the Oakbrook Gun Club; targets and live birds. Arthur A. Fink, Manager.

Oct. 27-29.—Louisville, Ky.—Tournament of the Kentucy Gun Club. Championship of Kentucky on last day, 25 pigeons. Emile Pragoff, Secretary.

Nov. 2-3.—Indianapolis, Ind.—Tournament of the Limited Gun Club; targets only. John M. Lilly, Sec'y.

Nov. 2-4.—Cincinnati, O.—Cincinnati Gun Club's tournament; live birds and targets. J. A. Penn, Recording Secretary.

Nov. 15-17.—Eau Claire, Wis.—Dan R. Scammon's tournament; two days at targets; one at live birds.

Nov. 23.—Hackensack, N. J.—All-day target tournament. C. O. Gardner, Jr., Sec'y.

Nov. 24.—Dansville, N. Y.—All-day shoot of the Dansville Gun Club.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

1899.

April 4-7.—Baltimore, Md.—Tournament of Baltimore shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Cincinnati Gun Club, Cincinnati, O., claim the dates Nov. 2, 3 and 4 for their tournament. First day, targets; second day, Sportsmen's Review live-bird trophy, 50 live birds, $25 entrance, class shooting, 35, 25, 20, 15 and 10 per cent.; 12 gauge guns, 30yds. rise, $500 added. Third day, live birds. The winner of trophy to hold cup and defend the same, subject to following rules and conditions: First, the winner to file a bond of $500 with the Sportsmen's Review for the safe-keeping and delivery of the same, according to stated conditions. Second, all individual contests for this trophy will be shot under American Association rules, 30yds. rise, 12-gauge guns, at 100 pigeons to each man, $100 to each side, loser to pay for pigeons shot at by both contestants. Third, the holder of this trophy is subject to challenge, and must forfeit or defend the cup within sixty days after being challenged, and will be required to post a forfeit of $50 with any responsible sportsmen's journal in the United States, accepting such challenge by publication within thirty days, naming a place, hour and date for such contest to take place, giving the challenger at least fifteen days' notice of the date of contest. Address J. A. Penn, Recording Secretary, Cincinnati Gun Club Co.

It is hard, very hard, for a man to break himself of life-long habits, whether it is smoking cigars, riding a wheel or breaking targets in a string a mile more or less long. This in reference to the "Daddy of them all," not in years necessarily, nor figuratively in paternal characteristics, but in the wisdom and ability which he displays in competition. The E. C. cup was recently added twice to his museum of rare trophies. It would seem that the redoubtable Rolla was uncertain whether some one else had not a possibility of winning it, so it was again placed in open competition at his shoot last week. Well, some of his doubts may be allayed, for he was high man on the first and second days, though on the third day he seemed to relax just by way of a rest, seemingly, for he was high man in the total for the three days with an average of 477 broke out of 525 shot at, a total percentage of .908. There may be bald eagles and cosmopolitan daddies, but the real daddy eagle does not seem to be numerous.

The programme of the Philadelphia Trap-Shooters' League's all-day tournament, under the auspices of the Forest Gun Club, on the grounds of the Forest Gun Club, at Wissinoming, Oct. 22, is now ready for distribution. There are 15 events, of which three are at 15 targets, the remainder at 10 targets. The entrance varies from 25 cents to $1, the smaller sum being in Nos. 9 and 12, to which are added $3 and $2 respectively. All sweeps are divided under the percentage system. Targets, 1½ cents, and included in entrance. Open sweeps commence at 10:30. Team match at 1 o'clock. Lunch and shells on the grounds. This is a programme which brings out the amateur and the man who likes to shoot for sport. The total entrance for the 15 events is $8.75.

Mr. J. von Lengerke, of Von Lengerke & Detmold, writes us as follows: "Will you please correct your Mr. E. Hough, who reported me as one of a party passing through Minneapolis for the great hunting grounds of North Dakota. We are daily receiving letters with reference to this alleged trip, and even telegrams to open letters on business addressed to me personally. No, I am sorry to say that I have to be on duty at 318 Broadway, working hard for a living, and am not after honkers. During our busy season I have to steal my days off, but managed to open the season Saturday with a nice mixed bag of woodcock, grouse and cotton-tails, which I hope to repeat weekly. By making mention of the mistaken identity you will oblige."

Under date of Oct. 12 Mr. H. T. Hearsey, of the Limited Gun Club, Indianapolis, Ind., writes us as follows: "Our autumn tournament takes place on the Limited Gun Club grounds, Indianapolis, on Nov. 2 and 3. Targets exclusively. Open to amateurs. On the second day the Grand Hotel trophy, emblematic of the amateur championship of the five States—Indiana, Ohio, Illinois, Kentucky and Michigan—will be contested for; 50 birds. Conditions and further information will be given in our programme, which will go to press the last of this week."

The Bison Gun Club, Buffalo, N. Y., will give an open shoot on Thursday of this week, on their grounds, Walden avenue and city line, beginning at 9:30. There are two 10-target events on the programme, 50 cents entrance, and two 10-live-bird events, $2 and $2.50 entrance respectively. There are two 15-target events, one 20-target event, one at 10 singles and 5 pairs, and 5 pairs walk-up; each 50 cents entrance, birds included. All moneys divided 50, 30 and 20 per cent. Birds 15 cents each; targets 1 cent. John E. Wilson, Sec'y.

Mr. Ansley Fox, secretary of the Fox Gun Company, made an extraordinary good showing both in target and live-bird shooting, as will be noted on reference to the scores at the Baltimore tournament, the report of which is published in FOREST AND STREAM of this week. His company has a new lock mechanism, for which the claim is simplicity, strength, durability and efficiency never before attained in such device.

Mr. H. A. Brehm, president of the Prospect Park Shooting Association, Baltimore, writes us as follows: "We would like to claim April 18, 19, 20 and 21 for our tournament. This will be strictly an amateur tournament, and we will try to make it the largest ever held in America. Will add at least $500."

The Baltimore Shooting Association, Baltimore, Md., claims the dates April 4 to 7, 1899, for its tournament. There will be added money, and a general effort to present a programme such as is up to modern standing.

Leroy was high average at Baltimore last week in the two days on targets, breaking 332 out of 360 shot at, an average of .911. Under the windy conditions of weather which prevailed much of the time, it was an excellent showing. He also showed excellent ability on live birds, but lacks the experience so necessary in making a successful long race, and a knowledge of the manner of holding on grounds varying in their surfaces, as different slopes of ground require different holding on the birds.

Mr. W. Fred Quimby, the traveling agent of the American E. C. and Schultze Powder Co., seems to have his shooting nerve all right, as will be noted on reference to the report of Rolla Heikes' shoot, wherein Mr. Quimby made a score of 22 out of 25 on birds which heated the air in their flights. There was a prospect of a team race on the edge of this hamlet, of which Mr. Quimby might have been a member, but in the light of his recent performance he must stay with the star performers.

In "Western Traps" Mr. Hough mentions the sad plight of the Federation of Gun Clubs, of Kansas City, which has $2,000, which is a redundancy. We fancy that the Federation will have to struggle on with its burden and suffer in silence. The affliction is one which should be borne with fortitude and faith that time, which cures all things, may cure the $2,000 evil.

A match between Messrs. S. Glover and J. M. Hawkins, of Baltimore, was arranged at the Baltimore tournament last week. The conditions were 100 targets each, $100 a side, both to stand at the same distance. In the tournament Mr. Hawkins stood at 16yds., Mr. Glover at 18. It was fixed to take place on Tuesday of this week.

The daily press of New York recounts that on Saturday of last week Capt. A. W. Money shot in the live-bird events at Woodlawn, Brooklyn, at 33yds. mark, killing 33 out of 35. It was extraordinary good work, particularly as the Captain was at his home in Oakland, and therefore was not present at the shoot mentioned.

Mr. W. R. Elliston, of Nashville, Tenn., has challenged Mr. R. O. Heikes to contest for the Cast Iron Medal, more commonly known as the chafing dish or stove lid. The challenge has been accepted, and the debate will take place at Belle Meade, Oct. 22.

The South End Gun Club, of Reading, Pa., won the trophy at their recent shoot, Oct. 12. Their score was 87 out of 125, 5 men to a team. The trophy will be placed in competition on Feb. 22, next year, under the same conditions.

Mr. Ed Taylor, ballistic expert of the Laflin & Rand Powder Co., was severely handicapped at Baltimore by an injured trigger finger, which, being hurt every time he fired his gun, had a corresponding effect on his scores.

Messrs. E. Meyers and J. Hushler, of Lambertville, shot a match at 25 live birds on Charley Zwirlein's grounds, Oct. 13. The former won on a score of 19 to 18. A return match will be shot in the near future.

U. M. C. Thomas, in a calm-like manner collogated 23 out of 25 live birds at Rolla Heikes' shoot, a .92 per cent. gait. If U. M. C. Thomas gets serious when he squints along a gun barrel, it is herein in evidence that it is a bad day for the health of live birds.

Several matches were shot at Dayton after the tournament, as will be duly chronicled in the report of it by Mr. Litzke, in our columns, elsewhere.

The Heikes-Elliott vs. Gilbert-Budd match, 50 live birds per man, was won by the Iowa delegation; score 94 to 88.

BERNARD WATERS.

Heikes' First Annual.

DAYTON, O., Oct. 14.—The little entertainment that Rolla Heikes had arranged for the benefit of his friends virtually came to a close this evening, at least so far as the programme is concerned, though there are yet several events of importance which remain to be decided, mention of which will be made herein later. Everything was conducted as per schedule, and the promoter has received many well-deserved compliments from the participants.

In arranging his programme, Mr. Heikes did so with much forethought and judgment, and it is rarely the case that the wolves and lambs mingle together so congenially as they did here. Then too there has been an opportunity for any aspiring amateur to win fame and glory in the E. C. cup race without resorting to an individual race with the possessor. Those who are familiar with the game will realize at once that this method of competition is not near so trying on the nerves of the novice as is pitting one's skill single-handed against that of the often-tried veterans. The methods of dividing the money in the unknown angle events, which were also the added money events, were satisfactory to all. The equitable system was used. The 90 per cent. men were taxed an additional $2 per day to create a fund for those who shot through the aforesaid events and failed to draw down their entrance money. This kept up the interest in the shoot. Such was the universal satisfaction at the manner of conducting this tournament that I believe in the future not a few shooting events of importance will be announced where exactly the same system will be employed. Taking it all in all, Mr. Heikes has many reasons to feel proud of his tournament, and I question if there is one present who will not return again next year should Mr. Heikes decide to make this an annual affair. Naturally there are some losers, for as yet no system has been devised whereby those who failed to shoot into a place can share in the division of the purse. True, Mr. Heikes may have been a trifle rude in not permitting some one to take the E. C. cup home with him, but as he claims that this is almost as indispensable an article as the cast iron medal, it will have to be passed over with only a slight rebuke. Business affairs and social etiquette do not always mingle as harmoniously as one might wish.

Tourists.

The trade, as was to be expected, was well represented at this meeting. There was present J. A. R. Elliott, Kansas City, Mo., the well-known Winchester representative; Chas. Budd, Des Moines, and Fred Gilbert, Spirit Lake, Ia., Du Pont and Hazard powder representatives, also Ralph Trimble, of Covington, Ky., looking after the same companies' interests; Harvey McMurchy, Syracuse, of the Hunter Arms Co., makers of the L. C. Smith gun; A. G. Courtney, Syracuse, N. Y., the representative of the Remington gun; E. D. Fulford, Utica, N. Y., shooting a Remington gun and Schultze powder; W. Fred Quimby, New York, American E. C. & Schultze Powder Co.'s representative; Milt Lindsley and Mrs. Lindsley (Wanda), of Cincinnati, O., manufacturers of King's Smokeless powder; J. S. Fanning, Batavia, N. Y., the shooting representative of the Gold Dust Co.; A. W. du Bray, Cincinnati, O., Parker Bros.' able and popular representative; Harry King and J. W. Mackie, of Cincinnati, both connected with the Peters Cartridge & King Powder Co., and last, but not least, U. M. C. Thomas, Bridgeport, Conn., of the Union Metallic Cartridge Co.

There were also present E. W. Hull, Akron O.; Shorty Bacon, Miamisburg, O.; Joe Coyle, Cincinnati, O.; Lon Fisher, Millersport, O.; W. G. Lyman, Kent, O.; F. D. Alkire, Woodlyn, O.; F. M. See, King's Mills, O.; R. B. Guy, C. W. Philis, G. Gross and P. Morgan, Mechanicsburg, O.; Grant Marchant, Washington Court House, O.; J. C. Porterfield, Columbus, O.; Chas. Young and Downs, Springfield, O.; E. H. Tripp, G. C. Beck, John W. Lilly, J. W. Cooper and T. H. Parry, Indianapolis, Ind.; Pepper and H. L. Frost, Connorsville, Ind.; Ed Voris, Crawfordsville, Ind.

Trophy and Prize Winners.

As has been stated several times in this report, Rolla Heikes of course retains possession of the E. C. cup, which debars him from winning any of the other prizes, though he made the best general average as well. Fred Gilbert, who is next, therefore takes the Newsalt cup; Fulford wins a fine flag; Harvey McMurchy a box of cigars; Chas. Budd a fine bed spread; Jack Fanning also a box of cigars; Chas. Young a silk umbrella; Ralph Trimble a pair of slippers, while Rike, Alkire, Du Bray, Voris, U. M. C. and Courtney each get a hand protector. Then there was a special prize in the E. C. race, a very handsome and artistic cup, to go to the shooter finishing second in this race. McMurchy and Fulford are tied for this, and as yet it remains undecided.

The special fund created by the tax of $2 on the 90 per cent. shooters amounted to $48. The first seven average winners helped to make up this fund, and nine shared in the division—Voris, U. M. C., Du Bray, Courtney, Rike, Mumma, Stark, Fisher and Hull—each receiving $5.30 as their part of this money.

First Day, Tuesday, Oct. 11.

The shooting to-day was not of the gilt-edge order that one would expect with so many of the experts competing. It is really a matter of surpise that, with the number of known 90 per cent. shooters participating, not one should reach this mark. The Daddy of them all came very near to it, as he is at the head of the procession, with .891, but there is quite a gap between him and Fulford, who is next with .868. While Heikes leads in the general averages for the day, he is by no means in this position by him-

self in the events that constitute the trophy contest. These are Nos. 2, 4, 6, 8, and 9, which aggregate 100 shots. In these events Heikes, McMurchy, Fulford and Fanning are tied, with a total of .870—a rather meager percentage for shooters of this caliber. The only bit of good shooting was Heikes' 20 straights in the first double event, and his and McMurchy's similar performance in the expert event.

While the shooting was of the ordinary, the weather conditions were largely responsible for this. A drenching rain fell up to about 12 o'clock, and for a while it was thought expedient to postpone the shoot until the following day. However, at 10 o'clock a start was made, and this afterward proved a wise move, as in the afternoon the sun came out and made the shooting much pleasanter. During the first part of the day it was difficult to judge a target correctly, as the dark weather and the high board fence that encases the shooting ground made the light very uncertain. Nos. 2, 4, 6, 8, and 9 are the events which count in the E. C. cup race. Thirty-seven shooters participated, but only sixteen of these shot in all the events. The table appended shows the performance of all the contestants in the order of merit:

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	15	20	15	20	15	20	15	20	20	15	at.	Broke.	Av.
Heikes	14	16	13	20	14	20	13	15	16	15	175	156	.891
Fulford	12	17	11	19	12	19	15	16	16	15	175	152	.868

Wednesday, Oct. 12, Second Day.

Everybody was in fine form to-day, and as a natural result the averages rank high, and some capital shooting was done. Young started off in slashing style, and never made a skip until he had the great run of 94 straight to his credit. The score does not evidence this, but No. 6 was shot before No. 5, and it was in this latter event that he lost his first target. Add to this a run of 7 from the previous day, and his total straight run amounts to 101! Despite the fact that Heikes has the manifold duties of host, manager, squad hustler, etc., to perform, he is still setting the pace, and there are none that can do it more gracefully than he. It may not be just the proper thing to invite one's friends to a shoot and beat them too, but the Daddy of them all does it in such a gracious and congenial way that all keep shooting with steady regularity. The attendance is much larger, and the shooting progresses as smoothly as clock work. All told, forty-two names appear on the entry book to-day, and eighteen of these shot through the entire programme. Nos. 2, 4, 5, 6 and 7 are the ones that count in the E. C. cup race, and here Heikes gained a lead of 7 birds over McMurchy, who was tied with him yesterday. Fulford scored one less than McMurchy, and Fanning is 4 behind Fulford. The score to-night is Heikes 202, McMurchy 195. Fulford 194, Fanning 190. These are the four leaders. The weather is ideal, being clear and bright, which made shooting a pleasure. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	15	20	15	20	18	15	19	19	14	19	at.	Broke.	Av.
Heikes	14	20	14	20	18	15	19	19	14	19	180	172	.955
Young	15	20	15	20	12	15	19	16	14	18	180	164	.911
Gilbert	15	20	15	19	16	14	19	16	12	18	180	164	.911

Thursday, Oct. 13, Third Day.

The lead of 7 targets that Heikes had over McMurchy last night the latter could not overcome in the remaining 80 targets that were yet to be shot on the E. C. cup race. In fact, he could not gain a single bird, and the best he could do was to prevent him from increasing this lead, so that Heikes again won the trophy by this margin in a field of the best shooting talent in the country. Fulford, who was third yesterday, managed to gain a bird on McMurchy, so that this pair are tied for second honors in the race. Gilbert to-day came to the front, and is on top with a general average of .897, thereby gaining 8 birds on Heikes in the general average, which insures him second place. Fulford, too, shot well, being second for the day with .868. McMurchy and Fanning are only one bird behind him.

A leaden sky and a bleak, raw atmosphere added to the difficulty of the shooting, for it is a hard matter to judge a target correctly on these grounds on a dark day. Fanning won first in the double events on 17, without a tie, which netted him quite a neat little sum, as the money on this occasion was divided on the percentage system. The attendance was not quite so large as yesterday, though thirty-six participated. There were no long runs made and the averages are not very high, no one being able to reach the 90 mark. The targets throughout the shoot have been thrown low and hard, so that it is no easy matter to maintain one's average. In No. 1 event there were no straights, which is the first time this has occurred during the tournament in the unknown angle events. One other feature of the shoot is that Heikes was shot out of the money twice to-day, once in a 20-bird event, and later on in a 15-bird race. The latter though occurred right after he had won the E. C. cup, and it is probable that he let up a trifle just then.

Events:	1	2	3	4	5	6	7	8	9	10	Shot

Courtney	129	149	115	525	393	.748

The weather was of a wintry nature. It was a most difficult matter to keep warm. There was a cold, raw wind, with no sunshine. If the latter had been in evidence, it would have been a typical day for pigeon shooting. The birds were the usual lot, some ordinary and many as good as ever left the trap.

The conditions of the event were 25 live birds, handicap rise, entrance $15, class shooting, five moneys, 30, 25, 20, 15 and 10 per cent. By a rather singular coincidence second, third, fourth and fifth paid the same amount, $11. First was $22. Dr. L. O. Adams, of the Buckeye Gun Club, acted in the capacity of referee, to the satisfaction of all concerned.

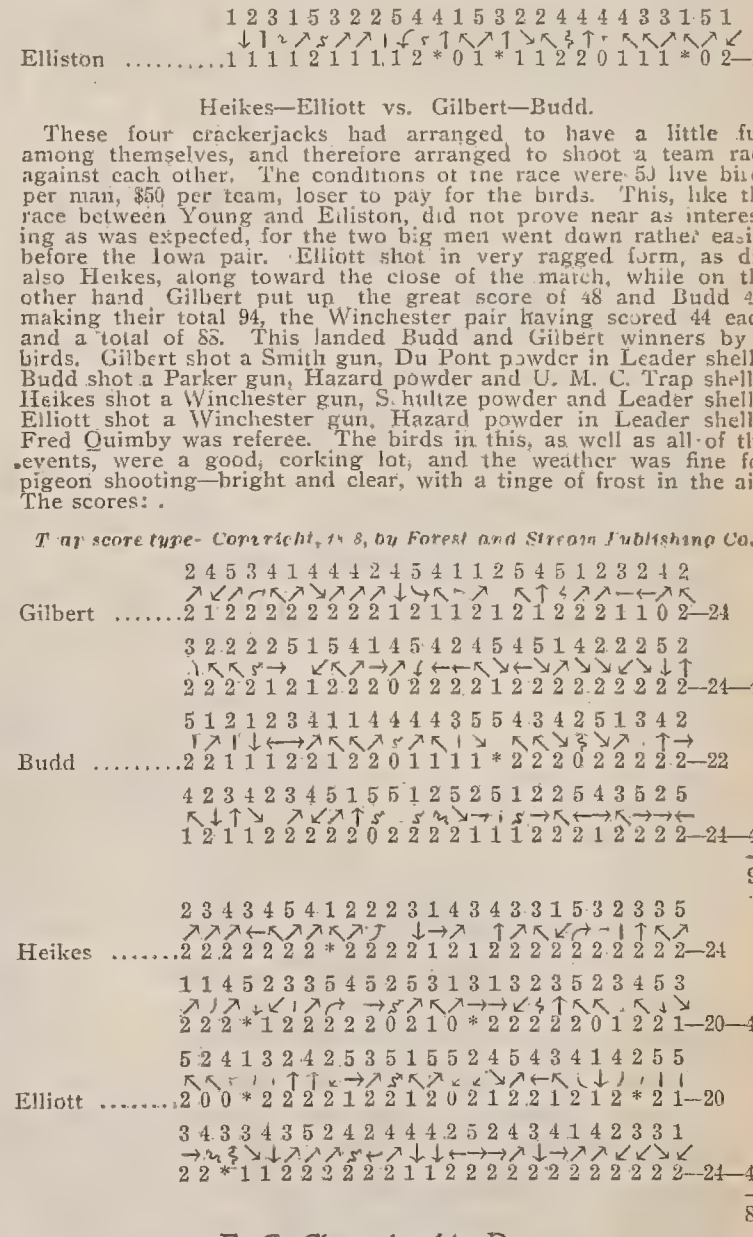
Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Fourth Day, Friday, Oct. 14.

This was live-bird day, and there was but one event on the programme, a 25-bird handicap, which showed up with twenty-two entries. It proved to be quite a shooting match, as only five of the participants failed to shoot into the money. There were no straight scores, and the nearest approach to this was young Elliston, who had the misfortune to lose one bird dead out of bounds by only a few feet. Had the usual 18in. wire screen encircled the boundary this bird would have gone to his credit, and he would have had the honor of beating all the cracks, as the two—Heikes and Young—who tied him for first place, each missed his bird clean. Elliston really did the best shooting, as he also cut up the money with Heikes and Rike in the miss-and-out that preceded the main event. This event had seventeen entries, and the three above-mentioned had to kill 8 straight before they could take the pot. Heikes kept up his good work, and again demonstrated to the talent that he is their master at any stage of the game; for it must be remembered that he shot from the scratch, and none of the other scratch men could equal his score. Thirty-two out of thirty-three is a killing pace from this mark. Charley Young's shooting is also worthy of mention, as he was much handicapped by his gun breaking down, to which to some extent his only miss in the big event must be attributed. It was evident that the first barrel was discharged prematurely, though he should have smothered it with the second, as it was a towering incomer. To Quimby, however, belongs the honors of making the star kill of the day. His third bird was certainly a most remarkable piece of shooting, and the wicked flight that this bird put up is seldom equaled by any. He drew screamers with aggravating regularity, and it was a great piece of shooting for him to score 22 of these birds. And even at this, all of his lost birds are dead out bounds. U. M. C. is another who shot a capital race. On no former occasion has he been able to kill 23 out of 25. Naturally he is much elated over his achievement. Courtney too was in evidence, and it appeared for a while that he would equal U. M. C.'s score, but his last bird—dead out of bounds—was a very fast blue, one that was difficult to see, it being then late in the day. He had a very much swollen wrist to contend with. McMurchy, Fanning, Fulford, Gilbert and Elliott shot in their usual slashing style, though McMurchy had perhaps a shade the worst of the birds.

Aftermath—Saturday, Oct. 15.

Quimby vs. Thomas.



During the tournament that has been in progress here all the week several matches were made, and these were decided to-day. The first was a race between Fred Quimby and U. M. C. Thomas, which resulted in a win for the former by 2 birds, the result being Quimby 22, Thomas 20. Nothing was involved in this but the price of the birds.

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Young vs. Elliston.

After this followed the match between Chas. Young, of Springfield, O., and W. R. Elliston, of Nashville, Tenn. This was also a 25-bird event, for $25 a side, loser to pay for the birds. Every one expected that this would prove to be a hotly contested event, as both the principals had scored 24 in the handicap on the previous day, and each had the reputation of being a cracking good pigeon shot. Elliston, however, was evidently out of form, and Young won rather easily by a score of 23 to 19. Elliston made a number of remarkable kills and had decidedly the worst of the draw, but it would have been a difficult matter to beat Young to-day, as he too was shooting a fine race. Elliston lost 3 birds dead out of bounds. Young shot a Smith gun and Schultze powder, loaded in U. M. C. Trap shells. Elliston shot a Greener gun, Schultze powder, loaded in metal-lined Winchester shells. Jack Fanning acted as referee. Elliston is not satisfied, and speaks of shooting Young another race in the near future.

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Heikes—Elliott vs. Gilbert—Budd.

These four crackerjacks had arranged to have a little fun among themselves, and therefore arranged to shoot a team race against each other. The conditions of the race were 50 live birds per man, $50 per team, loser to pay for the birds. This, like the race between Young and Elliston, did not prove near as interesting as was expected, for the two big men went down rather easily before the Iowa pair. Elliott shot in very ragged form, as did also Heikes, along toward the close of the match, while on the other hand Gilbert put up the great score of 48 and Budd 46, making their total 94, the Winchester pair having scored 44 each and a total of 88. This landed Budd and Gilbert winners by 6 birds. Gilbert shot a Smith gun, Du Pont powder in Leader shells. Budd shot a Parker gun, Hazard powder and U. M. C. Trap shells. Heikes shot a Winchester gun, Schultze powder and Leader shells. Elliott shot a Winchester gun, Hazard powder in Leader shells. Fred Quimby was referee. The birds in this, as well as all of the events, were a good, corking lot, and the weather was fine for pigeon shooting—bright and clear, with a tinge of frost in the air. The scores:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

E. C. Championship Race.

The following table has been compiled so as to show just which style of shooting each contestant in this race was the strongest at. Here the unknown angles, the expert, and the double events are grouped together, irrespective on which day they were shot. Gilbert was the strongest at the unknown, while Heikes led in the expert and doubles:

	Unknown.					Expert.					Doubles.				
Heikes	16	16	20	19	16—87	20	20	19	20	19—98	20	15	18	19	16—88
McMurchy	17	16	29	19	19—91	20	19	18	17	19—93	16	18	16	16	16—82
Fulford	17	16	19	18	18—88	19	18	19	19	19—94	19	16	18	15	16—84
Fanning	18	18	18	17	17—88	18	15	19	19	19—90	17	15	15	18	17—84

WESTERN TRAPS.

Money to Burn.

CHICAGO, Ill., Oct. 15.—In Kansas City they have a federation of gun clubs which is one of the strongest shooting organizations of the West, and it seems that this confederation has now gotten into trouble of a singular sort. It has been so popular and prosperous that it has been unable to spend all the money it has accumulated, and now has about $2,000 which it does not know what to do with. One or two meetings have been called, but at latest accounts no conclusion has been reached. Jimmie Whitfield, of the Kansas City Star, suggests that it might be a good idea to invest the amount in suburban real estate for the purposes of a shooting park, or else fund the amount in productive securities. I suggest they might buy a challenge trophy with it. Yet is it not an odd state of affairs when a shooting organization gets so rich it has more money than it can spend? It certainly is an evidence of the prosperity and harmony of the Kansas City shooting clubs, than which the West has no more admirable organizations.

Hermitage, of Nashville.

The Hermitage Gun Club, of Nashville, Tenn., is a young organization, but has plenty of enthusiasm. The club medal was won last week by E. S. Sutton, who shot out Mr. T. O. Morris, Jr., in the tie. In the first sweep Mr. Morris broke 20 out of 25; in the next Mr. Sutton broke 21 out of 25.

Elliston Wins.

At Belle Meade Lodge, Nashville, Tenn., Oct. 11, a 100-bird race was shot between W. R. Elliston and James de Bow, the former winning with a score of 96 to Mr. De Bow's 78.

Ottumwa Handicap.

The twelfth handicap shoot of the Ottumwa, Iowa, Gun Club, for the special prize of a Parker hammerless gun, was won this week by Saunders.

Peoria Wins.

Peoria Gun Club, of Peoria, Ill., was the winner last week in the see-saw between that club and Pekin Gun Club. This club team contest has progressed with varying fortunes and varying interest for some time. The race in this case was at 25 live birds, four men team, and the scores were as follows: Pekin—Heilman 24, J. Hoff 23, W. Hoff 18, Baker 20; total 85. Peoria—G. Portman 24, A. E. Leisy 23, Kit Sammis 24, W. Meidroth 22; total 93.

Idaho State Shoot.

The Idaho State shoot, completed at Boise last week, offered rather tame sport in live birds, as the lot of birds shipped in proved dull, and needed the flush rope a great deal. Messrs. John Smith and R. W. Faris tied on 19 for the State medal, the following being the scores, at 20 live birds: Z. Taylor 18, John Smith 19, J. U. Wells 16, A. Adelmann 18, H. Fulton 17, H. Bayhouse 15, Dr. Maberley 15, R. W. Faris 19, J. Ridenbaugh 18, Dr. Prosser 15, G. R. Hitt 16.

Waukegan.

The annual October shoot of the Waukegan Gun Club, of Illinois, is still in progress at this writing, and will be closed to-day. This gun club is a remarkable one in many respects. It has a membership of 139, of whom a large number are regular attendants. Yet the club was organized only three years ago, in May, 1895. The organizers of this successful shooting body were Messrs. J. M. Graves, R. C. Barton, Jas. van Deusen, J. A. Woodsworth, Geo. Hallowell, Chas. Grubbs, Chas. Hoffman, L. W. Jeffery, Jas. Hull, H. A. Bangs, Clarence Bassett, Ben Dowe, Victor Rossbach and John A. Sutherland, with J. M. Graves, President; R. C. Barton, Vice-President, and L. W. Jeffery, Secretary and Treasurer. The policy of the club has been so successful that it now possesses good grounds, club house and every facility needed for pleasant shooting.

Coming.

Milwaukee Gun Club, of Milwaukee, Wis., will hold a tournament Dec. 3 and 4 at live birds and targets. This will be a good one to keep in mind.

Do not forget John Watson's big December live-bird shoot. No stranger should come to the city without taking home a box of John Watson's hard birds for the loved ones at home.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Alpine Gun Club.

The Alpine Gun Club, of Chicago, held its final monthly shoot on the club grounds, near Hedgwich, Oct. 12, with a good attendance. There was a bright sun and a fresh crisp wind, which added to the comfort of the participants.

The medal for the season of 1898 was awarded to A. Corrieri, who won it four times out of the six monthly contests. The monthly medal was won by R. Simonetti in the final contest on a score of 23 out of 25. The medal contest is at 25 targets, known traps, unknown angles, with a handicap of added targets. Following are detailed scores:

A Corrieri	1110011101110111110111100—18—4—22
B Barto	1110110111111111111101111—22—0—22

J Church	1010311111110110110011111—18—0—18

The season for the club has been a most pleasant and successful one, and there is some talk of furthering the pleasure in live-bird contests at Watson's Park during the winter months.

The Chicago Athletic Association.

The shoot for the Chicago Athletic trophy will take place on the afternoon of Oct. 20, on Watson's grounds.

Montgomery Ward Trophy.

The shoot-off for the Montgomery Wood & Co. trophy took place on the afternoon of Oct. 14, at Watson's Park, between P. R. Fletcher, of Blue Island; M. J. Eich, J. L. Alabaster and J. B. Barto. The day was cool, with an overcast sky, and a strong wind blew across the traps from the left quarter. The birds were very good and flew largely to the left quarter. The four contestants started with a handicap, Alabaster missing his first bird shot at, which was a left-quartering dark bird which fell dead out of bounds. M. J. Eich missed his second, a nearly-straight-away, which would have been a hard one for any one to kill. The next bird missed was by Alabaster, a right-quartering driver, which fell dead out of bounds; this bird let him out of the race, for the others killed straight up to the ninth, when Fletcher missed two in succession, and Barto killed his dead out of bounds as shown by the following scores:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

	4 3 1 2 1 1 5 4 1 5 1 2	
P R Fletcher, 27, 2	2 2 2 1 2 1 2 1 0 0 2 1	—10
	5 3 3 2 * 3 5 3 3 4 5	
M J Eich, 28, 1	1 0 1 1 2 1 1 1 2 1 2	—10
	2 4 5 5 4	
J L Alabaster, 29, 1	* 1 1 1 * w	— 3
	4 5 3 4 3 3 4 3 1 1 3	
J B Barto, 30, 1	1 1 2 1 2 2 1 1 2 * 1	—10

and Barto. Fletcher killed straight up to the sixth, which was feathered with both barrels, and fell dead out of bounds. His eighth, a left-quartering towerer, he hit, but not hard enough to stop. His eleventh was a left-quartering swift flyer, which he shot This required a shoot-off of another 10 birds by Fletcher, Eich behind.

Eich's first bird was white, and was missed clean with the first and stopped nicely with the second. His fifth was a swift left-quartering dark one, which he lost by shooting behind. His ninth was a circling one from Trap 5, which he should easily have killed, but fell out of bounds and shut him out.

Barto shot remarkably well and in excellent form, as the birds were good from start to finish. Out of the last ten he used his second barrel but three times. He won the trophy after killing 20 out of 21, and shot a Colt gun, 12-gauge, 3½ Du Pont, 1¼ 7 chilled. The winners of the trophy to date are C. E. Comley, E. M. Steck, Dr. S. Shaw and lastly J. B. Barto. The final shoot-off:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

	1 1 4 4 1 5 5 2 2 2 4

Blue Island Gun Club, of Blue Island, Ill.

The Blue Island Gun Club, whose members are Henry Beer, President and Captain, who is county commissioner; W. H. Wearner, Secretary and Treasurer; Jacob Rehm, Mayor; C. C. Hess, Superintendent Washington Ice Co.; Oliver Bourke, Commissioner of Public Works; A. C. Boeber, Deputy Sheriff; Geo. Airey, Deputy Game Warden; J. L. Zacarias, bank president, and Henry Neipert, Henry Kline, P. R. Fletcher, Geo. Roll, R. Krueger and Geo. Boerman, has a limit of fifteen members, and the membership is always full. This club announces that it will give a live-bird and target tournament some time during November. The date will be published later.

Chicago Challenge Trophy.

While W. P. Mussey has signified his readiness to resign from the board of trustees, he will continue to act until the return of the member who is at present out of the city.

The handicap established for Silas Palmer, holder, and Dr. Sarembo Shaw, challenger, by the trustees, is alike, both shooting at 25 birds from 31yds.

Eureka Gun Club.

The Eureka Gun Club held its weekly contest on the club grounds, Oct. 14. The attendance was fairly good, considering the weather, which was quite cold. The wind blew strong in the face of the traps. The sky was clouded the greater part of the time. All events were shot from the magautrap, which threw the targets somewhat erratic, greatly on account of the wind. The scores:

Events:	1	2	4	5	Events:	1	2	4	5
Targets:	25	15	15	25	Targets:	25	15	15	25
E M Steck	19	12	..	..	V L Cunnyngham	..	14	..	20
A W Adams	21	12	12	19	F P Stannard	..	..	13	22
H Vetter	21	11	..	..	A C Paterson	..	..	9	..
H B Morgan	15	9	9	10	W D Stannard	..	..	11	20
A W Morton	..	..	14	..	Dr Morton	..	..	..	10

In the trophy contests, 25 targets, W. D. Stannard won Class A, H. Vetter won Class B, and A. C. Borroff won Class C.

Class A.—Ed. Steck 14, F. P. Stannard 19, A. W. Adams 22, W. D. Stannard 23, A. C. Patterson 18.

Class B.—V. L. Cunnyngham 22, H. Vetter 22, Dr. Morton 12, A. W. Morton 11, H. B. Morgan 16, A. C. Boroff 11.

Class C.—A. C. Boroff 11.

The club wishes to announce that on the last Saturday of this month, October 29, it will have a handicap target shoot for its members, and will give merchandise prizes for high scores.

A. C. PATERSON.

South End Gun Club's First All-Day Tournament.

READING, Pa., Oct. 12.—The first all-day open target tournament of the South End Gun Club, of this city, was held to-day. It was an unqualified success, and the members are correspondingly happy.

Although the South End Gun Club has been in existence over eleven years, and contains among its members some of the best shots in the country, it remained until to-day for them to make the initial attempt at holding an all-day shoot of open sweeps. Gun clubs from Berks and adjoining counties were invited. Although the sky was clear and the sun shone brightly, a stiff northwest wind prevailed the entire day, making good scores impossible.

Eight regular programme events and seventeen extra sweeps were shot off during the day, besides the team shoot for the sterling silver shield given by the South End Gun Club, to be shot for by teams of five men from clubs of Berks or adjoining counties. Each man shot at 25 targets, or a total of 125 targets per team. Promptly at 2 P. M., the time set for the match, manager Arthur A. Fink called out the first squad and started the event. The final score showed that the South End Gun Club, of Reading, had won the trophy, their team hitting 87 out of 125. The Shuler Shooting Club's team was a close second with 85 to their credit. The Phoenix Gun Club, of Phoenixville, Pa., was third with 77. The Independent Gun Club, of Sinking Springs, Pa., was fourth with 76 hit, and the Mt. Penn Gun Club, of Reading, finished last with 69 broke. Following are the scores of the team shoot, five men, for the trophy:

Five-men team shoot, for intercounty championship and South End Club trophy, 25 targets, $5 entrance per team:

Sinking Spring Gun Club.

Johnson	1111011110111111110111111—22—77

The shoot was managed by Arthur A. Fink, of this city, to whom is due considerable credit for the prompt and efficient manner in which the various events were run off.

One event not on the programme was the shooting several rounds of ammunition at a flock of wild ducks that happened to come up the Schuylkill River. It caused considerable commotion among the shooters not engaged at the time at the score, and a general scramble for guns ensued. Slonaker, of Pottstown, proved to be the lucky man, and carried with him his trophies. Even if he team, the Shuler Gun Club, did not win the team shoot, one of their members had the honor of killing the most wild birds of the day's sport.

Among the shooters present from out of town gun clubs were Messrs. Benner, Wien and Shealer, of the Royertown Rod and Gun Club; Messrs. Grubb, Cole, L. H. Davis, Slonaker (Dick), Saylor, of the Shuler Shooting Club, of Pottstown; Messrs. Trumbauer and Jake Johnson, of Royersford and Spring City; Harris, J. H. Miller, Erb, of the Phoenix Gun Club; Chas. Miller, of Pleasant View; Chas. Eshelman, of Plowville, Pa. The Independent Gun Club, of Sinking Spring, was represented by Messrs. Hainly, Spatz, Grundy, Geo. Johnson and Hunsinger. Among the local clubs' representatives present were Yeager, Laird, Ball, Kuersten (Kerr), Rhoads, of the Mt. Penn Gun Club, and Shaaber (Jack), Yost, Shultz, Harrison (Adams), Essick (Greener), Eshelman (Mart), Jones, Gerhard, Gicker, Geo. Milles and Farr, of the South End Gun Club.

As the South End team won the trophy, it will again be placed in competition on Feb. 22 for the same conditions, when another all-day tournament will be held.

The scores of the different events follow:

Buffalo Audubon Gun Club.

BUFFALO, N. Y.—Louis Frieze captured the first prize in the Audubon Gun Club's fifth annual field day, scoring 48 out of 50 targets shot at. The following is a summary of scores. By way of explanation, the club has an extra day each year, which is called the field day and merchandise shoot. All members who wish contribute as they see fit. The donations on this occasion, fifty-two in number, were all very useful prizes, consisting of gun cases, fishing rods, kegs of powder; in fact, everything that is useful in the sportsman's line. The day's programme was made up of nine target events. The first seven events were sweepstake events, in which the five highest averages received merchandise prizes. The winners in this class were H. D. Kirkover, first, with .900; E. W. Smith, second, .880; J. Charles, .870; E. F. Hammond, .840; Norris, .810. No. 8 event was a 15-target merchandise. There were ten prizes in this event for high guns, finishing in the order named: Kirkover and Norris, with a loss of 3 each; Hebard, E. W. Smith, L. W. Bennet, J. Charles, Hammond, Walker, Oehmig and Jacobs. The main interest was centered in the grand merchandise, which was No. 9 event on the programme, was at 50 targets. Each contestant was assured a prize. The highest gun got first choice, and so on down to the last. Louis Frieze carried off first honors in this shoot, making a total of 48 out of 50. The finish of the others can be seen by the score. The weather was rather chilly, but a very enjoyable day was had by all. A fine hot lunch was furnished by the club, which was prepared by caterer W. E. Garbe.

The main attraction at the Audubon Gun Club club shoot today was the third series of shoots for the Hebard trophy, and was won by Dr. Carroll, who scored 28 out of 30, with 3 birds added, making 31 total. No. 4 event on the programme was this event. No. 3 was the club badge shoot. E. C. Burkhardt and Warren tied for Class A; Warren won shoot-off. Walker won Class B, and W. R. Eaton won Class C.

C. J. MAYER.

Oakbrook Gun Club's Tournament.

The first two day's tournament of the Oakbrook Gun Club will be held at the Kurtz House, one mile from Reading, situated on the Lancaster Pike. The shooting grounds can be reached by the Reading & Southwestern electric road, cars leaving Third and Penn streets every twenty minutes. The first day, Oct. 27, will be devoted to live birds. The second day will be for targets. The programme of the first day is: Event 1, 10 live birds, Rhode Island rules, entrance $5, birds included; event 2, 5 live birds, Hurlingham rules, entrance $2.50, birds included; event 3, miss-and-out, $3 entrance, birds extra. Extra events to suit the shooters. Shooting begins 10 A. M. Friday, Oct. 28.—Event 1, 10 targets, $1; No. 2, 15, $1.50; No. 3, 25, $2.50; No. 4, 10 pairs double, $1.75; No. 5 miss-and-out, 50 cents. Other events to suit the shooters. Targets 2 cents each; live birds 35 cents a pair. Shells for sale on the grounds. A fine dinner will be served at 50 cents at the hotel grounds at 12 o'clock. Arthur A. Fink, of Reading, Pa., has been secured to manage the shoot. James W. Kurtz is the secretary, Oak brook, Pa.

DUSTER.

Cincinnati Gun Club.

DAYTON, O., Oct. 16.—The coming Cincinnati tournament will most likely be a very important shooting event. I was in that city on Oct. 8 and visited their new grounds, which had just been opened up the day previous. When all the improvements have been made that are contracted, they will be the finest shooting grounds that I have ever visited, even exceeding those of the Indianapolis Club. Owing to the fact that the Club were unable to state definitely just when the grounds would be ready for use, it was impossible to announce the dates of their tournament. Now that they have taken possession, they are out with an announcement for a three days' shoot on Nov. 2, 3 and 4. Some of the very best citizens of Cincinnati are members of the club. There are now 210 names on the club's roll.

Confabulations of the Cadi.—IX.

The Sucker.

"In our weary pilgrimage through this vale of fogs and tears," said the Cadi to his respectfully attentive circle of associate philosophers, who were gazing on him with a look of contemplation which might be interpreted to mean either affection or mental vacuity, "we are all suckers under certain favoring conditions. We at times give up our money recklessly, with no substantial return for it or without any particular inquiry into whys and wherefores as to why we part with it. This no doubt as a statement contains nothing new, since many years ago it was said that a fool and his money soon came to a fork in the road. Still, when a man parts with his money liberally, it does not necessarily follow that he should be considered a sucker, nor does it seem right that those who are beneficiaries of his open-handedness should sneer at him and treat him with contempt—always behind his back, be it understood.

"I was in a certain town some years ago in Arkansaw on a day when a circus had pitched its tent for the amusement and education of the people therein and thereabouts. A circus in that country was not an incident; it was an event which ranked with a war, an election or a dangerous comet. Men with pounds of unlaundried whiskers on their chins, and more pounds of bushy hair on their heads, came in from all points of the compass, horseback, mule-back, country wagons, prairie schooners, ox-wagons, with their Hopie Janes, or other Janes which they had hopes would be Hopie Janes as soon as time and tide would permit, and all arrayed in their best bibs and tuckers, which in most instances were the same bibs and tuckers which they wore every day and every year. The saddles were seemingly made of scraps of leather and bare trees, while the horses and mules, whose office it was to draw the wagons, had corn husk collars and harnesses consisting of about three pieces of leather, while cheap pieces of bed cord served for driving reins. If all the paraphernalia of the horses had been cast into one pile the whole would hardly have equalled the cash value of the amount spent for circus tickets, peanuts and the bright and winsome pink lemonade which brings such disaster to the wallet of the country swain and such joy to the palate of the country belle; but the circus and peanuts were the necessities of the moment, emergency necessities as it were, while the former were every-day luxuries.

"I wore a citified suit of clothes, and on that account I presume one of the star performers engaged in conversation with me. Affecting a blasé air, I viewed with calm indifference his diamond ring, when he inadvertently, as it were, flashed it into view in many different lights; so that he soon came to consider and treat me as his equal, than which no higher honors could be found in his standard of measures. An air of excitement and expectancy pervaded the groups and changing currents of humanity which moved to and fro around here and there, but all intent on the ticket wagon, from which they drifted in a steady stream to the tent entrance. My new-found friend, in a tone filled with a happy ring, remarked: 'Just see the suckers pile in. They are the biggest lot of fools that I have seen on our route.' I felt a bit of annoyance at the ingratitude of the remark. From the standpoint of the circus man, the people who patronized the circus, and whose dollars gave him a means of livelihood, were suckers. He meant it too in an ill sense. He considered them as being his dupes or gulls, and that he was getting their money under some allurement other than what gave an honest return for the money received."

"Well, what about it?" said Moke, with an inquiring look. "The sucker was a useful thing to the circus. He had a look into the tent, some peanuts and pink lemonade for his money, and all he remembered was that the clown said, 'Here we are again,' as he turned a hand-spring in a blithe manner in the middle of the ring. The circus man had some cheap money. One had only a memory; the other had good money."

"Don't you consider that the audience was well amused for the time being, and had a certain relief from the every-day cares and troubles, which amply compensated for the outlay?" queried the Cadi.

"What cares and what troubles? I have none; and if I have none of my own, how can I imagine any in the world?" replied Moke.

"You are bright, very bright, sweet Moke. Just for a moment consider that your name is Peter, and that the poet had you in mind when he so feelingly wrote:

"'Peter was dull; he was at first
Dull—oh, so dull, so very dull!
Whether he talked, wrote or rehearsed,
Still with this dullness was he cursed!
Dull—beyond all conception dull.'"

"That sounds very pretty, but I think I can see into a brick wall quite as far as the next one, all the same," said Moke, somewhat peevishly. "If the people chose to be duped, it was their own lookout."

"Although the circus man had an opinion that his patrons were suckers, he did not proclaim his opinions from the housetops," continued the Cadi. "In the trap-shooting world, the poor shot has been given to understand, with little attempt at concealment, that he is a sucker. Indeed, not a few of the experts have been forward in frank expressions of their views concerning what were suckers, not infrequently in such places where the sucker, so-called, could hear the aforesaid expressions, and thereby learn the esteem in which he was held. Now, mayhap a man may be a sucker once or twice, or even a few times more, but the average man learns very quickly what are his mistakes and what are not. If a man is really a sucker he cannot know it too quickly. There is a great injury done, however, when men, who can afford to shoot, and whose means would enable them to look upon the day's loss at a tournament as a mere item of expense, are led to believe that they are looked upon in a way as fools, which is but the more generic term for sucker. A sensible man, who shoots but poorly, will not shoot long if he is looked upon with contempt for being unskillful and as easy to pluck.

"There was a certain disregard of consequences in the past, for it was the theory of a few that if the sucker crop was exhausted there would be a new one to follow, or as it was more technically expressed: 'A sucker is born every minute.' It was a mistaken assumption, as it was also a mistaken policy. It was a mistake as a policy to pretend to be out for sport when the practice was that the big fish swallowed the lesser. A sucker is not born every minute in the trap-shooting world, nor was he ever so born. Even if he were so born, a sucker is not a proper element to cultivate and levy upon as a part of a gentleman's sport. Such belongs to another sphere of action, to which a clean sport should have no affinity.

"Considering the merciless manner in which the poorer shots have been beaten year in and year out during many years past, the real cause for wonder is that there are so many trap-shooters as there are. The poorer shots have faced the traps on equal terms with the experts through many years, and have had the lessons of adversity well pounded into them. We should congratulate ourselves that trap-shooting is on such a good footing as it is. Its present condition really speaks well for the genuine enthusiasm of those who still support it. However, if we continue on the old lines, we cannot hope for any success greater than that which obtains at present. If the future is to be made prosperous in the trap-shooting world, the conditions should be changed so that all will have an even chance, and this can be done by establishing a system of handicaps."

Ethical Juggle Systems.

"But the different systems accomplish that," objected Ephraim.

"Not in the least," mildly replied the Cadi. "Systems in most instances apply only to the divisions of the moneys and not at all to the equity of the direct competition. To such as have not shot well enough to be in the money, all systems are practically alike. Without a handicap, the poorer shot cannot be any nearer a winner under one system than he can under another, no matter what the rule may be for the division of the moneys. This harping on systems as a cure for all the evils which beset the shooter of moderate skill reminds me of a story of the old country doctor, who had become so habituated to giving an emetic for every disease which came under his treatment that he once prescribed an emetic for an ulcerated tooth, on the theory presumably that in the general upheaval there would something happen to the relief of it. The juggling with conditions on the surface does not in the least affect the real evil of the situation.

"Take the equitable system, for instance. The poorer shots, who cannot shoot well enough to break at least 12 or 13 out of 15, or 17 or 18 out of 20-target events, accordingly as there are three or four moneys provided in either, is not benefited in the least by the system. It no more provides a proper equity among the shooters than does any other system. As it refers to a division of the moneys, it is far inferior to the Rose system, of which it is a bastard offshoot. It abandons all idea of a competition, and the term tournament is a misnomer wherever this system is used. Men are merely paid so much for breaking a certain number of targets if the number exceeds a certain minimum, much in the same manner that a laborer contracts to chop wood by the cord, or dig ditches by the yard, or any other matter of job work. There is nothing either direct or implied that there is a competition between the shooters, nor is there any need of it under this system. It is merely a matter of piece work. As there is no application of competition, there is still less of sport. The proposition, stripped of its few fictions, is: You, as party of the first part, pay in a certain stipulated sum to qualify in the contract, and agree to break over a certain number of targets, which is duly specified in the programme. For breaking over the certain number the party of the second part agrees to pay a certain sum apiece for each target broken. If the party of the first part fails to break over the stipulated number, the party of the second part is relieved from all obligations in the matter, etc. Now, my friends, is not the breaking of targets at so much per target great sport and great competition? Isn't it sport to lay bricks at so much per thousand, barring the fact that the work is a bit harder? Isn't business sport?

"The equitable system is a misnomer, for there is nothing equitable about it as applied to a competition. First of all, it does not recognize the shooters as being first, second and third, as is the case in the Rose system. Each man is simply an individual who broke so many targets at so much per target. The ratios too are variable. In the Rose system the ratios are invariable and each shooter is recognized as a contestant. Under the equitable system, in a 15-target event, if there are shooters who break 15, 14 and 13, then the ratios are accordingly 15, 14 and 13. But if some one should break 15, others 13 and still others 11, then the ratios would be accordingly 15, 13 and 11; so that the ratios vary each time according to the number of targets broken, instead of according to the relative standing of the scores as a matter of competition. Whether 15, 14 and 13, or 15, 12 and 9, or any other numbers were broken, under the Rose system they would be classed as first, second and third, and the ratios of 5, 3 and 2 would govern accordingly. The Rose system thus recognizes a competition, while its bastard relative recognizes only job work. Under the so-called equitable system the man who breaks the least targets gets almost as much as the man who breaks them all, in which again there is no equity whatever.

"To make the matter clearer, let us suppose that in a 15-target event, $1.50 entrance, twenty men enter. This would make a total of $30. Deducting $6 for targets, there are $24 left to be divided among the contestants. Let us suppose that one man breaks 15, one 14 and one 13. Then under the so-called equitable system and the Rose system the moneys would be divided thus:

Equitable. Broke.		Rose. Broke.	
15 targets at 60 cents	$9.00	15 targets, ratio 5	$12.00
14 targets at 60 cents	8.40	14 targets, ratio 3	7.20
13 targets at 60 cents	7.80	13 targets, ratio 2	4.80

"Let us suppose that 15, 13 and 11 were broken, then under the equitable system the results would be as follows:

Equitable. Broke.	Broke.
15 targets at 61 cents per, $9.15	11 targets at 61 cents per, $6.71.
13 targets at 61 cents per, 7.93	

Under the Rose system, the latter would have paid the same as in the former instance. The equitable system as a matter of job work pays the contestants practically the same amount. The Rose system recognizes a competition, and its ratio works with mathematical accuracy at all times.

"From the most ancient times to the present, whether in peace or war, sport or business, the men who excelled were honored and rewarded much above their fellows who did the poorest, and yet the modern equitable trap-shooting system requires that the men who break over a certain number shall be all paid practically alike; that is, so much per piece of job work. But whatever system is used, as I have reiterated, it only applies to a division of the moneys, and not to the equity governing the poorer shots as compared with the experts. There can be no permanent gain unless there is a handicap to support it, as fairness requires that there should be."

A Universal Panacea.

Le Loup, who had been busily engaged writing on the bottom of a soap box, rapped on it with his pencil as a signal that he wished to have a hearing. "Worthy Cadi," said he, "you are as far from being right as a man can be and still stay on earth. No handicap is necessary, for you never heard a shooter, composed of the right stuff, who claimed that a low score was due to his own lack of skill. Every time such shooter misses a target there is some good reason for it other than fault in himself. I have taken some pains to compile the following, which I offer in lieu of a handicap, and which I think will give more general satisfaction, as there is nothing in it which will offend the amour propre of any shooter. In this respect it differs from a handicap, which necessarily implies that he who receives it is not as good a shot as are some others. To illustrate by example—a shooter goes to the score, shoots and misses. Then he turns to his neighbor and says, 'I am shooting a new load. I never would have missed that target with the old load.' Then the scorer marks it as a broken bird. No. 2 shoots and misses. He says: 'My pattern opened and let the target go through it. I never held a gun more correctly in my life.' The scorer then says in a fatherly way, 'The pattern was to blame and we will score that a broken bird.' And so the shoot goes on.

"The following is a list of reasons which are in common use, sanctioned by many good shots, and which all shooters should paste in their hats not only as a substitute for a handicap, but as a universal panacea for all kinds of bad shooting, and to be used as in the above example:

"Some one shook the platform just as I shot.

"A fly lighted on my gun barrel and disarranged my aim at the moment of shooting.

"The target was hit hard, but was too tough to break.

"The powder did not act right.

"There is something wrong with the primers.

"My gun stock don't fit.

"The shells are faulty. I never will use them again. (This is peculiarly apropos if you have tried to get the shells for nothing and been treated to a refusal.)

"The targets are thrown too fast; too slow; too high; too low.

"A tree in the background swallowed up the target out of sight at the moment I pulled the trigger.

"The wind jumped or ducked the target as I fired.

"I have a bad cold. I ate too much breakfast; too much dinner; too much supper. The cabbage, soft-shell crabs, roast beef, cold water, etc., affected my nerves and sight.

"I had a nightmare.

"A cross-eyed boy looked at me just as I shot.

"The trap-puller pulled too soon; too late; and I was balked, balked, balked.

"The referee called a broken bird a lost bird.

"The people talk too much.

"The grounds are laid out wrong.

"There was too much sunlight; there wasn't enough; it was too cloudy; it wasn't cloudy enough.

"If one does not care to go into specifications, he merely says in a scornful way, 'I am not in my usual good form.'

"In all these instances, and many more, which are to be left to the ingenuity of the shooter and the discretion of the referee, the shooter missing the target has it scored to him as broken, and in that way there will be a more equitable division of the money under modern ideas of what is equitable than there can be under any system of handicapping which can be devised, or for that matter any equitable system of division. Each target will then pay just the same amount for each shooter, for every one then will break straight, and the nearer every one receives the same amount, the greater is the equity of the system. What do you think of it, fellows?"

"But where does the sport come in?" queried Ephraim.

"Who's talking of sport," said the Cadi. "When we are breaking targets for so much apiece, we are talking of

"'Gold! gold! gold! gold!
Bright and yellow, hard and cold.'"

BERNARD WATERS.

Buckeye Gun Club vs. Cincinnati Gun Club.

KING'S MILLS, Ohio, Oct. 10.—The scores herewith are of team race between the new Cincinnati Gun Club and the Buckeye Gun Club, of Dayton, O., which took place on the afternoon of Oct. 7. Rolla O. Heikes was captain of the Buckeye team, and I was captain of the Cincinnati team. The match was shot on the grounds of the Cincinnati Gun Club and was really an opening day, or house warming, for the new grounds. The day was very dark, and made the targets very difficult to see, which will account for low scores.

The race was close, and we had a very enjoyable time; the men marked D are the Buckeye Gun Club, and the men marked C are the Cincinnati men.

We shot them in mixed squads, so that there would be no possible chance for any unfair dealings; you will see that it was anybody's race almost until the last shot was fired.

We expect to shoot them a return race in the near future on their grounds at Dayton;

The total scores were: Dayton 671, Cincinnati 669.

MILT F. LINDSLEY.

Under date of Oct. 11 Mr. J. Arthur Belden writes us as follows: "In the issue of Oct. 8, FOREST AND STREAM, column "Drivers and Twisters," you have J. A. Belden's score 10 birds straight, which is correct; in the score of Hell Gate Gun Club contest you have the score 9 killed, on same page. Will you kindly correct the error in the column of "Drivers and Twisters" in your next issue. The reason I ask you to correct this is that I had a small wager to be decided by FOREST AND STREAM. The Brooklyn Eagle and New York Sun of Sept. 28 both had my score 10 straight, yet the party would not accept that, as the wager was to be decided by your paper." Concerning the foregoing, we cannot assume the responsibility of passing upon it, as the score sent to us was a manifold copy, which had a figure which might be taken for 0 or 1, and the total was written both 10 and 9, one over the other. It was one of those scores in which the maker knew all about them, but all others knew very little.

The Eureka Gun Club, Chicago, will give a handicap target shoot on Oct. 27.

The Baltimore Tournament.

The sixth annual tournament of the Baltimore Shooting Association, Baltimore, Md., was held on Oct. 11, 12, 13 and 14, on the grounds of the Association, on Pimlico Road. The first two days were devoted to target shooting; the last two to live-bird shooting. Both target and live-bird shooting had handicap conditions. In the former the shooters stood at 14, 16 and 18yds., accordingly as they were classed as amateurs, semi-experts or experts. The targets were thrown after the Sergeant system. There was $300 added money.

The weather was all that could be desired on the three first days, excepting some windiness; on the fourth there was much rain and unfavorable conditions therefore for good shooting. Mr. James R. Malone managed the shoot, assisted now and then by other members of the Association. Mr. H. P. Collins, of the Du Pont Powder Co., looked after the cashier's department. Mr. L. Jory was the scorer in the target competition. Mr. R. A. Scharf filled the office in the live-bird events.

The programme was a good one. There were ten target events each day, six of which were at 20 targets, $2 entrance; four at 15 targets, $1.50 entrance, with $10 added money in each event. There were four moneys, 40, 30, 20 and 10 per cent. With such a programme the shooters did not appear to give it their support further than what is apparent in the scores given herewith.

There was nothing of special interest in the way of remarkable shooting, if that of Hawkins on the second day at the 16yd. mark is excepted, a degree of skill which warranted his shooting at the 18yd. mark.

Tuesday, Oct. 11, First Day.

A strong, fluky wind, blowing quartering and at times straight toward the shooters at the score, made very difficult competition. The scores of the steadiest shooters were cut down by the erratic target flights, caused by the irregular wind mentioned. Edward Banks and Hood Waters tied on .888 per cent., although the scores erroneously give Banks but 18 in No. 9 event instead of 19, the number which he broke. Leroy was close up with .877 per cent., one target less than Banks and Waters.

The 15-target events were $1.50 entrance, 20-target events, $2. The handicaps in yards are placed after the names of the shooters. While theoretically 2yds. more or less does not seem to be much of a handicap to the experts, in practice it was found to make a slight difference, as a time and lead which would be correct in shooting at 16yds. was found at times to be faulty at 18yds., so that there was some difficulty encountered in making scores at that distance up to the expert's average.

Extra No. 1, Malone, Leroy and Hood, 10; Glover, Lupus, Banks and Collins, 9; Taylor, Coe and Haywood, 8; Hawkins, 7; Colburn, 5.

No. 2: Hood and Banks, 10, Glover, Lupus and Hawkins, 9; Malone, Leroy and Haywood, 8; Hicks and Coe, 7; Collins, Taylor and Colburn, 6; J. L. Pentz, 5.

No. 3: Leroy, Hill, Dixon and Bond, 10; Glover, 9; Hood, Banks and Fox, 8; Hobbs, 7.

No. 4, 5 pairs: Hobbs, 8; Banks and Bond, 7; Glover, 6.

No. 5, 5 pairs: Hood, 10; Hobbs, 9; Leroy, 8.

No. 6: Hood 10, Leroy 8, Colburn 6.

Wednesday, Oct. 12, Second Day.

The weather again was clear and bright, with a stiff wind blowing from the rear in the morning, which gradually died away, till at noon it was calm and favorable for good scores. Hawkins was high average for the day with the excellent per cent. of .927. Leroy was next with .911, also a very good average. As in the first day's scores, the figures after the names denote the handicaps. Some extra events were shot in the morning, $1 entrance, with the following results:

No. 1: Hicks, 10; Hawkins, Haywood and Malone, 9; Leroy, Coe, Banks, Glover, Taylor, Money and Hood, 8; Marshall and Lupus, 7; J. L. Pentz, 6.

No. 2: Hawkins, Waters and Hood, 10; Hicks, Haywood, Malone, Coe, 9; Glover, Marshall and Pentz, 8; Money, 7.

No. 3, 15 targets: Leroy, 15; Glover and Money, 13; Dixon, 12; Malone, 11; Billy, Fox and Banks, 10; Latour, 9.

Following are the scores in the regular programme:

Events:	1	2	3	4	5	6	7	8	9	10	Shot		
Targets:	15	20	20	15	20	20	15	20	20	15	at.	Broke.	Av.
Leroy, 18	15	17	18	12	19	19	15	18	18	13	180	164	.911
Banks, 18	13	16	17	14	19	17	12	20	18	13	180	159	.883
Hood, 16	13	16	14	11	14	13	12	15	..	..	155	108	.683
Glover, 18	14	19	16	17	18	18	14	17	18	13	180	159	.882

Billy, 16	..	..	..	..	..	..	..	9	..	..		20	9	.450

Thursday, Oct. 13, Third Day.

The weather was calm, clear and pleasant. The sun shone clear and bright. The conditions were all in favor of high scores, but the excellent quality of the birds, and the somewhat difficult features of the grounds, they sloping gradually upward from No. 3 trap to the left, and from the same trap downward to the right. Most of the birds were first class, with some easy ones sandwiched in now and then, rather trying even to the well-schooled shooter. The regular programme was not begun till afternoon, the morning being devoted to $2 miss-and-outs, in which the scores were as follows:

Watts	....	.....	2211212
Glover	122211	1212	0	2122122
Macalester	121110	1222	22221112	12110
Hicks	2220	20	21122121	1122212
Fox	22210	1111	11211112	1112111
Dupont	122111	10	20	1210
Coulbourn	1120	20	0	.....
Williams	110	20	222110	.....
Money	211222	1111	21212110	1121222
Hood	11120	....	0	.....
Malone	111112	1211	1111220	122110
Leroy	112210	....	22211222	0
Hawkins	.....	110	21212120	.....
Waters	.....	....	.....	1221120
Glover	.....	....	1111110	.....

The first regular programme event was the Baltimore Introductory, 7 birds, $5 entrance, birds included, 30yds. rise, three moneys, 50, 30 and 20 per cent., high guns, not class shooting. It was changed into a handicap, some of the poorer shots being placed nearer, which made it a handicap entirely different from the emphatic conditions advertised, which was a mistake, as the advertised conditions of a stake should be followed to the letter. Following are the scores:

Hayward	122211—7	Malone	1121112—7
Du Pont	11o2111—6	Glover	2021112—6
Hicks	222o212—7	Colburn	1o21220—5
Money	1o2i121—6	Fox	2212221—7
Waters	1112o21—6	Leroy	2112122—7
Collins	1012102—5	Watts	0122122—6

The second event was the Suburban sweepstakes, 10 birds, $10 entrance, birds included, 30yds. rise, three moneys, 50, 30 and 20 per cent., high guns, not class shooting. The scores:

Macalester	0121122122— 9	Glover	2012221022— 8
Ducker	1021212112— 9	Fox	2121122221—10
Hicks	1102220012— 7	Jamison	000220101w
Money	1101211211— 9	Leroy	2221222222—10
Malone	2211121222—10	Hawkins	0121111000— 6

The third event was the Pimlico handicap, 15 birds, $15 entrance, birds included, handicaps 25 to 33yds., three moneys, 50, 30 and 20 per cent., class shooting. Scores:

Hayward, 30	2212222111222222—15	Collins, 26	0221*0202221001— 9
Dupont, 29	1111112122211111—15	Brehm, 25	100122011112211—12
Hicks, 29	1222222022112122—14	Jamison, 27	2010122122201102—11
Money, 30	0101120121121121—12	Watts, 28	1120010222222222—12
Malone, 30	1211110211211011—13	Leroy, 30	022222**2202021—10
Glover, 30	1010111101122222—12	Edwards, 27	2101022102111112—12

Extra events, miss-and-out, $2, resulted as follows:

* Re-entry.

Friday, Oct. 14, Fourth Day.

The weather was rainy and the light dark, although there was not sufficient wind to add appreciably to the difficulties. The main event of the meeting was the Maryland Handicap, 25 live birds, $25 entrance, birds included, 25 to 32yds., three moneys, 50, 30 and 20 per cent., class shooting, $100 added to the purse. The scores were as follows:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Extra $2 miss-and-outs were shot as follows:

Hayward	2220	11211112220	21221121112
Fox	0	222222222122	12122211120

The Interstate Association.

A review of the Interstate Association's season of 1898 is fresh from the press. As no association approaches this Association in its power, prestige, influence and broad purpose, the following review is taken almost in its entirety to set forth what the Association has done in the passing year, and what it contemplates for the future:

"'By their fruits you shall know them' is an old maxim, the truth of which needs no demonstration. The truly great among men are those who have proven their right to the title by their deeds. 'Deeds, not words,' have been their watchword. This has during the past eight years been the policy of the Interstate Association. It was organized primarily for the encouragement of trap-shooting and the advancement of its interests, as well as the elimination of all that would tend to retard the furtherance and perpetuation of this line of sport. The history, achievements and unparalleled successes in its chosen field are of such a permanent and lasting character as needs no commendation. Its 'deeds' speak for themselves to the great army of sportsmen throughout the country. During its existence it has been in the vanguard of every effort to improve and encourage not only the condition of the individual shooter, but the segregated body of sportsmen as well.

"At a meeting of the Association held at Madison Square Garden, New York, Jan. 17, 1897, a resolution was adopted which concerned every sportsman throughout the country. It is self-explanatory and is given in full below:

"The wisdom of such a move was questioned at the time, but money or otherwise, and all those connected in any way with companies manufacturing guns, shot, shells, powder, targets and traps shall be barred from participating in sweepstakes and purses, but will be perfectly welcome to shoot for targets only and display their goods. The decision as to who such paid men are to be left at all times to the manager, whose decision shall be final.

"'Resolved, That the foregoing does not apply in any way to the Grand American Handicap tournament.'

"'The wisdom of such a move was questioned at the time, but after a season's trial and a careful consensus of the good resultant therefrom, we incline to the belief that the action of the Association is fully justified, and is a step in the right direction.

"A careful perusal of the statistical data which appear in the pages following will clearly show that the season of 1898 has met our anticipations. We were compelled to cancel two tournaments, owing entirely to the war with Spain."

The Grand American Handicap.

"The inaugural tournament for 1898 was the sixth annual Grand American Handicap at live birds, which was decided at Elkwood Park, near Long Branch, N. J., March 22, 23, and 24. The Interstate Association guaranteed $1,500 (and all surplus added) in the main event, which was shot under the following conditions, viz.: 25 live birds, $25 entrance, 50yds. boundary, with a dead line at 33yds., high guns to win, and moneys to be divided in accordance with the number of entries received.

"In addition to guaranteeing $1,500, the Interstate Association presented to the winner of first place a sterling silver trophy commemorative of the win.

"As each recurring handicap exceeded its predecessors, there was the greatest difficulty in the practical management of it up to two years ago, owing to the insufficient equipment of grounds for its peculiar needs. The large entry of 1896 made necessary the running of extra sets of traps, which in turn made necessary a new system of scoring to meet the new requirements, and further suggested the need of quicker trapping and retrieving, all of which was so nicely perfected by the opening of the Elkwood Park shooting grounds in 1897 that the opportunities to shoot in the last two handicaps kept nearly an even pace with the requirements of the shooters at the score.

"To accomplish all this so perfectly every important part of the management of the tournament was in a high degree specialized. The Interstate Association engaged only the best trained talent for every working department of the tournament, with the result that it was conducted from start to finish without any material break.

"The system of dividing the moneys which prevailed in 1896 and 1897 was adopted again for 1898, the divisions, however, being graduated up to 170 entries for this year's event. The entries numbered 207, of which number 192 were regular entries at $25 each, 5 were penalty or post entries at $35 each, and 10 were forfeits at $10 each, making the total purse amount to $5,075. The purse under the system of division of moneys adopted by the Interstate Association provided for 25 moneys. There were nine straight scores of 25 made which took the first nine moneys—$3,713.75—a total of $412.65 each. Twenty-two tied on 24 out of 25 and divided the next sixteen moneys—$1,361.25—each man receiving $61.85. The nine men with straight scores of 25 shot off the tie, miss-and-out, for the silver trophy. This was won by Mr. E. D. Fulford, on the 23d round.

"With a total of 197 shooters facing the traps, it is impossible, in this review, to give the score of each individual. The following, however, shows the score of each of the money winners:

Twenty-five straight: E. D. Fulford, 29yds.; Geo. W. Loomis, 28yds.; Jim Jones, 27yds.; U. Bender, 27yds.; W. R. Patten, 27yds.; T. P. Laflin, 28yds.; R. O. Heikes, 30yds.; Wm. Wagner, 27yds.; J. A. R. Elliott, 31yds.

Ties on 24: E. M. Cooper, 28yds.; Aaron Doty, 28yds.; A. W. Money, 28yds.; Geo. Roll, 29yds.; J. S. Fanning, 30yds.; F. Schwarz, 26yds.; J. B. Savage, 27yds.; Sim Glover, 30yds.; Jay Snell, 26yds.; Lee Huckins, 28yds.; Allen Willey, 27yds.; J. M. Thompson, 26yds.; E. C. Burkhardt, 27yds.; E. S. Rice, 25yds.; W. P. Shattuck, 27yds.; A. W. Wiedebusch, 27yds.; H. D. Kirkover, 27yds.; H. S. Stevens, 26yds.; T. J. Laughrey, 27yds.; R. A. Welch, 30yds.; Dr. D. Mosher, 26yds.; E. A. Leach, 28yds.

Shoot-off for trophy:

E D Fulford, 29	22222222222222222222222—23
Geo W. Loomis, 28	2222122222222222222220—22
Jim Jones, 27	12122121222220 —14
U Bender, 27	2222222220 —10
W R Patten, 27	2222222220 — 9
T P Laflin, 28	1222220 — 6
R O Heikes, 30	222* — 3
Wm Wagner, 27	0 — 0
J A R Elliott, 31	0 — 0

"Two hundred and eleven shooters took part in the tournament and $9,069.40 was divided in different purses. The total number of live birds trapped was 6,231."

(Here follow reviews of the tournaments at Macon and Brunswick, Ga.; Meadville, Pa.; Meriden, Conn.; Waterville, Me.; and Haverhill, Mass., all of such recent date that those events are comparatively fresh in the minds of our readers.).

The recapitulation sets forth some most interesting statistics. The summary of the work is as follows:

"Shooters taking part, 471; live birds trapped, 7,217; targets trapped, 60,145; money divided in purses, $13,757.20.

"The results as above given show an increased activity and very favorable comparison with that of the preceding season. The totals fall a trifle short as compared with 1897, but it should be remembered that two scheduled tournaments were cancelled, due entirely to the war with Spain. This, coupled with the fact that the tournaments were given at relatively far distant points, the results indeed are very gratifying."

For 1899 the Interstate review sets forth that "it is the intention to perfect arrangements for giving the most interesting series of tournaments during the season of 1899 yet proposed in the history of the Association. Clubs contemplating holding tournaments and desiring the assistance of the Interstate Association should have their applications in the hands of the manager by Dec. 10, 1898, in order that they may be presented to the tournament committee for action thereon at the annual meeting of the Association, Dec. 15, 1898. Communications relating to inanimate target tournaments should be sent to the manager's home address: Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa."

New Jersey Central League.

Bound Brook, N. J., Oct. 15.—Following are the scores in the club contest of the New Jersey Central League, shot at Bound Brook to-day, conditions, 25 targets per man, five-men teams, Sergeant system. There was a high, puffy cross-wind. Excepting a large tree on the left quarter, the background was good. The contest took place on the new grounds, one-half mile from town. The targets were thrown fast, and the shooting was hard.

PUBLISHERS' DEPARTMENT.

To Omaha and the West.

During World's Fair year the railroad service of the country attracted the attention and admiration of the world, and ever since it has been the aim of all first-class roads to maintain the high standard then established. The Northwestern Line has not only succeeded in doing this, but has even made further advances in equipment and service. The running time throughout the entire system has been reduced to the minimum consistent with absolute safety, and it is justified in its boasts that its run from Chicago to Denver is the greatest railroad achievement of the age. "The Colorado Special" leaves Chicago daily at 10 A. M., and reaches Denver early the following afternoon. The journey from Chicago to the Rocky Mountains in less than forty-eight hours! Think of it! Strolling through "The Colorado Special," one is reminded of the magnificance of the enchanted palaces of the Arabian Nights, and the illusion is heightened rather than dispelled by the marvellous conveniences created by Twentieth Century Ingenuity.

"The Colorado Special" passes by daylight through the Garden State of the world, Iowa, reaching Omaha in the evening. The traveler, however, who goes as far as Omaha should not fail to go to the Rocky Mountains, to see the intervening country and the beautiful scenery of the West.

This train frequently makes eighty-seven miles in eighty-five minutes, while the passenger takes his ease in the drawing room or buffet car, with its reading room, bath room, barber, shop, etc., or at the dinner table, where meals are served "a la carte," a way which commends itself, as the traveler may sometimes desire only a lunch and not an elaborate dinner, which, however, he can obtain on this train, served as perfectly as in any metropolitan hotel.

With such splendid facilities as are offered those who go by the Northwestern Line, the travel to the West this season will doubtless be unprecedented, and tourists may be sure of having the best of everything if they purchase tickets via the Chicago, Union Pacific & Northwestern Line and take "The Colorado Special."

Excess fares are no longer charged on this train.—*Adv.*

The Mullins Game Carrier.

Mr. Wm. H. Mullins, of Salem, O., has devised an extremely convenient game basket attachment, fitted on the outside of the cockpit of his well-known duck boats, so arranged that the game can drain off without wetting the inside of the boat. Mr. Mullins tells us that the carriers can be used on any of his boats already in service. A new catalogue of Mullins' duck boats and other sporting equipments will be sent to any address.

Lift up our eyes to the heights where, glory-crowned, the genius of American liberty points; and to know all that a sportsman requires to know about the game laws within the genius's purview equip yourselves with the Game Laws in Brief.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 29, 1898.

VOL. LI.—No. 18. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photography will be found on another page.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

CONCERNING A NUISANCE.

THE New York Tribune and Sun, the Boston Traveler and other papers, which have commented upon the case of the Italian who was killed in self-defense by a New Jersey game warden the other day, appear to entertain a notion that the game laws are quite correct and commendable so long as they are respected by everybody, but that if Italian gunners choose to defy the statutes and to menace the wardens who are charged with enforcing them, it is really not worth while to retain the laws. This is not going quite so far as does the editor of the Boston Fibre and Fabric, who counsels the summary shooting of game wardens; nor as the editor of the Port Jervis Farmer, who is forever exhorting the farmers to arise and abolish all game laws. It shows, however, that the character of the average Italian gunner as he presents himself to suburban communities is not understood by those who would abolish the bird protective statutes in his favor. Without such information, a newspaper editor is not competent to discuss the question; and may not hope to fool the public into thinking that he is by raising the silly cry that a man's life is worth more than a robin's. Of course it is, but the fact has nothing to do with the case.

In this country we make a sharply defined and commonly recognized distinction between game birds and the other species which are birds of song or insectivorous in their habits; and this distinction extends to and governs the practice of the sportsman afield. A gunner who is out after grouse or quail, or other legitimate game, would not think of counting sparrows and thrushes into his bag. We have no class of shooters native to America who kill song birds for sport or the pot. In some other lands, on the contrary, the small species are regarded as game; in Italy every feathered creature counts, even if no bigger than one's thumb; and when the Italian gunner comes to this country he brings his peculiar notions of game and sport with him, and attempts to put them into practice here. Going out from the cities, he ranges nearby fields and roadsides in pursuit of sparrows, thrushes, larks, robins, thistlebirds, swallows and wrens. Anything large enough for him to hit he counts as game, and in pursuit of it invades pastures and orchards, home yards, parks and cemeteries. In one of the Boston fells last week two Italians were arrested for having in their possession a shotgun, five robins, three hermit thrushes and a woodpecker. The park, we are told, is amply posted with warning signs, but Italians from Boston are caught in it every few days shooting song birds. In Long Island districts, where there is not the slightest pretense by the authorities of enforcing the game laws, the hordes of song bird shooters from this city have practically free range, and are an unmitigated pest. In New Jersey, where on the contrary the State game warden force is making an honest effort to suppress the nuisance, the monthly record of the department shows that of the numerous individuals arrested for these offenses a vastly preponderating majority bear foreign names.

These Italians constitute a distinct class of marauding gunners, with whom suburban communities find it most difficult to deal. The Italian hunts where legitimate sportsmen seeking legitimate game have no occasion to go; for the objects of his pursuit are the small species of farm and door yard, and he becomes a trespasser of peculiarly aggravating type. Game laws and trespass laws he regards as relics of hard and oppressive class restrictions left behind in the old world, and he shows his independence of them by insolent disregard and defiant violation. As trespasser and song bird shooter, he is a constant nuisance and menace. For his suppression some means must be devised. If the journals which are so free in their condemnation of the game wardens will suggest any other and better way of dealing with the problem, the public will give it welcome.

THE LONG ISLAND DEER.

THERE will be five Wednesdays in November, and according to the New York game law, on each of these days deer hunting will be permitted on Long Island. But here is a curious condition of things, for while the law allows deer hunting, all the people of the deer country have leagued themselves together in a compact to permit no hunting; and as they control the situation, no hunting will there be. The deer range covers a territory of about thirty square miles. Much of this is in large estates, which adjoin one another, are posted, and on Wednesdays in November will be effectively policed. The Long Island Railroad, which runs through the district, has in former years afforded in its tracks and right of way a vantage ground for the deer hunters, whose method was to line up on the railroad and shoot the deer when driven across the road by hounds. This year the railroad authorities will not permit the track to be used for such purposes. Nor will hunting on the highways be allowed. In short, the entire deer district will be tightly closed against the invasion of hunting forays.

This means that practically no deer will be killed. What then is to be the solution of the Long Island deer problem? for with a steadily increasing stock there has come to be a problem. The creatures have bred and multiplied with the prolificacy natural to the species when the favoring conditions are present of an abundant food supply, immunity from foes and security and peaceful repose. If the numbers continue to increase the people of the district will be compelled to adopt some measures to reduce them. Here, as we have suggested before, is an excellent opportunity for the State to establish a game park for a deer breeding station, from which the Catskills and other depleted deer sections may be restocked.

SHOTS IN THE NIGHT.

"WE crawled away to beds made of wild duck feathers, which conjured sweet dreams of unending sport." As he records his outings in print, we note, the average sportsman dreams of ducks or deer or fish or whatever it is he proposes to pursue on the morrow. It is quite the regular and conventional thing in print; how is it in actual experience? Does a sportsman never sleep through the night before without beholding dream shadows of the game of the morning?

If all the hosts of spectre ducks and deer and quail and grouse and antelope and bears, which course through the realms of dreamland, could be reduced to material existence, their multitude would go far to stocking anew the prairie expanses and mountain ranges of the continent.

In one of the numbers of the Spectator, Addison remarks that dreams are an instance of that agility and perfection which is natural to the faculties of the mind when they are disengaged from the body; the slow of speech make unpremeditated harangues, the grave abound in pleasantries, the dull in repartees and points of wit. "I am in no way facetious nor disposed for the mirth of company," said Sir Thomas Browne, "yet in one dream I can compose a whole comedy, behold the action, apprehend the jests, and laugh myself awake at the conceits thereof." So in dreams are done physical deeds surpassing those of waking hours; and in the realm of sport the veriest bungler may perform in sleep feats of skill with gun and rifle. The novice who has yet to undergo his novitiate of buck fever slays his dreamland deer with unerring bullet and the nonchalance of a Davy Crockett; and brings to bag swiftly flying game from prodigious heights. This shooting in sleep is the easiest shooting in the world. It is the mastery of the highest degree of marksmanship, the attainment of perfection in that art which Mr. Hammond in his new book calls "Hitting vs. Missing."

"Supposing a man always happy in his dreams and miserable in his waking thoughts, and that his life was equally divided between them," asks Addison, "would he be more happy or miserable?" We leave that for the man who grasses his grouse in dreams and touches never a feather by day; is his trip a success? And one who thus invariably hits in his dreams, but misses when awake, is he a duffer or a good shot?

The man who, on the eve of a day in the field, lies down to pleasant dreams of the sport of the morrow may join with Sir Thomas Browne when he writes: "I thank God for my happy dreams, as I do my good rest, for there is a satisfaction in them unto reasonable desires, and such as can be content with a fit of happiness."

SOME SHOOTING RECORDS.

THAT story of a Bohemian side-hunt is suggestive of game conditions abroad which do not prevail here. In European countries, where game is bred like domestic poultry, and if ten thousand pheasants are killed today, ten thousand others may be raised to take their places, the side-hunt is not so devastating a competition as it is in this country, where we depend on a natural supply only, and one which cannot maintain itself against such combined assaults of associated shooters. In this country then we have reason to discourage side-hunts, as in their effects opposed to the sportsman's interest. As the game supply diminishes year by year the opposition to side-hunting naturally gains strength among sportsmen. As we pointed out the other day, side-hunters as a rule are not sportsmen.

In Europe, on the contrary, where the question of a game supply does not enter into consideration, killing for count is recognized as legitimate and sportsmanlike. He is considered to have made a record of honor who has bagged the largest numbers of birds or other game. Thus we read of one Trauttmansdorff—Prince Carl Trauttmansdorff—who has to his credit for a single day's shooting the slaughter of 862 head of game, with a best bag of pheasants 303, of partridges 632, of hares 416, of rabbits 638, of roebuck 12, of fallow deer 20, and of black cock 14, and a best year's count of 10,833 head of assorted game. Another record smasher is Earl de Gray, whose exploits have been duly tabulated for a series of years, from 1867 to 1895. His pheasant score was 111,119, with 89,401 partridges, 47,468 grouse, 26,747 rabbits and as many hares, 2,735 snipe, 2,077 woodcock, 1,393 wild duck, 567 deer, 12 buffalo, 11 tigers, a couple of rhinoceros, and 9,000 assorted; making a total of 316,699 for the entire period, or about 11,000 annually. This is a record which the most industrious market shooter in this country would needs work hard to equal. In very truth the noble sportsman must have been a monomaniac in the field. Yet for all his slaughter the game supply where he shot has not been permanently diminished.

SNAP SHOTS.

The Bulletin of the League of American Wheelmen appears to be edited on a theory that the members of the League are congenital idiots. Its columns are stuffed week after week with silly puns, the damnable iteration of which for fifty-two weeks in the year, as presented to intelligent people, must disgust and repel. We advise the League managers, who are looking about for the causes of a diminishing membership, to consider whether the imposition of such a worthless and foolish official organ upon the members has not something to do with it.

The annual meeting of the New York State Fish, Game and Forest League will be held in Syracuse on December 8th. The League cordially invites support and cooperation of all clubs and associations which have for purpose the better protection of fish and game. The League is in control of those who are themselves sincerely concerned to advance the real interests, and it is the most promising and efficient agency for promoting these interests. The secretary is Mr. Ernest F. Gould, of Seneca Falls.

We print to-day from Mr. Langford a further note as to the ascent of the Grand Teton; and next week we shall publish a statement of the case prepared by Mr. Wm. O. Owen, submitted by him to support his claim to credit for having been the first to achieve the ascent.

The Sportsman Tourist.

In the Forest.

I.

The arrival of American sportsmen is always a subject of absorbing interest to the little town of Mattawa, and was a much rarer occurrence a few years ago than it has since become. In those days the larger supply stores had not yet gathered courage to compete seriously with the Hudson Bay Company, around whose fort the settlement had first grown up. To trade with the Northern Indians, exchanging hunters' supplies for their fur in the spring, and advancing traps and ammunition in the autumn—to fit out an adventurous sportsman who was anxious to still-hunt the largest of American deer, were still the unquestioned prerogatives of the great company. Nor was the competition greater among the hotels, since the famous tavern known as Peter O'Farrell's was the only one in town, and its proprietor, with his dog Fairy, will be long remembered by the stray hunters and lumbermen who have passed the night there.

Peter was just knocking the ashes from his pipe, preparatory to retiring, when two men, obviously Americans, drove up in the crazy bus which met the daily train from the East.

"Well, well! More moose hunters, but I'm glad to see yez. Come in, sors. Yes, there do be plenty of moose this year. I seen one back of the church yisterday," said the genial but imaginative Mr. O'Farrell. "Howly smoke! But you've got stuff enough to go to the Height of Land."

"That is just where we intend going, not for moose alone, but for caribou," said Robert Daunton, the taller of the two strangers, as he entered the stove-heated office, and threw off his overcoat.

The speaker was a tall, powerfully-made man of some thirty years, and had seen much of wood life, while his companion, Roger Farnesby, had never been on a hunt before.

The two Americans had barely entered the hotel when they were followed by the head factor of the Hudson Bay Post, who at once greeted them with the news that he had their outfit ready and waiting, thanks to the telegrams he had received from Daunton.

That very evening, in spite of the protests of Mr. O'Farrell, who felt aggrieved that he had not been consulted in advance as the company had been, and who thought that he should reap the emoluments of a week's delay at least—that same evening the outfit of the travelers was carried to the company's store, and a list of further necessaries made out. While the last arrangements were being made, the Hudson Bay factor sent word to the men he had engaged for the Americans, so that the following morning the guides were on hand, and with the luggage they were embarked on the flatboat for transportation up the Ottawa River, with a rapidity that quite dazed Mattawa.

The four guides were Indians with a dash of French-Canadian blood in them, and had been chosen from among the best hunters in the employ of the company. Alexander Francois, the head guide, was noted throughout the Ottawa country for his skill in trapping and tracking.

The expedition, once under way, passed rapidly through the Keepawa Lake district without a stop for hunting on the road, and on the third day they reached Birch Lake.

That night Farnesby was awakened by a harsh whistle, followed by an angry stamping. He shook Daunton and whispered:

"What's that? Listen."

The moment he spoke the whistle was repeated, he heard two or three jumps and a few twigs snap, and the visitor was gone.

Daunton said sleepily:

"That's your first midnight alarm. You'll have plenty more until you know the language of the woods. It was nothing but a buck coming down the trail to the beach. He ran across the white tents and did not know what to make of them. When he heard you speak he bolted. Good night."

Farnesby rolled up in his blanket again and tried to sleep, but instead he kept listening to the unknown noises of the forest so mysterious to a newcomer, so simple to a veteran hunter. Far down the lake a loon screamed, and Farnesby wondered what great beast could make such a sound, for he had yet to learn that the larger animals make the least noise.

Then in the intense stillness away off to the south he heard a murmur, gentle as that of the brook, which flowed a few yards away. It grew, slowly at first, then increasing in volume until it resembled the rumble of a distant train. Farnesby sat up in his blankets and drew on his boots, intending to slip out and listen to this new phenomenon without disturbing Daunton. Each second the roar grew louder, until it resembled a waterfall in the distance, and at short intervals Farnesby heard sharp reports that sounded like rifle shots. He decided to arouse Daunton at the risk of being laughed at again. Daunton raised himself on his elbow. He listened a second and then said hastily:

"Get out of the tent and run for the beach. A tornado is coming and your rifles are pines a hundred feet high, breaking like reeds."

A second more and Daunton had rolled the guns in the blankets to keep them dry, and seizing his moccasins had sprung outside. Two quick jerks brought down the poles, letting the tent fall on its contents, in the hope that the pegs would keep it from blowing away. By this time the wind was upon them. The men aroused by the uproar had reached the beach a few rods away and were clustered around Farnesby, half dazed by the din and lightning, all except Francois, who had remained behind to pull down the guides' tent and throw some heavy stones on it.

Daunton started for the shore. The wind was terrific and the air full of flying branches and leaves. The exposed trees around them were swaying and groaning, and half-way to the beach a large balsam with wide spreading boughs impending over the path cracked ominously. Daunton hesitated a second and then decided that it was more dangerous to stand still than to dash past. He had taken but one step when a pair of arms slipped round him and drew him back. As he staggered backward, he saw the fir snap—then, slowly at first, but gathering speed each heartbeat, crash through the smaller tree tops and dash itself to fragments on the rocks beneath.

There are few wilder sights than a giant tree falling before the wind.

Neither Daunton nor Francois were struck by the flying pieces, and the latter remarked quietly in English: "Tree fall."

Daunton found Farnesby on the beach up to his knees in the shallow water. The trees along the shores were now snapping fast, some of the larger ones reaching in their fall out over the beach and plunging their tops in the waters of the lake.

There was a fringe of great pines along the shore, and they were going down one by one. Francois tapped Daunton on the shoulder and commenced wading out into the shallow lake until he was up to his chin in the water. The inlet of the lake had at this point formed a delta of sand over which the water was very shallow for some hundred yards from the shore. Daunton and Farnesby followed Francois, but the other men being shorter could not get out so far. Scarcely had they changed positions when a pine fell obliquely toward them. Daunton thought that it would reach the guides, but it just missed them, throwing over the terrified men a mass of spray. The glare of the lightning had now become continuous, and the hunters could see as plainly as in daylight. Crash after crash of thunder succeeded the flashes with scarcely distinguishable intervals. The whole forest waved like a field of grain in a gale, and the trees that were exposed by their height or by the fall of their neighbors struggled painfully. They bent with the wind until the breaking point seemed long passed, and then struggled with a mighty effort back to an upright position, only to be forced to bend again. When a specially strong gust caught them already bent over, or when wood and bark could stand the strain no more, the huge trunk would unexpectedly snap and carry widespread ruin among its lesser mates.

From their position in the Lake Daunton and Farnesby could watch the forest with safety from the wind at least, but they could not have remained standing on the exposed beach for a moment without having been blown into the lake.

The cyclone did not last long, and when once passed left behind a heavy rain. The men waded ashore, stiff from the cold water, and lit a fire. Some smaller trees had fallen across the camp, but beyond smashing a few cooking utensils did little damage. The tents and blankets were soaked by the rain, but fortunately had not blown away.

They learned the next day that the worst part of the storm had passed a little to the south of the camp, and about a quarter of a mile away they found a spot where it had cut a swath in the forest some 500yds. wide in a straight line, and had not left a stick standing. It was a perfect windfall, and had absolutely annihilated the forest, leaving in its stead mere piles of splintered, twisted timber.

Farnesby gazed on the scene aghast, and declared that he would never again allow the camp to be made near large growth. In fact, the party had been most fortunate in selecting the sheltered gully by the inlet of the lake, where the full force of the wind could not reach them, or their outfit would certainly have been blown away or smashed by falling trees, even if they had escaped uninjured.

Two days of lake travel and portages with their heavy loads brought them to Kastenan Lake. Here a halt was made to look for fresh signs of caribou, but none were found, so the journey was resumed to Grand Lac. On a portage, just before reaching this lake, Farnesby had his first view of a moose. He had gone on ahead to shoot partridges, and getting too far in advance had seated himself to wait for the others. In the act of putting a lighted match to his pipe, he was horrified to see a gigantic beast standing in the path before him, and not 20ft. away.

It towered seven feet at the withers, and the massive antlers swung clear of the shoulders. The creature was on a slight knoll, and Farnesby afterward explained to Daunton that he thought it was the Irish elk come back from prehistoric times. Although the Southerner had been on the alert for big game, and especially moose, this sudden apparition totally paralyzed him. He simply sat and looked, letting the match burn out between his fingers. He knew it was a moose, because it could be nothing else; but then it did not look like his wildest conception of that animal, and then those long white legs, like stilts, how they could kick! The moose seemed uncertain what to do, and Farnesby was inspecting the nearest tree out of the corner of his eye, when the bull suddenly stamped with his forefoot, and pricking up his ears grunted. At that second a rifle shot rang out close at hand—then another. The bull ran straight forward, stepping completely over Farnesby, who had thrown himself on the ground, and disappeared in the thick brush with a tremendous crashing.

Daunton ran up to Farnesby. "I did not see you, Roger, until I fired. Did he startle you much?"

"I rather think he'd have startled you," said his friend indignantly, as he gathered himself up. "Nice country this. Sit down peaceably to light a pipe and find a restored fossil standing over you."

The men had hastened up by this time, and throwing down their loads, all started on the trail. At the foot of the hill the moose was found facing his pursuers and in his last gasp. As Daunton came up, he staggered and fell on his side, dead. Farnesby sat down on a log, and looked in amazement at the enormous chest and long legs. The antlers, which were remarkably fine, formed a great addition to their load, almost compensating for the provisions they had already consumed, but Daunton knew that such splendid horns could only be found on the solitary bulls scattered far up north, and he intended to leave them for safe-keeping at the nearest Hudson Bay Company's fort.

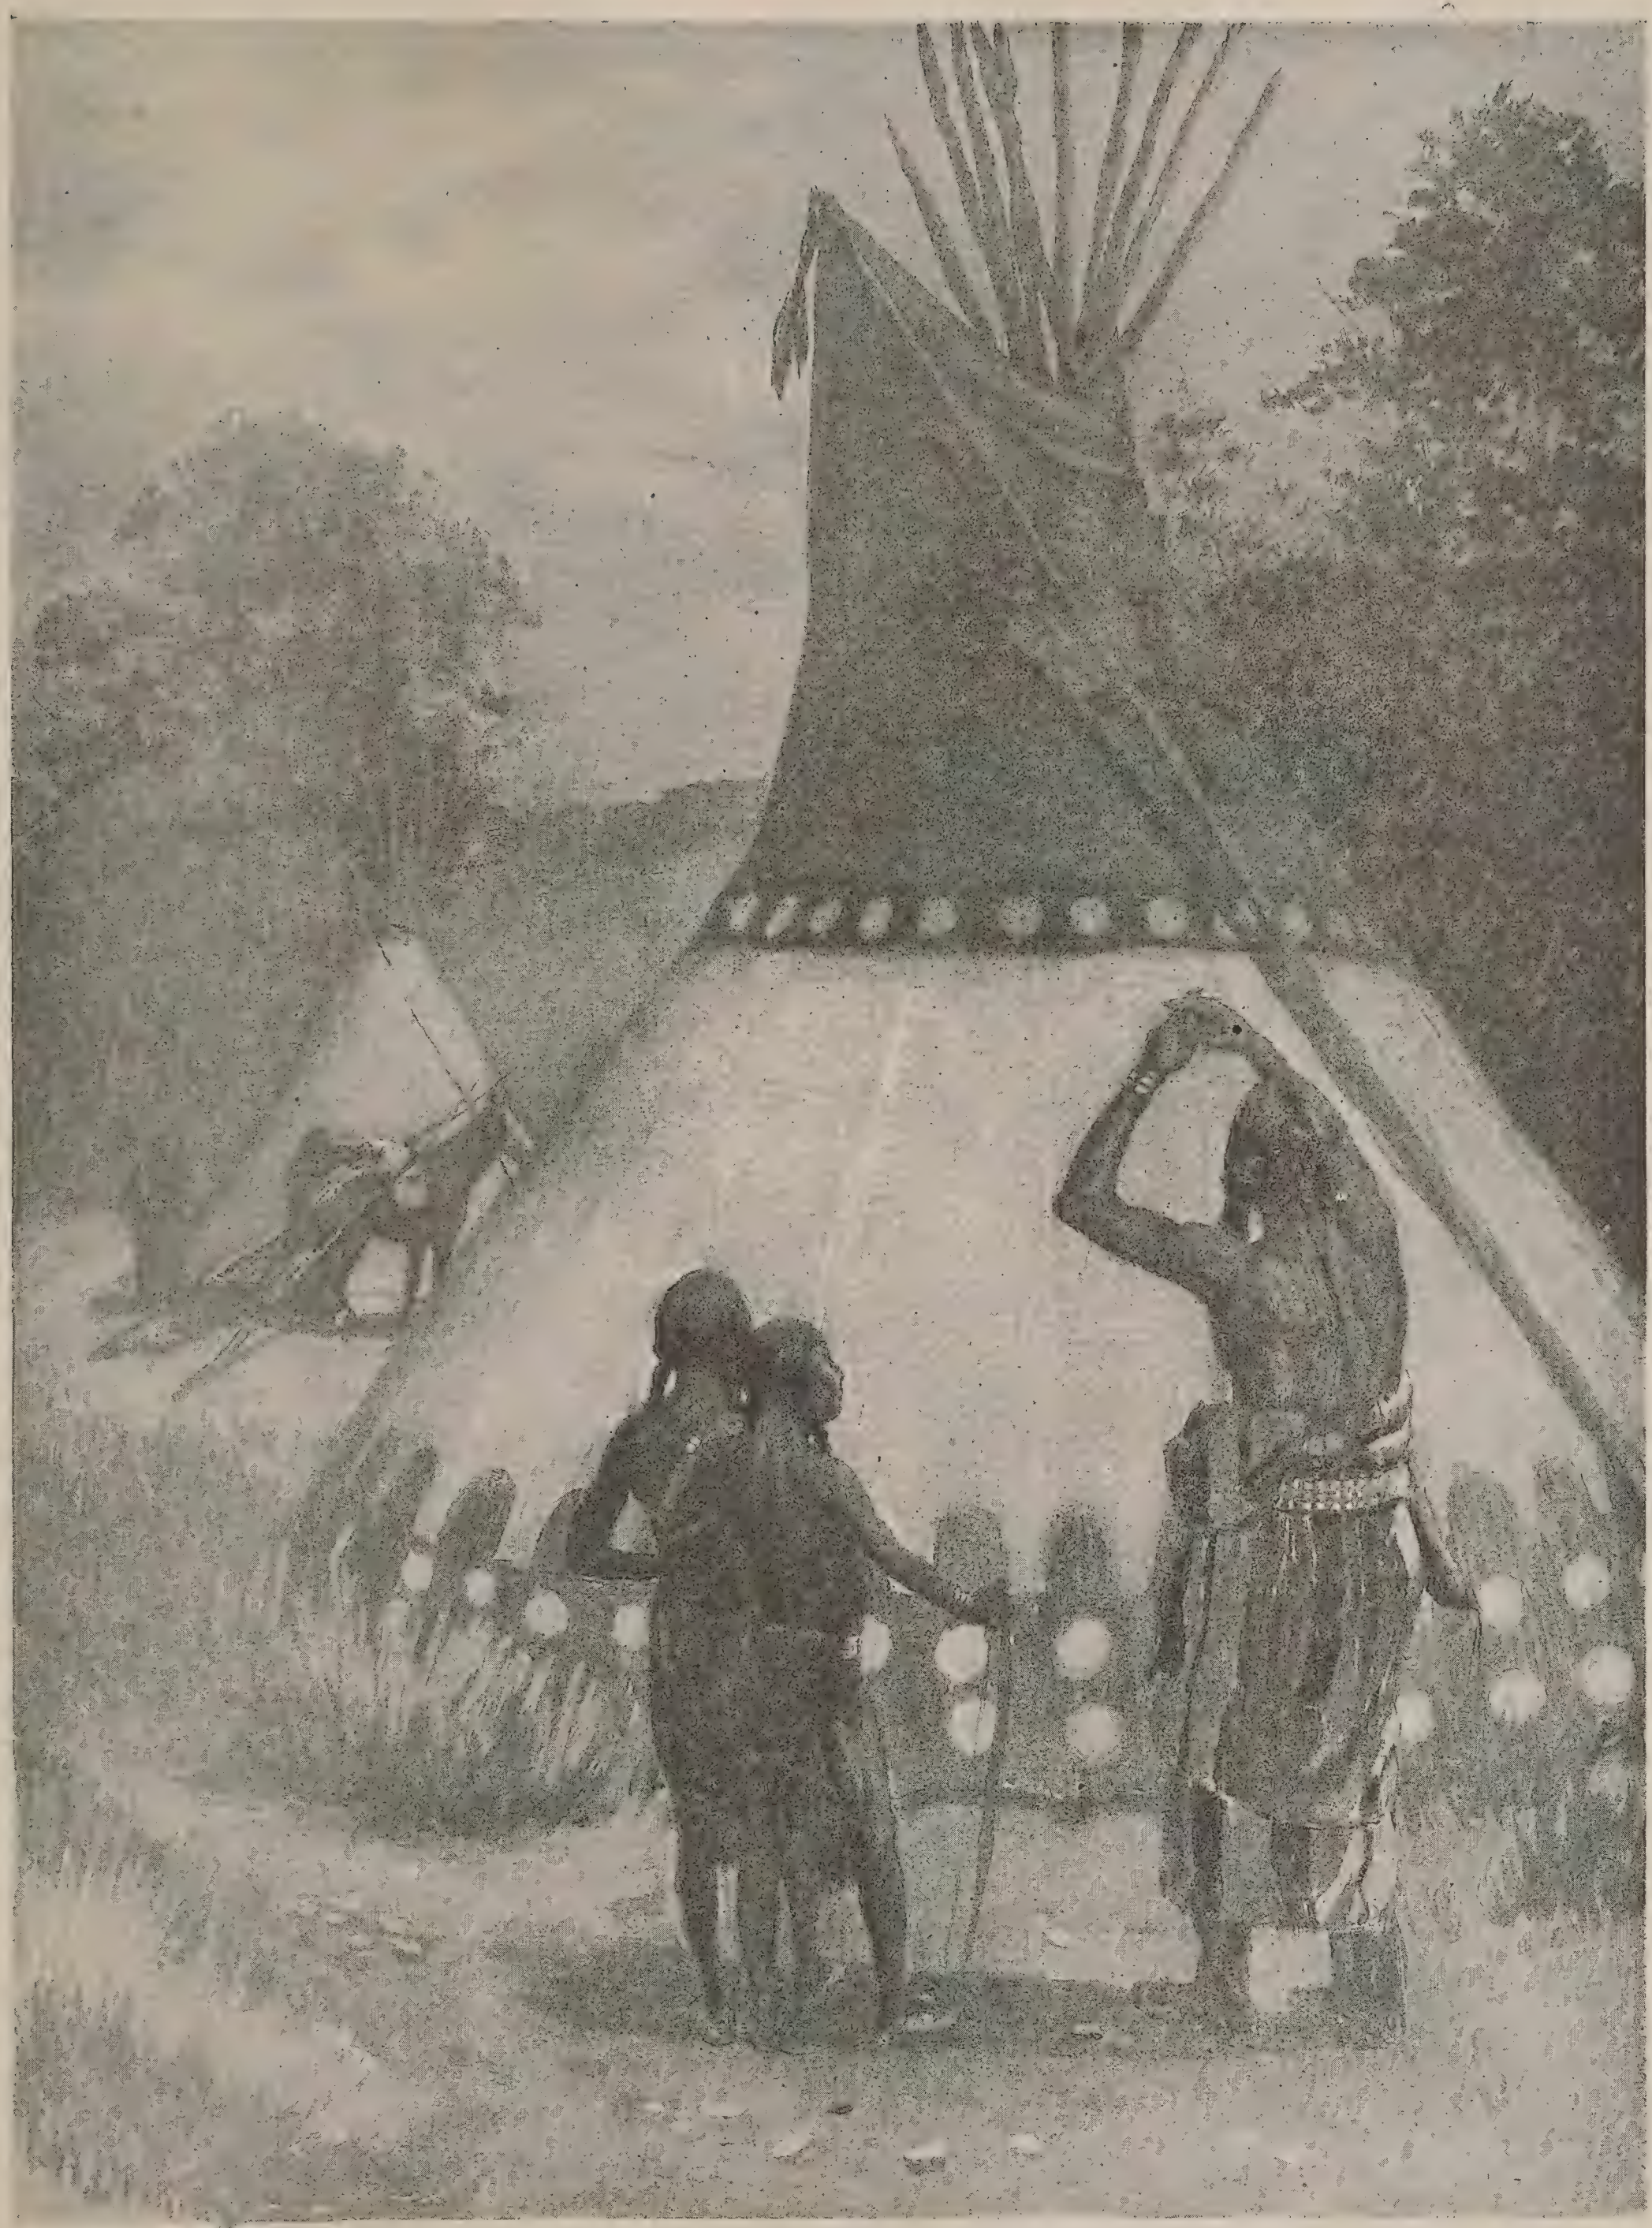
The next day they landed at the little post which controlled the district around Grand Lac, and here they purchased fresh supplies, as this would be the last depot until Lake Abitibi was reached.

The factor in charge told them that his Indians reported caribou in numbers on a little river that flowed into the north side of Lake Expanse, a round body of water, some ten miles across, through which the Ottawa flows after leaving Grand Lac. Crossing this lake in loaded canoes was dangerous at all times from the frequency of sudden squalls, and impossible with high winds. They reached the inlet of Lake Traverse without adventure, and camped in a thick grove of young birches. The winds were high and it was useless to venture out until the lake calmed down.

II.

After lunch on the second day of this tiresome waiting Daunton took his rifle and started back on an old lumber road for partridges. He had his hunting coat on and in his pockets the little necessaries that a hunter carries: matches, a compass, a tin cup, a flask of brandy and some twenty cartridges. He secured several partridges by shooting their heads off with his rifle, not a difficult matter to a steady eye when the bird is on the ground walking slowly away. Hanging them conspicuously on branches to pick up on the way back, he hurried on. After several miles of walking he came across a covey of partridges, two of which he shot on the road. A large cock offered a tempting mark several times, but scuttled off just as Daunton was aiming. He was annoyed and made up his mind to secure the bird. The partridge ran into some small growth, and Daunton followed as fast as he could, barely able to keep in sight of the game. At length he took a snap shot at the bird through the bushes, and rather to his surprise knocked its head off. The report startled two more partridges which were skulking close by. Daunton picked up the first bird, and slipping in into his spacious game pocket, ran after one of the others. After some minutes' turning and twisting he lost the bird and started back to the road. He walked about ten minutes and then thought to himself:

"Singular that I should have gone so far from the trail," but he kept on. When he must have walked a mile or so he stopped again and sat down. After trying in vain to recall the zigzag course he had made after the partridge, he gave it up and concluded that he had definitely lost the road. "It's nasty work walking in the bush, and it will bring me into camp after dark," he thought, feeling for his compass. As he went through one pocket after another, the careless expression faded from his face. He stood up and taking off his coat searched the contents of each pocket separately, then his trousers—all in vain. The compass had fallen out and he was lost. He stood aghast at the thought, for he knew its full meaning. Then he figured that he had walked all the afternoon approximately toward the sun and that would be southwest, so an opposite direction would take him back to Lake Expanse. The sun was going down fast by this time, and Daunton, putting it behind his left shoulder, started into the bush; violating an old rule of hunters, which he knew well—when lost, sit down and wait, don't move.



Daunton feeling quite safe in his calculation pushed on briskly, with the sun going down behind him. The woods for a while were somewhat open, and he made rapid progress, but as it grew dark he came to the edge of a swamp. He worked on for a little while in hope of finding good water, but soon gave it up as useless. A tree with its roots upturned offered a good camping place, where he could be sheltered from the wind. With his heavy sheath knife he soon cut birch bark and twigs enough to start a fire, and with the crackling blaze his spirits revived. He cooked the partridge he had shot and ate half of it, leaving the remainder for breakfast. The lack of water annoyed him greatly, but a very little brandy served to moisten his mouth. He cut a long strip of birch bark from a neighboring tree, and as the fire went down he coiled it around him, putting the foot end against the loose dirt of the upturned roots. With his blanket he passed a good night, except that the extreme cold aroused him before daybreak. He rekindled the fire and ate what was left of the partridge with the smallest possible allowance of brandy, for more partridges might be shot, but the stimulant could not be replaced.

The day broke black and cloudy, and as soon as he could see Daunton tightened his belt, and looked over his rifle and remaining cartridges, then started in the direction he considered northeast. He forced his way through the swamp in front of him, sinking at every step into the mossy duff that covered the ground, and climbing over the fallen tamaracks, which formed the chief growth in the vicinity. Early in the afternoon he found a pool of half-stagnant water. Throwing himself flat on his chest he drank with avidity the first water he had tasted for twenty-four hours. After resting awhile he pushed on in as straight a line as possible.

With the sun invisible behind the thickening clouds, with no moss on the large tree trunks, with no tall pines with their bent tops to guide him, he could only rely on guesswork.

About dusk he made a camp on a tiny hillock in the swamp, building a fire and smoking a pipe in place of supper. When the pipe burned out he threw himself on a pile of hemlock boughs he had gathered and fell into the troubled sleep of exhaustion. The wind was coming in fitful gusts, sobbing through the low tamaracks and wailing by the larger trees not far from Daunton's camp. A cold and curious tickling feeling in the face awakened him before the night was done. He raised himself, stiff and faint, on his elbow.

It was snowing. The first snowfall of the year. "It needed only this to finish me," thought Daunton, still rain would be worse. He lit the fire and cowered close to it until daylight. The loneliness of the woods came over him, so silent was everything, except the almost inaudible rustle of the falling snow. He threw more wood on the fire, for he had a large supply close at hand from a newly fallen tree, which he had broken into convenient pieces. The flames lit up the surrounding trees and cast dancing shadows on the veil of night behind. The stories he had heard in his boyhood, in his first camp in the Adirondacks, then in all their wildness, recurred to him. He remembered the tale of the sur-

THE MARK OF THE BUTTERFLY.

Painted for "Forest and Stream" from original studies by E. W. Deming.

veyor's chainman sent to the top of a mountain to flash signals at noon from the topmost peak, and who was visited that night by a mysterious prowler. How the lonely man sat up hour after hour in horror until all was quiet again, and he dropped asleep only to start up and find a panther's head staring at him across the dying embers of the fire. How no signal flashed the next noon tide or the following, and how his comrades found him stark mad.

"Mad," said Daunton, slowly, "they may find me mad, but not from panthers' heads." A twig snapped close at hand, just beyond the circle of the light.

"Food," thought Daunton, "something to eat," and he slipped with his rifle as quietly as he could out of the fire light. Many times before daylight he heard the animal, whatever it was, step heavily as it circled around and around him, only well out of sight. At daybreak Daunton found in the light snow the clear marked tracks of a small bear. The creature had walked around the camp all night, and as it was a common occurrence for almost any of the forest animals, led by curiosity alone, to watch a fire at a safe distance, Daunton thought only of his losing a chance for food, for he was now beginning to starve. With daylight he started again, and soon, to his delight, found himself at the end of the swamp. He emerged into an open hardwood country, where he made rapid progress, although toward afternoon he had to stop frequently to rest, for he was becoming weak.

At sundown he camped by a little pool, the water of which, mixed with a few drops of brandy, refreshed him. He had some difficulty in making a comfortable camp, as the temptation was to throw himself on the ground and sleep. Finally, however, he managed to cut enough firewood and boughs to cover him, and in spite of the snow still falling he went to sleep. Daunton awoke some time after daybreak, covered with an inch of snow. He lay some minutes without moving, fearing almost to test his strength in an attemot to rise.

"I'm going fast," he thought. "It's getting colder, and I feel it more. Another effort and I may get a shot, if only a squirrel. I've one, two; no, four, cartridges left."

He sat up with some effort and shivered with the bitter cold. The pool with its little brook flowing through it was not quite frozen over, and Daunton broke the ice at the edge and filled his tin cup. He added a few drops of his precious brandy, and the mixture revived him. He had perhaps two good drinks left in the flask. It was scarcely worth while to light a fire, walking would warm him, so he started on. He was dizzy at first, but that soon passed away, and left in its stead a dull ache across the left side of his head, and his left ear throbbed. His legs were strong, but he found it hard to control them. All idea of direction was lost by this time, and he forced himself on in a wolfish feeling of hunger, in the hope perhaps of finding a partridge or rabbit.

The woods seemed absolutely devoid of living things, and for two days he had seen in the snow only a few fox and marten tracks. In the first snow the wood animals do not move about, the larger ones finding shelter in the thick undergrowth of the swamps, and the partridges hiding under the low spruce and cedar boughs. So Daunton could find nothing to satisfy his hunger, but staggered on through the open woods, sometimes sitting for long minutes on a fallen trunk. Once he left his rifle against a tree. He stopped some 10yds. off and looked back at it. Should he leave it behind, it was so heavy, and his shoulders were sore from carrying it.

"A hunter leaves his rifle when a woman abandons her child," runs an Indian saying; and smiling grimly as he staggered back, Daunton took up the gun and resumed his weary tramp. His head felt very heavy and his eyes were dim, for he stumbled heavily as the day wore on, and had some bad falls, from which he rose with difficulty.

"I'm going on, on," he said aloud, "on to the end. I won't give up.

"Lost! Who says I'm lost—an old hunter like me. I'm going north! Farnesby, can't you see that I'm going north? Look at the moss on the trees on the south side; it always grows on the south side. There, that tree. It was there a moment ago.

"I can't see very well, but it's there if you'll look. Ben Hurley, when we lost him in the Aroostook up in Maine, went crazy, mad, in two days, and look at me, sane as you are. Don't you hear me? Farnesby, Roger, where are you? Gone, but you'll come back—you'll come back!"

Talking to himself, Robert Daunton, worn and wasted, struggled on, dragging his rifle after him, moving from tree to tree in that silent, snow-draped forest, stark mad!

Just before dark the clouds suddenly broke up and the sun came out in all the magnificence of a northern sunset, turning the straggling clouds into masses of flames and setting the western sky ablaze with a splendid conflagration.

It was not lost on Daunton.

"So, I'm going out in a blaze of fire," thought the sufferer. "Fire! Why, my head and veins are full of it, burning with it, but my feet are cold, so cold."

He was in a plantation of birch trees, where the loose dry bark hung in patches and shreds from every trunk. Scarcely knowing what he was about, he tore down the hanging bark, more inflammable than pitch, and a moment more he had a fire going. Alone on the hardwood ridge stood a dead pine with a hollow heart, in which generations of squirrels had made their homes. Against the foot of this pine Daunton built his fire. The dry punk of the hollow tree caught fire like tinder, and in ten minutes the tree was blazing.

When the sun had disappeared below the horizon, the great pine was flaming up into the sky like a torch, and from the ridge upon which it stood was visible for miles around. Daunton reveled in the warmth until after burning two hours the tree fell with a terrific crash, resounding like an explosion through the silent night. The wanderer crouched as close as he could to the glowing embers, and in a half-conscious state passed the night.

Daylight came at last, and with it Daunton struggled to his feet, but his legs would not support him, and he sank back again. Twice he tried to rise, for he knew it was death to lie there. His head was clear for the moment, and he felt that the end was close at hand.

"It's the last daylight I shall see," he thought, "but I won't give up yet. The brandy, yes, it's time to finish it."

He took out the flask and looked at the remaining liquid. Putting it to his lips, he drained it at a gulp. It ran like living coals down his throat, and gave him temporary strength.

Flinging away the now empty flask, he made another effort and rose to his knees. His half-frozen feet would scarce support his weight, but his will conquered his physical weakness and he stood erect once more.

The fire smouldered in the pine stump, and stirring the embers he warmed himself. Then he picked up a long pine sliver and lit one end. With this brand in his hand he shouldered his rifle, muzzle forward, and started on his last tramp. As he passed the birches he lit the hanging bark with his torch; why, he himself could not have told. The combustible bark flamed up like gunpowder and burned in a twinkling to the top of the tree, then went out as quickly, sending up into the still morning air a thick column of pitchy smoke. He must have lighted a dozen trees in this manner when his torch went out.

He staggered on with reeling brain through the endless trees, falling at times from sheer weakness, but always regaining his feet after a determined effort. He was at the end of the struggle, and could go but little further.

His rifle became an intolerable load to him, and he knew the time had come to abandon it. He leaned it against a tree and fired it.

The noise almost deafened him. His numbed fingers could hardly work the lock, but he managed to discharge the three remaining cartridges into the air. Then he affectionately placed his rifle against a hemlock and walked away. The relief from the weight of the heavy rifle was great, but only temporary, and an hour later he was again falling and dragging himself up.

He turned down hill, for no other reason than that it was easier to walk, and toiled slowly forward. Suddenly in the snow in front of him he saw tracks—human footprints.

He examined them anxiously.

They were old—a day old, at least; and the trail was uncertain and wandering. Still he would follow it back and see where the marks came from.

What, more tracks!

With blurred eyesight and pulsing brain he knelt in the snow to inspect them.

They were unmistakable. The footprints of three wolves were following the moccassin tracks and their trail was but little fresher than that of the man.

Daunton dragged himself on, sometimes on his hands and knees, sometimes moving from tree to tree for support, until late in the day he heard the tinkle of running water. A few yards further and a little pool came in sight. He drank deeply and then looked around. By the pool were the charred embers of a camp-fire.

Slowly it dawned on his fevered brain that something was familiar about the place. He examined the tracks and the ashes of the fire. There could be no doubt. It was his camp of two nights before, and the trail he had followed was his own.

He had circled on his own trail, and here was the end.

As Daunton realized this, he deliberately sat down with his back against a tree and went through his pockets. In one he found some paper. With a blackened match he wrote:

ROBERT DAUNTON,
New York,
Died Nov. 28, 1883,

and thrust the paper between his knife blade and sheath and laid them beside him.

The mental effort of this was too much for Daunton, and for some moments he did not move. Then his back hurt him, and he slid down to a recumbent position. It was cold, very cold, but Daunton felt it not, for he was rapidly passing beyond all feeling. His eyes, dim before, now perceived nothing but the light above him, and his ears were filled with a strange humming. He sank into a delirious reverie.

Back to his boyhood his mind wandered. So it was for this, to starve alone in a frozen forest, that he was trained and educated.

Old scenes came back to him. The college campus—then the music of the ballroom; but now he was dying, only too grateful that he had to walk no more among those endless, endless trees.

Again he seemed to feel the genial glow of the club room fire, with his friends around him, and now—he knew he was slowly freezing, for the cold no longer hurt him.

Then the air seemed to grow heavy with the languor of the south, and once more he sat by a dark-haired girl on the banks of the Manola. All the hate and bitterness he had felt toward her passed from him, and a long suppressed love came surging up, conquering the last pangs of starvation and death weariness in its all mastering passion. He felt her arms around his neck and her warm kiss on his frozen lips. It seemed to draw from him the last trace of feeling, and Robert Daunton sank back in the snow unconscious.

III.

When Daunton failed to return, Farnesby did not at first feel much anxiety, for he knew little of the woods, but when he could see from the excited discussion among the men that they considered it something of importance he asked Sabattis what he thought of it.

Sabattis said that Daunton had probably wounded some animal, perhaps a caribou, and in following the fresh trail had found himself too far to return that night. Francois alone said nothing, and could not be persuaded to express an opinion.

Farnesby slept uneasily and at the first flush of dawn he rose and went to the beach, where he could get a view of the lake. To his surprise he found Francois smoking the inevitable pipe and peering through the rifts in the fog, which hung thick over the water.

"Francois," asked Farnesby, "what are you doing here? Looking for Daunton?"

"Not look," replied the Indian, "hear," and he touched his ear. "May be gun."

"We must find him to-day, Francois. You can follow his trail, can't you?"

Francois listened gravely and then shook his head, saying: "To much dry. Plenty snow soon."

That day they traced Daunton along the lumber road and found the partridge he had hung up, but with all the Indian's instinct at trailing they lost the track when it turned into the bush. They circled wider and wider to recover the lost trace, but their skill for once was at fault. Francois worked with the rest, but did so in a perfunctory manner, and showed repeatedly that he considered it useless.

That night shortly after Farnesby had thrown himself on his blanket the flap of the tent was drawn suddenly open, and Francois entered and seated himself in silence against the pole. Farnesby started up on his elbow at this unexpected apparition, not knowing what to expect, for he did not feel altogether comfortable alone with the Indian. He gazed into the imperturbable face before him as the pipe now and again brought it into sight when Francois puffed with more than usual energy. After sitting for some minutes without speaking a word, the Indian abruptly remarked: "Snow come. Now find him pretty quick. Might be dead, eh?"

"Dead," said Farnesby, "what do you mean, Francois? Daunton has been gone less than two days and we can find him easily now that there is snow to track him on. Why do you say dead, Alexander?"

"No food; die pretty quick in de bush when starve," replied Francois, and then to Farnesby's horror the Indian told the other a tale. He related it in his broken, jerky English, often pausing at important parts and speaking with an effort. He had hunted before in this region, he told Farnesby, and had run a line of sable traps over the hardwood ringes to the east of them. One day, in repairing a dead-fall, he was splitting off pine slabs, when he noticed a strange looking mound at the foot of the tree. Kicking away the leaves, he found a pile of human bones—the leg bones straight out in front and the ribs and arms in a small heap against the tree. At this point the Indian emphasized the story by straightening up against the tent pole with his feet stretched out in front of him, and then with his arms made a gesture of complete collapse to illustrate how the body had fallen together. The motions pictured the scene so graphically that Farnesby shuddered, but Francois, without noticing him, proceeded with his story.

He had found among the bones some rusty buttons and a short pipe—nothing else. He shook his head solemnly as he told how strange it was that neither wolf nor bear had disturbed the skeleton, though it had lain there for months. Then the Indian constructed the history of the bones with great ingenuity, told vividly how the man, who must have been a runaway shanty man, Francois said, had lost his way in the woods, had wandered day after day, had slowly starved, until sunken eyed and fevered he had crouched in the lea of the pine tree to escape the cutting north wind—"Bones be on south side tree," remarked the Indian—until the wind ceased to cut or the hunger to gnaw.

Then the Indian told how he had taken back the bones in a bag to Mattawa for the priest to bury. Francois smoked in silence for a moment, then rose with a jerk and left the tent with the parting remark, "Find boss sure. May be bring him back same way."

Next morning Francois was gone, taking with him his canoe, his rifle and a light load of provisions.
